NOTE 164.—P. Torribio de Benevente, or Motolina, has enumerated ten causes of the rapid depopulation of Mexico, to which he gives the name of the Ten Plagues. Many of these are not peculiar to that province. 1. The introduction of the small-pox. This disease was first brought into New Spain in the year 1520, by a negro slave who attended Narvaez in his expedition against Cortes. Torribio affirms, that one half of the people in the provinces visited with this distemper died. To this mortality, occasioned by the small pox, Torquemada adds the destructive effects of two contagious distempers which raged in the year 1545 and 1576. In the former 800,000, in the latter above two millions perished, according to an exact account taken by order of the viceroys. Mon. Ind. i. 642. The small-pox was not introduced into Peru for several years after the invasion of the Spaniards; but there, too, that distemper proved very fatal to the natives. Garcia Origen, p. 88. 2. The numbers who were killed or died of famine in their war with the Spaniards, particularly during the siege of Mexico. 3. The great famine that followed after the reduction of Mexico, as all the people engaged, either on one side or other, had neglected the cultivation of their lands. Something similar to this happened in all the other countries conquered by the Spaniards. 4. The grievous tasks imposed by the Spaniards upon the people belonging to their Repartimientos. 5. The oppressive burden of taxes which they were unable to pay, and from which they could hope for no exemption. 6. The numbers employed in collecting the gold carried down by the torrents from the mountains, who were forced from their own habitations, without any provision made for their subsistence, and subjected to all the rigour of cold in those elevated regions. 7. The immense labour of rebuilding Mexico, which Cortes urged on with such precipitate ardour as destroyed an incredible number of people. 8. The number of people condemned to servitude, under various pretexts, and employed in working the silver mines. These, marked by each proprietor with a hot iron, like his cattle, were driven in herds to the mountains. The nature of the labour to which they were subjected there, the noxious vapours of the mines, the coldness of the climate, and scarcity of food, were so fatal, that Torribio affirms the country round several of those mines, particularly near Guaxago, was covered with dead bodies, the air corrupted with their stench, and so many vultures and other voracious birds hovered about for their prey, that the sun was darkened with their flight. 10. The Spaniards, in the different expeditions which they undertook and by the civil wars which they carried on, destroyed many of the natives whom they compelled to serve them as *Tamemes*, or carriers of burdens. This last mode of oppression was particularly ruinous to the Peruvians. From the number of Indians who perished in Gonzalo Pizarro's expedition into the countries to the east of the Andes, one may form some idea of what they suffered in similar services, and how fast they were wasted by them. Torribio, MS. Corita, in his Breve y Summaria Relacion, illustrates and confirms several of Torribio's observations, to which he refers. MS. *penes me*.

NOTE 165.—Even Montesquieu has adopted this idea, lib. viii. c. 18. But the passion of that great man for system sometimes rendered him inattentive

to research; and from his capacity to refine, he was apt, in some instances, to overlook obvious and just causes.

NOTE 166.—A strong proof of this occurs in the testament of Isabella, where she discovers the most tender concern for the humane and mild usage of the Indians. Those laudable sentiments of the queen have been adopted into the public law of Spain, and serve as the introduction to the regulations contained under the title of *Of the good treatment of the Indians*. Recopil. lib. vi. tit. x.

NOTE 167.—In the seventh Title of the first book of the *Recopilacion*, which contains the laws concerning the powers and functions of archbishops and bishops, almost a third part of them relates to what is incumbent upon them as guardians of the Indians, and points out the various methods in which it is their duty to interpose, in order to defend them from oppression, either with respect to their persons or property. Not only do the laws commit to them this honourable and humane office, but the ecclesiastics of America actually exercise it.

Innumerable proofs of this might be produced from Spanish authors. But I rather refer to Gage, as he was not disposed to ascribe any merit to the popish clergy to which they were not fully entitled. Survey, p. 142, 192, &c. Henry Hawks, an English merchant, who resided five years in New Spain previous to the year 1572, gives the same favourable account of the popish clergy. Hakluyt, iii. 466. By a law of Charles V. not only bishops but other ecclesiastics, are empowered to inform and admonish the civil magistrates, if any Indian is deprived of his just liberty and rights; Recopilac. lib. vi. tit. vi. ley. 14; and thus were constituted legal protectors of the Indians. Some of the Spanish ecclesiastics refuse to grant absolution to such of their countrymen as possessed *Encomiendas*, and considered the Indians as slaves, or employed them in working their mines. Gonz. Davil. Teatro Eccles. i. 157.

NOTE 168.—According to Gage, Chiapa dos Indos contains 4000 families; and he mentions it only as one of the largest Indian towns in America, p. 104.

NOTE 169.—It is very difficult to obtain an accurate account of the state of population in those kingdoms of Europe where the police is most perfect, and where science has made the greatest progress. In Spanish America, where knowledge is still in its infancy, and few men have leisure to engage in researches merely speculative, little attention has been paid to this curious inquiry. But in the year 1741, Philip V. enjoined the viceroys and governors of the several provinces in America to make an actual survey of the people under their jurisdiction, and to transmit a report concerning their number and occupations. In consequence of this order the Conde de Fuen-Clara, viceroy of New Spain, appointed D. Jos. Antonio de Villa Segnor y Sanchez to execute that commission in New Spain. From the reports of the magistrates in the several districts, as well as from his own observations and long acquaintance with most of the provinces, Villa Segnor published the result of his inquiries in his *Teatro Americano*. His report, however, is imperfect. Of the nine dioceses, into which the Mexican empire has been divided, he has published an account of five only, viz., the archbishopric of Mexico, the bishoprics of Puebla de los Angeles, Mechoacan, Oaxaca, and Nova Galicia. The bishoprics of Yucatan, Verapaz, Chiapa, and Guatemala, are entirely omitted, though the two latter comprehend countries in which the Indian

race is more numerous than in any part of New Spain. In his survey of the extensive diocese of Nova Galicia, the situation of the different Indian villages is described, but he specifies the number of people only in a small part of it. The Indians of that extensive province, in which the Spanish dominion is imperfectly established, are not registered with the same accuracy as in other parts of New Spain. According to Villa Segnor, the actual state of population in the five dioceses abovementioned is, of Spaniards, negroes, mulattoes, and mestizos, in the dioceses of

	Families.
Mexico . . . . .	105,202
Los Angeles . . . . .	30,600
Mechoacan . . . . .	30,840
Oaxaca . . . . .	7,296
Nova Galieia . . . . .	16,770

190,708

At the rate of five to a family, the total number is 953,540.

Indian families in the diocese of Mexico	119,511
Los Angeles . . . . .	88,240
Mechoacan . . . . .	36,196
Gaxaca . . . . .	44,222
Nova Galicia . . . . .	6,222

294,391

At the rate of five to a family, the total number is 1,471,955. We may rely with greater certainty on this computation of the number of Indians, as it is taken from the *Matricula*, or register, according to which the tribute paid by them is collected. As four dioceses of nine are totally omitted, and in that of Nova Galicia the numbers are imperfectly recorded, we may conclude that the number of Indians in the Mexican empire exceeds two millions.

The account of the number of Spaniards, &c. seems not to be equally complete. Of many places, Villa Segnor observes in general terms, that several Spaniards, negroes, and people of mixed race, reside there, without specifying their number. If, therefore, we make allowance for these, and for all who reside in the four dioceses omitted, the number of Spaniards, and those of a mixed race, may probably amount to a million and a half. In some places Villa Segnor distinguishes between Spaniards and the inferior races of negroes, mulattoes, and mestizos, and marks their number separately. But he generally blends them together. But from the proportion observable in those places, where the number of each is marked, as well as from the account of the state of population in New Spain by other authors, it is manifest that the number of negroes and persons of a mixed race far exceeds that of Spaniards. Perhaps the latter ought not to be reckoned above 500,000 to a million of the former.

Defective as this account may be, I have not been able to procure such intelligence concerning the number of people in Peru, as might enable me to form any conjecture equally satisfying with respect to the degree of its population. I have been informed that in the year 1761 the protector of the Indians in the viceroyalty of Peru computed that 612,780 paid tribute to the king. As all females, and persons under age, are exempted from this tax in Peru, the total number of Indians ought by that account to be 2,449,120. MS. *penes me*.

I shall mention another mode, by which one may compute, or at least form a guess concerning the state of population in New Spain and Peru. Ac-

cording to an account which I have reason to consider as accurate, the number of copies of the bull of Cruzada, exported to Peru on each new publication, is 1,171,953; to New Spain, 2,649,326. I am informed that but few Indians purchase bulls, and that they are sold chiefly to the Spanish inhabitants, and those of mixed race; so that the number of Spaniards and people of a mixed race will amount by this mode of computation to at least three millions.

The number of inhabitants in many of the towns in Spanish America may give us some idea of the extent of population, and correct the inaccurate but popular notion entertained in Great Britain concerning the weak and desolate state of their colonies. The city of Mexico contains at least 150,000 people. It is remarkable that Torquemada, who wrote his *Monarquia Indiana* about the year 1612, reckons the inhabitants of Mexico at that time to be only 7000 Spaniards and 8000 Indians. Lib. iii. c. 26. Puebla de los Angeles contains above 60,000 Spaniards, and people of a mixed race. Villa Segnor, p. 247. Guadalaxara contains above 30,000, exclusive of Indians. Id. ii. 206. Lima contains 54,000. De Cosme Bueno Descr. de Peru, 1764. Carthagená contains 25,000. Potosi contains 25,000. Bueno 1767. Popayan contains above 20,000. Ulloa, i. 287. Towns of a second class are still more numerous. The cities in the most thriving settlements of other European nations in America cannot be compared with these.

Such are the detached accounts of the number of people in several towns, which I found scattered in authors whom I thought worthy of credit. But I have obtained an enumeration of the inhabitants of the towns in the province of Quito, on the accuracy of which I can rely; and I communicate it to the public, both to gratify curiosity, and to rectify the mistaken notion which I have mentioned. St. Francisco de Quito contains between 50 and 60,000 people of all the different races. Besides the city, there are in the *Corregimien* twenty-nine *curas* or parishes established in the principal villages, each of which has smaller hamlets depending upon it. The inhabitants of these are mostly Indians and mestizos. St. Juan de Pasto has between 6 and 8,000 inhabitants, besides 27 dependent villages. St. Miguel de Ibarra, 7000 citizens, and ten villages. The district of Havala, between 18 and 20,000 people. The district of Tacuna, between 10 and 12,000. The district of Ambato, between 8 and 10,000, besides 16 depending villages. The city of Riobamba, between 16 and 20,000 inhabitants, and nine depending villages. The district of Chimbo, between 6 and 8000. The city of Guayaquil, from 16 to 20,000 inhabitants, and 14 depending villages. The district of Atuasi, between 5 and 6000 inhabitants, and 4 depending villages. The city of Cuenza, between 25 and 30,000 inhabitants, and 9 populous depending villages. The town of Laxa, from 8 to 10,000 inhabitants, and 14 depending villages. This degree of population, though slender if we consider the vast extent of the country, is far beyond what is commonly supposed. I have omitted to mention, in its proper place, that Quito is the only province in Spanish America that can be denominated a manufacturing country; hats, cotton stuffs, and coarse woollen cloths, are made there in such quantities as to be sufficient not only for the consumption of the province, but to furnish a considerable article for exportation into other parts of Spanish America. I know not whether the uncommon industry of this province should be considered as the cause or the

effect of its populousness. But among the ostentatious inhabitants of the New World the passion for every thing that comes from Europe is so violent that I am informed the manufactures of Quito are so much undervalued as to be on the decline.

NOTE 170.—These are established at the following places:—St. Domingo, in the island of Hispaniola; Mexico, in New Spain; Lima, in Peru; Panama, in Tierra Firmè; Santiago, in Guatemala; Guadalajara, in New Galicia; Santa Fe, in the new kingdom of Granada; La Plata, in the country of Los Charcas; St. Francisco de Quito, St. Jago de Chili, Buenos Ayres. To each of these are subjected several large provinces, and some so far removed from the cities where the courts are fixed, that they can derive little benefit from their jurisdiction. The Spanish writers commonly reckon up twelve courts of audience, but they include that of Manila, in the Philippine islands.

NOTE 171.—On account of the distance of Peru and Chili from Spain, and the difficulty of carrying commodities of such bulk as wine and oil across the isthmus of Panama, the Spaniards in those provinces have been permitted to plant vines and olives; but they are strictly prohibited from exporting wine or oil to any of the provinces on the Pacific ocean, which are in such a situation as to receive them from Spain. Recop. lib. i. tit. xvii. l. 15—18.

NOTE 172.—This computation was made by Benzoni, A. D. 1550, fifty-eight years after the discovery of America. Hist. Novi Orbis, lib. iii. c. 21. But as Benzoni wrote with the spirit of a malecontent, disposed to detract from the Spaniards in every particular, it is probable that his calculation is considerably too low.

NOTE 173.—My information with respect to the division and transmission of property in the Spanish colonies is imperfect. The Spanish authors do not explain this fully, and have not perhaps attended sufficiently to the effects of their own institutions and laws. Solorzano de Jure Ind. (vol. ii. lib. ii. l. 16), explains in some measure the introduction of the tenure of *Mayorasgo*, and mentions some of its effects. Villa Segnor takes notice of a single consequence of it. He observes, that in some of the best situations in the city of Mexico a good deal of ground is unoccupied, or covered only with the ruins of the houses once erected upon it; and adds, that as this ground is held by right of *Mayorasgo*, and cannot be alienated, that desolation and those ruins become perpetual. Teatr. Amer. vol. i. p. 34.

NOTE 174.—There is no law that excludes Creoles from offices either civil or ecclesiastic. On the contrary, there are many *Cedulas*, which recommend the conferring places of trust indiscriminately on the natives of Spain and America. Betancourt y Figueroa Derecho, &c. p. 5, 6. But, notwithstanding such repeated recommendations, preferment in almost every line is conferred on native Spaniards. A remarkable proof of this is produced by the author last quoted. From the discovery of America to the year 1637, three hundred and sixty-nine bishops, or archbishops, have been appointed to the different dioceses in that country, and of all that number only twelve were Creoles, p. 40. This predilection for Europeans seems still to continue. By a royal mandate, issued in 1776, the chapter of the cathedral of Mexico is directed to nominate European ecclesiastics of known merit and abilities, that the king may appoint them to supply vacant benefices. MS. *penes me*.

NOTE 175.—Moderate as this tribute may appear, such is the extreme poverty of the Indians in many

provinces of America, that the exacting of it is intolerably oppressive. Pegua Itiner. par Paroches de Indios, p. 192.

NOTE 176.—In New Spain, on account of the extraordinary merit and services of the first conquerors, as well as the small revenue arising from the country previous to the discovery of the mines of Sacatecas, the *encomiendas* were granted for three, and sometimes for four lives. Recop. lib. vi. tit. ii. c. 14, &c.

NOTE 177.—D. Ant. Ulloa contends that working in mines is not noxious, and as a proof of this, informs us that many mestizos and Indians, who do not belong to any repartimiento, voluntarily hire themselves as miners; and several of the Indians, when the legal term of their service expires, continue to work in the mines of choice. *Entreten*, p. 265. But his opinion concerning the wholesomeness of this occupation is contrary to the experience of all ages; and wherever men are allured by high wages, they will engage in any species of labour, however fatiguing or pernicious it may be. D. Hern. Carillo Altamirano relates a curious fact incompatible with this opinion. Wherever mines are wrought, says he, the number of Indians decreases; but in the province of Campeachy, where there are no mines, the number of Indians has increased more than a third since the conquest of America, though neither the soil nor climate be so favourable as in Peru or Mexico. Colbert Collect. In another memorial presented to Philip III. in the year 1609, Captain Juan Gonzales de Azevedo asserts, that in every district of Peru where the Indians are compelled to labour in the mines, their numbers were reduced to the half, and in some places to the third, of what it was under the viceroyalty of Don. Fran. Toledo in 1581. Colb. Collect.

NOTE 178.—As labour of this kind cannot be prescribed with legal accuracy, the tasks seem to be in a great measure arbitrary, and like the services exacted by feudal superiors in *vineæ, prato, aut messe*, from their vassals, are extremely burdensome, and often wantonly oppressive. Pegua Itiner. par Parochos de Indios.

NOTE 179.—The turn of service known in Peru by the name of *Mita* is called *Tanda* in New Spain. There it continues no longer than a week at a time. No person is called to serve at a greater distance from his habitation than 24 miles. This arrangement is less oppressive to the Indians than that established in Peru. Memorial of Hern. Carillo Altamirano. Colbert Collect.

NOTE 180.—The strongest proof of this may be deduced from the laws themselves. By the multitude and variety of regulations to prevent abuses, we may form an idea of the number of abuses that prevail. Though the laws have wisely provided that no Indian shall be obliged to serve in any mine at a greater distance from his place of residence than thirty miles; we are informed in a memorial of D. Hernan Carillo Altamirano presented to the king, that the Indians of Peru are often compelled to serve in mines at the distance of a hundred, a hundred and fifty, and even two hundred leagues from their habitation. Colbert Collect. Many mines are situated in parts of the country so barren and so distant from the ordinary habitations of the Indians, that the necessity of procuring labourers to work there has obliged the Spanish monarchs to dispense with their own regulations in several instances, and to permit the viceroys to compel the people of more remote provinces to resort to those mines. Escalona Gazo phyl. Perub. lib. i. c. 16. But in justice to them it

should be observed that they have been studious to alleviate this oppression as much as possible, by enjoining viceroys to employ every method in order to induce the Indians to settle in some part of the country adjacent to the mines. *Id. ibid.*

NOTE 181.—Torquemada, after a long enumeration which has the appearance of accuracy, concludes the number of monasteries in New Spain to be four hundred. *Mon. Ind. lib. xix. c. 32.* The number of monasteries in the city of Mexico alone was, in the year 1745, fifty-five. *Villa Segnor Teat. Amer. i. 34.* Ulloa reckons up forty convents in Lima: and mentioning those for nuns, he says that a small town might be peopled out of them, the number of persons shut up there is so great. *Voy. i. 429.* Philip III., in a letter to the viceroy of Peru, A. D. 1620, observes, that the number of convents in Lima was so great that they covered more ground than all the rest of the city. *Solorz. lib. iii. c. 23, n. 57. Lib. iii. c. 16. Torquem. lib. xv. c. 3.* The first monastery in New Spain was founded A. D. 1525, four years only after the conquest. *Torq. lib. xv. c. 16.*

According to Gil Gonzalez Davila, the complete establishment of the American church in all the Spanish settlements was, in the year 1649, 1 patriarch, 6 archbishops, 32 bishops, 346 prebends, 2 abbots, 5 royal chaplains, 840 convents. *Teatro Ecclesiastico de las Ind. Occident. vol. i. Pref.* When the order of Jesuits was expelled from all the Spanish dominions, the colleges, *professed* houses, and residences, which it possessed in the province of New Spain were thirty, in Quito sixteen, in the new kingdom of Granada thirteen, in Peru seventeen, in Chili eighteen, in Paragnay eighteen; in all, a hundred and twelve. *Collection General de Providencias hasta aqui tomadas sobre estranamento, &c. de la Compagnia, part i. p. 19.* The number of Jesuits, priests, and novices in all these amounted to 2245. *MS. penes me.*

In the year 1644 the city of Mexico presented a petition to the king, praying that no new monastery might be founded, and that the revenues of those already established might be circumscribed, otherwise the religious houses would soon acquire the property of the whole country. The petitioners request, likewise, that the bishops might be laid under restrictions in conferring holy orders, as there were at that time in New Spain above six thousand clergymen without any living. *Id. p. 16.* These abuses must have been enormous indeed, when the superstition of American Spaniards was shocked, and induced to remonstrate against them.

NOTE 182.—This description of the manners of the Spanish clergy I should not have ventured to give upon the testimony of Protestant authors alone, as they may be suspected of prejudice or exaggeration. Gage, in particular, who had a better opportunity than any Protestant to view the interior state of Spanish America, describes the corruption of the church which he had forsaken with so much of the acrimony of a new convert, that I should have distrusted his evidence, though it communicates some very curious and striking facts. But Benzoni mentions the profligacy of ecclesiastics in America at a very early period after their settlement there. *Hist. lib. ii. c. 19, 20.* M. Frezier, an intelligent observer, and zealous for his own religion, paints the dissolute manners of the Spanish ecclesiastics in Peru, particularly the regulars, in stronger colours than I have employed. *Voy. p. 51, 215, &c.* M. Gentil confirms this account. *Voy. i. 34.* Correal concurs with both,

and adds many respectable circumstances. *Voy. i. 61, 155, 161.* I have good reason to believe that the manners of the regular clergy, particularly in Peru, are still extremely indecent. Acosta himself acknowledges that great corruption of manners had been the consequence of permitting monks to forsake the retirement and discipline of the cloister, and to mingle again with the world, by undertaking the charge of the Indian parishes. *De Procur. Ind. Salute, lib. iv. c. 13, &c.* He mentions particularly those vices of which I have taken notice, and considers the temptations to them as so formidable, that he leans to the opinion of those who hold that the regular clergy should not be employed as parish priests. *Lib. v. c. 20.* Even the advocates for the regulars admit, that many and great enormities abounded among the monks of different orders, when set free from the restraint of monastic discipline; and from the tone of their defence one may conclude that the charge brought against them was not destitute of truth. In the French colonies the state of the regular clergy is nearly the same as in the Spanish settlements, and the same consequences have followed. M. Biet, superior of the secular priests in Cayenne, inquires, with no less appearance of piety than of candour, into the causes of this corruption, and imputes it chiefly to the exemption of regulars from the jurisdiction and censures of their diocesans; to the temptations to which they are exposed; and to their engaging in commerce. *Voy. p. 320.* It is remarkable that all the authors who censure the licentiousness of the Spanish regulars with the greatest severity, concur in vindicating the conduct of the Jesuits. Formed under a discipline more perfect than that of the other monastic orders, or animated by that concern for the honour of the society which takes such full possession of every member of the order, the Jesuits, both in Mexico and Peru, it is allowed, maintained a most irreproachable decency of manners. *Frezier, 223. Gentil, i. 34.* The same praise is likewise due to the bishops and most of the dignified clergy. *Frez. Ibid.*

A volume of the Gazette de Mexico for the years 1728, 1729, 1730, having been communicated to me, I find there a striking confirmation of what I have advanced concerning the spirit of low illiberal superstition prevalent in Spanish America. From the newspapers of any nation one may learn what are the objects which chiefly engross its attention, and which appear to it most interesting. The gazette of Mexico is filled almost entirely with accounts of religious functions, with descriptions of processions, consecrations of churches, beatifications of saints, festivals, autos de fe, &c. Civil or commercial affairs, and even the transactions of Europe, occupy but a small corner in this magazine of monthly intelligence. From the titles of new books, which are regularly inserted in this gazette, it appears that two-thirds of them are treatises of scholastic theology, or of monkish devotion.

NOTE 183.—Solorzano, after mentioning the corrupt morals of some of the regular clergy, with that cautious reserve which became a Spanish layman in touching on a subject so delicate, gives his opinion very explicitly, and with much firmness, against committing parochial charges to monks. He produces the testimony of several respectable authors of his country, both divines and lawyers, in confirmation of his opinion. *De Jure Ind. ii. lib. iii. c. 16.* A striking proof of the alarm excited by the attempt of the Prince d'Esquilaché to exclude the regulars from parochial cures, is contained in the

BOONE CROSSING THE MOUNTAINS.

1000  
1000  
1000

Colbert collection of papers. Several memorials were presented to the king by the procurators for the monastic orders, and replies were made to these in name of the secular clergy. An eager and even rancorous spirit is manifest on both sides, in the conduct of this dispute.

NOTE 184.—Not only the native Indians, but the *mestizos*, or children of a Spaniard and Indian, were originally excluded from the priesthood, and refused admission into any religious order. But by a law issued Sept. 28th, 1588, Philip II. required the prelates of America to ordain such *mestizos* born in lawful wedlock, as they should find to be properly qualified, and to permit them to take the vows in any monastery where they had gone through a regular novitiate. Recopil. lib. i. tit. vii. l. 7. Some regard seems to have been paid to this law in New Spain; but none in Peru. Upon a representation of this to Charles II. in the year 1697, he issued a new edict, enforcing the observation of it, and professing his desire to have all his subjects, Indians and *mestizos* as well as Spaniards, admitted to the enjoyment of the same privileges. Such, however, was the aversion of Spaniards in America to the Indians and their race, that this seems to have produced little effect; for in the year 1725 Philip V. was obliged to renew the injunction in a more peremptory tone. But so unsurmountable are the hatred and contempt of the Indians among the Peruvian Spaniards, that the present king has been constrained to enforce the former edicts anew, by a law published Sept. 11, 1774. Real Cedula, MS. *penes me*.

M. Clavigero has contradicted what I have related concerning the ecclesiastical state of the Indians, particularly their exclusion from the sacrament of the eucharist, and from holy orders, either as seculars or regulars, in such a manner as cannot fail to make a deep impression. He from his own knowledge asserts, "that in New Spain not only are Indians permitted to partake of the sacrament of the altar, but that Indian priests are so numerous that they may be counted by hundreds; and among these have been many hundreds of rectors, canons, and doctors, and, as report goes, even a very learned bishop. At present there are many priests, and not a few rectors, among whom there have been three or four our own pupils." Vol. ii. 348, &c. I owe it therefore as a duty to the public as well as to myself, to consider each of these points with care, and to explain the reasons which induced me to adopt the opinion which I have published.

I knew that in the christian church there is no distinction of persons, but that men of every nation, who embrace the religion of Jesus, are equally entitled to every christian privilege which they are qualified to receive. I knew likewise that an opinion prevailed, not only among most of the Spanish laity settled in America, but among "many ecclesiastics, (I use the words of Herrera, dec. ii. lib. ii. c. 15), that the Indians were not perfect or rational men, and were not possessed of such capacity as qualified them to partake of the sacrament of the altar, or of any other benefit of our religion." It was against this opinion that Las Casas contended with the laudable zeal which I have described in books III. and VI. But as the Bishop of Darien, Dr. Sepulvida, and other respectable ecclesiastics, vigorously supported the common opinion concerning the incapacity of the Indians, it became necessary, in order to determine the point, that the authority of the holy see should be interposed: and accordingly Paul III. issued a bull, A. D. 1537, in

which, after condemning the opinion of those who held that the Indians, as being on a level with brute beasts, should be reduced to servitude, he declares that they were really men, and as such were capable of embracing the christian religion, and participating of all its blessings. My account of this bull, notwithstanding the cavils of M. Clavigero, must appear just to every person who takes the trouble of perusing it; and my account is the same with that adopted by Torquemada, lib. xvi. c. 25, and by Garcia, Orig. p. 311. But even after this decision, so low did the Spaniards residing in America rate the capacity of the natives, that the first council of Lima (I call it by that name on the authority of the best Spanish authors) discountenanced the admission of Indians to the holy communion. Torquem. lib. xvi. c. 20. In New Spain the exclusion of Indians from the sacrament was still more explicit. Ibid. After two centuries have elapsed, and notwithstanding all the improvement that the Indians may be supposed to have derived from their intercourse with the Spaniards during that period, we are informed by D. Ant. Ulloa, that in Peru, where, as will appear in the sequel of this note, they are supposed to be better instructed than in New Spain, their ignorance is so prodigious that very few are permitted to communicate, as being altogether destitute of the requisite capacity. Voy. i. 341, &c. Solorz. Polit. Ind. i. 203.

With respect to the exclusion of Indians from the priesthood, either as seculars or regulars, we may observe, that while it continued to be the common opinion that the natives of America, on account of their incapacity, should not be permitted to partake of the holy sacrament, we cannot suppose that they would be clothed with that sacred character which entitled them to consecrate and to dispense it. When Torquemada composed his *Monarquia Indiana*, it was almost a century after the conquest of New Spain; and yet in his time it was still the general practice to exclude Indians from holy orders. Of this we have the most satisfying evidence. Torquemada having celebrated the virtues and graces of the Indians at great length, and with all the complacency of a missionary, he starts as an objection to what he had asserted, "If the Indians really possess all the excellent qualities which you have described, why are they not permitted to assume the religious habit? Why are they not ordained priests and bishops, as the Jewish and Gentile converts were in the primitive church, especially as they might be employed with such superior advantage to other persons in the instruction of their countrymen?" Lib. xvii. c. 13.

In answer to this objection, which establishes, in the most unequivocal manner, what was the general practice at that period, Torquemada observes, that although by their natural dispositions the Indians are well fitted for a subordinate situation, they are destitute of all the qualities requisite in any station of dignity and authority; and that they are in general so addicted to drunkenness, that upon the slightest temptation one cannot promise on their behaving with the decency suitable to the clerical character. The propriety of excluding them from it on these accounts was, he observed, so well justified by experience, that when a foreigner of great erudition, who came from Spain, condemned the practice of the Mexican church, he was convinced of his mistake in a public disputation with the learned and most religious father D. Juan de Gaona, and his retractation is still extant. Torquemada indeed acknowledges, as M. Clavigero observes, with a degree of

exultation, that in his time some Indians had been admitted into monasteries; but with the art of a disputant he forgets to mention that Torquemada specifies only two examples of this, and takes notice that in both instances those Indians have been admitted by mistake. Relying upon the authority of Torquemada with regard to New Spain, and of Ulloa with regard to Peru, and considering the humiliating depression of the Indians in all the Spanish settlements, I concluded that they were not admitted into the ecclesiastical order, which is held in the highest veneration all over the New World.

But when M. Clavigero, upon his own knowledge, asserted facts so repugnant to the conclusion I had formed, I began to distrust it, and to wish for further information. In order to obtain this I applied to a Spanish nobleman, high in office, and eminent for his abilities, who, on different occasions, has permitted me to have the honour and benefit of corresponding with him. I have been favoured with the following answer: "What you have written concerning the admission of Indians into holy orders, or into monasteries, in Book VIII., especially as it is explained and limited in Note lxxxviii. of the quarto edition, is in general accurate, and conformable to the authorities which you quote. And although the congregation of the council resolved and declared, Feb. 13, A. D. 1682, that the circumstance of being an Indian, a mulatto, or mestizo, did not not disqualify any person from being admitted into holy orders, if he was possessed of what is required by the canons to entitle him to that privilege; this only proves such ordinations to be legal and valid (of which Solorzano and the Spanish lawyers and historians quoted by him, Pol. Ind. lib. ii. c. 29, were persuaded), but it neither proves the propriety of admitting Indians into holy orders, nor what was then the common practice with respect to this; but on the contrary it shows that there was some doubt concerning the ordaining of Indians, and some repugnance to it.

"Since that time there have been some examples of admitting Indians into holy orders. We have now at Madrid an aged priest, a native of Tlascala. His name is D. Juan Cerilo de Castilla Aquihual Catehutle, descended of a cazique converted to christianity soon after the conquest. He studied the ecclesiastical sciences in a seminary of Puebla de los Angeles. He was a candidate, nevertheless, for ten years, and it required much interest before Bishop Abren would consent to ordain him. This ecclesiastic is a man of unexceptionable character, modest, self-denied, and with a competent knowledge of what relates to his clerical functions. He came to Madrid above thirty-four years ago, with the sole view of soliciting admission for the Indians into the colleges and seminaries in New Spain, that if, after being well instructed and tried, they should find an inclination to enter into the ecclesiastical state, they might embrace it, and perform its functions with the greatest benefit to their countrymen, whom they could address in their native tongue. He has obtained various regulations favourable to his scheme, particularly that the first college which became vacant, in consequence of the exclusion of the Jesuits, should be set apart for this purpose. But neither these regulations, nor any similar ones inserted in the laws of the Indies, have produced any effect, on account of objections and representations from the greater part of persons of chief consideration employed in New Spain. Whether their opposition be well founded or not, is a problem difficult to resolve,

and towards the solution of which several distinctions and modifications are requisite.

"According to the accounts of this ecclesiastic, and the information of other persons who have resided in the Spanish dominions in America, you may rest assured that in the kingdom Tierra Firme no such thing is known as either an Indian secular priest or monk; and that in New Spain there are very few ecclesiastics of Indian race. In Peru, perhaps, the number may be greater, as in that country there are more Indians who possess the means of acquiring such a learned education as is necessary for persons who aspire to the clerical character."

NOTE 185.—Uztariz, an accurate and cautious calculator, seems to admit that the quantity of silver which does not pay duty may be stated thus high. According to Herrera there was not above a third of what was extracted from Potosi that paid the king's fifth. Dec. 8, lib. ii. c. 15. Solorzano asserts likewise that the quantity of silver which is fraudulently circulated, is far greater than that which is regularly stamped, after paying the fifth. De Ind. Jure, vol. ii. lib. v. p. 846.

NOTE 186.—When the mines of Potosi were discovered in the year 1545, the veins were so near the surface that the ore was easily extracted, and so rich that it was refined with little trouble and at a small expense, merely by the action of fire. The simple mode of refining by fusion alone continued until the year 1574, when the use of mercury in refining silver as well as gold was discovered. Those mines having been wrought without interruption for two centuries, the veins are now sunk so deep that the expense of extracting the ore is greatly increased. Besides this, the richness of the ore, contrary to what happens in most other mines, has become less as the vein continued to dip. The vein has likewise diminished to such a degree, that one is amazed that the Spaniards should persist in working it. Other rich mines have been successively discovered; but in general the value of the ores has decreased so much, while the expense of extracting them has augmented, that the court of Spain in the year 1736 reduced the duty payable to the king from a *fifth* to a *tenth*. All the quicksilver used in Peru is extracted from the famous mine of Guancabelica, discovered in the year 1563. The crown has reserved the property of this mine to itself; and the persons who purchase the quicksilver pay not only the price of it, but likewise a *fifth*, as a duty to the king. But in the year 1761 this duty on quicksilver was abolished, on account of the increase of expense in working mines. Ulloa, *Entretenimientos*, xii—xv. Voy. i. p. 505, 523. In consequence of this abolition of the *fifth*, and some subsequent abatements of price, which became necessary on account of the increasing expense of working mines, quicksilver, which was formerly sold at eighty pesos the quintal, is now delivered by the king at the rate of sixty pesos. Campomanes, *Educ. Popul.* ii. 132, note. The duty on gold is reduced to a *twentieth*, or five per cent. Any of my readers who are desirous of being acquainted with the mode in which the Spaniards conduct the working of their mines, and the refinement of the ore, will find an accurate description of the ancient method by Acosta, lib. iv. c. 1—13, and of their more recent improvements in the metallurgic art, by Gamboa *Comment. a las ordenanz. de Minas*, chap. 22.

NOTE 187.—Many remarkable proofs occur of the advanced state of industry in Spain at the beginning of the sixteenth century. The number of cities in

Spain was considerable, and they were peopled far beyond the proportion that was common in other parts of Europe. The causes of this I have explained, *Hist. of Charles V.* p. 355. Wherever cities are populous, that species of industry which is peculiar to them increases; artificers and manufacturers abound. The effect of the American trade in giving activity to these is manifest, from a singular fact. In the year 1545, while Spain continued to depend on its own industry for the supply of its colonies, so much work was bespoke from the manufacturers, that it was supposed they could hardly finish it in less than six years. *Campom.* i. 406. Such a demand must have put much industry in motion, and have excited extraordinary efforts. Accordingly, we are informed, that in the beginning of Philip II.'s reign the city of Seville alone, where the trade with America centred, gave employment to no fewer than 16,000 looms in silk or woollen-work, and that above 130,000 persons had occupation in carrying on these manufactures. *Campom.* ii. 472. But so rapid and pernicious was the operation of the causes which I shall enumerate, that before Philip III. ended his reign the looms in Seville were reduced to 400. *Uztariz*, c. 7.

Since the publication of the first edition I have the satisfaction to find my ideas concerning the early commercial intercourse between Spain and her colonies confirmed and illustrated by D. Bernardo Ward, of the Junta de Comercio at Madrid, in his *Proyecto Economico*, part ii. c. i. "Under the reign of Charles V. and Philip II." says he, "the manufacturers of Spain and of the Low Countries subject to her dominion were in a most flourishing state. Those of France and England were in their infancy. The republic of the United Provinces did not then exist. No European power but Spain had colonies of any value in the New World. Spain could supply her settlements there with the productions of her own soil, the fabrics wrought by the hands of her own artizans, and all she received in return for these belonged to herself alone. Then the exclusion of foreign manufactures was proper, because it might be rendered effectual. Then Spain might lay heavy duties upon goods exported to America, or imported from it, and might impose what restraints she deemed proper upon a commerce entirely in her own hands. But when time and successive revolutions had occasioned an alteration in all those circumstances, when the manufactures of Spain began to decline, and the demands of America were supplied by foreign fabrics, the original maxims and regulations of Spain should have been accommodated to the change in her situation. The policy that was wise at one period became absurd in the other."

NOTE 188.—No bale of goods is ever opened, no chest of treasure is examined. Both are received on the credit of the persons to whom they belong; and only one instance of fraud is recorded during the long period in which trade was carried on with this liberal confidence. All the coined silver that was brought from Peru to Porto-bello in the year 1654 was found to be adulterated, and to be mingled with a fifth part of base metal. The Spanish merchants, with sentiments suitable to their usual integrity, sustained the whole loss, and indemnified the foreigners by whom they were employed. The fraud was detected, and the treasurer of the revenue in Peru, the author of it, was publicly burnt. *B. Ulloa Relat. de Manuf. &c.* liv. ii. p. 102.

NOTE 189.—Many striking proofs occur of the scarcity of money in Spain. Of all the immense

sums which have been imported from America, the amount of which I shall afterwards have occasion to mention, *Moneada* asserts, that there did not remain in Spain, in 1619, above two hundred millions of pesos, one half in coined money, the other in plate and jewels, *Restaur. de Espagna*, disc. iii. c. 1. *Uztariz*, who published his valuable work in 1724, contends, that in money, plate, and jewels, there did not remain an hundred million. *Theor. &c.* c. 3. *Campomanes*, on the authority of a remonstrance from the community of merchants in Toledo to Philip III. relates, as a certain proof how scarce cash had become, that persons who lent money received a third part of the sum which they advanced as interest and premium. *Educ. Popul.* i. 417.

NOTE 190.—The account of the mode in which the factors of the South-Sea Company conducted the trade in the fair of Porto-bello, which was opened to them by the *Assiento*, I have taken from Don Dion. Alcedo y Herrera, president of the court of audience in Quito, and governor of that province. Don Dionysio was a person of such respectable character for probity and discernment, that his testimony in any point would be of much weight; but greater credit is due to it in this case, as he was an eye-witness of the transactions which he relates, and was often employed in detecting and authenticating the frauds which he describes. It is probable, however, that his representation, being composed at the commencement of the war which broke out between Great Britain and Spain, in the year 1739, may, in some instances, discover a portion of the acrimonious spirit natural at that juncture. His detail of facts is curious; and even English authors confirm it in some degree, by admitting both that various frauds were practised in the transactions of the annual ship, and that the contraband trade from Jamaica and other British colonies was become enormously great. But for the credit of the English nation it may be observed that those fraudulent operations are not to be considered as deeds of the company, but as the dishonourable arts of their factors and agents. The company itself sustained a considerable loss by the *Assiento* trade. Many of its servants acquired immense fortunes. *Anderson Chronol. deduct.* ii. 388.

NOTE 191.—Several facts with respect to the institution, the progress, and the effects of this company are curious, and but little known to English readers. Though the province of Venezuela, or Caraccas, extends four hundred miles along the coast, and is one of the most fertile in America; it was so much neglected by the Spaniards, that during the twenty years prior to the establishment of the company, only five ships sailed from Spain to that province; and during sixteen years, from 1706 to 1722, not a single ship arrived from the Caraccas in Spain. *Noticias de Real Campania de Caraccas*, p. 28. During this period Spain must have been supplied almost entirely with a large quantity of cacao, which it consumes, by foreigners. Before the erection of the company, neither tobacco nor hides were imported from Caraccas into Spain. *Ibid.* p. 115. Since the commercial operations of the company begun in the year 1731, the importation of cacao into Spain has increased amazingly. During thirty years subsequent to 1701, the number of *fanegas* of cacao (each a hundred and ten pounds), imported from Caraccas was 643,215. During eighteen years subsequent to 1731, the number of *fanegas* imported was 869,247; and if we suppose the importation to be continued in the same proportion during the remainder of thirty years, it will amount to 1,443,746

*fanegas*, which is an increase of 805,531 *fanegas*. Id. p. 148. During eight years subsequent to 1756, there have been imported into Spain by the company 88,482 *arrobas* (each twenty-five pounds) of tobacco; and hides to the number of 177,354. Id. 161. Since the publication of the *Noticias de Campania* in 1765 its trade seems to be on the increase. During five years subsequent to 1769, it has imported 179,156 *fanegas* of cacao into Spain, 36,208 *arrobas* of tobacco, 75,496 hides, and 221,432 pesos in specie. Campomanes, ii. 162. The last article is a proof of the growing wealth of the colony. It receives cash from Mexico in return for the cacao, with which it supplies that province, and this it remits to Spain, or pays out in purchasing European goods. But besides this the most explicit evidence is produced, that the quantity of cacao raised in the province is double to what it yielded in 1731; the number of its live stock is more than treble, and its inhabitants much augmented. The revenue of the bishop, which arises wholly from tithes, has increased from eight to twenty thousand pesos. *Noticias*, p. 69. In consequence of the augmentation of the quantity of cacao imported into Spain its price has decreased from eighty pesos for the *fanega* to forty. Id. 61. Since the publication of the first edition I have learned that Guyana, including all the extensive provinces situated on the banks of the Orinoco, the islands of Trinidad and Margarita, are added to the countries with which the company of Caraccas had liberty of trading by their former charters. Real Cedula, Nov. 19, 1776. But I have likewise been informed that the institution of this company has not been attended with all the beneficial effects which I have ascribed to it. In many of its operations the illiberal and oppressive spirit of monopoly is still conspicuous. But in order to explain this it would be necessary to enter into minute details which are not suited to the nature of this work.

NOTE 192.—This first experiment made by Spain of opening a free trade with any of her colonies, has produced effects so remarkable as to merit some further illustration. The towns to which this liberty has been granted are Cadiz and Seville, for the province of Andalusia; Alicant and Carthagena, for Valencia and Murcia; Barcelona, for Catalonia and Arragon; Santander, for Castile; Corugna, for Galicia; and Gijon, for Asturias. Append. ii. à la Educ. Popul. p. 41. These are either the ports of chief trade in their respective districts, or those most conveniently situated for the exportation of their respective productions. The following facts give a view of the increase of trade in the settlements to which the new regulations extend. Prior to the allowance of free trade, the duties collected in the custom-house at the Havannah were computed to be 104,208 pesos annually. During the five years preceding 1774, they rose at a medium to 308,000 pesos a year. In Yucatan the duties have risen from 8000 to 15,000. In Hispaniola from 2500 to 5600. In Porto Rico from 1200 to 7000. The total value of goods imported from Cuba into Spain was reckoned in 1774 to be 1,500,000 pesos. Educ. Popul. i. 450, &c.

NOTE 193.—The two treatises of Don Pedro Rodriguez Campomanes, *Fiscal del real consejo y Supremo* (an office in rank and power nearly similar to that of Attorney-General in England), and director of the royal academy of history, the one entitled, *Discurso sobre el Fomento de la Industria Popular*; the other, *Discurso sobre la Education Popular de los Artesanos y su Fomento*; the former published in

1774, and the latter in 1775, afford a striking proof of this. Almost every point of importance with respect to interior police, taxation, agriculture, manufactures, and trade, domestic as well as foreign, is examined in the course of these works; and there are not many authors, even in the nations most eminent for commercial knowledge, who have carried on their inquiries with a more thorough knowledge of those various subjects, and a more perfect freedom from vulgar and national prejudices, or who have united more happily the calm researches of philosophy with the ardent zeal of a public-spirited citizen. These books are in high estimation among the Spaniards; and it is a decisive evidence of the progress of their own ideas that they are capable of relishing an author whose sentiments are so liberal.

NOTE 194.—The galeon employed in that trade, instead of the six hundred tons to which it is limited by law, Recop. lib. xlv. l. 15, is commonly from twelve hundred to two thousand tons burden. The ship from Acapulco, taken by Lord Anson, instead of the 500,000 pesos permitted by law, had on board 1,313,843 pesos, besides uncoined silver equal in value to 43,611 pesos more. Anson's Voy. 384.

NOTE 195.—The price paid for the bull varies according to the rank of different persons. Those in the lowest order, who are servants or slaves, pay two reals of plate, or one shilling; other Spaniards pay eight reals, and those in public office, or who hold encomiendas, sixteen reals. Solorz. de Jure Ind. vol. ii. lib. iii. c. 25. According to Chilton, an English merchant who resided long in the Spanish settlements, the bull of Cruzado bore a higher price in the year 1570, being then sold for four reals at the lowest. Hakluyt, iii. 461. The price seems to have varied at different periods. That exacted for the bulls issued in the last *Predicacion* will appear from the ensuing table, which will give some idea of the proportional numbers of the different classes of citizens in New Spain and Peru:—

There were issued for New Spain—

Bulls at 10 pesos each	:	:	:	:	4
at 2 pesos each	:	:	:	:	22,601
at 1 peso each	:	:	:	:	164,220
at 2 reals each	:	:	:	:	2,462,500
					<hr/>
					2,649,325

For Peru—

at 16 pesos 4½ reals each	:	:	:	:	3
at 3 pesos 3 reals each	:	:	:	:	14,202
at 1 peso 5½ reals	:	:	:	:	78,822
at 4 reals	:	:	:	:	410,325
at 3 reals	:	:	:	:	668,601
					<hr/>
					1,171,953

NOTE 196.—As Villa Segnor, to whom we are indebted for this information contained in his *Teatro Americano*, published in Mexico, A. D. 1746, was accomptant-general in one of the most considerable departments of the royal revenue, and by that means had access to proper information, his testimony with respect to this point merits great credit. No such accurate detail of the Spanish revenues in any part of America has hitherto been published in the English language; and the particulars of it may appear curious and interesting to some of my readers:

					Pesos.
From the bull of Cruzado, published every					
two years, there arises an annual revenue					
in pesos	:	:	:	:	150,000

	Pesos.
Brought forward	150,000
From the duty on silver	700,000
From the duty on gold	60,000
From tax on cards	70,000
From tax on Pulque, a drink used by the Indians	161,000
From tax on stamped paper	41,000
From ditto on ice	15,522
From ditto on leather	2,500
From ditto on gunpowder	71,550
From ditto on salt	32,000
From ditto on copper of Mechochan	1,000
From ditto on alum	6,500
From ditto on Juego de los gallos	21,100
From the half of ecclesiastical annats	49,000
From royal ninths of bishoprics, &c.	68,800
From the tribute of Indians	650,000
From Alcavala, or duty on sale of goods	721,875
From the Almajorifasgo, custom-house	373,333
From the mint	357,500
	5,552,680

This sum amounts to 819,161*l.* sterling; and if we add to it the profit accruing from the sale of 5,000 quintals of quicksilver, imported from the mines of Almaden, in Spain, on the king's account, and what accrues from the *Averia*, and some other taxes which Villa Segnor does not estimate, the public revenue in New Spain may well be reckoned above a million pounds sterling money. Teat. Mex. vol. i. p. 38, &c. According to Villa Segnor the total produce of the Mexican mines amounts at a medium to eight millions of pesos in silver annually, and to 5912 marks of gold. Id. p. 44. Several branches of revenue have been explained in the course of the history; some which there was no occasion of mentioning, require a particular illustration. The right to the *tithes* in the New World is vested in the crown of Spain by a bull of Alexander VI. Charles V. appointed them to be applied in the following manner: one fourth is allotted to the bishop of the diocese, another fourth to the dean and chapter, and other officers of the cathedral. The remaining half is divided into nine equal parts. Two of these, under the denomination of *los dos Novenos reales*, are paid to the crown, and constitute a branch of the royal revenue. The other seven parts are applied to the maintenance of the parochial clergy, the building and support of churches, and other pious uses. Recop. lib. i. tit. xvi. Ley, 23, &c. Avendano Thesaur. Indic. vol. i. p. 184.

The *Alcavala* is a duty levied by an excise on the sale of goods. In Spain it amounts to ten per cent. In America to four per cent. Solorzano, Polit. Indiana, lib. vi. c. 8. Avendano, vol. i. 186.

The *Almajorifasgo*, or custom paid in America on goods imported and exported, may amount on an average to fifteen per cent. Recopil. lib. viii. tit. xiv. Ley, 1. Avendano, vol. i. 188.

The *Averia*, or tax paid on account of convoys to guard the ships sailing to and from America, was first imposed when Sir Francis Drake filled the New World with terror by his expedition to the South Sea. It amounts to two per cent. on the value of goods. Avendano, vol. i. p. 189. Recopil. lib. ix. tit. ix. Ley, 43, 44.

I have not been able to procure any accurate detail of the several branches of revenue in Peru later than the year 1614. From a curious manuscript containing a state of that viceroyalty in all its

departments, presented to the Marquis of Montes-Claros by Fran. Lopez Caravantes, accomptant-general in the tribunal of Lima, it appears that the public revenue, as nearly as I can compute the value of money in which Caravantes states his accounts, amounted in ducats at 4*s.* 11*d.* to : 2,372,768  
Expenses of government . . . 1,242,992

Net free revenue 1,129,776

The total in sterling money : : £583,303  
Expenses of government : : 305,568

Net free revenue 277,735

But several articles appear to be omitted in this computation, such as the duty on stamped paper, leather, ecclesiastical annats, &c., so that the revenue of Peru may be well supposed equal to that of Mexico.

In computing the expense of government in New Spain, I may take that of Peru as a standard. There the annual establishment for defraying the charge of administration exceeds one half of the revenue collected, and there is no reason for supposing it to be less in New Spain.

I have obtained a calculation of the total amount of the public revenue of Spain from America and the Philippines, which, as the reader will perceive from the two last articles, is more recent than any of the former.

Alcavalas (excise) and Aduanas (customs), &c., in pesos fuertes	: : : 2,500,000
Duties on gold and silver	: : : 3,000,000
Bull of Cruzado	: : : 1,000,000
Tribute of the Indians	: : : 2,000,000
By sale of quicksilver	: : : 300,000
Paper exported on the king's account, and sold in the royal warehouses	: : : 300,000
Stamped paper, tobacco, and other small duties	: : : 1,000,000
Duty on coinage or, at the rate of one real de la Plata for each mark	: : : 300,000
From the trade of Acapulco, and the coasting trade from province to province	: : : 500,000
Assiento of negroes	: : : 200,000
From the trade of <i>Mathe</i> , or herb of Paraguay, formerly monopolized by the Jesuits	: : : : : 500,000
From other revenues formerly belonging to that order	: : : : : 400,000

Total 12,000,000

Total in sterling money £2,700,000  
Deduct half as the expense of administration, and there remains net free revenue : : : : £1,350,000

NOTE 197.—An author long conversant in commercial speculation has computed, that from the mines of New Spain alone the king receives annually, as his fifth, the sum of two millions of our money. Harris, Collect. of Voy. ii. p. 164. According to this calculation the total produce of the

mines must be ten millions sterling; a sum so exorbitant, and so little corresponding with all accounts of the annual importation from America, that the information on which it is founded must evidently be erroneous. According to Compomanes the total product of the American mines may be computed at thirty millions of pesos, which, at 4s. 6d. a peso, amounts to 7,425,000*l.* sterling, the king's fifth of which (if that were regularly paid) would be 1,485,000*l.* But from this sum must be deducted what is lost by a fraudulent withholding of the fifth due to the crown, as well as the sum necessary for defraying the expense of administration. *Educ. Popular.* vol. ii. p. 131, note. Both these sums are considerable.

NOTE 198.—According to Bern. de Ulloa, all foreign goods exported from Spain to America pay

duties of various kinds, amounting in all to more than 25 per cent. As most of the goods with which Spain supplies her colonies are foreign, such a tax upon a trade so extensive must yield a considerable revenue. *Retablis. de Manuf. & du Commerce d'Esp.* p. 150. He computes the value of goods exported annually from Spain to America to be about two millions and a half sterling. P. 97.

NOTE 199.—The Marquis de Serralvo, according to Gage, by a monopoly of salt, and by embarking deeply in the Manilla trade, as well as in that to Spain, gained annually a million of ducats. In one year he remitted a million of ducats to Spain, in order to purchase from the Condé Olivares, and his creatures, a prolongation of his government, p. 61. He was successful in his suit, and continued in office from 1624 to 1635, double the usual time.

END OF ROBERTSON'S HISTORY OF AMERICA

## ADVERTISEMENT.

---

THE volumes published by Dr. Robertson contain, to use his own words, "The Account of the Discovery of the New World, and of the Progress of the Spanish Arms and Colonies there." This account is brought down to the year 1772. It was his intention to have given a complete history of the whole of America, but his death prevented the fulfilment of his project. The history of Portuguese America and the settlements made in the West India Islands, were totally untouched by him. Of the history of the United States some fragments were discovered after his death, and have uniformly been printed with his History of Spanish America.

The Proprietors have determined to carry into effect the comprehensive history of the New World, contemplated by Dr. Robertson: aware that it is more than ever required at a time when it is fast advancing in a career, which, in all probability, will surpass that of the Old. The work will be compiled from the ample and authentic sources open to them; and in following Dr. Robertson's steps, they will not walk in any hopes of rivalry, but merely collect and arrange, from the most esteemed historians of this country and America, such accounts as have received the public sanction.

The history of the United States of America will be first proceeded with, as well on account of their political importance as of their British origin. The fragments of Robertson bring the history of Virginia down to the year 1688, and the history of New England to 1652. This compilation will commence with a continuation of the latter, as being most necessary to a proper knowledge of the general history of the States; and a separate and succinct account will be given of each of them down to the war which established their grand federative union and independence; a method that will avoid much confusion, and in which they are guided by the principal historians. The history of Massachusetts is placed first, as being the most important State of New England.

# THE HISTORY OF THE UNITED STATES

OF

## NORTH AMERICA.

---

THE histories of Virginia and New England, left by Dr. Robertson, are in an imperfect form, and present only a very small portion of the history of the numerous countries now known as the United States. These fragments contain only a general view of a part of the States, and it may, perhaps, therefore be necessary, in order to give the rise and progress of all of them, to retrace, in some instances, the same period of which Dr. Robertson has given an outline.

### MASSACHUSETTS.

Of the two companies incorporated by King James, an account of the proceedings and dissolution of one, and a history of the colony to the time of Cromwell, will be found in Robertson's narration, whose fragment concludes with stating that the colonists of this settlement declined complying with his desire, that they should remove to the island of Jamaica, which he had taken from the Spaniards.

In 1641, the settlements in New Hampshire had been incorporated with Massachusetts. And, in 1652, the inhabitants of the province of Maine were, at their own request, taken under her protection. This province had been granted to Sir Ferdinand Gorges, who, in 1639, first established a government over it. In 1640 a general court was held at Saco. Upon the death of the proprietor, in 1649, most of the officers whom he had appointed deserted it, and the people found it necessary to resort elsewhere for protection.

In 1656 several Quakers arrived in the colony. In this age of enthusiasts, these sectarians surpassed all others in enthusiasm. Their behaviour was rude, contemptuous, and disorderly. They reviled magistrates and ministers, and entering churches on the sabbath, disturbed the solemnities of public worship. For these offences they were first imprisoned, and then banished. A law was passed prohibiting Quakers from coming into the colony, imposing the penalty of banishment upon the first offence, and of death upon such as should return after banishment. Four, who were so infatuated as to return and obtrude themselves upon the notice of the government, suffered the death which they appeared to seek. This cruel and impolitic law was soon afterwards repealed.

Cromwell, who had governed England with greater ability and higher merit than most of her kings, died in 1658, and after an interval of two years Charles the Second, a prince destitute of honour and virtue, was recalled from exile, and placed upon the throne. He was reluctantly acknowledged by the colonies of New England. They had been the favourites of the parliament and the protector, and apprehended, with good reason, the loss of their civil and religious privileges.

A short time after, Whalley and Goffe, two of the judges who had sentenced Charles the First to be beheaded, having fled before the return of his successor, arrived in New England. Their first place of residence was Cambridge; but they often appeared publicly in Boston, particularly on Sundays and other days of religious solemnities. They had sustained high rank in Cromwell's army, were men of uncommon talents, and, by their dignified manners and grave deportment, commanded universal respect.

As soon as it was known that they were excepted from the general pardon, the governor suggested to the court of assistants the expediency of arresting them. A majority opposed it, and many members of the general court gave them assurances of protection. Considering themselves, however, unsafe at Cambridge, they removed to New Haven, where they were received with great respect by the clergy and magistrates.

After a short residence there, enjoying, in private, the society of their friends, the governor of Massachusetts received a mandate to arrest them. A warrant was immediately issued, authorizing two zealous royalists to search for, and seize them, wherever found, in New England. They hastened to the colony of New Haven, exhibited the warrant to the governor, who resided at Guildford, and requested him to furnish authority and assistants to pursue them. Desirous of favouring the exiles, he affected to deliberate until the next morning, and then utterly declined acting officially without the advice of his council.

In the mean time they were apprized of their danger, and retired to a new place of concealment. The pursuers, on arriving at New Haven, searched every suspected house, except the one where the judges were concealed: this they began to search, but were induced, by the address of the mistress of it, to desist: when the pursuers had departed, the judges, retiring into the woods, fixed their abode in a cave.

Having there heard that their friends were threatened with punishment for having afforded them protection, they came from their hiding place for the purpose of delivering themselves up; but their friends, actuated by feelings equally noble and generous, persuaded them to relinquish their intention. Soon after they removed to Milford, where they remained about two years.

Upon the arrival of other persons, instructed to apprehend them, they repaired privately to Hadley, in Massachusetts, where they resided fifteen or sixteen years, but few persons being acquainted with the place of their concealment. There is in that neighbourhood a tradition, that many years afterwards two graves were discovered in the minister's cellar; and in these, it was supposed, they had been

interred. At New Haven two graves are shown, said to be those of the two judges. It is not improbable that their remains were removed to this place from Hadley.

A singular incident which occurred at the latter place in 1675, shows that one of these illustrious exiles had not forgotten the avocations of his youth. The people, at the time of public worship, were alarmed by an attack from the Indians, and thrown into the utmost confusion. Suddenly a grave, elderly person appeared, differing in his mien and dress from all around him. He put himself at their head, rallied, encouraged, and led them against the enemy, who were repulsed and completely defeated. As suddenly the deliverer of Hadley disappeared. The people were lost in amazement, and many believed that an angel sent from heaven had led them to victory.

Their treatment of the king's judges, and in truth all their conduct, evinced the republican spirit of the colonists. By the royal government of England they could not therefore be regarded with favour. In 1663 it was enacted that no European commodity should be imported into the colonies, unless shipped directly from England, and in British vessels. By this regulation, in connection with others that had been previously made, all the trade of the colonies was secured to the mother country. They submitted reluctantly to these restrictions, and often made them the subject of complaint. But England, believing that they augmented her wealth and power, obstinately refused to repeal them.

In 1664 the king dispatched four commissioners to visit the several colonies of New England, to examine into their condition, to hear and decide complaints, and to make him a report of their proceedings and observations. This measure was dictated by no friendly motive, and was considered by the colonies as a violation of their charters.

The first session of the commissioners was at Plymouth, where but little business was transacted; the next in Rhode Island, where they heard complaints from the Indians, and all who were discontented, and made various determinations respecting titles to land, which were but little regarded. In Massachusetts the general court complied with such of their requisitions as they thought proper; but professing sincere loyalty to his majesty, declined acknowledging their authority, and protested against the exercise of it within their limits.

In consequence of this manly assertion of their chartered rights, an angry correspondence took place between them, at the close of which the commissioners petulantly told the general court, "that they would lose no more of their labours upon them," but would represent their conduct to his majesty.

From Boston the commissioners proceeded to New Hampshire, where they exercised several acts of government, and offered to release the inhabitants from the jurisdiction of Massachusetts. This offer was almost unanimously rejected. In Maine they excited more disturbance. They encouraged the people to declare themselves independent, and found many disposed to listen to their suggestions; but Massachusetts, by a prompt and vigorous exertion of power, constrained the disaffected to submit to her authority.

Connecticut appears to have been the favourite of the commissioners. She treated them with respect, and complied with their requisitions. In return they made such a representation of her merits to the king, as to draw from him a letter of thanks

"Although," says he, "your carriage doth of itself most justly deserve our praise and approbation, yet it seems to be set off with more lustre by the contrary behaviour of the colony of Massachusetts."

At the end of fifty years from the arrival of the emigrants at Plymouth, the New England colonies were supposed to contain one hundred and twenty towns, and as many thousand inhabitants. The acts of parliament not being rigidly enforced, their trade had become extensive and profitable. The habits of industry and economy, which had been formed in less happy times continued to prevail, and gave a competency to those who had nothing, and wealth to those who had a competency. The wilderness receded before adventurous and hardy labourers, and its savage inhabitants found their game dispersed, and their favourite haunts invaded.

This was the natural consequence of the sales of land which were at all times readily made to the whites. But this consequence the Indians did not foresee; and when they felt it in all its force, the strongest passions were awakened which can animate civilized or savage man, the love of country and of independence.

A leader only was wanting to concentrate and direct their exertions, and Philip, of Pokanoket, sachem of a tribe living within the boundaries of Plymouth and Rhode Island, assumed that honourable but dangerous station. His father was the friend, but he had ever been the enemy, of the whites; and this enmity arising from causes of national concern, had been embittered to vindictive hatred by their conduct towards his elder brother. This brother, being suspected of plotting against them, was seized by a detachment of soldiers and confined; and the indignity so wrought upon his proud spirit as to produce a fever that put an end to his life.

Philip inherited the authority and proud spirit of his brother. He exerted all the arts of intrigue and powers of persuasion of which he was master, to induce the Indians, in all parts of New England, to unite their efforts for the destruction of the whites. He succeeded in forming a confederacy, able to send into action between three and four thousand warriors.

The English were apprized of the plots of the Indians, and made preparations to meet their hostilities. They hoped, however, that the threatened storm would pass by as others had, and that peace would be preserved. But the insolence of Philip, and the number of his adherents increased daily; and in June 1675, some of them entered the town of Swanzy, in Plymouth, where, after slaughtering the cattle, and plundering the houses, they fired upon the inhabitants, killing and wounding several.

The troops of that colony marched immediately to Swanzy, and were soon joined by a detachment from Massachusetts. The Indians fled, and marked the course of their flight by burning the buildings, and fixing on poles by the way-side the hands, scalps, and heads of the whites whom they had killed. The troops pursued, but unable to overtake them; returned to Swanzy.

The whole country was alarmed, and the number of troops augmented. By this array of force, Philip was induced to quit his residence at Mount Hope, and take post near a swamp at Pocasset. At that place the English attacked him, but were repulsed. Sixteen were killed, and the Indians by this success were made bolder.

At this time most of the settlements were surrounded by thick forests, and the Indians lived intermixed with the whites. The former were acquainted,

of course, with the dwellings of the latter, with their roads, and places of resort; could watch their motions, and fall upon them in their defenceless and unguarded moments. Many were shot dead as they opened their doors in the morning; many while at work in their fields, and others while travelling to visit their neighbours, or to places of worship. At all times, at all places, in all employments, were their lives in jeopardy; and no one could tell but that in the next moment he should receive his death-shot from his barn, the thicket, or the way-side.

Whenever the enemy assembled in force, detachments were sent against them; if weaker than these, they would retreat; if stronger, assault and conquer them. Defenceless villages were suddenly attacked, the houses burned, and the men, women, and children killed, or carried into captivity. Their ruin was the work of a moment; and when accomplished, its authors vanished.

The colonies, losing individuals, families and villages, found their numbers sensibly diminished; their strength impaired; and began to apprehend even total extinction. Nothing but a vigorous effort could save them. The commissioners met, and determined to dispatch an army of a thousand men to attack the principal position of the enemy. Josiah Winslow, governor of Plymouth, was appointed commander in chief: and a solemn fast, to invoke the divine aid, was proclaimed throughout New England.

On the 18th of December, the different bodies of troops formed a junction at a place in the country of the Narragansets, about fifteen miles from the enemy. The weather was extremely cold, but the men, from necessity, passed the night uncovered in the fields. At dawn of day they began their march, wading through the deep snow, and at one o'clock arrived near the enemy's post, which was upon a rising ground, in the midst of a swamp. It was surrounded by palisades, and on the outside of these was a fence of brush a rod in width.

Here was fought the most desperate battle recorded in the early annals of the country. It continued three hours. The English obtained a decisive victory. One thousand Indian warriors were killed; three hundred more, and as many women and children were made prisoners. But dearly was the victory purchased. Six captains, and eighty men were killed, and one hundred and fifty wounded.

From this blow the confederated Indians never recovered; but they still remained sufficiently strong to harass the settlements by continual inroads. In retaliation the English sent several detachments into their territories, nearly all of which were successful. Captain Church, of Plymouth, and Captain Dennison, of Connecticut, were conspicuous for their bravery and good fortune.

In the midst of these reverses, Philip remained firm and unshaken. His warriors were cut off; his chief men, his wife and family were killed or taken prisoners; and at these successive misfortunes, he is represented to have wept with a bitterness which proved him to possess the noblest of human virtues and affections; but he disdained to listen to any offers of peace. He even shot one of his men, who proposed submission. At length after being hunted from swamp to swamp, he was himself shot by the brother of the Indian he had killed. After his death the remnant of his followers either submitted to the English, or united with distant tribes.

Never was peace more welcome, for never had war been more distressing. The whole population was in mourning for relatives slain. Nearly a thousand

houses had been burned, and goods and cattle of great value had been plundered or destroyed. The colonies had contracted a heavy debt, which, their resources having been so much diminished, they found an almost insupportable burden. But in their deepest distress they forbore to apply to the mother country for assistance; and this omission excited surprise and jealousy. "You act," said a privy councillor, "as though you were independent of our master's crown; and though poor, yet you are proud."

In 1680 New Hampshire, at the solicitation of John Mason, to whose ancestor a part of the territory had been granted, was constituted a separate colony. Massachusetts, apprehending the loss of Maine also, purchased of the heirs of Gorges their claim to the soil and jurisdiction, for twelve hundred and fifty pounds.

The disregard of the acts of trade had given great offence to the mother country, and the governors of New England were peremptorily required to enforce them. But being enacted by a parliament in which the colonies were not represented, they were regarded as violations of their rights, and continued to be evaded with impunity. Edward Randolph was therefore sent over, commissioned as inspector of the customs in New England. He was also the bearer of a letter from the king, requiring that agents should be sent to the court of London, fully empowered to act for the colonies.

It was well understood to be the intention of the king to procure from the agents a surrender of the charters, or to annul them by a suit in his courts, that he might himself place officers over the colonies who would be subservient to his views. The inhabitants of Massachusetts felt that to be deprived of their charter, which secured to them the right of self-government, would be the greatest of calamities; and their agents were instructed, in no emergency, to surrender it. This being known to the king, a prosecution was instituted against the corporation, and in 1684 a subservient court decreed that the charter should be cancelled.

All impediments to the exercise of the royal will being thus removed, King James established a temporary government over the colony, first appointing Joseph Dudley, and, in 1686, Sir Edmund Andros, governor. This latter appointment caused the most gloomy forebodings. Sir Edmund had been governor of New York, and it was known that his conduct there had been arbitrary and tyrannical.

Having secured a majority in the council, he assumed controul over the press, appointing Randolph licenser. He established new and oppressive regulations concerning taxes, public worship, marriages, and the settlement of estates. He, and by his permission, his subordinate officers, extorted enormous fees for their services. He declared that the charter being cancelled, the old titles to land were of no validity, and compelled the inhabitants, in order to avoid suits before judges dependent on his will, to take out new patents, for which large sums were demanded.

The hatred of the people was excited in proportion to their sufferings. In the beginning of 1689, a rumour reached Boston, that William Prince of Orange had invaded England, with the intention of dethroning the king. Animated by the hope of deliverance, the people rushed spontaneously to arms, took possession of the fort, seized Andros, Randolph, and other obnoxious persons, and placed them in confinement. A council of safety, consisting of their former magistrates, was then organized, to administer

the government until authentic intelligence should be received from England.

In a few weeks a ship arrived, bringing the glad tidings that William and Mary were firmly seated on the throne. They were immediately proclaimed in all the colonies with unusual rejoicings. The people of Massachusetts applied for the restoration of their old, or the grant of a new charter. A definite answer was deferred, but the council was authorized to administer the government, according to the provisions of the old charter, until further directions should be given. Andros, Randolph, and others, were ordered home for trial.

In this unsettled state of the country, the French in Canada and Nova Scotia instigated the northern and eastern Indians to commence hostilities against the English settlements. Dover and Salmon Falls, in New Hampshire; Casco, in Maine; and Schenectady, in New York; were attacked by different parties of French and Indians, and the most shocking barbarities perpetrated on the inhabitants.

Regarding Canada as the principal source of their miseries, New England and New York formed the bold project of reducing it to subjection. By great exertion they raised an army, which, under the command of General Winthrop, was sent against Montreal, and equipped a fleet, which, commanded by Sir William Phipps, was destined to attack Quebec.

Both returned unsuccessful, disappointing the sanguine hopes of the people, and burdening them with a debt which they had not the means of discharging. To pay off her troops, Massachusetts put in circulation bills of credit, or paper money, an expedient which was afterwards often resorted to, and though it afforded relief at the moment, produced in its consequences extensive and complicated mischief.

In the mean time a new charter had been granted to Massachusetts, which added Plymouth, Maine, and Nova Scotia, to her territory. The only privilege it allowed to the people was the choice of representatives. These were to elect a council, and both bodies were to constitute the legislative power.

It reserved to the king the right of appointing the governor and lieutenant-governor. To the governor it gave the power of rejecting laws, of negating the choice of councillors, of appointing all military and judicial officers, of adjourning and even of dissolving the assembly at pleasure. Laws, although approved by him, might be abrogated by the king, within three years after their enactment.

The king, to render the new charter more acceptable, appointed Sir William Phipps, a native of the province, governor, and in 1692 he arrived at Boston. The new government went into operation without any opposition from the inhabitants; and almost the first act of Sir William Phipps and his council was the institution of a court to try the unfortunate victims of popular delusion, accused of witchcraft, at Salem.

The belief in this supposed crime had been so prevalent in England, that parliament had enacted a law punishing it with death. Under this law, multitudes had been tried and executed in that country, and two or three in Massachusetts, some of whom acknowledged they were guilty. Accounts of these trials and confessions, and particularly of some trials before Sir Matthew Hale, a judge revered in the colonies, had been published and distributed throughout the country. They were read in a time of great distress and gloom by a people naturally sedate, and accustomed to regard with awe the surprising and

unaccountable incidents and appearances which, in this new world, were often presented to their contemplation.

In February, 1692, a daughter and a niece of Mr. Paris, the minister of Salem, were afflicted with disorders affecting their bodies in the most singular manner. The physicians, unable to account for their contortions, pronounced them bewitched; and the children, hearing of this, declared that an Indian woman, who lived in the house, was the cause of their torments. Mr. Paris concurred with the physicians. Several private fasts were kept at his house, and the gloom was increased by a solemn fast throughout the colony.

The Indian woman confessed herself guilty. The children were visited, noticed, and pitied. This encouraged them to persevere, and other children, either from sympathy or the desire of similar attentions, exhibited similar contortions. A distracted old woman, and one who had been a long time confined to her bed, was added to the list of the accused; and, in the progress of the infatuation, women of mature age united with the children in their accusations.

The accused were multiplied in proportion to the accusers. Children accused their parents, and parents their children. A word from those who were supposed to be afflicted occasioned the arrest of the devoted victim; and so firmly convinced were the magistrates that the prince of darkness was in the midst of them, using human instruments to accomplish his purposes, that the slightest testimony was deemed sufficient to justify a commitment for trial.

The court, specially instituted for this purpose, held a session in June, and afterwards several others, by adjournment. Many were tried, and received sentence of death. A few pleaded guilty. Several were convicted upon testimony, which, at other times, would not have induced suspicion of an ordinary crime, and some upon testimony retracted after conviction. Nineteen were executed, and many yet remained to be tried.

At this stage of the proceedings the legislature established, by law, a permanent court, by which the other was superseded, and fixed a distant day for its first session, at Salem. In the mean time the accusations multiplied, and additional jails were required to hold the accused. The impostors, hardened by impunity and success, ascended from decrepid old women to respectable characters, and at length, in their ravings, named ministers of the gospel, and even the wife of the governor.

The community were thrown into consternation. Each felt alarm for himself, his family, and his friends. The shock roused them to reflection. They considered more closely the character of the accusers; the nature of the alleged crime; the testimony often contradictory and never explicit; and more than all these, the high standing of some who were implicated; and began to doubt whether they had not been too credulous and precipitate.

At the next term the grand jury found indictments against fifty; but on trial all were acquitted except three, and those the governor reprieved. He also directed that all who were in prison should be set at liberty. A belief, however, of the truth of the charges still lingered among the people, and prevented any prosecution of the impostors. That all were impostors, cannot be believed. Many must have acted under the influence of a disordered imagination, which the attendant circumstances were well calculated to produce.

Besides establishing courts of justice, the legisla

ture, at its first session under the new charter, passed a law which indicates the same independent spirit that afterwards resisted the usurpations of the British parliament. It provided that no tax should be imposed upon any of his Majesty's subjects, or their estates, in the province, but by the act and consent of the governor, council, and representatives of the people, in general court assembled. It is almost superfluous to say that this law was disallowed by the king.

The war with the French and Indians, which began in 1690, was not yet terminated. For seven years were the frontier settlements harassed by the savages; and the English employed in expeditions against them. A history of these would consist only of repeated accounts of Indian cunning and barbarity, and of English enterprize and fortitude.

The peace of Ryswick was proclaimed in Boston, December 10, 1697. The war with the Indians did not immediately cease. The beginning of the next year, they shewed themselves at Kittery, where they killed an old man; and at the same time they carried away three persons from York. In July, they appeared upon the western frontier and took three or four prisoners at Hatfield: but the French no longer daring to afford them assistance, they spent the rest of the year in contriving a peace. Upon intimations given by the Indians to any of the forts or outposts that they were disposed to peace, the English were very ready to embrace the offer. The principal object was the recovery of the captives, which at the end of the war had generally been numerous. In October, Major Convers and Captain Alden were sent to Penobscot to settle preliminaries; one of which was to be the release of all prisoners, but no more could be obtained, on this head, than a promise to return all such as desired it; the Indians refused to compel any who inclined to remain with them. In the winter, John Phillips, Esq., of the council, with Major Convers, and Cyprian Southack, commander of the province galley, went with full powers to conclude a treaty. The Indians were not very nice in acknowledging their perfidy in such terms as the English prepared for them, and made such submissions and promises of future fidelity as were desired. The treaty was in the same terms with that in 1693. Several captives were restored, and others were promised in the spring; but many remained, males and females, who mingled with Indians, and contributed to promote a succession of savages to exercise cruelties upon the English frontiers, in future wars, and perhaps upon some of their own relations.

The leaving bounds to be settled between the English and French, upon the continent, by commissaries, and the ambiguous terms made use of in treaties (perhaps artfully introduced by the French) have ever been the causes of new disputes between the two crowns; and, in one instance at least, very soon brought on a new war. The peace of Ryswick was scarcely proclaimed in New England, when the inhabitants were made sensible of the designs of the French to make themselves sole proprietors of the fishery, and to restrain the English from the possession of any part of the country contained in the Massachusetts charter to the eastward of Kennebeck. It was understood by the English court, that by the treaty of Ryswick, all the country westward of St. Croix was to remain to the English, as being within the bounds of the province of Massachusetts-Bay. The French court, immediately after the treaty, asserted an exclusive right to the fishery

upon the sea coasts and to all the inland country. A French man of war, bound from France to Port royal, met one of the fishing vessels off Cape Sabels, sent for the skipper to come on board, and caused to be translated and read to him in English an order of the French king for seizing all English vessels found fishing on the coasts, and told him to give notice of this order to all other vessels. Villebon, governor of St. John's river, writes, soon after, to Mr. Stoughton, that he had orders, from the French king, his master, to take possession of, and defend the whole country as far as Kennebeck.

The Norridgewock Indians, this year also, built a church, at their chief settlement upon Kennebeck river, which was complained of by the Massachusetts' government as a French encroachment; but we know not for what reason, except their having a French man for their priest can be thought one.

Representations were made to the ministry, and the right of the English to the eastern country, as far as St. Croix, was insisted upon. The Lords of trade wrote thus to the Earl of Bellamont. "As to the boundaries, we have always insisted and shall insist upon the English right as far as the river St. Croix; but in the mean while, in relation to the encroachments of the French and their building a church on Kennebeck river, that seems to us a very proper occasion for your Lordship's urging the general assembly of the Massachusetts-Bay to rebuild the fort at Pemaquid, which they ought to have done long ago, and thereby they might have prevented this and many other inconveniences."

The French persisted in their molestations of the English fishermen, and there seems to have been no great concern about it in the English ministry; other greater affairs, in difference between the two crowns, engaged the attention, and brought on a new war; and it was well they did, for it seems very probable that this dispute about the fishery would not have made a breach; but if peace had continued, the French would have excluded the English, and this valuable branch once lost, might never have been recovered.

King James, always under the influence of France, had relinquished his right to Acadia or Nova Scotia; and although his governor (Andros) for the short time the king remained afterwards upon the throne, retained the possession of Pemaquid, and challenged a right to St. Croix; and although the friendship between the two monarchs might prevent any severity upon the English fishermen, yet the French insisted upon their right both to the country and coasts. The war, upon the revolution, suspended the dispute about title. At the treaty of Ryswick, England was not disposed to urge any points which would retard the peace; and the French immediately after renewed the same claim they had made under King James.

Lord Bellamont arrived at Boston from New York, May 26, 1699. A nobleman at the head of the government was a new thing. All ranks of people exerted themselves to show him respect, and the appearance was so pompous, that his lordship thought it gave him good reason to expect a very honourable support from a province so well stocked with inhabitants, and in a state of so much affluence. He took every method to ingratiate himself with the people. He was condescending, affable, and courteous upon all occasions. He professed to be of the most moderate principles in religion and government; although a churchman, yet far from the high church, and he attended the weekly lecture at Bos-

ton with great reverence, and professed great regard and esteem for the preachers. He avoided all unnecessary contests with private persons, or with either branch of the legislature. His inclination led him to Mr. Dudley's enemies, but he did not neglect those who were friendly and attached to him. There was perfect harmony in the general court whilst he presided. There was something singular and unparliamentary in his form of proceeding in council; for he considered himself as at the head of the board in their legislative, as well as executive capacity. He concerned himself in all their debates, proposed all business, and frequently recommended to them to resolve into a committee upon bills or clauses in bills, and then, as the entries stand, he left the chair, and the committee (being ready to report) reassumed; nor did he think it proper they should act as a house of parliament in his absence; but when detained at home, by messages from time to time, directed their going into a committee and preparing business against such time as he should be able to attend. This was guiding them in all their debates and resolves, as far as his influence would extend, which was not a little way; and yet, afterwards, as a separate branch, he had his negative upon all their proceedings which were not according to his mind. This irregularity does not seem to be the mere effect of his lordship's authority and influence over the council. The constitution under the new charter was not settled. They came off by degrees from their practice under the old charter. The governor, created by the people, used then to vote with the assistants; and although he had no negative, yet he had a casting voice. Lord Bellamont finding this to have been the practice, and considering how much it increased his share in all acts of government, might be disposed to retain it. Experience taught, what was not at first conceived, the great difference between the privilege of proposing or originating and that of rejecting. In some succeeding administrations, it has given cause of exception and complaint when the governor has interested himself in the debates of the council, to influence their determinations and abridge them of that freedom, to which they are equally entitled with the other branches of the legislature. He was the first governor who imitated the lord lieutenant of Ireland in formal speeches, as the king's representative, to the two houses of parliament; copies of which were delivered to the speaker, and afterwards printed. Extracts from one or two, shew they were calculated *ad captandum*. The unfavourable sentiments of the inhabitants in general, of the reign of the Stuarts, were well known to him; no subject could be more engaging than a censure upon that family. He concludes his first speech, which is a very long one, in this manner: "I should be wanting to you and myself too, if I did not put you in mind of the indispensable duty and respect we owe the king, for being the glorious instrument of our deliverance from the odious fetters and chains of popery and tyranny, which has almost overwhelmed our consciences and subverted all our civil rights. There is something that is godlike in what the king hath done for us. The works of redemption and preservation come next to that of creation. I would not be misunderstood, so as to be thought to rob God of the glory of that stupendous act of his providence, in bringing to pass the late happy and wonderful revolution in England. His blessed work it was, without doubt, and he was pleased to make king William, immediately, the author and instrument

of it. Ever since the year 1602, England has had a succession of kings, who have been aliens in this respect, that they have not fought our battles nor been in our interests, but have been, in an unnatural manner, plotting and contriving to undermine and subvert our religion, laws, and liberties, till God was pleased, by his infinite power and mercy and goodness, to give us a true English king, in the person of his present majesty, who has, upon all occasions, hazarded his royal person in the fronts of our battles, and where there was most danger; he has restored to our nation the almost lost character of bravery and valour; and, what is most valuable of all, his majesty is entirely in the interest of his people. It is therefore our duty and interest to pray to God, in the most fervent manner, that he would bless our great king William with a long and prosperous reign over us, to which I am persuaded, you that are present and all good people will heartily say amen."

His last speech had expressions, strong enough, upon the same strain. "The parting with Canada to the French, and the eastern country called Acadia or Nova Scotia, with the noble fishery on that coast, were most execrable treacheries to England, and intended, without doubt, to serve the ends of popery. It is too well known what interest that king favoured who parted with Nova Scotia, and of what religion he died."

By avoiding offence to particular persons, and by a general conformity to the cast or prevailing disposition of the people, his lordship obtained a larger sum as a salary and gratuity, not only than any of his predecessors, but also than any who succeeded him, when the inhabitants were more numerous and more opulent, and money compared with the necessities of life had become less valuable; for he remained but fourteen months in the province, and the grants made by the general court amounted to 2500*l.* lawful money, or 1875*l.* sterling.

His time was much taken up in securing the pirates and their effects, which, as was supposed, was the great inducement with the king to send him to America. Before his arrival in Boston, several suspected persons had been seized. After thirty or forty years indulgence, there succeeded a general abhorrence of buccaneering; and the buccaneers, or freebooters, were hunted from one colony to another. A large sum of money was seized in the possession of one Smith, part of it foreign coins and the impressions unintelligible; and he was brought upon trial, but the evidence produced being insufficient to satisfy the jury, he was acquitted.

About the same time one Bradish was apprehended. He had been boatswain's mate of a ship fitted out by merchants and tradesmen of London to India, in the interloping trade. The crew turned pirates; and, having left the master ashore at Polonais, gave the command to Bradish. They came to America, and lodged large sums of money and goods with persons upon Long Island and other places within and near to the government of New York, and then dispersed; some to Connecticut, others to Massachusetts, where Bradish was taken and others of his crew, and sent to England. The vigilance used in pursuing and apprehending them, appears from the account Mr. Stoughton transmitted to the secretary of state. But Kidd was his lordship's chief object. His own reputation and that of several of his friends depended upon his seizure, that being the only effectual way of removing the jealousies and unjust surmises, not only against several of the

ministry, out even against the king himself. In order to suppress the piracies committed by English subjects in India, &c., it was thought proper to fit out a ship for that special purpose. Lord Rumney, Sommers and others, became adventurers, to the amount of six thousand pounds sterling, and a grant was made to them of all captures, saving one-tenth only reserved to the king. Lord Bellamont seems to have had the principal direction. Upon enquiry for a proper commander, Mr. Livingstone, a principal inhabitant of New York, being then in London, recommended Kidd, who had sailed out of New York, and having a family there, no question was made of his attachment to it, and there was no suspicion of his ever turning pirate himself. From London he went first to New York, where he broke through the instructions he had received, shipping his men upon new terms; and when he arrived in India, not only connived at and suffered to continue, a known pirate vessel, but committed divers alarming acts of piracy himself, to the endangering the amity subsisting between the East India Company and the princes in that part of the world. The least said by the enemies of the administration was, that from a greedy desire of gain, an ill-judged measure had been engaged in, which would be attended with very mischievous consequences, and the malice of some insinuated a criminal intention in the undertaking.

Where Kidd would seek an asylum was uncertain. Strangely infatuated, he came from Madagascar to Boston, and made a bold open appearance there, July 1, this year, and some of his crew with him. On the 3rd he was sent for by the governor and examined before the council. What account he could give of himself does not now appear, but he was not immediately committed, and only ordered to draw up a narrative of his proceedings; which neglecting to do in the time assigned him, on the 6th he was apprehended and committed to prison. Being a very resolute fellow, when the officer arrested him in his lodgings, he attempted to draw his sword, but a young gentleman, who accompanied the officer, laying hold of his arm, prevented him, and he submitted. Several of his men were secured at the same time, and advice having been sent to England, it was thought an affair of so much importance, that a man of war was sent to carry them there; where Kidd, Bradish, and divers others were condemned and executed. The party writers in England pretended, that after Kidd's arrival he had assurance from some anti-courtiers, who examined him in prison, that his life should be spared if he would accuse his employers, but that he was not bad enough to comply with such a proposal.

Lord Bellamont held two sessions of the general court this year; the first, the anniversary for the election of councillors, the latter the 31st of March following, occasioned by a general rumour through the colonies, that the Indians (from all quarters, not only those upon the frontiers, but those who were scattered through the towns in the several colonies) had united and agreed, at an appointed time, to fall upon the English in order to a total extirpation. The Indians were no less alarmed with a report that the king had withdrawn his protection from them, and ordered his subjects to unite in their destruction. These reports were supposed to have been raised by evil-minded persons among the English or Dutch; but it is more probable, the Indians of the six nations, to obtain the presents which accompanied all treaties between the English and

them, were the contrivers and managers of the whole affair. (1699.) Such was the consternation in the Massachusetts, that several acts passed the general court for levying soldiers; for punishing mutiny and desertion; or holding all the militia in readiness to march; and for enabling the governor to march them out of the province, which, by charter, he was restrained from without an act of assembly. As it happened, there was no occasion for carrying these laws into execution; the general terror subsiding soon after.

Soon after the session of the general court in May 1700, Lord Bellamont took his leave of the Massachusetts, and went to New York, where he died the 5th of March following. Mr. Stoughton took the chair again, with reluctance. His advanced age and declining state of health made him fond of ease and retirement.

As soon as the news of the governor's death reached England, Mr. Dudley renewed his solicitations with fresh vigour, for a post which he never lost sight of. By the interest of Lord Cutts, and the condescension of Lord Weymouth, whose son-in-law was a competitor, he was chosen member for Newtown in Southampton county, in King William's last parliament. This, with the place of lieutenant-governor of the Isle of Wight, was to be preferred to all he could expect in New England, if it had not been his native country; but he had a passion for laying his bones there, which equalled that of the ancient Athenians, and which he could not help mentioning to every New England man who paid him a visit; as many frequently would do, from Portsmouth, where they were often detained for convoy.

(1701.) When Sir Richard Onslow and Mr. Harley were competitors for the Speaker's place, his inclination led him to the latter, from whom he had received favours; but his favourite object, which he was then pursuing, obliged him to comply with the court and vote for the former. He made use of the dissenting interest in England to obtain his commission, and to recommend him to his countrymen upon his arrival. There was another difficulty still remaining; the king was not willing to appoint a governor, who he knew had been very obnoxious to the people. A petition was therefore procured from such persons belonging to the Massachusetts as were then in London, and from the principal New-England merchants, praying that Mr. Dudley might be appointed governor. He had also the address to reconcile himself to Mr. Mather the younger, and to obtain from him a letter favouring his cause, which he made known to the king, and which removed his objection; and although Lord Cornbury, a near relation of the Queen and the Princess Ann, being appointed for New York, expected Massachusetts also, yet Mr. Dudley prevailed; and his commission passed the seals. The king's death, a few months after, caused him the trouble of taking out a new commission from the queen, but he had the unusual favour shown him of remitting most if not all the fees.

Whilst these things were transacting in England, the lieutenant-governor, Mr. Stoughton, died, in May (1702), at his house in Dorchester. The administration for the first time devolved upon the council. Some manuscript minutes and letters, which we have seen, about the time and after the settlement of the charter, take it for granted, that upon the death or absence of the governor and lieutenant-governor, the senior counsellor would preside, and an instruction

from the crown has been given for that purpose; but the expression in the charter, if it will admit of this construction, does not favour it: we must not wonder, therefore, that twenty-seven counsellors did not readily give up their share in the administration to him that happened to be the eldest. It is a defect in the constitution, for although, for certain purposes, seven counsellors make a quorum, yet in all acts, as commanders in chief, it has been judged necessary that fifteen (or a majority of the whole number) should give their consent. This must be extremely inconvenient, especially in time of war, when despatch often, and secrecy sometimes, are of great importance.

Mr. Stoughton's father was esteemed by the people; was commander in chief of the forces of the colony in the first war against the Pequod Indians, and after that many years a magistrate; and of a considerable estate for those times. This circumstance caused his own natural endowments, which were cultivated and improved by the best education the country afforded, to be more observed and valued. He was, in early life, a candidate for the ministry; but the people judged him proper to take his father's place as a magistrate; then employed him as their agent in England; and urged him a second time to engage in the same service. It is no blemish in his character that he had many opposers. Every man, who makes it more his aim to serve than to please the people, may expect it. From the observations he made in his agency, he was convinced it was to no purpose to oppose the demands of King Charles; and from the example of the corporations in England, he was for surrendering the charter rather than to suffer a judgment or decree against it. In such case a more favourable administration might be expected to succeed it, and in better times there would be a greater chance for re-assuming it. He consented to act as one of the council under Sir Edmund Andros, in hopes, by that means, to render the new form of government more easy. By this step he lost the favour of the people, and yet did not obtain the confidence of the governor, who would willingly have been rid of him, seldom consulted him, and by the influence he had over the majority of the council, generally carried the votes against his mind. He joined upon the revolution with the old magistrates, who made no scruple of receiving him, in re-assuming the government; but upon the election afterwards made by the people he did not obtain a vote. At the desire of the council and representatives he drew up a narrative of the proceedings of Sir Edmund and his accomplices, signed by him and several others of the council; in which they modestly take exception to many things in the administration, and exculpate themselves from any share in them. He was nine years lieutenant-governor, and six of them commander in chief; had experienced the two extremes of popular and absolute government; and not only himself approved of a mean between both, but was better qualified to recommend it, by a discreet administration, to the people of the province. He died a bachelor. Instead of children, he saw, before his death, a college reared at his expense, which took the name of Stoughton-hall. He had good reason to think it would transmit a grateful remembrance of his name to succeeding ages.

Sir Henry Ashurst and Constantine Phipps had continued agents for the province, in England, for ten years together. Divers attempts had been made by Mr. Mather's friends to send him again to Eng-

land in the service of the province; and after Mr. Stoughton's death the two houses came to a resolution to choose some person in the province, and send him to England as their agent; and a great interest was made that Mr. Mather might be the man; but it happened that Mr. Cooke, who had not forgot their former difference when joint agents, stood as well with the assembly at this time as he had ever done, and had influence enough to prevent Mr. Mather from succeeding. The choice fell upon Waitstill Winthrop, grandson to the first governor of the Massachusetts, and son to the first governor of Connecticut, and who, either out of respect to his family or for some other reason which does not now appear, was considered as president of the council, although there were many who, by priority of appointment, the rule generally observed, should have preceded him.

The French claim to the country east of the river Kennebeck, and to an exclusive fishery upon the sea coast, were the reasons publicly assigned for the choice of an agent at this time, and an address to the king had passed the council and assembly, and Mr. Winthrop's instructions were prepared. These proceedings of the French were really alarming. The professed reasons, however, were not the true reasons. Mr. Dudley's solicitations for the government were known, and although his interest in the province was increasing, yet a majority of the court had a very ill opinion of him. Mr. Winthrop was a good sort of man, and although he was of a genius rather inferior to either of his ancestors, yet he was popular, and the party against Mr. Dudley wished to have him governor. They flattered themselves that his being acceptable to the country would, together with his family and his estate, both which were of the first rate, be sufficient to recommend him, but they were mistaken. Winthrop was a plain honest man. Dudley had been many years well acquainted with the customs and manners of a court, and would have been more than a match for him. Just as he was about to embark, news came that Mr. Dudley was appointed governor, and Thomas Povey lieutenant-governor. The reason of Mr. Winthrop's appointment to the agency immediately appeared. The vote for his instructions was reconsidered, and his voyage laid aside. It was thought proper, however, that the address to the king should be forwarded. This was sent to Mr. Phipps. A second address accompanied it, occasioned by advice of a bill being brought into the House of Lords for dissolving charter governments. It is not probable that the Massachusetts charter was the special occasion of this bill. It differs so little from the commissions in the royal governments, as they are called, as not to be worth notice. About this time, or a little before, the spirit against the king had caused the re-assumption of many grants which he had made of private estates. If there was a special prejudice against colony charters, it is probable the charter to Pennsylvania was the most exceptionable. The proprietor was obnoxious, had absconded a few years before upon a suspicion of treasonable practices, and was still under a cloud. The Massachusetts instructed their agents as follows: "As to the bill said to be lying before the House of Lords, for the dissolving charter governments in the plantations, we intreat you to be very watchful in that matter, and use utmost diligence, by all convenient means, to prevent our being comprehended in or concluded by the same. Our circumstances are different from those of other plantations under charter government, our

first settlement being wholly at our own cost and charge, and by our present settlement we are already reduced to a more immediate dependence on the crown, his majesty having reserved to himself the nomination of our governor, lieutenant governor, and secretary, and a negative on our laws." In their address to the king they thus express themselves:—"And forasmuch as we are given to understand that, through the suggestions of some persons not well affected to charter governments, a bill has been preferred in the House of Lords for vacating charter and proprietary governments within your majesty's plantations, we in all submission crave leave humbly to pray your majesty's grace and favour towards your good subjects within this your province, that no such suggestions may make an impression in your royal breast to deprive us of those privileges which we enjoy under your majesty's most gracious grant, and that we may not be included in any such act to our prejudice, without having opportunity given us of being heard and speaking for ourselves." The bill was dropped in the House of Lords, and a war with France being every day expected, the longest sword was to determine the points complained of in the first address.

The sending these addresses to Phipps was grievous to Ashurst. Although he had not very shining talents, yet being a member of parliament, having a great family interest, and being an honest man and conscientious in the discharge of his trust, he had been very serviceable to the province. He had, however, the fate of most agents. As soon as the party against him found they were strong enough they left him out of the agency, and he made frequent complaints that they had slighted his services and neglected giving him an adequate reward. All the agents who had been employed before him, except Mr. Winslow, were unsuccessful; and several, probably for that reason, thought unfaithful. The first who were employed were Weld, Peters, and Hibbins, in 1640. They borrowed money for the service of the colony, and proper care not being taken by the government for the payment, these agents for several years after, were contending about the proportion in which they should pay it themselves.—Winslow, who went over in 1646, soon found more profitable employment, but his allowance was so scant from the colony, that the corporation for propagating the gospel among the Indians allowed him 130*l.* sterling for promoting that design, but wrote to the government that it ought to be restored. Bradstreet and Norton were sent in 1660. Norton laid the reproaches he met with so much to heart as to affect his health and shorten his life. In 1677, Stoughton and Bulkley were employed, and soon after their return it was said by those who charged Bulkley with too great compliance with court measures, that his sun set in a cloud. He died of melancholy. Stoughton was reproached, and although he had a majority of the court in his favour, he could not be prevailed on to risk his reputation a second time. Dudley and Richards were the next, in 1682. The former managed the whole business, and bore the whole blame, but being of a very different temper from some of his predecessors, instead of laying to heart the slight of his countrymen, he was politic enough to improve frowns at home to procure favours from abroad. Mather, Cooke, and Oakes were employed to solicit the restoration of the first charter. In this they failed. Mather without the consent of his brethren accepted the present charter, and although, at first, a majority of the court acknowledged

his merit, the opposite party soon after prevailed, and he failed of his expected reward, and complained all his life of the ingratitude of his countrymen, after having spent not only his time but part of his estate in public service. We would draw a veil over our transactions relative to agents, if the obligations due to truth would permit. Errors and failings, as well as laudable deeds, in past ages, may be rendered useful, by exciting posterity to avoid the one and to imitate the other.

*From the arrival of Governor Dudley, in 1702, to the arrival of Governor Shute, in 1716.*

Mr. Dudley was received with ceremony and marks of respect, even by those who had been his greatest opposers in the reign of King James. Winthrop, Cooke, Hutchinson, Foster, Addington, Russell, Phillips, Browne, Sargent, and others, who had been of the council which committed him to prison, where he lay twenty weeks, were of the council when he arrived. Upon such political changes a general amnesty is oftentimes advisable and necessary.

The affront and insult shown by Louis XIV., not only to the prince upon the throne, but to the English nation, in proclaiming another person king, had rendered a war with France inevitable, before the governor left England. The news of its being proclaimed arrived in a few weeks after him. Nothing less could be expected than a war with the Indians also. Ever since the peace, in 1698, the governor of Canada, by his emissaries, had been continually exciting them to hostilities; and justified himself upon this principle, that the Indians having cast themselves upon the French long since, as their protectors, and being proprietors of the eastern country, where the English had usurped a jurisdiction, which as far westward as Kennebeck rightfully belonged to the French, the English therefore were to be considered as intruders and invaders upon the jurisdiction of the French and upon the property of the Indians.

The governor, the first summer, visited all the eastern frontiers as far as Pemaquid; taking such gentlemen of the general court with him as he thought proper; met the delegates from the Indian tribes, and confirmed the former treaties which had been made. He had recommended, in his first speech to the assembly, the rebuilding the fort at Pemaquid; and the gentlemen who accompanied him east reported in favour of it, and their report was accepted by the council; but the house continued of the same mind they had formerly been, urging that all the money they could raise would be wanted for other services more necessary than that, and refused to comply with the governor's proposal. His heart was set upon it; the ministry continued their prejudice in favour of this particular spot, and it is not improbable that he had given himself encouragement he should be able to carry a point, which his predecessors could not, and therefore was the more mortified at the failure.

The Indians, upon the Massachusetts frontiers, continued quiet this year, but the Nova-Scotia Indians seized three of the fishing vessels belonging to this province, upon a report that war was declared. The council attempted to recover them, and by the interposition of Bruillon, governor of Nova Scotia, two, if not the third, were restored.

(1703.) At the first election Mr. Dudley treated the house more cavalierly than Sir William Phipps or Lord Bellamont had ever done. After the list of counsellors elect had been presented, "A message was

sent from his Excellency to desire Mr. Speaker and the house forthwith to attend him in the council chamber; and Mr. Speaker and the house being come up, his excellency observed to them, that in their list of elections, presented to him, he took notice that there were several gentlemen left out who were of the council last year, who were of good ability, for estate and otherwise, to serve her majesty and well disposed thereto, and that some others who were new elected, were not so well qualified; some of them being of little or mean estate; and withal signified, that he should expunge five of the names in their list, viz., Elisha Cooke, and Peter Sargent, Esqrs., Mr. Thomas Oakes, Mr. John Saffin, and Mr. John Bradford, and dismissed the house, who returned to their chamber." Cooke had been of the council nine or ten years, had been assistant before the revolution, married a daughter of governor Leveret, and was allied to the best families in the province, had a better estate than the governor himself, but then he had been agent in England, and discovered greater zeal for prosecuting the complaints against Andrew Dudley, &c., than any of his fellow agents. Sargent had married the relict of Sir William Phipps. Oakes had been one of the agents in England also, and under the direction of Cooke. Saffin was a principal inhabitant of Bristol (the father of Thomas Saffin, of Stepney churchyard, whose memory the author of the Spectator has immortalized), and Bradford was grandson of the first worthy governor of Plymouth.

There had been but one instance of the governor's refusal of a counsellor, since the charter. The right of refusal could not be disputed. Had the power been frequently exercised less exception would have been taken to this instance; but the long disuse of it caused the re-assumption of it upon so many persons at once, to be more disagreeable. Oakes was of the house, and notwithstanding the negative as a counsellor, remained there; and if he could be of any consequence, this would add to his weight.

Lord Cornbury, governor of New York, some time in the month of May advised Mr. Dudley of an army of French and Indians, intending to make a descent upon Deerfield, in the Massachusetts province. The intelligence was brought to Albany by some of the praying or christianized Mohawks, who had been to visit their friends at Cagnawaga, in Canada, who formerly had belonged to the same village, about forty miles from Albany. This design was not immediately carried into execution.

Whilst every one was fearing hostilities from the Indians, several Englishmen, pretending friendship to Castine, son of the Baron de St. Castine, by an Indian woman, who now lived at Penobscot, plundered his house, &c., and made great spoil. Upon his complaint to the government, he was assured the action should not go without due punishment, and that restitution should be made. About the same time the Indians did mischief to some of the people of Kennebeck: which action was first cannot be ascertained. Perhaps neither of them was from resentment or revenge for the other.

Before the end of the year, the blow threatened in the beginning of it, was struck upon Deerfield. This was the most remote settlement upon Connecticut river, except a few families at Squakheag or Northfield adjoining to it. Deerfield, being easiest of access of any place upon the river, had often suffered by small parties. In 1697 an attempt was made upon it, but failed of success through the vigi-

lance and bravery of the inhabitants, with Mr. Williams their minister at their head. Colonel Schuyler, of Albany, had obtained information of the designs of the enemy upon it this year, and gave notice seasonable enough to put the people upon their guard. It was afterwards thought remarkable, that the minister had it strongly impressed upon his mind that the town would be destroyed. It would not have been very strange if this impression had never been off his mind. He warned his people of it in his sermons, but too many made light of the intelligence, and of the impressions which naturally followed. The government, upon his application, ordered twenty soldiers as a guard. The party, which had been fitted out at Canada, consisted of about 300 French and Indians, under Hertel de Rouville, who had four brothers with him; their father had been a noted partisan, but was now unable to take so long a march. They came upon the town the night after the 28th of February. In the fore part of the night, and until about two hours before day, the watch kept the streets; and then unfortunately went all to sleep. The enemy, who had been hovering about them, and kept continually reconnoitring, perceived all to be quiet, and first surprised the fort or principal garrison house. The snow was so high, in drifts, that they had no difficulty in jumping over the walls. Another party broke into the house of Mr. Williams, the minister, who, rising from his bed, discovered near twenty entering. He expected immediate death, but had the firmness of mind to take down a pistol, which he always kept loaded upon his tester, and to present it to the breast of the first Indian who came up to him. The pistol, fortunately for Mr. Williams, snapped only and missed fire. Had he killed the Indian, his own life no doubt would have been taken in revenge. Being, in effect, disarmed, he was seized and pinioned, and kept standing, in his shirt only, in that cold season, the space of an hour. In the mean time his house was plundered, and two of his children and a negro woman murdered. His wife and five other children were suffered to put on their clothes, and then he himself was allowed to dress and prepare for a long march.

Other parties fell upon other houses in the town, and slew about forty persons, and made about a hundred more prisoners. The sun being about an hour high, the enemy had finished their work, and took their departure, leaving all the houses, outhouses, &c. in flames. Mrs. Williams had scarcely recovered from her lying in, and was in a weak state.—The enemy made all the haste they could, lest a superior force should overtake them. The second day she let her husband know she was unable to travel any farther as fast as they did. He knew the consequence, and would gladly have remained with her and assisted her; but they had different masters, and leave could not be obtained, and he was carried from her, and soon after heard that her master had sunk his hatchet into her brains. One cannot easily conceive of greater distress, than what an affectionate husband must then have felt. About twenty more of the prisoners, in their travel towards Canada, gave out and were killed also. They were twenty-five days between Deerfield and Chambli, depending upon hunting for their support as they travelled. Vaudreuil, the French governor of Canada, treated these prisoners with humanity; and although the Indians have been encouraged, by premiums upon prisoners and scalps to lay waste the English fron-

tiers, yet the captives, who have been carried to Canada, have often received very kind usage from the French inhabitants.

The unfortunate provinces of Massachusetts-bay and New Hampshire, were the only people upon the continent against whom the French and Indians, during a ten years' war, exerted their strength. Connecticut and Rhode-Island were covered by the Massachusetts. New York took care of themselves, and of the colonies south of them, by a neutrality which the Iroquois or six nations (influenced by those who had the direction of Indian affairs) engaged to observe between the English and French. This was, in effect, a neutrality between the French and the English governments to the southward of New England. Nothing could be more acceptable to the Canadians. The New England governments felt the terrible consequences. Charlevoix gives this account of it. "Teganissorens arrived, a little while after, at Montreal, and, in the conference which he had with the commander in chief, he appeared at first to be out of humour, which boded ill to the business he came upon. The Europeans, says he, are an out of the way people; after they have made peace, one with another, they go to war again, for mere nothing at all. This is not our practice; after we have once signed to a treaty there must be some very strong reasons to induce us to break it. He went on and declared that his nation should not engage in a war which they did not approve of, neither on one side nor the other. Mons. de Vaudrenil let Teganissorens know that he desired nothing further; and that the Iroquois might have no pretence to break so advantageous a neutrality, he determined to send out no parties towards New York." Again upon another occasion, "At all events, the six nations, and especially the Tsononheans were resolved strictly to observe the neutrality which they had sworn, and of which they began to feel the benefit; but you shall see that they were much set upon including the English, that they might be considered as mediators between them and us. Mr. Vaudrenil, who had very early seen through their design, had acquainted the court with it, and received for answer, that if he was able to carry on the war to advantage without putting the crown to any extraordinary expense, he should reject the proposals of the Iroquois; otherwise he might settle a neutrality for America upon the best terms he could, but that it was not for his majesty's honour that his governor and lieutenant general should be the first mover of it. The minister added, that he thought it would be most proper for the missionaries to let the Indians know that the French did not desire to disturb the peace of the country; that although they were very well able to carry on a vigorous war, yet they preferred the quiet of Canada to all the advantages they might reap from the superiority of their arms; and if the six nations, convinced that this was our disposition, should cause the English to ask a neutrality for their colonies, M. Vaudrenil might consider of it; but that he should not come to a conclusion without orders from the king."

It is true Charlevoix says, that "the Bostoners would have obtained the same thing from the Abenakis or eastern Indians." It is certain that the Massachusetts government would have been content (provided the eastern Indians had continued a peace with the English) that they should not be obliged to go to war against the French; but the Massachusetts, in all their treaties with the eastern Indians, made peace for the other governments as

well as for themselves; and hostilities against Connecticut or New York would have been deemed a breach of the peace, as well as those against the Massachusetts; whereas the New Yorkers, or rather the Albanians, suffered the Canada Indians to go through their province and fall upon any of the frontiers, without looking upon it to be a breach of the neutrality, and carried on great trade both with French and Indians, at the same time; and sometimes the plunder made in the county of Hampshire became merchandize in Albany. Some of the best people detested such proceedings, particularly Col. John Schuyler, of Albany; who, by means of the Indians of the six nations in the English interest, informed himself of the intended expeditions of the French and French Indians, and gave frequent notice to the people upon the frontiers to be upon their guard; but most of the inroads made upon it he had it not in his power to discover.

That the French might improve this plan to greater advantage, they drew off, about this time, a great number of the Abenakis families from Penobscot, Norridgewock Saco, Pigwacket, &c. and settled them at Becancour and St. Francois, in Canada, where they were known to the English by the name of St. Francois Indians. Here they were under the constant direction of the governor of Canada, and were sent out, from time to time, with parties of the six nations in the French interest and French Canadians, to massacre the men, women, and children upon the east and west frontiers. Charlevoix says, "they were intended as a barrier against the inroads of the six nations, in case of a future war between them and the French."

The Massachusetts, thus harassed and perplexed, thought it necessary to remain no longer on the defensive only; and, in the fall, sent out three or four hundred men to a noted settlement of the Indians at Pigwacket, and another party to the ponds, Ossapy, &c. upon the back of the eastern frontier; but neither party met with the enemy. Soon after, Colonel March going out with another party, killed and took about a dozen of the enemy. This measure not answering expectation; to encourage small parties of the English to go out and hunt the Indians, the general court promised a bounty or reward, no less than forty pounds, for every Indian scalp. Captain Twyng went out in the winter and brought in five.

(1704.) In the spring, another project was tried. About an hundred Indians were obtained from Connecticut and posted at Berwick, in the county of York; but these Indians were not only strangers to the woods, and wholly ignorant of the frontiers of Canada, but by long living in a depressed state among the English, were dispirited, enervated and unfit for this service, and nothing remarkable was effected. Had not the six nations been restrained, parties of them, harassing the French settlements, would have induced the French, for their own preservation, to have suffered the frontiers of New England, as well as New York, to have remained unmolested.

All these attempts failing, a still more expensive undertaking was agreed on. It was supposed that an army, to sweep the coast and country from Piscataqua river to Nova Scotia, would strike terror into the Indians and bring them to reason. Colonel Church, noted for his exploits in former wars, especially in Philip's war, was pitched upon to command in this expedition, and had orders to enlist as many as he could, both of English and Indians,

who had been in service before. This is called, by Charlevoix, an expedition against Port Royal; but Church was instructed not to make any attempt against the Fort there, and to ravage the country only. Mr. Dudley had intimations of the queen's intention, to send ships the next year for the reduction of that fortress.

Church had 550 soldiers under him, in fourteen small transports, and was provided with thirty-six whaleboats, and convoyed by the Jersey man of war, of forty-eight, the Gosport of thirty-two, and the Province Snow of fourteen guns. He stopped first at Montinicus, and sent two of his boats to Green-Island, where he took four or five French and Indians, who served him for pilots up Penobscot river and to the Indian settlements there. In this river he killed and took captive many of the enemy; among the captives were Castine's daughter and her children, her husband and father being gone to France, where Castine had an estate upon which he lived after he left America. The transports lay at Mount Desart. Church, having taken from them a fresh supply of provisions, went in the boats up the western Passimaquady. In the harbour he found only a French woman and her children, upon an island, and another family upon the main, near to it. He then went up the river, where he took prisoners, Gourdon a French officer and his family, who lived in a small cottage. Church seeing some of his men hovering over another hut, he called to them to know what they were doing; and upon their reply, that there were people in the house who would not come out, he, hastily, bid his men knock them on the head; which order they immediately observed. He was much blamed for this, after his return, and excused himself but indifferently. He feared the enemy might fall upon his men, who he saw were off their guard, which put him in a passion. He went as high up the river as the falls, taking or destroying all in his way; missed Chartiers, another French officer who lived or was posted there. The transports took in the forces at the harbour or mouth of the river and carried them to Menis; the men of war standing for Port-royal. At Menis, he met with some opposition, the enemy firing from the banks as he rowed up the river to the town; but he lost none of his men. They found plenty, not only of fresh provisions but good liquor in the town, which occasioned such disorders among the men, especially the Indians, that it was necessary to stave all the casks which had any wine or spirits in them, and it was done accordingly. Here, the lieutenant of Church's own company, Barker (Charlevoix calls him the lieutenant general) and one man more were shot down, which were all that were lost in the expedition. After plundering the inhabitants of all their goods, they set the town on fire, and then embarked on board the transports. The inhabitants of a village, upon another branch of the river, supposed the English to be gone, and that they should escape; but Church went back with his boats, and, going up this branch, came unexpectedly upon the village and took what prisoners he had a mind to, and among the rest, two gentlemen who had been sent by the governor of Port-royal to bring two companies of soldiers for the defence of the place against the men of war which appeared in the gut. Church gave the gentlemen leave to return, for the sake of sending a message by them to the governor, to desire him to acquaint the governor of Canada, that if he did not prevent his French and Indians from committing such barbarities upon poor helpless

women and children, as the people of Deerfield had suffered the last year, he would return with a thousand Indians and let them loose upon the frontier of Canada to commit the like barbarities there. This the French governor must know to be a gasconade.

The forces, after this, went up what is called the eastern river and destroyed the settlements there, and then returned to the transports, and joined the men of war at Port-royal; where it was agreed, both by sea and land officers, that no attempt should be made. The men of war returned to Mount Desart harbour, and Church with his transports, went up to Chignecto. The inhabitants all fled, taking with them as much of their substance as they could carry away; the rest they left to the mercy of the English, who laid all waste. From Chignecto they went to Mount Desart; the men of war being gone to Boston, the transports followed; and stopping at Casco-bay, Church found orders lodged there, from the governor, to go up Kennebeck river as far as Norridgewock fort; but having intelligence that it was deserted and his men having undergone much fatigue, he thought it best to return home.

This expedition Mr. Dudley supposes, in his speech to the assembly, struck great terror into the Indians, and drove them from the frontiers; but it appears from Church's journal, that the poor Acadians, who had been so often ravaged before, were the principal sufferers now, and that the Indians were little or nothing annoyed.

An exploit of Caleb Lyman of Northampton, deserves to be recorded: Hearing of a small party of Indians at Cohass, far up Connecticut river, he went out with only five friend Indians, and, after nine or ten days travel, came upon the enemy Indians in the night, killed seven out of nine, and the other two escaped, but wounded.

This may be placed among the favourable years; but the frontiers were not without annoyance. In April an Indian scout killed Edward Taylor at Lamprey river and carried his wife and child to Canada; Major Hilton with twenty men pursuing without overtaking them. They lay in wait to take Major Waldron at Cochecho, but missed him, carrying off one of his servants in his stead. July 31. About four hundred, French and Indians, fell upon Lancaster, and assailed six garrison houses at the same time, which made a brave defence. They burned many other dwelling houses and the meeting house. An alarm was soon spread, and three hundred men were in the town before night, who engaged the enemy with some loss on both sides. The beginning of August, a party of the enemy, lying in wait, fired upon a small scout going from Northampton to Westfield, killed one man and took two prisoners; but more of the forces being behind, they came up, retook the two men, and killed two of the Indians. Soon after, they killed lieutenant Wyler and several others at Groton, and at a plantation called Natheway.

Almsbury, Haveril and York, in the Massachusetts and Exeter, Dover and Oyster river, in New-Hampshire, suffered more or less, this summer, by the enemy.

The licentious practice, indulged among the seamen, of making depredations upon foreign nations in the east and west Indies was not wholly suppressed. John Quelch (who had been master of the brigantine Charles, and had committed many piratical acts upon the coast of India) came with

several of his crew and landed, some in one part of New England, some in another. Quelch and six more were condemned at Boston and executed. Some were admitted to be witnesses for the king, some reprieved, and some pardoned. The governor, upon this occasion, found old prejudices against him reviving. Reports were spread, of large sums of money falling into the hands of the governor and of his son, the queen's advocate, which however groundless easily obtained credit.

Mr. Dudley's principles, in government, were too high for the Massachusetts people. He found it very difficult to maintain what appeared to him to be the just prerogative of the crown, and at the same time to recover and preserve the esteem of the country. The government had been so popular under the old charter, that the exercise of the powers reserved to the crown by the new charter was submitted to with reluctance. Sir William Phipps was under the influence of some of his council and some of the ministers of note, and suffered remains of customs under the old form, hardly consistent with the new. Mr. Stoughton expecting every day to be superseded, avoided all occasions of controversy. Lord Bellamont, indeed, in some instances, assumed more than he had right to. His quality and the high esteem, at first, conceived of him, prevented any controversies, during his very short administration. Mr. Dudley set out, with resolution, to maintain his authority. The people were more jealous of him than they would have been of any other person. His negativing five of the council, the first election, was an unpopular stroke. The next year (1704) the two houses chose again two of the negatived persons, Mr. Cooke, and Mr. Sargent, and the governor again refused to approve of them. They were such favourites of the house, that the speaker, the house being present, addressed his excellency and prayed him to reconsider his negative, and to approve of the choice. This was out of character, and the house dishonoured themselves and had the mortification of being denied. This year, neither of the persons were chosen of the council, but one of them, Mr. Oakes, being chosen speaker of the house, upon the governor's being acquainted therewith, he signified to the house that he disapproved of their choice, and directed them to proceed in the choice of another, which they refused to do. It had been always the practice, for the governor to give directions to the two houses to proceed to the choice of counsellors; but the dispute about the speaker prevented it at this time, the council inserted themselves, and the question being put, whether it was in the governor's power, by virtue of the charter, to refuse the election of a speaker and direct the choice of another, they determined it was not, and immediately joined the house in electing counsellors. The next day the governor declared, that he looked upon it to be her majesty's prerogative to allow or disallow the choice of a speaker, but he would not delay the assembly by disputes, when the affairs of war were so pressing, saving to her majesty her just rights at all times.

The governor had it in special command to recommend three things to the assembly; the rebuilding the fort at Permaquid; the contributing to a fort at Piscataqua; and the establishing honourable salaries for the governor, lieutenant governor and judges of the courts. He had been pressing these things from his first arrival, but could obtain neither of them, and as to salaries. they not only refused fixing a salary, but allowed him only £500 per

annum, viz. 300 of it in the spring and 200 in the fall. To the lieutenant governor they gave £200 annually, as lieutenant governor and captain of the castle; and although it was more than any lieutenant governor has received since, yet he found it insufficient to support him, and this year, by the way of Lisbon, went back to England, and never returned to the province. A message from the house this year to the governor, though not very elegant, shews the sense they had of these matters.

*"May it please your excellency,*

"In answer to those parts of your excellency's speech, at the beginning of the session, referring to her majesty's directions for the building of a fort at Permaquid, contributing to the charge of a fort at Piscataqua, and settling of salaries, we crave leave to offer,

"Imprimis, as to the building a fort at Permaquid, we are humbly of opinion, that her majesty hath received misrepresentations concerning the necessity and usefulness of a fort there; wherefore, this house, in their humble address to her majesty, dated the 27th of March 1703, and since twice repeated, did among other things lay before her majesty our reasons why we could not comply with her expectations in that affair, as

"First, the little benefit said fort was to us, not being, as we could discern, any bridle to the enemy or barrier to our frontiers, being out of the usual road of the Indians and a hundred miles distant from any English plantation; and seemed only to make an anchorage for a few fishing boats, that accidentally put in there; but the expense thereon was very great, not less than twenty thousand pounds.

"Secondly, the charge of the said fort will be such that we cannot see how the province can possibly sustain it, having already laid out several large sums of money in raising new fortifications at Castle Island, &c., which was set forth in the address and memorial accompanying the same; but we understand we have been so unhappy, as that the said address and memorial did not reach her majesty's hands, because proceeding from this house alone, although the addressing her majesty is a privilege ever allowed to the meanest of her subjects. We did therefore at our session in February last join the council, in making our humble address to her majesty upon the affair aforesaid, which we hope, hath some time since arrived to her majesty's favorable acceptance.

"The second article is the contributing to the charge of Piscataqua fort.—The fort in that province was built several years past, when it was not desired or thought necessary that this province should assist them therein. The late reforms and reparations made of the same, as we have been informed, stands that whole province about the sum of five hundred pounds, which doth not amount to the quota of several particular towns within this province, towards the charge of the war one year; and all the navigation and trade of this province, coming down Piscataqua river, have been charged with a considerable duty towards the support of that fort; and this province hath always afforded such guards as were needful for their haling of masts, timber, &c. for her majesty's service, whilst the principal benefit and advantage of the trade hath accrued to that province. And they have never contributed any thing to the charge of our forces, forts, and garrisons, or guard by sea, that are as great a safety and defence to them as to ourselves: but the public charge of that

government has been much less proportionably than the charge of this; which being considered we hope no assistance will be expected from us towards the charge of the said fort.

“Thirdly, as to the settling fixed salaries, the circumstances of this province, as to our ability to support the government, are at times so different, that we fear the settling of fixed salaries, will be of no service to her majesty’s interest, but may prove prejudicial to her majesty’s good subjects here: and as it is the native privilege and right of English subjects, by consent of parliament, from time to time, to raise and dispose of such sums of money as the present exigency of affairs calls for; which privilege we her majesty’s loyal and dutiful subjects have hitherto lived in the enjoyment of, so we hope and pray always to enjoy the same under our most gracious sovereign and her successors.”

The governor then proposed the several matters to the council.

1st. Whether they advised to the building a fort at Peramquid.

2d. Whether they advised to a contribution towards the charge of Piscataqua fort.

3d. Whether they advised to the settling a fixed salary to the governor and lieutenant-governor for the time being.

And, they gave a negative answer to each question.

It was a great disappointment, to be able to carry neither of these points, which the ministry were very much set upon, and which it is not improbable they were encouraged might be obtained. Had they been matters less unpopular, yet the governor’s weight, at this time, would have scarce been sufficient to have carried them through. The prejudices against him were great. The people in general looked upon him as an enemy, even to the privileges of the new charter. Sir Henry Ashurst procured an original letter, wrote by the governor’s son Paul, who was then an attorney general, to Mr. Floyd, and sent it to New-England, in which were these expressions, “The government and college are disposed of here in chimney corners and private meetings, as confidently as can be—this country will never be worth living in for lawyers and gentlemen, till the charter is taken away.—My father and I sometimes talk of the queen’s establishing a court of chancery in this country. I have wrote about it to Mr. Blathwait.” Copies were dispersed about the province, and the letter was soon after printed. Mr. Dudley had no rest the first seven years; besides the opposition he met with in his administration, endeavours were using, soon after his arrival, to supplant him, and his enemies prevailed upon Sir Charles Hobby (who had been knighted as some said for fortitude and resolution at the time of the earthquake in Jamaica, others for the further consideration of £800 sterling) to go to England and solicit for the government. He was recommended to Sir H. Ashurst, who at first gave encouragement of success. Hobby was a gay man, a free liver and of very different behaviour from what should have recommended him to the clergy of New-England; and yet, such is the force of party-prejudice, that it prevails over religion itself, and some of the most pious ministers strongly urged, in their letters, that he might be appointed their governor instead of Dudley.

The governor, this year sent Mr. Livingston, William Dudley, the governor’s son, and two or three other gentlemen, to Canada, for the exchange of prisoners; who brought back with them Mr. Williams

the minister and many of the inhabitants of Deerfield with other captives. Vaudreuil, the French governor, sent a commissioner to Boston, with proposals of neutrality, which were communicated to the general court, who did not think proper to take any steps towards effecting it. They wished and hoped instead of a neutrality for the reduction of Canada; whereas the employment given to the French strength in Europe might well cause Vaudreuil to fear the want of protection, and dispose him to secure himself by a neutrality. Dudley, however, kept the matter in suspense with Vaudreuil for some time; and to the policy of his negotiation it was owing, that the people upon the frontiers enjoyed remarkable tranquility, and he valued himself upon it in his speech to the general court. Charlevoix says, “it was evident Mr. Dudley had no intention to agree, that he was a long time in treaty, and at length declared that he could come to no agreement without the consent of the other English colonies; and thereupon Vaudreuil caused hostilities to be renewed against the people of New England. He adds, that the Canadians were much dissatisfied with their governor, for suffering Mr. Dudley’s son to remain some time at Quebec, under pretence of finishing the treaty, and for permitting a New England brigantine to go up and down the river.”

Another negotiation, the next year, had a less desirable effect. William Rowse was sent in a small vessel, to Nova Scotia, as a flag of truce. He stayed there a long time, and brought back only seventeen prisoners. Being sent a second time, he brought no more than seven. Much greater numbers were expected, considering the time spent in procuring them. Upon his last return, it was charged upon him, that instead of employing his time in redeeming captives, he had been trading with the enemy and supplying them with ammunition and other stores of war. Rowse, upon examination, was committed to prison. Samuel Vetch, afterwards Colonel Vetch, and governor of Nova Scotia; John Borland, a merchant of note in Boston, and Roger Lawson, were all apprehended and examined, and bound to answer at the superior court. There was a general clamour through the province; and it was whispered about that the governor was as deeply concerned as any of the rest, and such reports against a governor as easily obtain credit, with many, without ground, as with. The house of representatives took the first opportunity of satisfying themselves. It was suggested there, that the superior court had no cognizance of the offence; and, that admitting Nova Scotia to be part of the province, yet it was not within the bounds of any country, and there was no authority, but the general court, that could punish it. The carrying the goods from Boston and the conspiracy there, were not considered. Besides, no persons could be supposed to have the public interests so much at heart, and none so likely to search to the bottom. They thereupon resolved, that the superior court had not jurisdiction, and that a parliamentary enquiry was necessary; and, in imitation of the house of commons, they framed articles of accusation and impeachment against the several persons apprehended, for traitorously supplying the queen’s enemies, &c. These were signed by the speaker, and sent by a committee to the council (June 25) praying “that such proceedings, examinations, trials, and judgments may be had and used upon and relating to the said persons as is agreeable to law and justice.” It was expected that the council should proceed, as the house of lords do upon an impeachment. No

wonder the council did not immediately proceed. In trying a capital offence, it became them to be well satisfied of their jurisdiction. No notice is taken of the affair in the council books for above a fortnight. The governor sat every day in council, and he still continued the practice of directing, every day, upon what business the council should proceed. It having been reported, that the house, in their examination of the prisoners, enquired how far the governor was concerned; on the 9th of July they passed a vote, vindicating themselves from an aspersion cast upon them, as having, in the examination of the prisoners, made it the first question, whether the governor was not concerned with them in the unlawful trade; wickedly insinuating, that the house had suspicion thereof, which they declared to be utterly false; and they thanked his excellency for his utmost readiness and forwardness, upon all occasions, in detecting and discouraging all such illegal trade and traders. For this the governor gave them thanks.

Before the 13th of July, the house were either convinced that the form of proceeding was irregular, or else that they could not support the charge of high treason, and ordered a bill to be brought in for inflicting pains and penalties; some moved for a bill of attainder, but the court being near rising, a message was sent to the governor, desiring that the prisoners charged might be kept in close custody, until the next session, in order to further proceeding against him.

At the next session, a few weeks after, the persons charged with two or three other accomplices of less note, were brought upon trial before the whole court; the governor's son, Paul Dudley, the queen's attorney, supporting the charge. The prisoners were heard by counsel in their defence. The court pronounced them all to be guilty, and then proceeded to determine their punishment. A committee of the two houses reported a fine of £1000 on Mr. Borland and three months' imprisonment; £350 on Roger Lawson and three months' imprisonment; £400 on Samuel Vetch and one year's imprisonment; £1000 on William Rowse, one year's imprisonment and incapacity of sustaining any office of public trust; £100 on John Phillips, jun. and one year's imprisonment; and £100 on Ebenezer Coffin. The house accepted this report, with an addition to Rowse's punishment, that he sit an hour upon the gallows with a rope about his neck; but the board disagreed to and reduced all the fines except Rowse's, and rejected the infamous part of his punishment. After a conference between the two houses, they settled the penalties as follows, viz. on Vetch a fine of £200; Borland £1100; Lawson £300; Rowse £1200 and incapacity; Phillips £100; and Coffin £60: all to stand committed until the fines and costs of prosecution were paid; and six separate acts passed the whole court for these purposes. By a clause in the charter, the general court is impowered to impose fines, imprisonments, and other punishments, and in consequence of this clause the proceeding was thought to be regular; but the queen did not think so, and these acts were disallowed. The governor was under a disadvantage, any obstruction to the two houses would have been improved as an evidence of the truth of the reports of his being *particeps criminis*; his compliance did not satisfy the people. An ill impression against persons in authority is not easily effaced. Several persons, some in Boston, but more in London, signed a petition, full of invectives against the governor, which was presented to the queen. Upon information of this petition, the council and house of representatives

passed votes, declaring their sense of the injury done the governor by the persons signing this petition or address. Mr. Higginson, who was at the head of the petitioners, was originally of New England, and educated at Harvard College, afterwards he travelled to the East Indies, and upon his return became a merchant in London, he was also a member of the corporation for propagating the Gospel among the Indians of New England, &c., and had so much interest, that some persons of note, by their letters, signified that they thought the two houses impolitic in the severity of their expressions, which, from being their friend, might at least cause him to become cool and indifferent.

Besides this petition, a pamphlet from New England appeared about the same time in London, charging the governor with treasonable correspondence, and it was expected that his enemies would prevail. Mr. Povey wrote to him from London; that he must prepare to receive the news of being superseded; but he was so fortunate, as either to convince the queen and her ministers of his innocence, or by some other means to allay the storm which had been raised against him. The charge of supplying the enemy with ammunition is incredible. Those persons who were convicted, had he been an accomplice, would have discovered him. He left them to suffer such punishment as the court thought proper to inflict. There was no certainty that the acts would be repealed, and after they were repealed, some remained long in prison; Rouse lay there eighteen months, unable to find security. The whole that appeared upon the trial, was an invoice for a quantity of nails, which, at the request of the governor of Port Royal, Mr. Dudley allowed to be shipped. This was foundation enough, though in no degree criminal, to give rise to all the calumny. It is not improbable, from the remonstrance of Mr. Sewall, who was a person of great integrity, that connivance might be shown as to some supplies of merchandise, and that this indulgence might be abused to the supply of powder, shot, &c., contrary to the governor's mind. It was the general opinion, that, without these supplies, the French could not have proceeded in their expedition against Newfoundland, where the harbours this year were much spoiled, and great loss and damage was sustained, not by the Europeans only, but by the New Englanders, who had then large commerce there.

That we might finish what relates to this prosecution, which was a subject of notoriety for many years after, we have been led a year or two forward. We meet with no remarkable devastations by the Indians in 1706; but in April 1706, they renewed their inroads and murdered eight or ten people in one house at Oyster River. There was a garrison house near, where the women of the neighbourhood had retreated, their husbands being abroad at their labour, or absent upon other occasions. This house being attacked, the women put on their husbands' hats and jackets, and let their hair loose, to make the appearance of men; and firing briskly from the openings, saved the house and caused the enemy to retreat.

Colonel Schuyler gave intelligence of two hundred and seventy men having marched from the frontiers of New Canada, which was an alarm to all the frontiers of New England; for it was uncertain upon which part they would fall. They made their first appearance upon Merimack River, about Dunstable, surprised and burned a garrison house there in which twenty soldiers were posted, and did other

mischievous. Five of their Indians, probably from the same party, ventured down as far as Reading, about fifteen or eighteen miles from Boston, surprised a poor woman, who had eight children with her in a lone cottage, killed the woman and three of the children, and carried away the rest; but the distant inhabitants were alarmed time enough to overtake them in their retreat, and recovered three of the children. Chelmsford, Sudbury, Groton, Exeter, Dover, and other plantations, had more or less of their people killed or taken; some of the latter they murdered before they could reach Canada, others very narrowly escaping. A poor woman, Rebecca Taylor, after the misery of a long travel to St. Lawrence River, near to Montreal, having offended her Indian master, he took off his belt and fastened one end of it round her neck, and threw the other over the limb of a tree; but the weight of her body broke the limb. He was making a second attempt, when the noted Bomazeen came by and rescued her. In their march, their hunting failing, they were kindling a fire to roast a child of one Hannah Parsons, when a strange dog, falling in their way, supplied the child's place. A Groton soldier, Sannet Butterfield, defended himself bravely, and killed one of their chiefs. This occasioned a dispute about the kind of punishment, some being for burning alive, others for whipping to death. It was left to the dead man's widow to determine it. She told them, that if killing the prisoner would bring her husband to life, she cared not what kind of death he suffered; but if not, she desired to have him for a slave, and her request was granted.

It appears, by the French accounts, that the Indians themselves were tired of the war, and with great difficulty were prevailed upon to continue it. To encourage them, a noted chief, dreaded by the English upon the frontiers, from the report of his cruelties, Nescambouit, was about this time sent by M. Vaudreuil to France, to receive his reward from the king himself. Upon his appearance at court, he held out his arm and bragged, that with that arm he had slain one hundred and fifty of his majesty's enemies. The king was so much pleased, that, as was then reported, he knighted him, and settled a pension of eight livres a day for life.

Charlevoix attributes the distress of the New Englanders to their refusal of a neutrality, "The Abenakis continued to lay New England desolate: Mr. Dudley either being unwilling or afraid to accept the neutrality which had been proposed for that province. He was much affected with the state of the inhabitants, who were no longer able to improve their lands, which were continually ravaged by the Indians, and he thought the only way to put an end to this distress was to extirpate the French from Acadia."

1707. Dudley depended upon the French being extirpated from Canada, as well as Acadia, or he would have been glad of a neutrality, if he could have had the queen's leave to agree to it. It was known, that an armament was intended, this year, from England against the French, either in Canada, or Acadia, or both. Troops were actually destined for this service, and general Macartney was to have commanded; but the battle of Almanza, in Spain, made such an alteration in affairs, that the troops could not be spared, and the expedition was laid aside. The Massachusetts would have been ready with the forces expected from them; and it was determined, early in the spring, that such a number

of men should be raised, as might be sufficient for the reduction of Acadia, although no assistance came from England: At least the other parts of Nova Scotia might be ravaged; but for Port Royal, it was doubted whether it could be subdued: however, the fortress there was "to be insulted, if by a council of war it should be found practicable."

One thousand men it was resolved should be raised in the Massachusetts, and proposals were made to New Hampshire, Connecticut, and Rhode Island, to join. Connecticut declined. The other two governments assisted, and Mr. Dudley, in his speech to the assembly, acknowledges that he had received a very honourable assistance from Rhode Island, and a proper force from New Hampshire. The naval force was barely sufficient for convoy, there being only the Deptford man-of-war, Captain Stukeley, and the province galley, captain Southack. The command of the land forces was given to colonel March, who had behaved well at Casco fort and upon some other occasions; but had never been tried in any service where other talents besides mere natural bravery were necessary. The fleet sailed from Boston the 13th of May, and arrived the 26th at Port Royal. March immediately landed with seven hundred men on the harbour side; colonel Appleton with three hundred men landing on the other side. The next day, as March with his men was advancing towards the fort, he discovered about two hundred of the enemy, with Subercas, the governor, at their head, near the top of a hill. A short skirmish ensued, and Subercas had his horse killed under him; but the numbers being very unequal the French soon retreated, leaving two of their number killed, and having wounded three of the English. On the 29th, Appleton and his three hundred men were attacked by a body of Indians, joined by about sixty Canadians who had arrived just before to man a privateer which lay in the harbour. They killed two of the English and then retreated. All the inhabitants forsook their houses and retired to the fort, which was well garrisoned. They made a continual fire with cannon and mortars upon the English camp; but wanting skilful engineers, very few of them fell so as to cause any destruction. The Indians, upon every quarter skulking about, shot any man who ventured without the camp. It is evident that the forces were very diffident of success from their first landing; and the army would in a great measure have saved their reputation, if, in conformity to the vote of the court for engaging in the expedition, they had, at a council of war determined not to attack the fort, and proceeded to ravage the country. Some intelligence which they had received of the disposition of great part of the garrison to revolt, seems to have encouraged them more than any hopes they had of being able to reduce the place by a regular siege or sudden attack. The 13th of May, at a council of war, it was agreed, "that the enemy's well disciplined garrison in a strong fort, was more than a match for a raw undisciplined army." They opened their trenches notwithstanding, and in three or four days they had made some breaches, and determined upon a general assault; but advancing towards the fort and finding no deserters come over, they altered their minds, and the 6th or 7th of June the whole army were re-embarked. Colonel Redknap (the engineer) and colonel Appleton went to Boston for further orders; the rest of the army to Casco Bay. A great clamour was raised at Boston against March and

Wainwright, and letters were sent them from thence, some anonymous, vilifying them as cowards and deserving the gallows. They charged Appleton with being the first for decamping, but own it would have been to no good purpose to have remained; as there was no prospect of carrying the fort. Captain Stukely, of the Deptford, gave an account of the strength of the place, and added, that he had hoped the fighting men at Boston, who had wrote so many scurrilous, vilifying letters, without names, would be satisfied, that regular, well fortified, and well defended forts, are not to be taken by raw men; and he was very certain that 1,500 of the best of them would come back as the army had done.

Mr. Dudley, notwithstanding the diffidence expressed, thought of nothing short of the reduction of Port Royal from the beginning; and after so great an expense in raising such an armed force, he was unwilling to give over the design, and sent immediate orders for the forces to remain where they were whilst he considered of further measures. March was beloved by the soldiers; besides, his courage was not suspected, although his capacity for a general was called in question. It was not, therefore, thought proper to recall him, and to appoint a general officer over him would be as exceptionable. An expedient was therefore thought of, which was suggested perhaps by the practice of the Dutch. Three gentlemen of the council were to be sent to the army, with as full powers to superintend and direct the proceedings as the governor himself would have had if present in person. Colonel Hutchinson, colonel Townsend, and Mr. Leverett, were selected for this purpose; and they embarked in the middle of July with about one hundred recruits and several deserters, who had left the army at Casco. Upon their arrival, they found parties formed among officers and men, no subordination, a coldness in the officers, and an aversion in the privates, to a return to the ground they had left. But it seems, the governor had made a point the army should go back.

A round robin was signed by a great number, peremptorily refusing to go to Port Royal; but the ringleaders being discovered and secured, whilst their sentence was under consideration, the rest submitted, and the ships of war and transports sailed. They stopped at Passimaquadi, about the 7th of August. March's spirits were broke and his health affected, so that, when the disposition was made for landing the army, he declared himself incapable of acting, and the command was given to Wainwright, the next officer. The 10th of August they crossed over to Port Royal, where they landed, but on the opposite side to the fort, and in every respect, in a much worse condition than before. The nights were growing cold, the men sickening, and the army in general, incapable of sustaining the fatigues of a siege. Wainwright's letter to the Commissioners, August 14th, shows the state they were in. "Our not recovering the intended ground on the opposite side is a mighty advantage to the enemy, in that they have opportunity, and are improving it, for casting up trenches in the very place where we designed to land and draw up our small forces. Yesterday, the French, about eight of the clock forenoon, on the fort point, with a small body of St John's Indians, began to fire on our river guards, and so continued until about three in the afternoon: then appeared about one hundred Indians and French, upon the same ground, who kept firing at us until dark. Several were shot through

their clothes, and one Indian through the thigh. About four in the afternoon I suffered a number of men, about forty or fifty, to go down to the bank of the river, to cut thatch to cover their tents. All returned well, except nine of captain Dimmock's men, who were led away by one Mansfield, a mad fellow, to the next plantation to get cabbages in a garden, without the leave and against the will of his officer. They were no sooner at their plunder but they were surrounded by at least one hundred French and Indians, who in a few minutes killed every one of them, their bodies being mangled in a frightful manner. Our people buried them, and fired twice upon the enemy; on which they were seen to run towards our out-guards next the woods, which we immediately strengthened. Indeed, the French have reduced us to the same state to which we reduced them at our last being at Port Royal; surrounded with enemies, and judging it unsafe to proceed on any service without a company of at least one hundred men. I shall now give you a short account of the state of our people, truly, as delivered me by doctor Ellis. There is a considerable number of them visited with violent fluxes, and although we have things proper to give them, yet dare not do it; others taken with mighty swellings in their throats; others filled with terror at the consideration of a fatal event of the expedition, concluding that, in a short time, there will not be well enough to carry off the sick.

"I am distressed to know which way to keep the Indians steady to the service. They protest they will draw off, whatever becomes of them. It is truly astonishing, to behold the miserable posture and temper that most of the army are in, besides the smallness of our number, to be attacked by the enemy which we expect every moment.

"I am much disordered in my health by a great cold. I shall not use it as an argument to be drawn off myself; but as you are masters of the affair, lay before you the true state of the army, which indeed is very deplorable: I should much rejoice to see some of you here that you might be proper judges of it.

"If we had the transports with us, it would be impossible, without a miracle, to recover the ground on the other side, and I believe the French have additional strength every day. In fine, most of the forces are in a distressed state, some in body, and some in mind, and the longer they are kept here on the cold ground the longer it will grow upon them, and, I fear, the further we proceed the worse the event. God help us."

Captain Stukeley had given encouragement, that he would lead on an hundred of his own men; but the bad state of affairs caused him to change his mind, and he had drawn them off before the date of this letter.

The army continued ashore until the 20th, when they re-embarked. The enemy then attacked them, many of whom were killed and wounded, and finally put to flight. The French say that both retreated by turns. Each seem to have been glad to be rid of the other. About sixteen were killed in the whole expedition, and as many wounded. The French, finding so few dead bodies, supposed the Massachusetts threw them into the sea.

When the forces returned, Mr. Dudley put the best face upon their ill success. In his speech to the assembly, he says, "Though we have not obtained all that we desired against the enemy, yet we are to acknowledge the favour of God in pre-

serving our forces in the expedition, and prospering them so far as the destruction of the French settlements and estates, in and about Port Royal, to a great value; which must needs distress the enemy to a very great degree."

A court martial was judged necessary, and ordered, but never met. The act of the province, for constituting courts martial, made so many officers requisite, that it was found impracticable to hold one. This must be owing to the great number of persons charged, the remainder being insufficient to try them.

1708. Whilst the forces were employed against French, the Indians kept harassing the frontiers. Oyster River, Exeter, Kingston, and Dover in New Hampshire government, and Berwick, York, Wells, Winter Harbour, Casco, and even the inland town of Marlborough, in the Massachussetts, sustained loss. The winter following passed without molestation. In the spring, 1708, Mr. Littlefield, the lieutenant of Wells, travelling to York, was taken and carried to Canada. For several months after, the enemy seemed to have forsaken the frontiers. It afterwards appeared, that they were collecting their forces in Canada for some important stroke.

Schuyler had such influence over the French Mohawks, who kept a constant trade with Albany, that they inclined to a more general peace with the English than merely those of New York. The French discovered their indifference, and to keep them engaged, a grand council was called at Montreal, the beginning of this year, and an expedition was agreed upon, in which were to be employed the principal Indians of every tribe in Canada, the Abenakis Indians, and one hundred select French Canadians, and a number of volunteers, several of whom were officers in the French troops. They were to make in the whole four hundred men.

De Chaillons, and Hertel de Rouville (the same who sacked Deerfield) commanded the French, and La Perriere the Indians. To give the less alarm to the English, the French party, with the Algonquin and St. Francois and Huron Indians, marched by the way of the river St. Francois: La Perriere and the French Mohawks went by lake Champlain: They were to rendezvous at lake Nikisipique, and there the Norringewock, Penobscot and other eastern Indians were to join them. They all began their march the 16th July, but the Hurons gave out and returned, before they arrived at St. Francois river. One of them had killed his companion, by accident, which they thought an ill omen and that the expedition would prove unfortunate. The Mohawks also pretended, that some of their number were taken sick by an infectious distemper which would be communicated to the rest, and they returned. Vaudreuil, when he heard these accounts, sent orders to his French officers, that, although the Algonquin and St. Francois Indians should leave them also, yet they should go on and fall upon some of the scattered settlements. When the Indians were tired of murdering poor helpless women and children, Vaudreuil employed his French officers to do it. Those Indians, however, did not leave them, and, being about 200 in all, they marched between four and five hundred miles through the woods to Nikisipique, where they found none of the eastern Indians. This was a happy disappointment for the English. Had the whole proposed number rendezvoused there, Newbury, or perhaps Portsmouth, might have been surprised and destroyed; but, the army being thus reduced Haverhill, a small but compact village was

pitched upon. Intelligence had been carried to Boston, that an army of 800 men was intended for some part of the frontiers, but it was uncertain which. Guards were sent to Haverhill, as well as other places; but they were posted in the most exposed parts of the town and the enemy avoided them, or passed undiscovered, and, on the 29th of August, about break of day, surprised the body of the town, adjoining to Merrimack river, where were twenty or thirty houses together, several of which they burned, and attempted to burn the meeting-house, but failed. The rest of the houses they ransacked and plundered. Mr. Rolfe the minister, Wainwright the captain of the town, and thirty or forty more, the French say about 100, were killed, and many taken prisoners. Mr. Rolfe's maid jumped out of bed, upon the alarm, and ran with his two daughters of six or eight years old into the cellar, and covered them with two large tubs, which the Indians neglected to turn over and they were both preserved. Three very good officers were at that time in the town, Major Turner, Capt Price and Capt. Gardner, all of Salem, but most of their men were posted at a distance, and, before any sufficient number could be collected, the mischief was done. The enemy, however, was pursued, overtaken and attacked, just as they were entering the woods. The French reported, when they got back, that they faced about, and that the Massachussetts being astonished, were all killed or taken, except ten or twelve who escaped. The truth is, that there was a brush, which lasted about an hour, and that the enemy then took to the woods, except nine who were left dead, among whom was Rouville's brother, and another officer. Many of the prisoners were also recovered. The governor in his speech to the assembly says, "We might have done more against them if we had followed their tracks."

The return of the French Mohawks might be owing to Schuyler's negotiations with them, which, it may be said, he would have had no opportunity for, if it had not been for the neutrality between them and Albany; but, on the other hand, not only Indians, at other times, but even the Penobscots and Norridgewocks were enabled by this neutrality, to make their inroads. The governor of Port royal, in a letter to the Count de Pontchartrain, says, "that the Michmacks were quite naked and the Kenebeckans and Penobscots would have been so too, if they had not carried on a trade with the Indians of Hudson's river, or, rather, by their means, with the English, who allowed a crown a pound for beaver, and sold their goods very reasonably." Charlevoix justly remarks upon it, "thus our own enemies relieved our most faithful allies, when they were in necessity, and whilst they were every day hazarding their lives in our service." The Massachusetts general court also, this year in an address to the Queen, say, "A letter from M. Vaudreuil, governor of Canada, to the late governor of Port-royal was sometime since happily intercepted, and came to our governor's hands; wherein he writes thus, namely, that he endeavours to keep all quiet on the side of Orange or Albany, having commanded from the king his master not to have any quarrel with your majesty's subjects on that side, or with the Mohawks, which he hath strictly observed. And they are in a profound peace, having met with little or no loss on the land side, either in men or estates this war."

The enemy were satisfied with their success at Haverhill, for this season, and, except now and then

a struggling Indian, none of them appeared again upon the frontiers this summer.

The party against the governor still pursued their schemes in England for his removal. Ashurst engaged a committee of the kirk of Scotland, who came up to London to settle some affairs with the queen's council, to use their interest, that Dudley might be removed and a new governor appointed; and he was very sanguine, that this would do the business, and that Hobby would be appointed, though not such a person as he could wish. In the province, the governor's interest was strengthening. Some of the old senators, who had been disaffected to him, were left out of the council. Oakes, whom he had negatived as speaker, and one other member for Boston lost their election, and John Clark and Thomas Hutchinson, two young gentlemen of the town, who were under no prejudice against him, came into the house in their stead; and, although, this year Mr. Cooke was again chosen one of the council, it was the last effort. The governor persisted in negativing him, and at the same time negatived Nathaniel Paine of Bristol: but he had so accustomed them to negatives, that they gave less offence than they would have done after long disuse.

The principal subject of the assembly's address, which we have just before mentioned, to the queen, was the reduction of Canada and Acadia by an armament from England, to be assisted by forces raised in the colonies. Vetch, who the last year was charged as a traitor, this year appeared, before the queen and her ministers, soliciting in behalf of the colonies; being able to give a full information of the condition of the French in America.

(1709.) In the spring, Mr. Dudley was advised, by letters from the Earl of Sunderland, that the queen had determined upon an expedition, and Vetch, made a colonel, came over with instructions to make the necessary preparations. The plan was extensive. The French were to be subdued, not only in Canada and Acadia, but in Newfoundland also. A squadron of ships were to be at Boston by the middle of May. Five regiments of regular troops were to be sent from England, to be joined by 1200 men, to be raised in Massachusetts and Rhode Island, and the governments were to send transports, flat bot-tomed boats, pilots, and three months' provisions for their own troops. With this force, Quebec was to be attacked; at the same time 1,500 men, proposed to be raised in the governments south of Rhode Island, which were to march by the way of the lake, were to attack Montreal. The men, assigned to the Massachusetts to raise, were ready by the 20th of May; and Vetch gave a certificate under his hand, that all the governments concerned had cheerfully and punctually complied with the orders given, except Pennsylvania. It was left to Lord Lovelace, governor of New York, to appoint the general officer for the 1500 men, but, by his death, the power devolved upon Mr. Ingoldsby, the lieutenant-governor; and Nicholson who had been lieutenant-governor of New York under Andros and afterwards lieutenant-governor of Virginia and Maryland being then in America, was settled as a proper person, and marched with the forces under his command as far as Wood-creek, there to wait untill the arrival of the fleet at Boston, that the attack on both places might be made at one time. The transports and troops lay waiting at Boston from May to September, every day expecting the fleet. No intelligence coming from England, Vetch, being sensible it was too late to go to Canada, proposed a meeting, at New Lon-

don, of the governors of the several colonies, to consider in what other way the forces raised should be employed against the enemy, that the expense might not be wholly lost; but Nicholson, unexpectedly, returned with his men from Wood-creek, and he and Vetch and Colonel Moody met some of the governors at Rhode Island. Two or three days before the congress (October 11th) a ship arrived at Boston from England, with advice that the forces intended for America were ordered to Portugal, and with directions to consult whether the forces raised in America might not be employed against Port Royal, the ships of war of which there were several then at Boston to be aiding and assisting. There was no great honour or profit to be expected, by the captains of the men of war, if the expedition should succeed, nothing more being required of them, than to serve as convoy to the transports, and cover to the forces at their landing; therefore two of the frigates, whose station was New York, sailed immediately from Boston, without taking leave of any body, and the commanders of the rest, Mathews, afterwards Admiral Mathews, who was then commander of the station ship at Boston, only excepted, peremptorily refused. As soon as this was known to the two houses, the court being sitting, they desired the governor to discharge the transports and disband the men, it not being safe to proceed without convoy. This was a heavy charge upon the province, without any good effect. It was indeed late in the year for the attempt against Port Royal, but then the prospect of surprising the enemy was so much the greater, and if it had happened otherwise and the forces had returned without subduing the place, it would have caused but little increase of the expense.

Whilst Nicholson lay at Wood-creek, the governor of Canada, who had intelligence of all his motions, sent out an army of 1500 French and Indians, who left Montreal the 28th July N. S. and the three first days advanced forty leagues towards the English camp; but upon a report that they were 5000 strong, and upon the march to meet the French, and there being discord at the same time, among the French officers, it was thought best to return to their advanced posts, and wait to receive the English there. Had they proceeded, they were equal to the English, better acquainted with the country, would have come unexpected, and the event would at least have been doubtful for us.

Charlevoix gives an instance of the treachery of the Indians of the six nations, and of their intention to destroy the whole English army. Speaking of father Marenil, who had been a prisoner at Albany, he says, "This missionary having been exchanged for a nephew of the principal officer at Albany, we learned from him, all the circumstances of that affair, and to what New France owed her deliverance from the greatest danger to which she had been at any time exposed from that quarter." Then having mentioned a grand council of the Indians, held at Onondago, where all their general meetings upon important matters were held, he goes on, "The Onondago, one of the old men of that nation, who was speaker, asked whether it was out of their minds that they were situated between two potent people, either of which were capable of totally extirpating them, and that it would be the interest of either to do it, as soon as they should have no further occasion for them. It behoved them therefore to be very careful, that they did not lose their importance, which they would do, unless each of those people

were prevented from destroying the other. This harangue made great impression upon the assembly, and it was resolved, upon this occasion, to continue the same political conduct which they had hitherto observed. Accordingly, the Iroquois, when they had joined the English army, and found, as they imagined, that it would be strong enough to take Montreal, employed their whole attention in contriving the destruction of it; and this was the way they went to work. The army being encamped upon the banks of a small river, the Indians who spent most of their time in hunting, threw the skins of all the creatures, which they flead, into the river, a little above the camp, which soon corrupted the water. The English never suspected this treachery and continued to drink the water; but it caused such a mortality among them, that father de Mareuil and the two officers, who went to fetch him from Albany to Canada, judged, by the graves, that there must have been at least a thousand buried there."

Nicholson certainly decamped sooner than was expected, which caused some dissatisfaction. The army was in a bad state. And a letter dated New York, November 4th, 1709, says, that many of the soldiers, who were at the lake, died as if they had been poisoned.

Although the French were in constant expectation of being attacked themselves, yet it did not prevent them from employing some of their strength, this summer, against the New England frontiers. In April, a man was taken prisoner at Deerfield. In May, several men were surprised and taken, as they were passing to a saw mill in Exeter; and in June, one of the Rouvilles, with 180 French and Indians, made another attempt upon Deerfield, to destroy or carry away prisoners the poor people, who, but a little while before, had returned from their captivity; but the enemy was discovered at a distance and beat off, the inhabitants bravely defending themselves. The town of Brookfield, in the west, and Wells, in the east, soon after lost some of their people, by small parties of Indians.

(1710.) Nicholson went to England, in the autumn, to solicit a force against Canada the next year, and an expedition seems to have been resolved upon. Advice was received, in New England, that, in July, Lord Shannon, with a fleet destined for that service, lay under orders for sailing, but that it was feared the westerly winds would detain him until it was too late. Port Royal, which did not require so great a force and which might be attempted late in the year, was afterwards made the only object. The Dragon and Falmouth, with a bomb ship and a tender, and two or three transports, left England in the spring, and Nicholson was on board of one of them. They arrived at Boston, July the 15th, and seem to have lain waiting there for orders, or until it should be made certain whether they were to be joined by any further force from England. On the 18th of September a fleet sailed from Nantasket for Port Royal, consisting of three-fourth rates, viz. the Dragon, commodore Martin; the Chester, Matthews; the Falmouth, Riddle; two-fifth rates, the Leostaffe, Gordon, and the Feversham, Paston, together with the Star bomb, Rochfort, and the province galley, Southack, with fourteen transports in the pay of the Massachusetts, five of Connecticut, two of New Hampshire, and three of Rhode Island. These, with the tender and transports from England, made thirty-six sail. There was a regiment of marines, commanded by Colonel Redding, and four regiments raised in New England, two commanded by Sir

Charles Hobby and Colonel Tailor of Massachusetts Bay, one by Colonel Whiting of Connecticut, and one by Colonel Walton of New Hampshire. Nicholson was general and Vetch adjutant-general. One transport, Captain Taye, ran ashore at the mouth of the river and was lost, and twenty-six men were drowned, the rest of the fleet arrived safe at Port Royal, the 24th of September. The forces were landed without any opposition. Subercase, the governor, had only 260 men, and most of them he was afraid to trust out of the fort, lest they should desert to the English. As the army was marching up to the fort, several men were killed by the inhabitants who fired from their houses and from behind their fences and made their escape; and, for three or four days, whilst the necessary preparations were making by the English, the French threw shells and shot from the fort, and the bomb ship, on the other hand, plied the French with her shells. It was commonly said, after the return of the forces to Boston, that early intimation was given to the English that they would meet with no great difficulty, a decent pretence for a surrender was all that was desired. On the 29th, the governor sent out a flag of truce, praying leave for some of his ladies, who were afraid of the bombs, to be sheltered in the English camp. The officer, not observing the rules of war, was put under arrest, and an English officer sent to the fort to acquaint the governor with the reason of it. The first of October, the two engineers, Forbes and Redknap, had three batteries opened, two mortars and twenty-four cohorn mortars ready, within 100 yards of the fort, and began their firing, the French firing their shot and throwing shells at the same time. The same day, Colonel Tailor and Captain Abercrombie were sent, with a summons to surrender, and, in consequence thereof, a cessation of arms was agreed upon, and the terms of the capitulation were soon settled, and the next day the following articles signed.

*"Articles of capitulation agreed upon for the surrender of the fort at Port Royal, &c. betwixt Francis Nicholson, Esq. general and commander-in-chief of all the forces of her sacred Majesty Anne Queen of Great Britain, &c. and Monsieur Subercase, governor, &c. for his most Christian Majesty.*

1. THAT the garrison shall march out with their arms and baggage, drums beating and colours flying.

2. That there shall be a sufficient number of ships and provisions to transport the said garrison to Rochel or Rochfort, by the shortest passage, when they shall be furnished with passports for their return.

3. That I may take out six guns and two mortars, such as I shall think fit.

4. That the officers shall carry out all their effects, of what sort soever, except they do agree to the selling them; the payment of which to be upon good faith.

5. That the inhabitants, within cannon shot of Port Royal, shall remain upon their estates, with their corn, cattle and furniture during two years, in case they are not desirous to go before, they taking the oaths of allegiance and fidelity to her Sacred Majesty of Great Britain.

6. That a vessel be provided for the privateers belonging to the islands in America, for their transportation thither.

7. That those, that are desirous to go for Placentia in Newfoundland, shall leave by the nearest passage.

8. That the Canadians, or those that are desirous to go there, may, for during the space of one year.

9. That effects, ornaments and utensils of the chapel and hospital shall be delivered to the Almoner.

10. I promise to deliver the fort of Port Royal into the hands of Francis Nicholson, Esq. for the Queen of Great Britain, within three days after the ratification of this present treaty, with all the effects belonging to the King, as guns, mortars, bombs, ball, powder and all other small arms.

11. I will discover, upon my faith, all the mines, fugasses and easements.

12. All the articles of this present treaty shall be executed upon good faith, without difficulty, and signed by each other at her Majesty of Great Britain's camp before Port Royal fort, this second day of October, in the ninth year of her Majesty's reign, Anno Domini, 1710.

"FRANCIS NICHOLSON. SUBERCASE."

"MEMORANDUM. The General declared, that within cannon shot of Port Royal, in the fifth article abovesaid, is to be understood three English miles round the fort, to be Annapolis Royal and the inhabitants within three miles to have the benefit of that article. Which persons male and female, comprehended in the said article, according to a list of their names given in to the general by M. Allein, amounts to 481 persons."

The English lost fourteen or fifteen men in the expedition, besides the twenty-six drowned when the transport was lost. The fort had been neglected and was in a very bad state. Subercase told the general "he was very sorry for the king his master, in losing such a strong fort and the territories adjoining." This was a compliment to Nicholson, but it was in no condition to stand a siege. Charlevoix says, Subercase's character suffered a great shock. He mentions several actions which other accounts take no notice of—"The troops being landed and nothing to oppose their march, went on towards the fort; but when they came within reach of the cannon, the governor caused so smart a firing as put them to a stand, killed a great many of their men, &c." Again, the eighth (N.S.) "M. Subercase, having observed the spot where the enemy were about to erect their batteries, made so lucky a fire that Mr. Nicholson, after having lost a great many men, was obliged to retreat."

The general having left a sufficient garrison under the command of Colonel Vetch, who was destined in case of success, to the government of the country, returned with the fleet and army to Boston, arriving there the 26th of October.

Whilst the forces were at Port Royal, it was thought proper, at a council of war, to send Castine, who probably was in the fort, and Major Livingstone to Canada through the country, with letters to M. Vandreuil, acquainting him that the country of Acadia was subdued and that all the inhabitants, except such as were within cannon shot of the fort, were prisoners at discretion; and as the council had been informed that he had often sent out his barbarous Indians to murder the poor innocent women and children upon the frontiers of New England, if he continued that practice they would cause the same execution upon the people of Acadia or Nova-Scotia, now absolutely in their power: but they abhorred such barbarities. and hoped he would give them no further occasion to copy after him, but rather would release and send home such prisoners

as had been taken by the Indians. After a most fatiguing, hazardous journey, Livingstone says in his journal that "he went about the middle of October from Port-royal to Penobscot, where he was kindly entertained by Castine, at his own house; and from thence went up the river in canoes, until they came to an island where was a great body of Indians, men, women, and children. Here, an Indian being enraged because some English prisoners had run away with his canoe, seized Livingstone by the throat, and would have dispatched him with a hatchet, if Castine had not thrown himself between them and rescued him. The Indians would not suffer them to proceed, for several days. At length, November 4, they set out in their canoes, and the next day the canoe the major was in overset, and one of the Indian guides was drowned. Soon after, the water beginning to freeze, the ice so shattered their tender vessels and made the passing so difficult, that they were obliged to betake themselves to the land and to travel by their compass, through a country so thick with spruce, cedar, and pine wood, and underwood, as to be scarcely passable, and the greatest part of the way broken and mountainous land. They were above a fortnight without the sight of the sun, the weather being stormy or foggy the whole time. They had spent their provisions six days before they came to any French settlement, and lived wholly upon moss, leaves, and dried berries. At length, the 16th of December they arrived at Quebec." The governor sent his answer to the message by two partizans, Rouville and Dupuis, by land through Albany, that they might be acquainted with the country and more fit to be employed in making war on a future occasion. The sum of the answer was, that Nicholson had been so well taught the laws of war as to know that they did not admit of reprisals upon such inhabitants as had surrendered upon an express promise of being well treated. That he, Vandreuil, never knew the French charged with inhumanity, and he was not afraid to appeal to the English prisoners, within his government, against such a charge; they had often been redeemed from the Indians, at a great expense, and, out of pure charity; indeed, the Indians themselves, ordinarily, did not treat them ill, but let that be as it would, the French were not accountable for the behaviour of the Indians; it was not their fault, that this unfortunate war was not over a long time ago, and all the miseries, which had been the consequence, must be attributed to those who had refused the neutrality between the two colonies; he was very ready to agree to the exchange of prisoners, but he had not the command of those which were in the hands of his Indian allies; as for the menace, of delivering up the Acadians to the Indians of New England, if the Indians of New France should refuse to deliver the English prisoners, it was contrary to all the rules of justice and humanity, and if it should be carried into execution he should be obliged to do as much to all the English he had in his power. This was all that was effected by Livingstone's most fatiguing hazardous journey.

At this time, a change in the agency was agreed upon. The change of the ministry in England was as alarming to New England, as to any part of his majesty's dominions. Mr. Phipps was deeply engaged in the new measures. There could not then have been any apprehension of his removing to Ireland; but a whig people would not be satisfied with a tory agent. Sir H. Ashurst never had any great powers, and he was now declining in age and health.

The party that used to support him set up his brother, Sir William Ashurst, a gentleman of superior character and real worth. Mr. Dudley did every thing in his power to prevent the choice, but, when he could not prevail, made a merit of accepting it. An address to the queen was sent to Sir William, but he refused the agency; he was well acquainted with the neglect of his brother and the little or no reward given him for his long services. When he excused himself, he recommended a New England young gentleman, then in London, Jeremiah Dummer, who also procured from the principal merchants in London, trading to New England, letters in his favour. He was not, at that time, acceptable to Mr. Dudley, and, in a message to the assembly, he advised them to chuse Henry Newman, a New England man, then in London also, a person of great probity, who had lived some years in the Duke of Somerset's family, and who afterwards was secretary to the society for promoting christian knowledge; but the choice fell upon Mr. Dummer and the governor did not think proper to negative him.

Mr. Dudley found means to remove the prejudice of Sir William Ashurst. From this time all his letters are written in a different style, and he represents the times to be such, that there was no prospect of a better governor, and advises the people, if they could be tolerably easy, not to run the risk of a change. Mr. Dummer, who was attaching himself to the new ministry and had great favour shewn him, engaged also in Mr. Dudley's interest. Mr. Phipps, who, at first, opposed him, had for some time been very friendly to him. It was a rule with him to gain his enemies, he was sure of his friends. It requires much of that art and skill, of which he is said to have been master, to render this rule, for any length of time successful. He happened also, as we have observed, when he was in England, to be favoured by Mr. Harley, and his interest there was so established, that he was no longer in danger, until the death of the queen caused an entire revolution, both as to men and measures. In the province, some reports against him were of so gross and criminal a nature, that although they might find some ready to believe them at first, yet time alone had sunk the credit of them, and the remembrance of lesser matters sunk with it, and the last days of his administration were his best days.

This year the enemy made their first appearance, in the spring, at York, but found the inhabitants upon their guard. In June, Col. Hilton of Exeter, being in the woods with eighteen men, was ambushed by a party, who fired and killed the colonel and two of his company, and took two prisoners, the rest escaping. Hilton was a good officer, and had behaved well with Church, in 1704, and upon other occasions; but at this time was off his guard. One hundred men went out upon the alarm, but had no other success than to bring in the dead mangled bodies to a decent interment. A few days after, sixty or seventy French and Indians appeared in the skirts of the town of Exeter, but were alarmed by the firing of a gun, and went off with four children, which they picked up in the street or road at play, to the unspeakable distress of their parents. In their retreat, they killed one man and took another prisoner. They then travelled westward and killed several of the inhabitants of Waterbury and Simsbury in Connecticut, struck down upon Brookfield and Marlborough, and, from thence, to Chelmsford, where Major Tyng was slain, an officer respected for his prudence and courage.

The 2d of August, about fifty Indians came upon Winter Harbour, and hovered about the place, some time, until they had killed four or five and taken eight or ten of the inhabitants. They insulted the fort, and found the garrison too many to be taken; but not enough to sally out and attack them. October the 1st, several persons, as they were going to meeting at Berwick, were waylaid, one of them killed, another had his horse shot under him, the rest escaping. The 10th of the same month, Bomazeen, with sixty or seventy more Indians, appeared at Winter Harbour, killed three or four and took as many captives; one of the latter was Johnson Harman, an officer noted for his expeditions in the ensuing war. The Indians, after they had done this mischief, sent a flag of truce to the fort, and offered to ransom their prisoners, if a vessel should be sent to Kennebeck river to receive them.

The Massachusetts forces had been scouring the woods all the summer, but the parties of the enemy avoided them. Towards winter, Col. Wilton, after his return from Port-royal, with 170 men ranged the eastern country, and killed a Norridgewock chief and six or eight others. He made a second march to Winnepisiaukee, without any success:—but in the mean time, the Indians were committing atrocities at Cocheco, York, Wells, and other places.

(1711.) After Port royal was reduced, Nicholson went to England to solicit another expedition against Canada; and, although his intention was known, there seemed to be no expectation that he would succeed. The New England people we have observed were all whigs and supposed the tory ministry to be determined upon a peace, and rather disposed to suffer France to recover part of what she had lost, than to make further acquisition from her: and there was a general astonishment when Nicholson returned to Boston, on the 8th of June, with orders from the queen to the several governments of New England, to New York, the Jerseys, and Pennsylvania to have their quotas of men in readiness for a fleet which had been dispatched, and which arrived on the 24th. This was short warning: but it was thought more extraordinary, that ten weeks' provision for the army was to be procured at Boston. One reason given for this measure, was, that there might be no suspicions, in Europe, of the destination of this armament. It might well be doubted whether it would be possible to procure such a quantity of provisions at Boston in season, and if it was not, it would be impossible to proceed. This unexpected measure increased a jealousy, began before, that it was not designed Canada should be taken, and that the blame should be cast upon New England. This jealousy may have been as groundless as the charge, which Walker first, and, after him, many other authors have brought against New England, for not affording that ready assistance which was expected; but it certainly had this effect, to cause, not only the government, but even private persons to exert themselves with more zeal and vigour than had been done upon any other occasion; and the people submitted, not without reluctance, it is true, to have their property taken from them, in a way and manner which the people of Great Britain or Ireland would not have allowed. A general meeting of all the governors was appointed, immediately after Nicholson's arrival at New London, and they were sitting when the fleet arrived. The assembly happened to be at Boston, when the first orders came. The governor, without delay, recommended to them a full compliance with the orders he had re-

ceived. The first thing necessary, was money. The credit of the treasury was so low in England, that no merchants or private persons at Massachusetts would take bills, unless the drawer would make themselves responsible, and there was no body authorized to draw such bills. The general court determined to issue forty thousand pounds in bills of credit, and to lend them to merchants and others, for the term of two years. These persons with their bills of credit purchased bills of exchange upon the treasury in England, which, it was hoped, before the expiration of the two years, would be paid, and, if they should not, it would be in the power of the government to continue the loan, but there was no engagement to do it. The next difficulty to be removed was the extravagant price to which provisions had started, upon the advice of this extraordinary demand. For this purpose, an order passed the court, stating the prices of the several species of provisions necessary for the service. The owners of the provisions shut up their stores, or removed their provisions in order to conceal them. The demand, which had raised the price, they urged, was the common chance in trade, which every merchant was justly entitled to. Another order soon passed the court, to impress all provisions, in whose possession soever, and for this purpose to open all doors and enter. This effected a general compliance. The short time spent for this purpose, and the refusal of particular persons to submit at first, caused a charge from the officers against the country in general, for unnecessarily delaying the fleet and army; and no notice was taken of the zeal of the government and this extraordinary measure for the removal of these impediments. The addition of so many mouths had caused a sudden rise of all poultry and fresh meat, and at that season of the year, if the usual consumption had continued, the forces must have failed of necessary supplies. This consideration induced many of the principal gentlemen in Boston to deprive themselves, and to eat salt provisions, and no other, in their families, as long as the fleet remained. The soldiers and seamen, some of them, deserted and were concealed by the inhabitants, who were justly censured for doing it. A law against this offence was made, with a very severe penalty, and a more summary way provided for trial of the offence than ever had been in any instance before. The desertion of the men put the Admiral out of temper, and he wrote the governor an angry letter, in which he told him, the service had been prejudiced, rather than forwarded, since his arrival at Boston, and demanded from the government a supply of men equal to the loss. This could be done in no other way than an impress. The inhabitants, it must be owned, would not have submitted to it; but, in general, would have preferred a prison on shore to a man of war at sea.

Besides the mistake, in the plan of this expedition, with respect to a speedy supply of provisions at Boston without previous notice, there was another, in presuming that skilful pilots were to be obtained there. The best in the country were shipmasters, who had been once or twice up the river St. Lawrence. These were employed in other business, upon which their future support depended, and they were averse to leaving it; but the government impressed them into the service, and afterwards was charged with their defect of skill, which, admitting it to be true, could not be helped.

The troops were all landed upon Noddle's island, about a mile from the town, where they were every

day exercised in a healthy air; and it was allowed, that men were never landed and reimplarked in better order. The land force, including two regiments from New England, amounted to near 7000 men, an army more than equal in number to that which afterwards reduced Quebec, under General Wolfe; although, in 1711, it was not half so strong as in 1759.

The fleet which arrived at Boston, consisted of fifteen sail of men of war, and forty transports, and all sailed again the 30th of July. Greater despatch could not well be expected from such short warning. Nicholson set out for Albany the same day, to take the command of the forces which were to march by land.

Nothing remarkable happened in the passage of the fleet to Gaspee, where it arrived the 18th of August, and sailed again the 20th. The next day and the day after proving foggy, and the wind beginning to blow fresh at E.S.E., the ships brought to, with their heads to the southward, being out of sight of land and out of soundings. This, the admiral, in his own account, says was by the advice of the pilots, both English and French; and that they were of opinion the fleet would drive into the midst of the channel or river. The New England pilots always denied they gave such advice, and declared, upon their oaths, their opinion was not followed nor regarded. Some of the principal persons on board one of the ships which belonged to New England, reported that upon the fleets being ordered to lie with their heads to the southward, the whole ship's company determined they must drive upon the north shore; and they were confirmed in their former jealousy, that it was never intended the fleet should arrive at Quebec. This, however, is incredible; and the admiral, who had not the character of an abandoned man, was incapable of sacrificing the lives of so many men; and, it must be presumed, he would not have thrown away his own life, which was exposed as well as the rest. The pilots from Boston supposed the admiral had a very mean opinion of them, and laid greater stress upon the judgment of the French pilots, who, through ignorance or from design, occasioned this wrong measure. In two or three hours after the fleet brought to, some of the transports were among the breakers. Eight or nine ships were lost upon the rocks, about midnight, one thousand of the men that were on board drowned, and about six or seven hundred saved by the other ships. All the men of war escaped; the admiral's ship is said to have anchored, and the rest either stood off or came to anchor; and the next morning, the wind shifting to W.S.W. the admiral bore away for Spanish river, the men of war and transports following; but, the wind shifting again to east, they were eight days before they all arrived, and, as they had the wind, might more easily have gone to Quebec. In a council of war, it was unanimously resolved, not only not to make any further trial to go up the river St. Lawrence, but also not to attempt any thing against Placentia in Newfoundland; the fleet not being sufficiently victualled for either. They sailed the 16th of September, and the admiral arrived the 9th of October at Portsmouth, and the 15th, his ship, the Edgar, blew up: the cause not being known, jealous minds would suggest that even this was not without design.

The admiral supposed, in his account of the expedition, that if they had arrived at Quebec and landed their men, their misfortune would have been greater still; that the French would either have

quitted the place and carried all their provisions with them, or that they would have defended the place until the provisions of the fleet and army were spent, and they must have laid down their arms; or if they finally surrendered, it was not to be expected the provisions, for so small a garrison, would have lasted any time for twelve thousand men, and French and English must have starved together. Vaudreuil had made the best preparations he could for their reception, having early notice of their coming, from the governor of Placentia. An English prisoner, carried in there from Boston, gave an account of Nicholson's arrival, of the fleet that was to follow, and of the forces intended by way of the lake; and the captain of a privateer saw the fleet within sixty leagues of Boston. This intelligence was afterwards confirmed by an Onondago Indian, who came to Quebec to inform of the great preparations making at Albany.

Nicholson had made but little progress in his march when he received the news of this disaster, and if the fleet had arrived safe, he would have been too late to have drawn any of the French force from Quebec, before so much of the provisions of the fleet had been spent that it would not have been safe to have remained any longer; and it is well he did not proceed; for as soon as Vaudreuil had advice of so many ships stove, and so many dead bodies with red coats drove upon the shore, and that the river was clear of ships, he ordered all the strength of Canada towards Montreal and the lake Champlain; which if Nicholson had passed, would have been sufficient to prevent his return.

To complete the charge against the Massachusetts, they are said to have represented the navigation to Quebec to be easy and without hazard, of which they were wholly ignorant; for the French, after an hundred years experience, almost every year suffered shipwreck; and sailing in the bay and river St. Lawrence was so hazardous, that they could hardly obtain sailors for a voyage thither. The Massachusetts people knew very well that Phipps and his fleet went up and down without difficulty, in 1690; that flags of truce had frequently passed and repassed, and they supposed the French represented the passage difficult, to deter other nations, and experience now shews that they judged right.

The American transports were all preserved, except one victualler, and the crew of that were saved. The disappointment and loss was grievous to New England. Some pious minds gave over all hopes of reducing Canada. So many attempts blasted, plainly indicated, as they conceived, that Providence never designed the whole northern continent of America for one European nation. Upon the first news in England of the disaster, the blame was laid upon governor Dudley, and it was said he would be removed, but his conduct soon appeared to have been unexceptionable.

Upon the return of the Massachusetts troops, they gave an account of the freedom used by the sea and land officers, in attributing the whole misfortune to the colonies. The forces were unreasonably detained at Boston—the provisions fell short of what was expected—the pilots were ignorant, and not fit to be trusted. The general court therefore thought that it was necessary to exculpate themselves; and that it would be prudent to lay no blame any where else. The governor, in his speech, October 17, says, "I condole with you upon the sorrowful disaster of the fleet and forces sent hither, by her majesty's special favour, to all her good sub-

jects in the provinces of North America. I have had time enough, since the account thereof, to consider the several articles of her majesty's commands to this government for the putting forward the expedition, and, therein, I cannot charge this assembly with neglect in any particular; but when I peruse the journal of the proceedings, I think there was all provision and expedition made, in every article referring to soldiers, artificers, pilots, transports, and provisions for the service of her majesty's British forces, as well as our own; which I hope you will see reason to consider and represent home for our justification, that it may be demonstrated, that we were in earnest to do our duty, to the utmost, for our own benefit and establishment, as well as her majesty's honour and just rights."

Three of the principal pilots in the service, were sent to England, to be ready to give an account of their conduct, if inquiry should be made. A journal of the proceedings relative to the expedition was prepared and transmitted, together with an address to the queen. The instructions to the agent were given with prudence and caution. "It chiefly concerns us to set forth that we have done our duty, by giving all assistance in obedience to her majesty's royal commands, as we have represented in our humble address herewith transmitted to be presented by you, and will appear by the journal and orders accompanying the same. We comported with the supplies, in the large demands made upon us, to the utmost of our power, beyond what we had at first a reasonable prospect to have provided timely, having so short a notice; but made our utmost efforts, and happily got through the same, in which you are to vindicate and justify the government.

"It is not our province, nor must you enter thereinto, to fault or impeach others, for want of doing their duty, or for their conduct in that affair, any further than is absolutely necessary for our own vindication. If there be just cause, therefore, her majesty, in her princely wisdom, will direct the inquiry thereinto."

The pilots waited many months in England, ready to answer any questions, but none were ever asked, nor was any inquiry ever made into the cause of the failure of the expedition. Upon the whole, it cannot be conceived that the admiral, general, and principal persons employed in the execution of this plan, pursued any particular measures in order to defeat and overthrow it; that those who projected it in England, had not good reason to expect, from the insufficient provision made, that it must fail of success, and at best, were all content that it should, is not so certain.

The account which Charlevoix gives of the French pilot does not agree with Walker's. "There was on board the admiral, a French prisoner, one Paradis, an old seaman who was perfectly acquainted with the River St. Lawrence. This man cautioned him, when he was off the seven islands, not to venture too near the land, and he obliged him to make frequent tacks, and to keep near the wind, which did not favour him. At length the admiral tired out, and, perhaps, suspecting the pilot only designed to wear out his men, refused to come to stays, and bordered so near a little island called the isle of eggs, that he and seven more were driven ashore by a very sudden squall at south east, and stove to pieces, and but very few people were saved."

A brief account of the disaster the fleet met with, is given in the following letter of the New England commissary, Sampson Sheaf:—

"When I accepted the employment of commissary to the New England forces on the Canada expedition, it was in hopes of doing some good service; wherein I designed to do my best, and hoped, with my diligence and best understanding to have been of some use; but on the 22d of August, our fleet under the command of Sir Hovenden Walker, about eight or ten leagues above the entrance of Canada river, about eleven or twelve at night, met with a dismal disaster. Ten or eleven of the British transports run on the north shore, and were dashed to pieces against the rocks. I hear but of one vessel belonging to New England met with any damage. There is an eminent providence of God therein, which doubtless we ought to consider; but as to the instrumental cause, by whose misconduct, remains to be examined, and, I hope, will be made evident. The admiral and general were in great danger; they saved themselves and their ships by anchoring, but lost several anchors. It was lamentable to hear the shrieks of the sinking, drowning, departing souls. The ship, wherein I was embarked, with very great difficulty weathered the rocks; but we were in no capacity to succour them that were in distress.

"Admiral Walker, just before our departure from Spanish River, set up a cross with an inscription, dated 15th of September. *In nomine Patris, &c.*, the purport of which was, that thereby he took possession of that country for her majesty.

"This will be a bitter pill for New England. The French will now employ their Indians with redoubled rage and malice, to distress and destroy our exposed frontiers.

"Annapolis-Royal, October 6, 1711."

Although the principal object of this expedition was not obtained, yet, in all probability, Annapolis-Royal was saved by it from falling into the hands of the French. The garrison there was reduced to a handful of men. Between two and three hundred of the New England forces were kept there, after the place was reduced, and four out of five were dead, and they were afraid even of the Acadians alone, without any additional strength; but the French court, sensible of their mistake in not giving more attention to the preservation of that country when it was in their hands, pressed the governor of Canada, in the strongest manner, to exert himself for the recovery of it. A body of troops was raised and ready to depart from Canada, when the news arrived of the English fleet and other preparations making; and the men which were designed against Nova-Scotia were detained at home to defend Canada. The French inhabitants of Nova-Scotia, having notice of the force intended from Canada, grew insolent, and it was not safe for an Englishman to stir out of the fort. As soon as they heard of the disappointment, they became submissive again and made acknowledgment of their faults; but at the same time let Vaudreuil know, that the French king had no better subjects, and necessity alone had brought them to this submission. These were the inhabitants round the fort, included in the capitulation. Many of those at a distance had not yet submitted to the English, and Capt. Pigeon, an officer of the regulars, was sent up the river to destroy some of the French houses, as well as to cut timber for the repair of the fort. He was surprised by a great number of Indians, who killed the fort major, the engineer, and all the boat's crew, and took thirty or forty of the garrison prisoners. This encouraged the inhabitants again to take up arms, and five

hundred of them, with as many Indians as they could collect, were preparing to attack the fort, expecting an experienced officer from Placentia to head them; but the governor not being able to spare one, they laid down their arms again and dispersed.

To meet the French or Indian enemy, who were expected upon our frontiers, Col. Walton was sent, in the fall, with 180 men, as far as Penobscot, where he burned two vessels which were designed for privateers or cruizers, and took some prisoners.

The year 1711 was rendered remarkable by a fire in the town of Boston, which from that time until the year 1760 was called the great fire. It was supposed to have been caused by the carelessness of an old woman in or near what was called Williams's-court; all the houses on both sides of Cornhill, from School-street to what was called the stone shop in Dock-square, all the upper part of King-street on the south and north side, together with the town-house, and what was called the old meeting-house above it, were consumed to ashes. Col. Tailer arrived in the fall of the year 1711, with her majesty's commission for lieut.-governor.

(1712.) Early in the spring the enemy attacked Exeter, Kittery, York, and Wells. In May, a party of English went up Merrimack river and killed eight Indians, without loss to themselves; but the Indians did not rest long without revenge. In June and July, they killed or took several prisoners from Berwick, Kittery, Wells, Dover, and Kingston. At Dover, apprehending they were in danger as they were scalping two children, for greater dispatch they took off both their heads, leaving the bodies a revolting spectacle. In the autumn, a great number of people being at a wedding of Capt. Wheelwright's daughter, of Wells, the enemy surprised several of the company, and among the rest, the bridegroom, Mr. Plaisted, son to a gentleman of Portsmouth. The Indians expected a good ransom for such a prisoner, and, instead of carrying him to Canada, sent in a flag, and offered, upon payment of three hundred pounds to release him, and the money was paid and the prisoner returned. We become wearied of relating these inroads and atrocities of the enemy, many of which have been given in general terms, to avoid frequently enumerating circumstances which can excite nothing but horror and disgust. This was the last action of any consequence. (1713.) In the spring, after the peace of Utrecht was known in America, the Indians sent in to Major Moodey at Casco, to pray that there might be peace between the English and them also, and also proposed a treaty to be held there; but the governor thought it more for his honour to oblige them to come to Portsmouth, the chief town of one of his governments, than to go to the borders of their usual residence; and, upon the 13th of July, they entered anew into articles of submission and pacification, signed by a number of chiefs of their several tribes, wherein they asked pardon for all their past rebellions and violations of former promises, and engaged to demean themselves for the future as faithful subjects of the crown of Great Britain. It may here be observed, that though the inhabitants in the colonies, in general, double their numbers, from their natural growth or increase, in twenty-five years at most, yet the growth of the Massachusetts colony and New Hampshire have borne no proportion to the rest; and in the year 1713 there was not double the number of inhabitants in the Massachusetts province, which the several colonies of which it was formed con-

tained fifty years before; and yet during this period there was no remarkable emigration to other colonies: there was vacant land sufficient to extend settlements upon, and as easy to be procured as any where else: the heavy taxes may have driven some to other governments; but the chief reason of the difference is to be found in the constant state of war which these two provinces were in, the Massachusetts more especially. From 1675 to 1713, five or six thousand of the youth of the country had perished by the enemy, or by distempers contracted in the service; nine in ten of these would have been fathers of families, and, in the course of forty years, have multiplied to near an hundred thousand souls.

The heavy burdens which the province subjected itself to during this war, were beyond those of any other ten years from the first settlement. The castle and other fortifications at Boston, the several forts in the eastern country, the various expensive expeditions actually prosecuted, and the preparations made for others, added to the constant defence of the extensive frontiers and to the support of the civil government, without any relief or compensation from the crown, must have occasioned such an annual burden as was not felt by any other subjects of Great Britain, and the merit of the people of that day ought not to be forgotten.

The settlement of the line of jurisdiction between the province and the colony of Connecticut, which was accomplished in the year 1713, after ineffectual attempts for several years before, deserves particular notice. In 1636 the first settlers upon Connecticut river had removed from the Massachusetts, and taken possession of the country upon and near the river on both sides, from Springfield as low as Weathersfield, inclusive of both, and managed their affairs by virtue of authority from the general court of the Massachusetts. In 1638 the inhabitants of Springfield, which included what was afterwards called Suffield, below on one side of the river, and Enfield on the other side, having no doubt that they were within the limits of the Massachusetts patent, petitioned the general court that they might be separated from the other towns below, and be received and continued as part of the colony, which was granted and jurisdiction exercised accordingly. In 1642, by order of the general court, two mathematicians, as they are called in the records, Nathan Woodward and Solomon Saffery, ran a line west, as they supposed, from a station three miles north of Charles river until they came to Windsor, upon Connecticut river, where it struck the house of Bissel, who kept the ferry. The people who had settled upon Connecticut river had no better title to land or jurisdiction than possession, the grant made by the Massachusetts general court being a mere nullity.

In 1630, the Earl of Warwick had obtained from the council of Plymouth, a patent of the lands upon a straight line near the sea shore towards the south west, west and by south, or west, from Naraganset river forty leagues, as the coast lies towards Virginia, and all within that breadth to the south sea; and yet, in 1635, all the lands between Connecticut river and the Naraganset country were assigned by the same council to the Marquis of Hamilton. Lord Say and others had purchased the Earl of Warwick's title, and by their agents built a fort at the mouth of Connecticut river about the year 1635, and four or five years after Mr. Fenwick came over with design to take possession of the lands upon Connecticut river under lord Say, &c., and remained

in possession of the mouth of the river until 1644, when the settlers purchased the title, as it was called, and formed themselves into, or continued the form they had assumed, of a body politic.

When the line was run by Woodward and Saffery, Fenwick was to have joined, as the Massachusetts commissioners for the united colonies afterwards affirmed, though Connecticut commissioners denied it; and in 1648, when a dispute arose about a duty required of Springfield for the support of the fort at the mouth of the river, the Massachusetts offered to run the line anew if Connecticut would be at the charge, the Massachusetts having been at the sole charge before, but this was not agreed to, and the fort having been burnt down, and the controversy about the duty at an end, this line seems to have been acquiesced in; and, in 1662, Mr. Winthrop obtained from King Charles, a charter for the colonies of Connecticut and New-Haven united, the north line of which was said to be intended to be the same with the south line of Massachusetts. From this time, until after the incorporation of the Massachusetts by a new charter in 1691, we hear nothing about bounds, except some controversies between Springfield and Windsor about their towns grants, and letters from the authority of each government relative to it; and, in 1686, many of the inhabitants of Roxbury pitched upon a tract of land to settle upon, which was bounded on the south by Woodward and Saffery's line, and it was granted to them by the Massachusetts government and took the name of Woodstock. Grants were also made to particular persons of tracts of land near to this line.

After the new charter, Connecticut made a more serious affair of what was called the Massachusetts encroachments, and in 1700, upon the appointment of a committee by Connecticut with a general power to settle the bounds between the two governments, the Massachusetts appointed a committee with a special limited power, viz. "to find the southernmost line of the late colony of Massachusetts-bay as anciently run by Nathaniel Woodward and Solomon Saffery, and to make report thereof to the general court." This was not what Connecticut wanted, for they supposed Woodward and Saffery's line to be erroneous: however they appointed a committee to attend the work, who reported to their constituents that a line from three miles north of Charles river, or Woodward and Saffery's station, would run some miles to the northward of John Bissell's house, where Woodward and Saffery supposed it to run; and in 1702 Mr. Winthrop, the governor of Connecticut, wrote to governor Dudley, and desired that the Massachusetts would join in ascertaining the difference of latitude between the Charles River station and Bissell's house. There were other attempts to bring this affair to a conclusion, but ineffectual, and in 1708, by a state of the case read in both houses, it appears that the Massachusetts intended "to rely upon the line formerly run, as it is therein said, by two skilful artists in the year 1642, and which has continued the stated boundary for sixty-six years." They add, "that the Connecticut charter which was granted in 1662 was bound by the south line of the Massachusetts, which was not then an imaginary or untried line, but well known to the gentleman who solicited that charter, who if he had thought it controvertible would doubtless have obtained an order for rectifying and adjusting it; and supposing, which was not granted, that there should be any error or mistake in the line, yet, having been run and stated so long before the grant of Connecticut charter and

held by possession for sixty-six years, and towns and plantations having been granted and settled upon the same, it was unreasonable, now, to draw it into question."

There being so little prospect of the Massachusetts receding from a line of which they had so long been in possession, Connecticut made their application to England, and it appears by a letter from governor Saltoustaill, of Connecticut, in 1710, that he was expecting orders concerning it. If any came, probably they were such as repeatedly afterwards were sent to New Hampshire, viz. to settle the controversy by commissioners appointed or agreed upon by the general courts of each colony. Be that as it may, it is certain that Connecticut renewed their application to the Massachusetts, and at last commissions passed the seals of each government with ample powers to settle the controversy. The Massachusetts were intent upon securing the property to such persons to whom they had granted lands and the jurisdiction of those towns which had been settled by them. Suffield, Enfield, and Woodstock were the only towns which could be affected. Connecticut was also apprehensive that part of the town of Simsbury, which had been settled by that government, might fall within the Massachusetts. It was therefore settled as a preliminary, that the towns should remain to the governments by which they had been settled, and the property of as many acres as should appear upon a balance to have been gained by one government from the other should be conveyed out of other unimproved lands as a satisfaction or equivalent; only, as there was about two miles which Windsor claimed upon the town of Suffield, there having been a long contest between these two towns concerning the validity of the respective grants, it was agreed the two miles should belong to the Connecticut if they fell within their line.

Nothing could be more equitable, nor tend more to the future peace and content of the inhabitants of the contested borders.

It appeared, by the report of the commissioners, that 107,793 acres of land were due from the Massachusetts, who accordingly made a grant thereof to Connecticut. They accepted and made sale of the same, and applied the produce to the support of Yale college and other public uses, and the controverted towns for many years after continued without molestation under the jurisdiction by which they were settled.

The affairs of the war had so engaged the attention of all persons, that we hear little of party disputes and discord, for five or six years; but as soon as they were delivered from enemies without, a contention began within, from a new cause, the effects of which were felt for many years together. The paper bills of credit were the cause of this contention: so many of which had been issued for the charges of the war (particularly the large sum of forty thousand pounds, issued for the Canada expedition), that they were become the sole instrument and measure of commerce, and silver and gold were entirely banished. Of two instruments, one in use in a particular state only, the other with the whole commercial world, it is easy to determine which must leave that particular state and which remain. The currency of silver and gold entirely ceasing, the price of every thing bought or sold was no longer compared therewith, but with the paper bills, or rather with mere ideal pounds, shillings, and pence. The rise of exchange with England and all other countries, was not attributed to the true cause, the

want of a fixed staple medium, but to the general bad state of the trade. It was thought that increasing the paper bills would enliven and reform the trade. Three parties were formed, one very small, which were for drawing in the paper bills and depending upon silver and gold currency. Mr. Hutchinson, one of the members for Boston, was among the most active of this party. He was an enemy all his life, to a depreciating currency, upon a principle very ancient, but too seldom practised upon, *nil utile quod non honestum*: nothing is useful which is not honest.

Another party was very numerous. These had projected a private bank, or rather had taken up a project published in London in the year 1684; but this not being generally known in America, a merchant in Boston was the reputed father of it. There was nothing more in it, than issuing bills of credit which all the members of the company promised to receive as money, but at no certain value compared with silver and gold; and real estates, to a sufficient value, were to be bound as a security that the company should perform their engagements. They were soliciting the sanction of the general court, and an act of government to incorporate them. This party, generally, consisted of persons in difficult or involved circumstances in trade, or such as were possessed of real estates, but had little or no ready money at command, or men of no substance at all; and we may well enough suppose the party to be very numerous. Some, no doubt, joined them from mistaken principles, and an apprehension that it was a scheme beneficial to the public, and some for party sake and popular applause.

Three of the representatives of Boston, Mr. Cooke, Mr. Noyes, a gentleman in great esteem with the inhabitants in general, and Mr. Payne, were the supporters of the party. Mr. Hutchinson, the other (an attempt to leave him out of the house not succeeding), was sent from the house to the council, where his opposition would be of less consequence. The governor was no favourer of the scheme, but the lieutenant-governor, a gentleman of no great fortune, and whose stipend from the government was trifling, engaged in this cause with great zeal.

A third party, though very opposite to the private bank, yet were no enemies to bills of credit. They were in favour of a loan of bills from the government to any of the inhabitants who would mortgage their estates as a security for the repayment of the bills with interest, in a term of years, the interest to be paid annually, and applied to the support of government. This was an easy way of paying public charges, which, no doubt, they wondered that in so many ages the wisdom of other governments had never discovered. The principal men of the council were in favour of it, and it being thought by the first party the least of the two evils, they fell in with the scheme, and, after that, the country was divided between the public and private bank. The house of representatives was nearly equally divided, but rather favourers of the private bank, from the great influence of the Boston members in the house, and a great number of persons of the town, out of it. The controversy spread universally, and divided towns, parishes, and private families.

(1714.) At length, after a long struggle, the party for the public bank prevailed in the general court, for a loan of fifty thousand pounds in bills of credit, which were put into the hands of trustees and lent for five years only, to any of the inhabitants at five per cent. interest, one-fifth part of the principal to

be paid annually. This lessened the number of the party for the private bank, but it increased the zeal, and raised a strong resentment, in those which remained.

A vessel, which arrived at Boston from Ireland on the 15th of September, brought the first news of the death of the queen, and the accession of king George the First; and two days after, a vessel arrived, from some part of Great Britain, with the printed proclamation in the London Gazette. This, the governor thought sufficient warrant, without express orders, for proclaiming the king in the province. The practice in the colonies has not been uniform on the like occasions. At New Hampshire, the king was proclaimed from the same intelligence, the 22d of September; at Rhode-Island, the 29th; at New York, on the 11th of October; at New Haven, in Connecticut, the 14th; at Philadelphia, the 27th; no express orders being received in any of those places. but at Annapolis-Royal it was delayed until the 2d of December. The propriety of proceeding without express orders has been questioned; but the absurdity of acts of government in the name and by authority of a prince, for months together, after certain intelligence of their demise, has generally influenced the governors to proceed.

The secret designs of Queen Anne's last ministry were no where more suspected, nor more dreaded, than in Massachusetts; and the 1st of August was no where celebrated with greater joy, during the whole of the king's reign.

The Hazard sloop, sent express from England with orders to the government, was lost upon Cohasset rocks, the 12th of November, the vessel being stove to pieces and no papers of any consequence saved. Enough washed ashore to make certain what vessel it was, and one man had been landed and left at Nantucket. Six months, from the king's accession, had expired and no orders had arrived for continuing officers in their posts. The authority of the governor began to be called in question. According to the charter, upon the death, removal, or absence of the governor or lieutenant-governor, and there being no person commissioned as governor within the province, the government devolves upon the council or the major part of them. The council deriving their authority from charter and not from a royal commission, the act of parliament, limiting the continuance in office to six months after the death of a prince, it was supposed could not affect their authority. The advice of the miscarriage of the first orders went the first opportunity to England, and new orders were daily expected, and some were inclined to wait; but, on the 4th of February, the council assumed the government, the lieutenant governor, being of the council, joining with the rest, and issued a proclamation for all officers to continue in their posts, &c.

An instruction had been given by the queen, in 1707, directing that in case of the death or absence of the governor and lieutenant-governor, the eldest counsellor should preside in the province; but the charter giving the powers of government to the major part, this instruction was not regarded.

The administration of the council was short, and nothing of moment was transacted. On the 21st of March, the king's proclamation was received, and the governor reassumed with as great parade as if he had been first entering upon the government; but he had reason to expect his rule would be short. His friends in the province were increased. Those who had been his greatest opposers had many of

them changed sides, and were strongly attached to him, and used what interest they had with Sir William Ashurst and others, that he might be continued, and at their request Ashurst appeared for him. The Bankers were the most disaffected, and Colonel Byfield, a gentleman of the council, father-in-law to the lieutenant-governor, went over to England to endeavour to supplant him, but wanted interest. In England Mr. Dudley lost his friends by the queen's death. Colonel Burgess, who had served under General Stanhope, was, by his interest, in February, appointed to the government, and his commissions passed the seals March the 17th, and Ashurst writes, that the General had promised to be answerable for his good behaviour.

(1715.) Mr. Dudley met the assembly, at the election in May, but made no speech, though he had never failed of doing it before. The council and house chose his great adversary, Mr. Cooke, whom he had so often negatived, into the council, and either from indifference, or a spirit of forgiveness before his political departure, he now approved of him.

Colonel Burgess intended to stay a short time in England. The bank party were impatient for the removal of Dudley, who did not favour them, and whose second son, William Dudley, who began to have great weight in the house of representatives, was a violent opposer. An unusual step was taken, that the governor's commission might be superseded. An exemplification of Burgess's commission was obtained; and that, with the new commission or warrant to the lieutenant-governor, Tailer, were published in Boston, at the same time, the 9th of November; and thereupon Tailer took upon him the administration. It was questioned, whether this was regular; the commissions lay three or four weeks for the council to consider of; but at length they advised to the publication. No other instance of the publication of a governor's commission in the Massachusetts before his arrival in person ever occurred. In Virginia, it must have been practised, if a publication has been judged necessary; as several of their governors have never been in the colony. The house of representatives, the first day of their sitting (November 23d), appointed a committee to consider of the commissions, but no public exception was taken. Mr. Dudley's friends were sensible he could continue but a short time; for the original commission, with the new governor, would remove all doubt; he himself was in advanced life, near seventy, and had felt so much of the burthen of government, that he might well be weary of it; and, like his friend, Mr. Stoughton, wish to retire.

No New England man had passed through more scenes of busy life than Mr. Dudley. He was educated for the ministry, and if various dignities had been known in the New England churches, possibly he had lived and died a clergyman; but, without this, nothing could be more dissonant from his genius. He soon turned his thoughts to civil affairs; was first a deputy, or representative of the town of Roxbury; then an assistant; then agent for the colony in England, where he laid a foundation for a commission, soon after, appointing him president of the council, first for Massachusetts Bay only, but, under Andros, for all New England. Upon the revolution, for a short time, he was sunk in disgrace, but soon emerged. He appeared, first, in the character of chief justice at New York, then, returning to England, became lieutenant-governor of the Isle of Wight, and member of Parliament for Newtown, both which places he willingly resigned for the chief

command in his own country. Ambition was the ruling passion; and, perhaps, like Cæsar, he had rather be the first man in New England than the second in Old. Few men have been pursued by their enemies with greater virulence, and few have been supported by their friends with greater zeal. It has been seen that a second generation inherited the spirit of their ancestors, the descendants, on one side, preserving an affection for his family and posterity, and on the other, retaining equal disaffection against them. Some of his good qualities were so conspicuous, that his enemies could not avoid acknowledging them. He applied himself with the greatest diligence to the business of his station. The affairs of the war and other parts of his administration were conducted with good judgment. In economy he excelled both in public and private life. He supported the dignity of a governor without the reproach of parsimony; and yet, from the moderate emoluments of his post, made an addition to his paternal estate. The visible increase of his substance made some incredible reports of bribery and corruption to be very easily received; but, in times when party spirit prevails, what will not a governor's enemies believe, however injurious and absurd? It is no more than justice to his character, to allow that he had as many virtues as can consist with so great a thirst for honour and power.

His life would afford convincing evidence, if there was any doubt, that an humble calm mind enjoys more happiness in private life than an ambitious anxious mind in the highest station. No man in that period had seen more of those vicissitudes of fortune and the age, which Cicero, in one of his epistles to Luceius, says, afford a pleasing narration, however irksome to the man who has the experience of them.

Colonel Tailer's strong attachment to the bank party procured him the administration for a few months; but was the ultimate cause of his losing his commission for lieutenant-governor. It was supposed, but it does not appear upon what grounds, that Colonel Burgess would favour the same party, and his arrival was every day wished for by them; whilst the other party dreaded it, and laboured to prevent it. It was said also, that, in other respects, he would by no means be agreeable to the country; a gentleman of a more grave serious turn of mind would be more likely to be happy here himself, and to render the people so. Mr. Belcher, afterwards governor, who was very opposite to the bank party, was then in London, he joined with Mr. Dummer, the agent, and they engaged Sir William Ashurst with them, and prevailed upon Burgess for a thousand pounds sterling, which Belcher and Dummer advanced equally between them, to resign his commission, that Colonel Shute might be appointed in his stead. Colonel Tailer's friends had endeavoured to engage Ashurst in his favour, but to no purpose; the same interest obtained the lieutenant-governor's commission for Mr. William Dummer, a New England gentleman, who had married a daughter of Mr. Dummer, one of the commissioners at Plymouth, and was in some post there himself; but, his wife dying, he had returned to his native country.

Colonel Shute's family were, generally, dissenters: His father, an eminent citizen in London; his mother, daughter of Mr. Caryl, a dissenting minister of great note. His brother, afterwards Lord Barrington, was then a member of parliament, and at the head of the dissenting interest. The

colonel began his education under Mr. Charles Morton, who, about the year 1684, came to New England, and was minister of Charlestown. After tuition under him, he was sent to Leyden. He went after that into the army under King William, who made him a captain, served under the Duke of Marlborough, was a lieutenant-colonel, and wounded in one of the principal battles in Flanders. He had a good acquaintance, and was well esteemed at court; had the character of a friend to liberty, and was of an open, generous, and humane disposition. A governor of his character might be supposed to be welcome to New England men, but the interest of party prevails over all other considerations; and virtue, religion, private friendship, and public good are all sacrificed to promote it.

*From the arrival of Governor Shute, in 1716, to the arrival of Governor Belcher, in 1730.*

Colonel Shute arrived at Boston, October the 4th, 1716, in a merchant ship, and was received with the usual parade. He made the opposers of the bank his first acquaintance, the old governor's family in particular, and took his lodgings at Mr. Paul Dudley's. He had received very unfavourable impressions of the other party, from Mr. Belcher and Mr. Dummer, in England, and was considered, from his first arrival, as an enemy to the scheme, and the heads of the party were the heads of an opposition, during the whole of his administration. In his first speech to the general court, November 7th, he put them in mind of the bad state of the trade of the province, an important article of any people's happiness, owing, as he supposed, to the great scarcity of money, and recommended the consideration of some effectual measures to supply this want, and thereby to restore trade to a flourishing condition. He advocated the further emission of government bills, and the representatives, pleased with so easy a method of obtaining money, soon determined upon a second loan, of one hundred thousand pounds for ten years, to be put into the hands of commissioners appointed for each county in proportion to their taxes. This provision being made by the government, there was the less pretence for private persons or companies issuing their bills; but it gave no relief to the trade, the whole currency soon depreciating to that degree, as, with this addition, to answer the purposes of money very little more than if it had not been made. The governor became sensible of it, and recommended to them to provide against it, which they were not able to do, and many of them would not have been willing if they had been able, being in debt; and by means of the depreciation, discharging the debts by a nominal sum, perhaps of not more than one half of the real value of the debts. He soon found the effects of it upon his own salary, which they refused to advance as the bills sunk; and having recommended this measure in a public speech, it became more difficult afterwards to refuse repeating it.

The province had been at war with the eastern Indians, except some short intervals, for about forty years. The prospect of a long peace between Great Britain and France encouraged us to hope for the like with the Indians, who had always been under French influence; but their father, Rallé, a jesuit, was constantly instigating them to insult and annoy the new settlers who, he pretended, encroached upon the lands of the Indians, and by supplying them with strong drink, debauched their morals and pro-

vented the progress of the good work he had began among them. A treaty or conference was thought expedient to confirm them in their friendship with the English, and, if possible, to draw them from the Roman Catholic to the Protestant religion. The governor, therefore, the first summer after his arrival, in August, (1717), attended by several of the council both of Massachusetts and New Hampshire, and other gentlemen, met the Indians at Arowsick Island.

At the beginning of the conference, he delivered them an English and an Indian bible, which he told them contained the religion of the English, and at the same time recommended to them Mr. Baxter, a minister who went down as a missionary, and told them he would explain the Bible, and instruct them in the principles of religion. They were at no loss for an answer. "All people, they said, loved their own ministers; and as for the Bible, they desired to be excused from keeping it, God had given them teaching, and if they should go from that they should displease God." They were fixed in their religion, and it would have been a loss of time to attempt to move them. The rest of the conference was upon the right of the English to settle in that part of the country. Upon complaint made, by the Indians, of encroachments upon their lands, the governor produced one of the original deeds which had been given by their sachems. They acknowledged the lands, to the west of Kennebeck, belonged to the English, but they were sure no sale had ever been made of any lands to the east. The governor told them the English would not part with an inch of the land which belonged to them. The Indians were so offended, that they rose immediately, and, without ceremony, took to their canoes, and went to another island, where they had their head quarters, leaving behind an English flag which the governor had given them. In the evening, several of them returned to Arowsick, with a letter from Rallé to the governor, acquainting him that the French king did not allow, that in any treaty he had given away the land of the Indians to the English, and would protect the Indians against the English encroachments. The governor let them know, that he highly resented the insolence of the jesuit, and the next morning ordered the signal for sailing. Rallé, in his letters, often laments the unsteadiness of the Indians. They were afraid at this time of a new war. The old men were loth to quit their villages at Norridgewock and Penobscot, where they lived at ease, and encamp in the woods, or, which was much worse, depend upon the French who, they would often say, treated them like dogs when there was no immediate occasion for their service. This consideration induced them to send two of their number with a message to the governor, acknowledging that yesterday they had been rude and unmannerly, and earnestly desiring to see him again. He let them know he would see them upon no terms, unless they quitted their pretensions to the lands which belonged to the English. This the messengers promised should be done, and desired that the English colours which they had slighted might be returned them. In the evening they came again to the conference, and appointed a new speaker, as a mark of resentment to the former, who, they said, had behaved ill the day before; and, without entering into any dispute about particular limits or bounds, declared they were willing the English should settle where their predecessors had settled, desired to live in peace, and to be supplied with

necessaries, in a way of trade, confessed that some of their inconsiderate young men had offered injuries to the English, and violated the treaty of Portsmouth in 1713. After renewing that treaty, the conference ended.

The administration of a new Governor in the colonies was formerly calm at first. Several months passed after Col. Shute's arrival, without open opposition to any measures. The town of Bolton at the first election of their representatives, left out such as had been bank men, and choose such as were of the other party, but Mr. Cooke, who was at the head of the first party, had interest enough to obtain a place in council. It was, soon after, insinuated that the governor was a weak man, easily led away, and that he was in the hands of the Dudleys, men of high principles in government, and it behoved the people to be very careful of their liberties. Mr. Cooke, who had the character of a fair and open enemy, was bold in expressing his sentiments, and the governor was informed of some contemptuous language in private company, with which he was so much offended as to procure Mr. Cooke's removal from the place of clerk to the superior court. A dispute happening about the same time between Mr. Bridges, surveyor of the woods, and the inhabitants of the province of Maine, concerning the property of the white pine trees within that province, Mr. Cooke immediately inserted himself in the controversy, publicly patronized the inhabitants, and in a memorial to the house of representatives, charged the surveyor with mal-conduct in threatening to prosecute all who, without licence from him, should cut any pine trees in their own ground, which Mr. Cooke alleged they had good right to do, and he further charged the surveyor with permitting such persons, as would pay him for it, to cut down the trees which were said to belong to the king.

The surveyor thereupon preferred his memorial to the governor and council, justifying himself in the discharge of his trust, and complaining of Mr. Cooke, one of the members of the council, for officiously concerning himself with the affairs of the surveyor's office, and obstructing his measures for the service of the crown. Mr. Cooke had many friends in the house ready to support him, and this dispute was the beginning of the public controversy which continued until the end of Col. Shute's administration; parties were formed, new subjects for contention from time to time were furnished, until at length the governor was forced to leave the province.

In the month of April of this year (1717), a pirate ship, the *Whidah*, of 23 guns and 130 men, Samuel Bellamy, commander, ventured upon the coast of New England, near to Cape Cod, and after having taken several vessels, seven of the pirates were put on board one of them, who soon got drunk and went to sleep. The master of the vessel which had been taken, ran her ashore upon the back of the cape and the seven men were secured. Soon after, the pirate ship, in a storm, was forced ashore near the table land, and the whole crew, except one Englishman and one Indian, were drowned. Six of the company, upon trial by a special court of admiralty, were pronounced guilty, and executed at Boston, Nov. 15th.

The famous Indian warrior, Benjamin Church, who had escaped the enemy's bullets in a great number of encounters when in the most imminent hazard, met death this year by a fall from his horse, at the age of 78.

Mr. Woodward, secretary of the province, tired of a post of much labour and little emolument, disposed

of it to Josiah Willard, Esq.; who obtained the royal commission, and arrived at Boston, from London, December the 12th.

(1713.) No vote of council upon this memorial can be found, but the governor espoused the cause of the surveyor, and, to shew his resentment against Mr. Cooke, when the list of counsellors was presented at the next election, directed his speech to him in particular, and let him know he would excuse him from attending at the board for the ensuing year.

Mr. Cooke, soon after, presented his memorial to the council, in which he justified his own conduct, and charged Mr. Bridges with "using his utmost efforts to evade the rights and properties of the people in the province of Main, by his exorbitant actions, as well as basely betraying the trust the crown had invested him with, by daily selling and bartering the very logs and timber which he gave out was the king's, his master, whose bread he then eat." The council suffered the memorial to lie upon the table, but acted nothing upon it. Afterwards, upon the appointment of a committee by the house, they joined a committee of council to consider in general of Mr. Bridges's conduct. This committee, in their report, justified Mr. Cooke, and condemned the proceedings of the surveyor. The council put off the consideration of this report also, but the house voted their acceptance of it. The governor, of course, transmitted to the board of trade an account of all these proceedings, and very soon received an answer censuring the house of representatives for countenancing and encouraging Mr. Cooke. This being laid before the house, they by a vote declared, that the censure of the board of trade was occasioned "by sending home the papers on one side only, whereby their lordships were informed *ex parte*," The house had avoided any direct attack upon the governor, until this vote; many of the principal members this year being well affected to him, but the party without doors, especially in Boston, had been increasing against him, and, at the next election for that town, they sent all new members, and a change was made in many other towns unfavourable to the governor's interest.

The famous projector, Captain Coram, in the year 1718, was busy in a scheme for settling Nova-Scotia and the lands between Nova-Scotia and the province of Main, and a petition was preferred by Sir Alexander Cairnes, James Douglas, and Joshua Gee, in behalf of themselves and others, praying for a grant upon the sea-coast five leagues south west and five leagues north east of Chibuetow harbour, where they proposed to build a town, and to improve the country round it in raising hemp, in making pitch, tar, and turpentine, and they undertook to settle a certain number of families to consist of 200 persons in three years, the rest of his majesty's subjects not to be prohibited fishing on the coasts under regulations. To this petition Mr. Dummer, the Massachusetts agent, objected because of the last clause, which laid a restraint upon the fishery. The lords of trade, however, reported in favour of it, but it stopped in council.

Another petition was preferred by William Armstrong and others, who had been officers and soldiers in the army, "praying for a grant of the lands between Nova-Scotia and the province of Main, the said tract of land having been conquered by the French in 1696, and possessed by them until 1710, when it was recovered by the English, and by the treaty of Utrecht was, with Nova-Scotia, given up by France to the British crown." The conquest in

1696, was the taking Pemaquid fort and holding possession of the harbour two or three days. The general court being restrained from conveying these lands without consent of the crown, it was proposed that if they would consent to resign the jurisdiction between Kennebeck and Penobscot the crown should confirm the property of the soil, but upon the proposal being communicated to the court, they instructed their agent to make no concessions.

One Sarah Watts, setting forth that she was heir at law to Thomas Goffe, deputy governor and one of the twenty-six patentees of the old colony, claimed a 16th part of the colony, and the issues and profits for eighty or ninety years. She filed a bill of complaint in chancery against the province, and there was a commission of sequestration for several New England ships in the river, which cost the owners several guineas, each, to the sharpers who had urged the woman to the suit. The agent was required to answer the bill, which he did by declaring that if the complainant could even make it appear that Thomas Goffe was once seized of a 26th part of the colony, and that she was heir at law to him, which he did not believe she was able to do, yet he verily believed that when the patentees, with others, were incorporated into a body politic, their respective rights ceased and passed to the corporation, who had granted the lands away. The poor woman was at last arrested for debt and sent to Newgate, where she perished.

(1719.) The governor, in the beginning of the year 1718, had consented to an impost bill which laid a duty not only upon West India goods, wines, &c., but also upon English manufactures, and a duty of tonnage upon English ships. Before the session in May, the next year, he had received an instruction from the king to give all encouragement to the manufactures of Great Britain. The house, however, passed a bill of the same tenor with that of last year, and sent it to the council for their concurrence. An amendment was proposed, viz., to leave out the duty upon English vessels and goods, but the house adhered to their bill. A conference ensued, for the house was not, then, so exact as they have been since, in refusing to confer upon money bills. This produced nothing more than a proposal from the house to alter the word English to European, which, being trivial, was refused. It seems, the governor, a little out of time, had taken the opinion of the council upon this question, whether, consistent with his instruction, he could give his consent to the bill, which they determined he could not, if it should be offered to him. The house then tried the council with the following resolve, "The house insist on their vote, forasmuch as the royal charter of this province gives power to the government to impose and levy proportionable and reasonable assessments, rates, and taxes upon the estates and persons of all and every the proprietors and inhabitants of the same, which this government has been in the free and uninterrupted exercise of ever since the enjoyment of the said charter." Sent to the upper house for their concurrence. The upper house was a new name for the council, and designed as a flier, and to intimate that they might consider themselves in another capacity, than as privy council. Perhaps if Cromwell's epithet for his house of lords had come into their minds, it would have been, the other house. Taunts and language which tend to irritate, can upon no occasion be justifiable from one branch of the legislature to the other. • Upon an agreement and harmony the interest of the people depends.

Upon different apprehensions of this interest, if it be the real object, the several branches, by the persuasive voice of reason, will strive to convince each other, and be willing to be convinced as truth shall appear.

The council thought themselves unkindly treated; and, by a message, desired the house to alter their vote, but they refused to do it, and gave their reasons for the new form. "The house have received new and unusual treatment from the board. 1st, It is new and unusual for the council to give his excellency their advice upon a bill, till they have acted in concert with the house in concurring or non-concurring. 2d, It is likewise new and unusual for the council to desire a free conference, upon a subject matter, and then, at the management, to inform the house that by a previous vote they had so far engaged themselves that they could not recede from it. 3d, It is likewise a new and unusual method for the honourable board, after a message to the house during several amendments to a bill of rates and duties which were in a great measure agreed to by the house, immediately to non-concur the bill. 4th, It is likewise new and unusual for the honourable board to intermeddle so much with the grants and funds, which this house take to be their peculiar province."

The house having in this manner expressed their resentment, returned to their old style, and then the council, by message, let them know that they would not give their concurrence to any bill laying a duty upon European goods, denied the charge made against them by the house, of innovations, and intimated that any further messages would only tend to increase the misunderstanding and retard the affairs of the government, and desired the house, rather to join with them in a diligent endeavour to bring the session to such a conclusion, as should promote his majesty's honour and the interest of the province.

Several weeks having been spent in these altercations, the governor thought it time to interpose; and, sending for the house to the council-chamber, he made the following mild and healing speech to them.

"Gentlemen,—My design for sending for you up at this time, is to let you know how concerned I am at the unhappy misunderstandings that have been for many years between the council and your house relating to the impost bill, and to assure you that no person here present can be more desirous of preserving the privileges of this people than myself, so far as is consistent with the late instructions I have received from my royal master, which have, by his special directions, been laid before this court. I am fully persuaded, that to act any way contrary thereto, after the many debates and votes which have been upon that head, would rather destroy than preserve those privileges we justly prize. Gentlemen, I desire your earnest consideration of what I have hinted; that so the important affairs of the province yet lying before you may have a speedy and happy conclusion."

This speech, which, a year or two after, when the prejudices against the governor were at the height, would have been excepted to as irregular and anticipating matters, which it would have been time enough for the governor to have declared his sense of when they came to be laid before him, had now a good effect, and the house, the same day, resolved that a new impost bill should be brought in, and that the controverted clause in the former bill

should be left out, but in the preamble to their resolve they made a heavy charge against the council for not concurring their former bill.

"Whereas this house have voted, and passed a bill, granting to his majesty several rates and duties of impost and tonnage of shipping, in which was included one per cent. on European merchandize, for which article or clause the honourable council have several times non-concurred the said bill, notwithstanding all proper endeavours have been used by this house to attain the same which have hitherto proved fruitless, whereby a considerable part of the revenue, which would have accrued to this province, is for the present session foregone; which also tends to the depriving this government of their just rights, powers, and privileges granted by the royal charter, resolved," &c.

The council were fond of peace, and, as soon as this resolve came to their knowledge, they sent a message to the house desiring they would not print the resolve in their votes, as it would have an ill effect and would oblige the council, in their own vindication, to reply, although they wished that all controversy, between the two houses, might cease. The house printed it, notwithstanding, and the next day the council sent the following answer.

"The board are very much concerned to find, among the votes of the honourable house, a declaration as if the council in non-concurring the bill of impost as it was first framed, had done that whereby a considerable part of the revenue, which would have accrued to this province, is for the present session foregone; which also tends to the depriving this government of their just rights, powers, and privileges granted by the royal charter.

"This declaration contains, or implies, such a charge as the council can, by no means, suffer themselves to lie under, without asserting and solemnly declaring their integrity, and they are more surprised, at the imputation of doing a thing which tends to deprive this government of their just rights, powers and privileges granted by the royal charter; because, on the 23d current, the board sent down a message to the honourable house, 'that they were always ready and desirous to concur with the honourable house of representatives in such proposals relating to an impost, as may not tend to alter or expose our present happy constitution under the royal charter;' so that it was from a sincere and just regard to the rights, powers, and privileges of this government granted by the royal charter, that the council chose rather to omit the duty of one per cent. on English goods for this session.

"That the council apprehended the duty of one per cent. on English goods affected the trade of Great Britain, and so came within the meaning of his majesty's late additional instruction, is certain: and, being of that opinion, it would have been inconsistent for the board to concur the bill of impost as it was sent up; however, they can boldly and truly say, they have acted from a principle of duty to his majesty, love and fidelity to their country, and have nothing more at heart than the just, wise, and careful preservation of those invaluable rights, powers, and privileges granted by the royal charter which God long continue."

This controversy being over, the court was prorogued.

Before the next sessions in November, the governor received a reprimand from the lords justices, the king being absent, for consenting to the duty on English goods, &c. by the impost act in 1718. This

he laid before the court. The same house, which had so long contended with the council, the session before, for this clause in the bill, now "readily acknowledge the exceptions taken to it are just and reasonable." An instruction to the governor to support the surveyor of the woods in the execution of his office, which was communicated to the house at the same time, was not so favourably received, and in an answer or remonstrance occasioned by the governor's speech they charge the surveyor with instances of very gross mal-conduct. What evidence they had of it does not now fully appear. The governor, by a message, desired that they would not print their remonstrance. They sent a committee to acquaint him, they must insist upon the right they had to make it public. He made a very great mistake, and told the committee, that his majesty had given him the power of the press, and he would not suffer it to be printed. This doctrine would have done well enough in the reigns of the Stuarts. In the present age it is justly exceptionable; although, by the liberty of the press, we are not to understand a liberty of printing every thing, however criminal, with impunity. The house had no opportunity to take notice of this declaration. Upon another occasion they let him know they had not forgot it. The governor was so displeased with the proceedings of the house, that he put an end to the session, and they did not meet again.

(1720.) We are now arrived to the memorable year 1720. The contests and dissensions in the government rose to a greater height than they had done since the religious feuds in the years 1636 and 1637.

The public affairs, in general, were in a very indifferent state. The Indians upon the eastern frontiers were continually insulting and menacing the English inhabitants, so that but little progress had been made in settling the country since the peace, and, this year, most of the settlements which had been begun were deserted, and a new war was every day expected.

The trade of the province declined; there was a general cry for want of money, and yet the bills of credit, which were the only money, were daily depreciating; the depreciation was grievous to all creditors, but particularly distressing to the clergy and other salary men, to widows and orphans whose estates consisted of money at interest, perhaps just enough to support them, and being reduced to one half the former value, they found themselves on a sudden in a state of poverty and want; executors and administrators, and all who were possessed of the effects of others in trust, had a strong temptation to retain them; the influence a bad currency has upon the morals of the people is greater than is generally imagined. Numbers of schemes, for private and public emissions of bills, were proposed as remedies, the only effectual one, the utter abolition of the bills, was omitted.

By these calamities, the minds of the people were prepared for impressions from pamphlets, courants, and other newspapers, which were frequently published, in order to convince them, that their civil liberties and privileges were struck at, and that a general union was necessary. These did not pass without answers, attributing all the distress in public affairs to the wrath and resentment, the arts and sinister views, of a few particular persons; but the voice of the people in general was against the governor. In the mother country, when disputes arise between the branches of the legislature upon their re-

spective rights, parties are formed and the body of the people are divided; for in a well constituted government it is of importance to the people that the share, even of the popular part of the constitution, should not be unduly raised to the suppression of the monarchical or aristocratical parts. From a regard to the common interest, therefore, in a dispute concerning prerogative and privilege, the people, ordinarily, are divided in sentiment. The reason is obvious why it is less frequently so in a colony. There, the people, in general, consider the prerogative as an interest; without them, separate and distinct from the interior interest of the colony: this takes their attention from the just proportion of weight due to each branch in the constitution, and causes a bias in favour of the popular art. For the same reason, men fond of popular applause are more sure of success, with less degree of part, in a colony, than in a state not so connected: and, consequently, men who with unbiassed judgments, discern and have virtue enough to pursue the real interest of their country, are more likely to be reproached and vilified.

The first act of the house of representatives was the choice of Mr. Cooke for their speaker. A committee was sent to the governor at his house, to acquaint him with the choice. They reported, at their return, that his excellency said, "it was very well." In the afternoon, the governor, being in council, sent the secretary to acquaint the house, that he was now in the chair and ready to receive their message, respecting the choice of a speaker. They sent back an answer, that his excellency, upon being informed of the choice in the morning, had said "it was very well," and they had recorded his answer in the books of the house. The governor replied, that he would receive no message from the house but when he was in the chair. The house then proposed, by message, to the council, to join with them in the business of the day, the choice of counsellors; but upon the governor's telling their committee, who carried up the message, that no election should be made until he was acquainted who was chosen speaker, the house sent a new committee to acquaint him with the choice they had made. The governor replied to this committee, that Mr. Cooke had treated him ill as the king's governor, and, therefore, according to the power given him by the royal charter, he negatived the choice, and desired they would proceed to choose another person. They sent back their answer, that they had chosen a speaker, according to their known and legal privileges, and therefore insisted upon the choice, and at the same time they renewed their motion to the council to join with them in the election. The governor told the committee, that he had received a message from the house, acquainting him with the choice they had made of a speaker, which choice had been negatived and he was no speaker. Upon this, the house sent their committee to the board to acquaint them, that two messages having been sent to propose to the board to join in the choice of counsellors and no answer having been given, they now desired to know whether the board would join in the election or not.

If there had been any further delay on the part of the board, it is very probable, the house would have proceeded without them, which must have increased the perplexity. The governor, therefore, left the board, having first charged the secretary with the following message to the house, "His excellency orders me to acquaint you, he is informed that governor Dudley did, in the time of his government,

disallow of a speaker chosen by the house, and that his proceedings therein were approved by the commissioners of trade and plantations, and that he was thereupon directed by the said commissioners to acquaint the council, that it would not be thought fit that her majesty's right of having a negative upon the choice of a speaker be given up, which was reserved to her majesty, as well by the charter, as by the constitution of England."

Notwithstanding the warm disputes, in the preceding year, between the two houses, only one new counsellor was chosen, John Burrill, Esq., of Lynn, who had been many years speaker of the house, but this year was sent to the board, in the room of Mr. Higginson. His temperate spirit, until now, had engaged the whole house in his favour, and, from year to year, procured him a general vote, but this year the house were willing to part with him for a gentleman obnoxious to the governor, which measure, it was easy to foresee, must give a further occasion of controversy.

Two of the new elected counsellors were negatived, Nathaniel Byfield, who had been soliciting in England for the government when Colonel Shute was appointed, and John Clark, who was a person of many valuable qualities, and obnoxious, only, for being strongly attached to Mr. Cooke, and having been a great supporter of the cause.

After the election, the governor made a further attempt to bring the house to a compliance by the following speech. "Gentlemen. At the opening of this session you thought fit to make choice of Elisha Cooke, Esq. for your speaker; and, upon reporting of it to me, I did declare my disacceptance of that election, and am firm in my opinion that I had good right so to do, by virtue of his majesty's commission, and the powers reserved by the royal charter, and am also confirmed in it, by what I find transacted by the late governor Dudley, during his administration, and also by the opinion of the right honourable the lords of trade and plantations in that matter. I must further observe to you, that the person you have chosen had invaded the king my master's rights in the woods of the province of Main, though confirmed to his majesty by an act of the British parliament, and I have received the thanks of the right honourable the lords of trade and plantations for removing him out of the council. He has ill treated me, who am the king's governor, and has been censured by the council for it, which stands upon record in the council books. How acceptable this matter will be, at home, considering the warning we have lately had from the court of Great Britain upon the account of passing the impost bill, will be worthy of your serious reflection. These things I thought necessary to acquaint you with, and advise you to return to your house and choose some other person speaker, with a reservation of your own rights, until you shall send to the court of Great Britain for the explanation of that part of your charter, relating to the affair of a speaker."

The house, immediately upon their return to their chamber, entered into a debate upon this speech, and the question being put, whether, for the reasons assigned by his excellency, the house will proceed to the choice of a new speaker, it passed in the negative, nemine contradicente.

The governor gave them no opportunity to proceed on any other business, for the next day he sent for them up again, and, after another speech, dissolved the court. "Gentlemen. Out of a tender

regard I have for the welfare of this province; I shall give you the following advice before we part; that when it shall please God we meet again in a general assembly, which shall be as soon as possible, you will not let this province suffer by the perverse temper of a particular person, but that you will choose one for a speaker that has no other view but that of the public good, one that fears God and honours the king. It is irksome and disagreeable to me to dissolve an assembly, but as matters now stand, I am forced to do it, or must give up the king, my master's prerogative, which nothing shall ever oblige me to do, who am the king's governor. Gentlemen, I do not think it for the honour of his majesty's government that this assembly should sit any longer, and therefore I shall dissolve you."

Writs were issued for a new assembly, to meet the 13th of July. The governor had no great reason to hope for a more favourable house. The people, in general, thought their privileges were attacked. The charter indeed was silent upon this point. In a dispute, between the crown and the house of commons in the reign of Charles the Second, an expedient was found which seemed to avoid the acknowledgment of the right of the crown to refuse a speaker, but a provincial law was principally relied upon which declares "that the representatives assembled in any great and general court shall be the sole judges of elections and qualifications of their own members, and may from time to time settle, order, and purge their own house, and make such necessary orders for the due regulation thereof as they shall see occasion." Whether the legislators had in contemplation the right of the house to choose a speaker, exempt from the governor's negative, might well be questioned; but it was urged that the due regulation of the house might very well include this right.

The towns, in general, sent the former members. Boston discovered how they stood affected by leaving out Mr. Tay, who was one of those persons who serve upon a pinch, when a favourite cannot be carried by a party, to stop the gap, and prevent an opposite candidate; and he came in several times upon such occasions. In his room, the town now chose Mr. Clark, the negatived counsellor.

The house was willing to sit and do business, which the choice of the former speaker would have prevented. They therefore pitched upon a person less attached to party, Timothy Lindall, one of the representatives of Salem, to whom no exception was taken. The governor, in his speech, recommended a peaceable session, but the house could not forget the late dissolution. They began with a warm message or remonstrance to the governor, in which they tell him, "the last assembly took no great pleasure in being dissolved, before they had gone through the usual necessary business; their asserting and maintaining their just right and ancient privilege of choosing their speaker, and not owning his excellency's power to negative him, was nothing but what they were strictly obliged to; and the new house are humbly of opinion, that whoever was of advice to his excellency, in the matter, did not consult his majesty's interest, nor the public weal and quiet of the government, but officiously endeavoured to beget unhappy misunderstandings between his excellency and the house, and break off that desirable harmony which every one ought to keep up; we earnestly hope and desire the province may never have an assembly that will willingly forego such a valuable privilege as King William and Queen Marv, of eve:

blessed memory graciously favoured the province with, when they gave their royal assent to a law, directing and governing that affair."

All the subsequent proceedings of this short session shew how much the house was out of temper. An Indian war used to be universally dreaded. To prevent it, the governor and council had been treating with three of the Penobscot tribe, who were sent for or came to Boston, and the house were desired to make a grant for a present to them, but by a vote they refused to do it. Some time after, they ordered a small sum, ten pounds only. To the controversy with the governor, and the opposition made to the proposals which came from him, the war, which soon after broke out, was, by the governor's friends, attributed.

There had been no public notaries in the province, except such as derived their authority from the archbishop of Canterbury. The house now first observed, that a notary public was a civil officer, which by the charter was to be chosen by the general court, and sent a message desiring the council to join with the house in the choice of such an officer in each part of the province. To all instruments which were sent abroad, not only the attestation of the notary himself would be necessary, but a certificate under the province seal, to shew the authority to attest; the council therefore took time to consider of the expediency of appointing such an officer, and referred the matter to the next session, but the house immediately proceeded and chose the officers by their own votes. The arguments, to prove that an officer to be chose by the whole court could derive an authority from the majority of the members of the house of representatives, have not been preserved.

Being offended with the council, the house sent a message desiring "that considering the low circumstances of the province, no draught be made upon the treasury for expenses, at times of public rejoicing, for the future."

It had been usual to make a grant to the governor for the salary of half the year, at the beginning of the session: the house deferred it until the close, and then reduced it from five to six hundred pounds, although the currency was depreciated. To the lieutenant-governor they used to make a present, once a year, never less than fifty pounds, they now reduced it to thirty-five. Mr. Dummer had so much spirit, that he inclosed the vote in a letter to the speaker, acquainting him that "having the honour to bear the king's commission for lieutenant-governor of the province, and having been annually more than fifty pounds out of pocket in that service, he did not think it for his honour to accept of their grant."

The governor took no public notice of the proceedings of the house. On the 23d of July he put an end to the session.

During the recess of the court (August 7th) a part of the eastern Indians fell upon Canso, within the province of Nova-Scotia, but peopled every summer from the Massachusetts. The Indians surprised the English in their beds and stripped them of every thing, telling them they came to carry away what they could find upon their own land. Three or four of the English were killed. Some of the French of Cape Breton were in confederacy, and came with their vessels, the next night, and carried off the plunder, together with about 2,000 quintals of fish. The English vessels in the harbour were not attempted. A sloop happening to arrive the next day, the master offered his service to go out and

make reprisals, and being furnished with a number of men, and two or three small vessels for his consorts, for want of more ample authority, he took a commission from one Thomas Richards, a Canso justice, and went after the French, and soon brought in six or seven small fishing vessels, having all of them more or less of the English property aboard.

Mr. Henshaw, of Boston, a principal merchant at Canso, went to Louisbourg with a complaint to the French governor, who excused himself from intermeddling, the Indians not being French subjects, nor under his controul. The French prisoners were sent to Annapolis-royal. The loss sustained by the English, was estimated at twenty thousand pounds currency.

The fears of the people, in the eastern parts of the Massachusetts, were increased by this stroke upon Canso. In a short time after the cattle were destroyed and the lives of the owners threatened. The governor was still desirous of preserving peace, and, by the advice of counsel, sent orders to Colonel Walton, the commanding officer of such forces as upon the alarm had been sent there, to inform the Indians, that commissioners should be sent to treat with them. The Indians liked the proposal and promised to attend the treaty.

Before the time appointed the general court met, and the house passed a resolve, "that 150 effective men, under suitable officers, be forthwith ordered to march up to Norridgewock, and compel the Indians that shall be found there, or in other those parts, to make full satisfaction for the damage they have done the English, by killing their swine and sheep or carrying them away; or stealing provisions, clothing, or any other way wronging them: and that a warrant be directed to Capt. John Leighton, high sheriff of the county of York, who is to accompany the forces for the apprehending and safe bringing Mr. Rallé to Boston, who is at present resident at or near Norridgewock, in Kennebeck river, in this province; and, if he be not to be found, that then the sheriff direct and command the Indians there, or in the parts adjacent, to bring in and surrender up the jesuit to him the sheriff; and, upon their refusal to comply with either of the said demands, that the commanding officer is to take the best and most effectual way to apprehend and secure the Indians so refusing, and safe conduct them to Boston."

The governor looked upon this resolve to be, in effect, a declaration of war and an invasion of the prerogative; it necessarily prevented a treaty he had agreed to hold with the Indians, and a new war must be the consequence of such a measure. The council were fond of peace, and when the resolve was sent to them for concurrence, they rejected it. The house were less averse to war. The charge of carrying it on, it was said, would be no burden to the province; the French, now, durst not join the Indians, and this would be the most favourable opportunity which could be expected to subdue or utterly extirpate them. That the charge should be no burden seems to be a paradox, but a wild opinion had filled the minds of great part of the people of the province, that, if bills of credit could be issued, the advantage to trade would be so great, that the taxes by which, at distant periods, they were to be drawn in again would not be felt. Many schemes of public expense were projected, and, among the rest, a bridge over Charles river, broader and much deeper than the Thames at London or Westminster.

The public records of the general court are al

ways open to the inspection of any of the members, but, that the house might have them under their more immediate view and charge, they passed a vote, that the secretary should make duplicates of all public records, and that one set should be lodged in such place as the house should appoint. The council, willing to have duplicates for greater security, concurred with an amendment, viz., in such place as the general assembly should direct, but this amendment the house rejected.

The house, finding the council a bar to their attempts, resolved, in one instance, to act by themselves. There was a complaint or suggestion, that false musters were made by some of the officers in the pay of the province. The house taking the affair into consideration resolved, "that one or more meet persons be appointed by this house clerk of the check, who shall, from time to time, have an inspection into the forts, garrisons, and forces, and take care that every one have their compliment of men; and the better to enable them to execute the trust reposed in them, that when and so often as they shall see reason, the commanders of the forts, garrisons, and captains of any of the companies in the pay of this government, shall call forth their men before them, and, if any do not appear, the commanding officer to give the reason of such absent men; and that no muster roll shall be accepted and paid by the treasurer, unless approved of by the clerk of the check." The governor did not intend to admit this officer, appointed by the house, into the forts, garrisons, &c., which, by the charter, the crown had reserved to the governor, but he kept silent.

To another act of the house the council took exception. A message was sent by the house to the council to let them know they had appointed a committee to prepare a bill for levying soldiers, "taking it to be their peculiar care." Lest it should be understood that this was to exclude the council from concurring or non-concurring such bill, or from advising to the levying soldiers upon an emergency in the recess of the court, the council desired the house to withdraw those words, "taking it to be their peculiar care," which they agreed to.

At this session, the house, again, withheld one hundred pounds from the governor's usual half year's salary. He had passed it over without notice before, but now he thought it proper to lay before them a royal instruction to recommend to the assembly to establish a sufficient allowance for him by a fixed salary. They sent him a reply, "that they humbly conceived what was granted him was an honourable allowance, and the affair of settling salaries being a matter of great weight, and wholly new to the house, and many of the members absent, they did not think it proper to enter upon the consideration of it, but desired the court might rise." The governor complied with their request. The Massachusetts province afforded subject for some part of the madness of the people of England in this remarkable year. Waste lands have an imaginary value set upon them, sometimes higher, sometimes lower, and continually afforded subject for bubbles among themselves. Mr. Dummer raised a bubble from the eastern lands, but had not time for any very great success. We give his letter, as a specimen of this kind of transaction:—

"It remains now that I give an account to the general court of a very considerable undertaking which I set on foot, and have been carrying on for

several months past in hopes to procure thereby many great advantages to the province. I have projected a scheme to raise hemp and flax in the eastern frontiers of the province of Main for the supply of this kingdom. In order to accomplish this design, I proposed that the lands between St. Croix and Penobscot should be granted to the undertakers and their assigns by the crown, and that they should also have a charter of incorporation, with all reasonable privileges and advantages allowed them.

"I set myself heartily to work, and, that I might lay a good foundation, I chose seventeen managers for the carrying it on, who are all persons of great distinction, and attend diligently upon the business at every meeting. My Lord Barrington is one, and Colonel Bladen, of the board of trade, is another, and Alderman Bailis, a commissioner of the customs, is a third. The rest are either men of note and figure in parliament, as Mr. Young, first commissioner for stating the accounts of the army, or eminent citizens, as Sir Justus Beck, who is one of the greatest merchants in the kingdom. Being thus strong, I had no reason to take notice of Coram and friends, or to have any apprehensions of what they were doing, or capable of doing against me; yet, for quietness sake, I sent them word that, if they would withdraw their petition, and give me no more trouble, they should find an account of profit from this undertaking, beyond what they could ever expect, if it were to be under their own conduct. Coram immediately submitted to my petition, but when he afterwards was told that I had left out of my petition the tract of land between Kennebeck and Penobscot, he ran about in a mad rage, declaring he would rather starve than come into it, and that the whole design was only a trick in me to save that fine country for the villainous people of New England.—I have therefore since treated and agreed with his partners and patrons by whose interest he was supported, so that Coram is now entirely dropped, and I have no opposition.

"Nevertheless, it is the opinion of the managers to rest a little till the ministry has quelled the great number of companies that are erected every day in defiance of the late act of parliament, and are so offensive to the government, that the best scheme in the world would suffer some disgrace by appearing at this time. I have only to add, that I have reserved twenty thousand pounds of the subscription for the use and benefit of the province; which, when the time comes, I will put in the name of proper trustees for that end."

(1721.) At the opening the next session (March 15th), the governor, in his speech, recommended measures to prevent the depreciation of the currency, to suppress a trade carried on with the French at Cape Breton, and to punish the authors of factious and seditious papers, to provide a present for the five nations, and to enlarge his salary.

They refused, directly or virtually, every proposal. To the first the house tell him, in their answer, "they had passed a bill for issuing one hundred thousand pounds more in bills of credit. This, alone, had a direct tendency to increase the mischief, but they add that "to prevent their depreciation they had prohibited the buying, selling, and bartering silver, at any higher rate than set by act of parliament. This certainly could have no tendency to lessen it." Such an act can no more be executed than an act to stop the ebbing and flowing of the sea. It would probably carry away and keep

out all silver and gold. The depreciation of their currency would, notwithstanding, have been as visible by the rise of exchange with foreign countries, and as sensibly felt by every creditor among themselves. To his other proposals they say, "they know of no trade carried on by any people of the province with Cape Breton, and do not think any law to prevent a trade there is necessary; and for seditious and scandalous papers, the best way to suppress or prevent them is, for the executive part of the government to bring the authors to condign punishment; and if proper measures had been taken to discover and punish the authors of a libel called *News from Robinson Crusoe's Island*, wherein the members of the house are grossly reflected upon, few or none would have dared, afterwards, to publish any thing of that nature or tendency, but to suffer no books to be printed without license from the governor will be attended with innumerable inconveniences and danger; as to the five nations, the house do not know enough of their number, nor what the other governments intend to give, and, therefore, cannot judge what is proper for them to do; and for the allowance to the governor, they think it as much as the honour and service of the government calls for, and believe the inhabitants of the several towns through the province are of the same mind."

There never had been an instance of any governor's refusing or neglecting, at the beginning of the year, to appoint a fast, in conformity to the practice of the country, but the house now endeavoured to anticipate the governor, and appointed a committee to join with a committee of council to prepare a proclamation for a public fast. The council refused to join, and acquainted the house they could find no precedent; but the house replied that, if such days had not the sanction of the whole court, people would not be liable to punishment for working or playing. The governor, willing to conform to the house so far as would consist with maintaining his right of issuing proclamations, mentioned in the proclamation which he soon after published, that the appointment was by advice of council, and upon a motion from the house of representatives; but the house refused to meet him and declared they had never made any such motion; and ordered that no members of the house should carry any proclamations to their towns, for the present. The day was, however, observed as usual, except that one of the representatives of Boston would not attend the public worship, but opened his warehouse as upon other days.

Certain persons had cut pine trees upon that part of the province of Main which had been granted by the general court as private property. A deputy to the surveyor of the woods gave licence to cut the trees, as belonging to the king. The house appointed a committee to join with a committee of council, which joint committee were to seize and secure for the province, the same logs which had been cut by licence. The council concurred with a "saving to his majesty all such rights as are reserved by the royal charter, and acts of parliament, to trees of the royal navy."

The house desired this saving might be withdrawn, not that they apprehended the reservation made in the charter, or the provision by act of parliament, were of no force; but they alleged that the trees they designed to seize were cut by one deputed by the deputy of the surveyor of woods, and cut not for the royal navy, but for other uses, and

therefore they did not come within reason of the reservation or provision.

Finally, upon the council's refusing to join, the house appointed a committee of their own to seize the logs, and directed the attorney-general to prosecute those who had trespassed and made spoil upon the province lands. After they were seized, the house again desired the council to concur a vote or order for securing and converting the logs to the benefit of the province. This, without any judicial determination, was still more irregular, and the council declined meddling with them.

As the time approached for issuing writs for a new assembly, the governor made the following speech to them, before their dissolution:—

"Gentlemen of the house of representatives: In my speech at the beginning of the session, I gave you the reasons of my meeting you at this time. I have since received your answer, which I shall take care to transmit by the first conveyance, that his majesty may see, not only how his governor of this province is treated and supported, but what sort of regard is paid to his own royal instructions. I shall also lay before the right honourable the lords commissioners of trade and plantations, the bill for prohibiting a trade to Cape Breton, which I recommended to you several sessions, and which had twice the concurrence of his majesty's council, but was as often thrown out in your house, notwithstanding the message that accompanied that bill.

"I am very much surprised you should refuse two other bills, which came down from the council, the one to prevent riots, the other to prohibit the making and publishing libels and scandalous pamphlets, the passing of which would, in my opinion, have tended both to the honour of the government and the public peace.

"But what gives me the greatest concern is, that the proceedings of your house, with respect to the woods in the province of Main, are directly contrary to the reservation of his majesty's right in the royal charter, and an act of parliament, which were both set forth in my proclamation, dated the 1st of November, 1720, for preventing the destruction and spoil of his majesty's woods.

"I could heartily wish, that instead of obliging me to make such representations to the lords of trade, as I fear will not be to your advantage, you had acted with that calmness and moderation, which becomes the subjects of a prince, who possesses those qualities in an eminent degree; and, which becomes the representatives of a province, that, without any encroachment on the royal prerogative, enjoys as many and as high privileges, as the greatest advocates for liberty can desire or expect.

"I must therefore recommend to you a loyal and peaceable behaviour, and to lay aside those misunderstandings and animosities that of late prevail so much amongst you, which you will find to be your truest and best interest."

Doctor Noyes, one of the representatives of Boston, died while the court was sitting (March 16th), after a short illness. He was very strongly attached to the popular party, and highly esteemed by them; was of a very humane and obliging disposition, and, in private life, no man was more free from indelicacies. Mr. William Hutchinson, who succeeded him, was also a gentleman of a very fair character, sensible, virtuous, discreet, and of an independent fortune. He began his political life at a time when persons, thus qualified, were wanted for the service of their country, to moderate the pas-

sions of those who were less temperate and who had the lead in the house. In general, he adhered to the popular party also, but lived but a little while. Longer experience might probably have convinced him, that he would have shewn his gratitude to his constituents more, by endeavouring to convince them that they were running to an extreme than by encouraging the same extremities himself.

The session of the general court, in May, this year, began as unfavourably as any former session. The house chose for their speaker, John Clarke, Esq.; who the year before had been negatived by the governor, as a counsellor. To prevent a negative, as a speaker, they projected a new form of message directed to the governor and council jointly, to acquaint them "that John Clarke, Esq. is chosen speaker of the house, and is now sitting in the chair." This was undoubtedly a very extraordinary contempt of the governor. Mr. John White, a gentleman of unspotted character, had been clerk of the house for many years. He was no zealous party man, but his most intimate friends, who esteemed him, and sought his company for the sake of his valuable accomplishments, were strongly attached to the governor. This, alone, was enough to dismiss him; and Mr. William Payne, brother by marriage to Mr. Cooke, and who had formerly been of the bank party, was appointed clerk in his stead.

The governor was more wroth than upon any occasion before. He came to council, in the afternoon, and sent immediately for the house, no doubt with an intent to dissolve the court. He had several faithful advisers about him, and, whilst the house were preparing to come up, he sent a message to stop them, and to let them know he accepted their choice of a speaker. This was giving a construction to their message, which they did not intend, and it was giving his consent before it was asked, but it was to be preferred to a dissolution; for a dissolution of the court, before the election of counsellors, according to the construction the house have sometimes put upon the charter, would have been a dissolution of the government, for one year at least, because the time mentioned for the first election was the last Wednesday in May. The counsellors named in the charter were to continue until others were chosen and appointed in their stead. We do not know of any words in the charter which would make the choice upon any day invalid, although that be the day more particularly designed for that business. The house shewed their resentment against the lieutenant-governor, and Mr. Belcher, who were both left out of the council. The rest were continued.

The next step was the appointing a committee to carry a list of the new elected counsellors to the governor; but the committee was not to desire his approbation, though this form had never been omitted in any one instance. The governor sent the list back, and took notice of the omission. The house thereupon resolved, "that considering the small pox was in Boston, and they were very desirous the house should be removed to Cambridge, they would send the list in the usual terms, saving their right to assert their privileges at a more convenient time." What privileges they had in their minds it is now difficult to discover. Surely they could not imagine the election would have been valid without his consent. The governor negatived Colonel Byfield, the rest he consented to.

The court was adjourned to Cambridge. The governor, in his speech, took no notice of past

differences. All was fair and smooth, and all was fair in the house also, the first fortnight, but, on the 19th of June, the governor's speech, at the dissolution of the last assembly, was ordered to be read, and a committee was appointed "to vindicate the proceedings of the house from the insinuations made by the governor of their want of duty and loyalty to his majesty." This committee made a report, not in the form of an address or message to the governor, but of a narrative and justification of the proceedings of the last assembly, and the house accepted it, and ordered it to be printed.

To vindicate the past proceedings about the pine trees, a full consideration was now had of the several acts of parliament, and the reservation to the crown in the province charter. The house did not deny a right in the crown to the trees, whilst they were standing, and fit for masts, but supposed that, as soon as they were felled and cut into lengths, fit for boards or timber only, the right of the crown ceased, and the owners of the soil recovered or acquired a new property in them. This, it was said, would render the provision made for the preservation of the trees, which at best is insufficient, to be of no effect, nothing being more easy than for the owners of the soil to procure the trees to be felled and cut into short logs, without possibility of discovery. However, they came to the following resolution, viz. "That inasmuch as a great number of pine trees have been cut in the province of Main, which, when standing, were fit for masts for the royal navy, but are now cut into logs of about twenty feet in length, and 'although the cutting them should be allowed to be an infringement of his majesty's rights reserved in the charter,' yet in the condition they are now in, being no longer capable of being used for masts, it is lawful for, and behoves this government to cause such logs to be seized, and converted to their own use, and to bring the persons who cut down the trees to punishment." In consequence, and for the purposes, of this resolve a committee was appointed.

The reservation in the charter is in these words, "for the better providing and furnishing of masts for our royal navy, we do hereby reserve to us, our heirs and successors, all trees of the diameter of twenty-four inches, and upwards of twelve inches from the ground, growing upon any soil or tract of land not heretofore granted to private persons. And we restrain and forbid all persons whatsoever from selling, cutting, or destroying any such trees without the royal licence of us, our heirs and successors, first had and obtained, upon penalty of forfeiting one hundred pounds sterling unto us, our heirs and successors, for every such tree."

It was said further upon this occasion that although the crown reserved the trees, and restrained all persons from cutting them which the necessity of the trees for national use and service might be sufficient to justify, yet it was not equitable to take them without a valuable consideration. The crown had made an absolute grant of the province of Main to Gorges, from whom the Massachusetts purchased. The Massachusetts' charter indeed was declared forfeited. Where the right was, after that, might be disputed, but this was a hard judgment, and it was the plain intent of the charter, in general, to restore rights, except that of the form of jurisdiction or administration of government, to the former state.

The house neglected making any provision for the support of the governor, or the other officers of the government, who depended upon the court for

their salaries. They waited to see how far the governor would consent to their several acts and votes. On the other hand, the two houses having chose the treasurer, impost officer, and other civil officers, the governor laid by the list, and neither approved or disapproved. When the house sent a message to the council, to enquire whether the governor had passed upon the list, he directed the committee to tell the house that he should take his own time for it. This occasioned a reply from the house, and divers messages and answers passed upon the subject. At length the house, by a vote, determined they would not go into the consideration of grants and allowances, before his excellency had passed upon the acts, resolves and election of that session. This was in plain terms avowing that the governor at first charged them with tacitly intending. To compel the governor to any particular measure, by making his support, in whole or in part, depend upon it, was said to be inconsistent with that freedom of judgment, in each branch of the legislature, which is the glory of the English constitution: this was not all; the house withheld the support of all the other salary men, because the governor would not comply with the measures of the house.

Resentment was shewn against some of the governor's friends. The agent in England, Mr. Dummer, in some of his letters, had informed the court of the sentiments of the ministry upon the proceedings of the house of representatives, and of the general approbation in England of the governor's conduct. A faithful agent would rather tell them the truth, than recommend himself to them by flattery and false representations. He lost the favour of the house, who, upon the receipt of these letters, voted, that it was not for the interest of the province Mr. Dummer should be continued agent any longer, and therefore it was ordered that he should be dismissed.

Paul Dudley, another of the governor's friends, had the misfortune also of falling under the displeasure of the house. He had been chosen, by a small majority, counsellor for Sagadahoc. By the charter, it was necessary for him to have been an inhabitant or proprietor of that part of the province for which he was chosen. He dwelt in the old colony of Massachusetts. It was suggested, in the house, that he had no lands at Sagadahoc, and they appointed a committee to enquire into this fact. Upon their applying to Mr. Dudley for evidence of his title, he told them it was too late, they should have inquired before the election. Perhaps he was in an error. He went on and told the committee, he had a deed which he would not expose to the house, but he would shew it to two or three of the members. Upon this they sent another committee to inform him, it was expected he should produce his deed, the next morning, to be laid upon the speaker's table. He replied that he would not produce his deed before the house, for they might possibly vote it insufficient. In this part of the province there are scarce any lands which have not more than one claimer, and it is not improbable some of the members of the house claimed the lands in Mr. Dudley's deed. The vote of the house would not have determined his title, but it might have had undue influence upon a jury in a judicial proceeding.

Mr. Dudley's answer was unsatisfactory, and the house voted that it was an affront; that his declining to produce his deeds gave sufficient grounds to believe that he was no proprietor, and it was therefore resolved that his election be declared null and

void. This vote being sent to the council was by them unanimously non-concurred.

No grants had been made, and no officers for the ensuing year had been constituted; the house, notwithstanding, sent a message to the governor to desire the court might rise. He refused to gratify them. Thursday, the 13th of July, had been appointed for a public fast; the members desired to be at home with their families; and, on Wednesday, by a vote, they adjourned themselves to Tuesday in the next week. It was urged that the British house of commons adjourn for as long a time, without any immediate act of royal authority; but it was replied that it never did so contrary to the inclination of the crown; and the adjournments over holidays are as much established by ancient usage, as the ordinary adjournments from day to day, and, being conformed to by both houses of parliament, no inconvenience can arise. But the charter was argued by the governor, to be the rule in this assembly, not the analogy between a Massachusetts' house of representatives and the commons of Great Britain. The governor, by charter, had the sole power of adjourning, proroguing, and dissolving the general court. Taken strictly, it would be extremely inconvenient, for the act of the governor would be necessary every day. Upon a reasonable construction, therefore, the house had always adjourned from day to day, but never for so great a number of days. The council, who were obliged to spend near a week without business, unanimously voted, upon hearing the house had adjourned, that such adjournment, without his excellency's knowledge and consent, was irregular and not agreeable to the charter.

The governor, afterwards, made this adjournment one of the principal articles of complaint against the house.

Upon Tuesday, like the first day of a session, there was scarcely a house for business. The next morning some votes passed, which were offered to the governor, and which he would not suffer to be laid before him, until he had sent for the house, and told them they had made a breach upon his majesty's prerogative, which he was under oath to take care of; and he insisted upon an acknowledgment of their error before they proceeded to business.

The house, by a vote or resolve, declared they had no design to make any breach upon the prerogative, but acknowledged, they had made a mistake in not acquainting his excellency and the board with the adjournment.

The governor observed to them, that they had industriously avoided acknowledging the sole power of adjourning, as well as proroguing and dissolving the general assembly, is vested in his majesty's governor, by the royal charter. They thereupon agreed to the following message: "The house of representatives do truly acknowledge, that, by the royal charter, your excellency and the governor for the time being, have the sole power and authority to adjourn, prorogue, and dissolve the general court; and the house further acknowledge, that your excellency ought to have been acquainted with the design and intention of the house, in their adjournment from Wednesday the 12th, to Tuesday the 18th instant, before they did adjourn, and that it was so designed and casually omitted."

The house carefully distinguished between the power of adjourning the general court and adjourning the house of representatives, one branch only, and seem to suppose, that their only mistake was their not acquainting the governor and the board

with their intention, which was, by no means, satisfactory to the governor, and he immediately ordered the house to attend him in the council chamber. The speaker ordered all the members of the house to be called in, and, expecting a dissolution, they resolved, "that all the votes of the house in the present session, more especially relating to any misunderstanding or difference that hath arisen between his excellency and the house, shall be prepared to be sent home, and that the speaker transmit them to William Tailer, Esq., now resident in London, or, in his absence, to such persons, as he shall think fit, desiring them to lay the same before his majesty in council, or any where else, if need require, to obviate any complaint that may be made by his excellency the governor against the proceedings of this house for their just and necessary vindication. So much time was taken up in this vote, or resolve, that the governor was highly offended, and sent a second time, requiring them to attend him forthwith. It has always been the practice of the house, before and since, upon a message from the governor, to stop all business, and go up without delay. The speaker, at this time, was among the forwardest in the opposition. There was no need of four or five members to hold him, as the speaker of the house of commons was once held, in the chair, until a number of strong resolutions had passed the house.

The governor directed his speech to the house only. "Gentlemen of the house of representatives: I am very much concerned to find in the printed journal of the house, first, an order to appoint a committee to draw a memorial upon, or representation of, my speech, made before the dissolution of the assembly in March last, and, afterwards, the memorial itself, signed by Mr. Cooke, in the name of the committee.

"This treatment is very surprising, from a house of representatives that profess so much loyalty and respect to his majesty's government. It appears to me to be very irregular, that the present house of representatives, whereof John Clarke, Esq. is speaker, and which consists of a majority of new members, should take upon them to answer my speech made to a former house of representatives, whereof Timothy Lindall, Esq. was speaker. These proceedings are not only improper, but without precedent from any former assembly.

"I must also observe to you, that you have not shewn that respect which is due to me as governor of this province, by suffering this order or memorial to go into the press, before it was communicated to me, which, if you had done, I could have convinced you, that it would have been very much for the service of your constituents, that neither the order nor the memorial should have appeared in print.

"It is my opinion, that you will quickly be convinced how much you have been wanting in your duty and interest, by disowning the authority of the right honourable board, which his majesty has constituted to superintend the affairs of the province, and all the other plantations.

"For these reasons, I should have dissolved the general court when the memorial first appeared, but I was in hopes the house might have been brought to correct or expunge it. Instead of making this use of my tenderness, you have gone on in the most undutiful manner, to withdraw from his majesty's and your country's service, by adjourning yourselves for near a week, without my knowledge and consent, contrary to the royal charter, which absolutely

vests in the governors of this province the power of adjourning, proroguing and dissolving, and that at a time when I thought it for the interest of the colony to adjourn you for two days only, having an affair of the greatest consequence to communicate to the house, which was to persuade you to take some effectual measures to prevent the plague coming among us, there being nothing so likely to bring it in as the French silk and stuffs which are constantly brought into this province.

"These your unwarrantable proceedings oblige me to dissolve this assembly."

This speech, and the dissolution which followed, further alienated the minds of the people from the governor. Some of his friends wished he had carried his resentment no further than putting an end to the session and giving time to deliberate. There was no room to expect a change for the better, upon a new election.

There was yet no open war with the Indians, but they continued their insults. The French instigated them, and furnished them with ammunition and provisions. Governor Shute published a proclamation, requiring the inhabitants to remain upon their estates, and keep possession of the country. No wonder the proclamation was not obeyed. We know no authority he had to require them to remain. If the preservation of their own property was not sufficient to keep them there, it could not be expected they would remain merely as a barrier for the rest of the province.

In the month of August, two hundred Indians, with two French jesuits, came to George town upon Arowsick Island, armed, and under French colours, and, after some parley with the inhabitants, left a letter to be delivered to the governor, in which they make a heavy charge against the English for unjustly invading the property of the Indians, and taking from them the country which God had given them.

Rallé, their spiritual father, was their patron also in their temporal concerns. Either from a consciousness of their having conveyed the country to the English, or from a desire of peace and quiet, they were averse to engaging in war. When they were at their villages, the priests were continually exciting them to act vigorously, and drive all the English to the westward of Kennebec; and such was their influence over them, that they would often set out from home, with great resolution to persist in their demands, and in their parleys, with the commanders of forts, as well as at more public treaties, would appear, at first, to be very sturdy, but were soon softened down to a better temper, and made to agree that the English should hold the lands without molestation. When they returned home, they gave their father an account of the great firmness they had shewn in refusing to make any concessions, and to this we are to impute the erroneous relation of these treaties by Charlevoix and others.

But about this time Toxus, the Norridgewock chief, died. When they came to choose another Toxus, the old men who were averse to war, contrary to Rallé's inclination, pitched upon Ouikouiroumenit, who had always been of the pacific party. They took another very disagreeable step, and submitted to send four hostages to Boston, sureties for their good behaviour, and for the payment of the damages the English had sustained. Vaudreuil, the governor of Canada, was alarmed, and thought it necessary to exert himself upon this occasion. He writes to father Rallé, of the 15th of June, "I

was at Montreal, my reverend father, when your letters of the 16th and 18th of May came to my hands, informing me of the bad step taken by the Norridgewocks, in choosing Ouikouiroumenit successor to the deceased Toxus, of the great loss which the whole Abenaki nation hath sustained by his death, and the divisions prevailing among the Norridgewocks, many of whom, and especially their chiefs, have betrayed the interest of their tribe in openly favouring the pretensions of the English to the country of Norridgewock. The faint hearts of your Indians in giving hostages to the English, to secure payment of the damage they have sustained, and the audacious language which they have used to the Indians, in order to keep possession of their country, and to drive you out of it, fully convinced me that every advantage would be taken of the present state of affairs, to subject them to the English, if the utmost care should not be immediately taken to prevent so great a misfortune. Without a moment's delay I set out, in order to apply myself to the business of Montreal, and from thence to St. Francois and Becancour, where I prevailed with the Indians of those villages vigorously to support their brethren of Norridgewock, and to send two deputies for that purpose, to be present at the treaty and to let the English know, that they will not have to do with the Norridgewocks alone if they continue their injuries to them. The intendant and I have joined in a letter, to desire father le Chase to take a journey to Norridgewock, in order to keep those Indians in their present disposition and to encourage them to behave with firmness and resolution. He will also go to Penobscot, to engage them to send some of their chiefs also, to be present on this occasion and to strengthen their brethren."

Begoir, the intendant, writes at the same time to Rallé, "I wrote, my reverend father, to Mons. de Vaudreuil, who is at Montreal, the sentiments of father de la Chase and my own, viz., what we think convenient to be done, until we hear from the council of the marine, whether the French shall join the Indians to support them openly against the English, or shall content themselves with supplying ammunition, as the council has advised that M. Vaudreuil might do, in case the English should enterprise any thing against them. He thought it more proper to send the reverend father la Chase, than Mons. de Croisil, lieutenant, &c., because the English can have no room to except to one missionary's visiting another, the treaty of peace not forbidding it; whereas, if a French officer was sent, they might complain that we sent Frenchmen into a country, which they pretend belongs to them, to excite the Indians to make war upon them.

"It is to be wished that you and your Indians may be suffered to live in quiet until we know the king's intentions whether we shall openly join the Indians if they are attacked wrongfully; in the mean time we shall assist them with ammunition, which they may be assured they shall not want.

"P. S. Since I wrote the foregoing, the Indians of St. Francois and Becancour have desired M. Vaudreuil that M. de Croisil may go with them to be a witness of their good disposition, and he has consented to join him with father de la Chase."

The Massachusetts people made heavy complaints of the French governor, for supporting and stirring up enemies against them in time of peace between the two crowns, but he justified himself to his own master. Rallé was ranked by the English among the most infamous villains, and his scalp would have

been worth an hundred scalps of the Indians. His intrepid courage and fervent zeal to promote the religion he professed, and to secure his *neophytes* or converts to the interest of his sovereign, were the principal causes of these prejudices. The French, for the same reasons, rank him with saints and heroes. He had been near forty years a missionary among the Indians, and their manner of life had become quite easy and agreeable to him. They loved and idolized him, and were always ready to hazard their own lives to preserve his. His letters, upon various subjects, discover him to have been a man of superior natural powers, which had been improved by an education in a college of jesuits; his latin is pure, classical, and elegant; he had taught many of his converts, male and female, to write, and corresponded with them in their own language, and made some attempts in Indian poetry. When he was young he learned to speak Dutch, and so came more easily to a smattering of English, enough to be understood by traders and tradesmen, who had been employed in building a church and other work at Norridgewock. He corresponded in latin with one or more of the ministers of Boston, and had a great fondness for shewing his talent at controversy. Pride was his foible, and he took great delight in raillery. The English idiom and the flat and bald Latin, in some of his correspondent letters, afforded him subjects. Some of his contemporaries, as well as Cotton, Norton, Mitchel, and others of the first ministers of the country, would have been a match for him. He contemned and often provoked the English, and when threatened with destruction by them, if they should ever take Norridgewock, he replied, "If."

The English charge the Indians with perfidy and breach of the most solemn engagements. The jesuit denies it and justifies their conduct, from their being under duress, at such times, and compelled to agree to whatever terms are proposed to them; particularly, when they met governor Shute, at Arowsick, in 1717, he says, the body of the Norridgewocks had fully determined, that the English should settle no farther upon Kennebeck river than a certain mill; for all the pretence they had to go beyond that, was a bargain of this sort, made by some Englishman with any Indian he happened to meet with. "I will give you a bottle of rum if you will give me leave to settle here; or, if you will give me such a place." "Give me the bottle," says the Indian, "and take as much land as you have a mind to:" the Englishman asks his name, which he writes down and the bargain is finished. Such sort of bargains being urged against the Indians, at the treaty, they rose in a body and went away in great wrath, and, although they met again the next day and submitted to the governor's terms, yet when they came home, all they had done was disallowed by the body of the nation and rejected." Whilst the English kept within the mill the jesuit forbade the Indians molesting them, but if any settled beyond those bounds, he allowed and encouraged the Indians to kill their cattle and to make other spoil.

The consideration made by the purchasers of Indian lands was not always so inconsiderable as the jesuit mentions, and the purchases were from chiefs or reputed chiefs or sachems, and the possession had been taken and improvements made scores of miles beyond the limits he would restrain the English to, more than sixty years before.

The French governor, Vaudreuil, in his manuscript letters, and the French historian Charlevoix,

in print, suppose the English settlers to be mere intruders, and charge the English nation with great injustice in dispossessing the Abanakis of their country. The European nations, which have their colonies in America, may not reproach one another upon this head. They all took possession, contrary to the minds of the natives, who would gladly have been rid of their new guests. The best plea, viz. that a small number of families laid claim to a greater part of the globe than they were capable of improving, and to a greater proportion than the general proprietor designed for so few people, who therefore had acquired no such right to it as to exclude the rest of mankind, will hold as well for the English as any other nation. The first settlers of the Massachusetts and Plimouth were not content with this, but made conscience of paying the natives to their satisfaction for all parts of the territory which were not depopulated or deserted, and left without a claimer. Gorges, the original patentee of the province of Main, made grants or conveyance of greater part of the sea coast and rivers of that province without purchase from the natives, other parts had been purchased from them by particular persons, and the remaining part, as well as the country east of it, the government claimed by conquest; but it must be confessed, that in the several treaties of peace this right had not been acknowledged by the Indians, nor insisted upon by the English, this controversy being about those parts of the country which the English claimed by purchase, and no mention made of a right to the whole by conquest.

The governor, immediately after the dissolution of the general court, issued writs for a new house of representatives, and the court met, the 23d of August, at the George tavern, the then extreme part of Boston, beyond the isthmus or neck, the small pox then prevailing in the town. The house chose Mr. Clarke, their former speaker, and informed the governor of it by message, and he sent his approbation, in writing, to the house. They passed a resolve, that they intended no more by their message than to inform the governor and council of the choice they had made, and that they had no need of the governor's approbation.

The first act of the house gave new occasion for controversy. They were so near the town as to be in danger, and, instead of desiring the governor to adjourn or prorogue the court to some other place, they passed a vote for removing the court to Cambridge, and sent it to the council for concurrence. The council nonconcurred the vote. The governor let the house know, that he should be very ready to gratify them if he was applied to in such manner as should consist with the sole right in him of adjourning, proroguing, and dissolving the court. They replied, that they were very willing to acknowledge his right, so far as respected time, but as to place, by the law of the province, the court was to be held in Boston, and therefore an act or order of the three branches was necessary to remove it to any other place. They let the governor know further, that although they had met in consequence of his summons, yet, as many of the members apprehended that their lives were in danger, they would leave the court and go home. There was a quorum, however, who chose to risk their lives rather than concede that the governor had power, by his own act, to remove the court from Boston to any other town in the province, or risk the consequence of refusing to remain a sufficient number to make a house.

The governor had received from England the opinion of the attorney-general, that he had good right to negative the speaker; and the lords commissioners of trade and plantations had written to him, and signified their approbation of his proceedings. These papers he caused to be laid before the house. The house drew up a remonstrance, in which they justified their own conduct, and that of former assemblies, in their controversies with the governor, and with a great deal of decency declared that, with all deference to the opinion of the attorney-general, they must still claim the right of solely electing and constituting their speaker; and they humbly presumed that their so doing could not be construed a disrespect to his majesty's instructions, or bearing upon the royal prerogative. The governor gave them a short and very moderate answer; that he had made his majesty's instructions and the royal charter the rule of his administration, that he did not desire to be his own judge, the former house had voted to send an account of the proceedings to England, and it would be very acceptable to him, if the present house would state the case, and send it home to persons learned in the law, and give them directions to appear for the house, that his majesty might judge between his governor and them, but in the mean time it was his duty to follow his instructions until they were countermanded.

Here seems to have been a calm interval. The flame was abated but the fire not extinguished. Fresh fuel soon caused a fresh flame. The grant to the governor afforded proper matter. It was said the house were bad economists. To save an hundred pounds in the governor's salary they put their constituents to the expense of five hundred pounds for their own wages. If the governor's demand was unreasonable, the house may be justified, although the wages of the members for the time spent in the debate amounted to much more than the sum in dispute. The currency also continued to depreciate, but this is a consideration which never had its just weight. Twenty shillings one year must be as good as twenty shillings another. They received and paid their private dues and debts in bills of credit according to their denominations, why should not the government's debts be paid in the same manner? A majority of the house were prevailed upon to vote no more than five hundred pounds, for half a year's salary, equal to about an hundred and eighty pounds sterling.

The governor was irritated, instead of obtaining an established salary of a thousand pounds sterling per annum, which he had been instructed to insist upon, his whole perquisites from the government would not afford him a decent support, and they were growing less every day by the sinking of the currency in its value.

The house, from an expectation that the governor would, from time to time, make complaints to the ministry, voted 500*l.* pounds sterling to be paid into the hands of such persons as should be chosen to defend their rights in England, but the council refused to concur the vote, because it was not expressed by whom the persons should be chosen.

At the close of the session, the house and council came into a vote, and the governor was prevailed with to consent to it, "that 300 men should be sent to the head quarters of the Indians, and that proclamation should be made commanding them, on pain of being prosecuted with the utmost severity, to deliver up the jesuits, and the other heads and fomenters of their rebellion, and to make satisfac-

tion for the damage they had done; and if they refused to comply, that as many of their principal men as the commanding officer should think meet, should be seized, together with Rallé, or any other jesuit, and sent to Boston; and if any opposition should be made, force should be repelled by force." Judge Sewall, one of the council, scrupled the lawfulness of this proceeding against the Indians and entered his dissent. This gentleman was a great friend to the aboriginals of every tribe, not from mere humanity and compassion, but from a strange notion that they were part of the ancient people of God; and that the ten tribes, by some means or other, had strolled into America. He was a commissioner from the corporation for propagating the gospel among them, and with his own substance built them what he named a synagogue, and did many other charitable acts. After the general court was prorogued, the governor, notwithstanding he had consented to the vote, suspended the prosecution until the Indian hostages escaped from the castle, but a war being then deemed inevitable, orders were given for raising the men. The hostages were taken and sent back to their confinement, and the orders were recalled.

A promise had been made, by the governor, to the Indians, that trading houses should be built, armourers or smiths sent down, at the charge of the province, and that they should be supplied with provisions, clothing, &c., for their furs and skins. The compliance with this promise was expected from the general court; and at any other time, it would have been thought a well judged measure, but the unhappy controversy with the governor would not suffer any thing from him to be approved of, and the private traders provoked the Indians by their frauds and other injuries, and, it seems, the governor, as well as good Mr. Sewall, scrupled whether a declaration of war against them was just or prudent. This house and council chose to call the proceedings against them, a prosecution for rebellion; but, if a view be taken of all the transactions between the English and them from the beginning, it will be difficult to say what sort of subjects they were, and it is not certain that they understood that they had promised any subjection at all.

The house, dissatisfied with the governor for not carrying into execution a vote of the whole court, resolved at the beginning of the next session, "that the government has still sufficient reason for prosecuting the eastern Indians for their many breaches of covenant." The vote being sent up for concurrence, the council desired the house to explain what they intended by prosecution, but they refused to do it, and desired the council either to concur or non-concur. The house refusing to explain their meaning, the board undertook to explain it, and concurred the vote with a declaration that they understood it to be such a prosecution as had been determined the former session. This, no doubt, was irregular in the council, and left room to question whether it was a vote of the court, the house not having agreed to it as the council qualified it. However, in consequence of it, a party of men were ordered up to Norridgewock, and returned with no other success than bringing off some of Rallé's books and papers, his faithful disciples having taken care to secure his person and fly with him into the woods. This insult upon their chief town, and the spoil made upon their priest, did not long remain unrevenged.

The session began at Boston the 3d of November.

The governor prorogued the court to meet at Cambridge the 7th; and before they proceeded to business, to avoid any dispute about the place of meeting, which would have obstructed the important affairs of the province, he gave his consent to a vote of the two houses, that by this instance of the governor's adjourning the court no advantage should be taken in favour of his sole power of removing the court from place to place. In his speech, he had taken no notice of party disputes, and only recommended to them to raise money for the service of the government and particularly of their exposed frontiers.

The house, in their vote for supply of the treasury, brought in a clause which had not been in former votes, and which the council supposed would lay such restraint upon the money in the treasury, that it would not be in the governor's power, with their advice and consent, so much as to pay an express without a vote of the whole court; they therefore non-concurred the vote, and the house refused any provision without that clause. In the midst of the dispute, Mr. Hutchinson, one of the members for Boston, was seized with the small pox and died in a few days. The speaker, Mr. Clarke, was one of the most noted physicians in Boston, and notwithstanding all his care to cleanse himself from infection after visiting his patients, it was supposed, brought the distemper to his brother member, which so terrified the court, that after the report of his being seized, it was not possible to keep them together, and the governor found it necessary to prorogue them. At the next session in March, the house insisting upon the form of supply which they had voted in the last session, the council concurred.

An affair happened during this session, which shewed the uncertainty of the relation the Indians stood in to the English. Castine, son by an Indian woman to the Baron de St. Castine, who lived many years, in the last century, at Penobscot, had appeared among the Indians, who were in arms at Arowsick. By an order of court, he had been afterwards seized in the eastern country, and brought to Boston and put under close confinement.

The house ordered that he should be brought upon trial in the county of Suffolk, before the superior court, and that the witnesses who saw him in arms should be summoned to attend. This, no doubt, would have been trying in one county a fact committed in another. The council non-concurred and voted to send for witnesses, that the court might judge in what manner to proceed against him; but this was not agreed to by the house. Some time after a committee was appointed to examine him. Castine was a very subtle fellow, and made all straight with the committee. He professed the highest friendship for the English, and affirmed that he came to Penobscot to prevent the Indians from doing mischief, and promised to endeavour to influence all that tribe to keep peace. The committee, therefore, reported and the two houses accepted the report, that he should be set at large. The governor approved of this proceeding; he had yet hopes of preserving peace. To have punished him as a traitor, would have destroyed all hopes of an accommodation. It might also be very well questioned whether it would have been justifiable. The tribe, or nation, with which he was mixed, has repeatedly, in words of which they had no adequate ideas, acknowledged themselves subjects; but, in fact, in concomitant as well as precedent and subsequent transactions with them, they had always been considered

as free and independent; and, although, they lived within the limits of the charter, the government never made any attempt to exercise any civil authority or jurisdiction over them, except when any of them came within the English settlements and disputes had arisen between them and the English subjects.

The house, who, the last session, were for prosecuting the Indians, and could not reasonably have supposed that they would bury, as they express themselves, the late march of the English to Norridgewock, seem, notwithstanding, to be suddenly changed from vigorous measures for bringing them to terms, to schemes for appeasing and softening them; and a present was ordered to be sent to Bomaseen, the Norridgewock captain, to engage him in favour of the English.

The small pox, this year, made great havoc in Boston and some of the adjacent towns. It had been brought into the harbour of Boston about the middle of April by the Saltortugas fleet; and having been prevented spreading for near twenty years, all born within that time, besides many who had escaped it before, were liable to the distemper. Of 5889 which took it in Boston, 844 died. Inoculation was introduced upon this occasion, contrary to the minds of the inhabitants in general, and not without hazard to the lives of those who promoted it, from the rage of the people. Doctor C. Mather, one of the principal ministers of Boston, had observed, in the Philosophical Transactions, a letter of Timonius from Constantinople, and a treatise of Pylarinus, Venetian consul at Smyrna, giving a very favourable account of the operation, and he recommended a trial to the physicians of the town, when the small pox first began to spread, but they all declined it, except Doctor Boylston, who made himself very obnoxious. To shew the confidence he had of success, he began with his own children and servants. Many sober pious people were struck with horror, and were of opinion that, if any of his patients should die, he ought to be treated as a murderer. The vulgar were enraged to that degree, that his family were hardly safe in his house, and he often met with affronts and insults in the streets.

The faculty, in general, disapproved his conduct, but Doctor Douglas made the most zealous opposition. He had been regularly bred in Scotland, was assuming even to arrogance, and in several fugitive pieces, which he published, treated all who differed from him with contempt. He was credulous, and easily received idle reports, of persons who had received the small pox by inoculation taking it a second time in the natural way, of others who perished in a most deplorable manner from the corrupt matter which had so infected the mass of blood as to render the patient incurable. At other times he pronounced the eruption from inoculation to be only a pustulary fever, like the chicken or swine pox, nothing analogous to the small pox, and that the patient, therefore, had not the least security against the small pox, afterwards, by ordinary infection.

Another practiser, Lawrence Dalhonde, who had been a surgeon in the French army, made oath that at Cremona, about the year 1696, the operation was made upon thirteen soldiers, four of which died, three did not take the distemper, the other six hardly escaped, and were left with tumours, inflammations, gangrenes, &c.; and that, about the time of the battle of Almanza, the small pox being in the army, two Muscovites were inoculated, one without

any immediate effect, but six weeks after was seized with a frenzy, swelled all over his body, and was supposed to be poisoned, and, being opened after his death, his lungs were found ulcerated, which it was determined was caused by inoculation.

The justices of the peace and select men of the town called together the physicians, who, after mature deliberation, came to the following conclusions: "That it appears, by numerous instances, that inoculation has proved the death of many persons, soon after the operation, and brought distempers upon many others which, in the end, have proved deadly to them. That the natural tendency of infusing such malignant filth in the mass of blood is to corrupt and putrify it, and if there be not a sufficient discharge of that malignity, by the place of incision or elsewhere, it lays a foundation for many dangerous diseases. That the continuing the operation among us is likely to prove of the most dangerous consequence." The practice was generally condemned.

The common people imbibed the strongest prejudices, and such as died by inoculation were no more lamented than self-murderers. Doctor Mather, the first mover, after having been reproached and vilified in pamphlets and newspapers, was at length attacked in a more violent way. His nephew, Mr. Walter, one of the ministers of Roxbury, having been privately inoculated in the doctor's house in Boston, a villain, about three o'clock in the morning, set fire to the fuze of a grenado shell, filled with combustible stuff, and threw it into the chamber where the sick man was lodged. The fuze was fortunately beat off by the passing of the shell through the window, and the wild fire spent itself upon the floor. It was generally supposed that the bursting of the shell by that means was prevented; but the shell was not filled with powder, but a mixture of brimstone, with bituminous matter. A scurrilous menacing writing was fastened to it.

The moderate opposers urged, that the practice was to be condemned, as trusting more to the machination of men, than to the all-wise providence of God in the ordinary course of nature, and as tending to propagate distempers to the destruction of mankind, which proved it to be criminal in its nature, and a species of murder. The magistrates in Boston supposed it had a tendency to increase the malignity, and prolong the continuance of the infection, and that therefore it behoved them to discountenance it.

At length, in the house of representatives, a bill was brought in, and passed, to prohibit all persons from inoculation for the small pox, but the council were in doubt, and the bill stopped.

Such is the force of prejudice. All orders of men, in that day, in greater or less proportion, condemned a practice which is now generally approved, and to which many thousands owe the preservation of their lives.

Boylston continued the practice, in spite of all the opposition. About 300 were inoculated, in Boston and the adjacent towns. It is impossible to determine the number which died by it. Douglas would have it there was one in fourteen, whilst the favourers of the practice would not allow more than one in seventy or eighty. It was evident, from the speedy eruption, that many had taken the distemper before they were inoculated. Indeed, where persons have continued in an infected air for months together, no true judgment can ever be made of the experiment.

(1722.) The new house of representatives, in May, chose the former speaker, and the governor declared his approbation in the same manner he had done before. He negatived two of the counselors elect, Colonel Byfield and Mr. William Clark. Mr. Clark, being a member of the house for Boston, had ever adhered closely to Mr. Cooke. The governor shewed his resentment, by refusing to admit him to the council, but did not serve his own interest, Mr. Clarke's opposition being of greater consequence in the house.

The Indians were meditating mischief, from the time the English were at Norridgewock, but committed no hostilities until June following. They came then with about sixty men, in twenty canoes, into Merrymeeting Bay, and took prisoners nine families, but gave no marks of their usual rage and barbarity. Some of their prisoners they released immediately, and others in a short time after. Enough were retained to be a security for the return of their hostages from Boston. Another small party of Indians made an attempt upon a fishing vessel belonging to Ipswich, as she lay in one of the eastern harbours, but the fishermen being armed they killed two or three of the Indians, and the rest retreated. The collector of the customs at Annapolis Royal, Mr. Newton, with John Adams, son of one of the council for Nova Scotia, were coming from thence, with Captain Blin, to Boston, and, putting in to one of the Passimaquadies, went ashore, with other passengers, and were all seized, and made prisoners, by about a dozen Indians and as many French; the people left on board the sloop cut their cables and fled to Boston.

Another party of the Indians burned a sloop at St. George's river, took several prisoners, and attempted to surprise the fort.

Intelligence of these several hostile acts came to Boston, whilst the general court was sitting, but there seemed to be no disposition to engage in war. Instead of the former vigorous resolves, upon lesser provocations, the house proposed that a message should be sent to the Norridgewock Indians to demand the reasons of this behaviour, restitution of the captives, and satisfaction for damages, and acquaint them that, if they refused, effectual methods would be taken to compel them. The hostages, given by the Indians, were sent down to the eastward, and, upon the restoring the English captives, they were to be set at liberty.

The friends of the English captives were importunate with the government to take measures for their redemption, and a view to effect this seems to have been the chief reason which delayed a declaration of war. But, soon after the prorogation of the court, news came that the Indians had burnt Brunswick, a village between Casco Bay and Kennebeck, and that Captain Harman, with part of the forces posted upon the frontiers, had pursued the enemy, killed several, and taken fifteen of their guns. Immediately after this news (July 25), the governor, by advice of council, caused a declaration of war to be published.

Foreign wars often delivered Greece and Rome from their intestine broils and animosities, but this war furnished a new subject for contention. The governor often charged the party in the house, with assuming the direction of the war, and taking into their hands that power which the charter gives to the governor. He gave them a hint in his speech, (August 8th), at the opening the next session. "One thing I would articularly remark to you,

which is that, if my hands and the council's be not left at a much greater liberty than of late they have been, I fear our affairs will be carried on with little or no spirit. Surely, every person who wishes well to his country will think it high time to lay aside all animosities, private piques, and self-interest, that so we may unanimously join in the vigorous prosecution of the weighty affairs which are now upon the carpet."

The house, in an address to the governor, signified their sentiments of the necessity of this declaration of war, and promised "all necessary and cheerful assistance." A committee of the two houses settled the rates of wages, and provisions for the forces, to which no exception was taken, but they went further, and determined the service in which they were to be employed, 300 men to be sent upon an expedition to Penobscot, and the rest to be posted at different places on the frontiers, and qualified their report, by desiring the governor to give orders accordingly. He let them know, that the king his master, and the royal charter, had given him the sole command and direction of the militia and all the forces, which might be raised on any emergency, and that he would not suffer them to be under any direction but his own, and those officers he should think fit to appoint. The house made him no answer. The destination of the military forces in this manner, and making the establishment of their wages depend upon a compliance with it, had not been the practice in former wars and administrations, but the governor found he must submit to it, or the frontiers would be without defence. He gave up his own opinion with respect to the Penobscots, and had laid the same plan which the committee had reported, and he intended to prosecute it, which made his compliance more easy. The house, being dissatisfied with Major Moody, who had the command of the forces, passed the vote desiring the governor to dismiss him. The council non-concurred this vote, "because he was condemned unheard," and substituted another vote, to desire the governor to send for him, that he might attend the court, but this the house would not agree to, and sent a separate message to the governor to desire him to suspend the major from his post. The governor told them he was surprised they should desire so high a piece of injustice as the punishing a man without hearing what he had to say for himself, and let them know that he would enquire into the grounds of their complaint. Several other votes passed, relative to the forces, which the governor did not approve.

At the next session, November 15th, he recommended a law to prevent mutiny and desertion, for want of which the men were daily running away. The house thought it necessary to be first satisfied, whether the desertion in the army was not owing to the unfaithfulness of the officers, and appointed two committees, one to repair to the head quarters on the eastern, and the other on the western frontiers, with powers to require the officers to muster their companies, when an exact list was to be taken of the men that appeared, an account of all deserters, and of all such as were absent upon furlough, or had been dismissed, or had been exchanged, together with divers other powers. They then applied to the governor to give orders to all in command to pay a proper deference to the vote and order of the house respecting repeated abuses and mismanagements among the forces, &c.

This the governor thought he had good right to

except to, and he made the vote itself, as well as the manner in which it was to be executed, an article of complaint against the house to the king; but he was prevailed upon to consent to it, and either made, or intended to make this condition, that the committees should make report to him. The house urged this consent against him, but, in England, it was not thought a sufficient justification.

The conceding in one point naturally led to a demand of the like concessions in others.

It was thought a salutary measure to send for delegates from the Iroquois, who were in friendship with the colony, and to desire them to use the influence they had over the eastern Indians, in order to their making satisfaction for the injuries done, and to their good behaviour for the time to come. When the delegates came to Boston, the house voted that the speech to be made to them by the governor should be prepared by a committee of the two houses. The governor had prepared his speech, and he directed the secretary to read it to the house of representatives, but this was not satisfactory and they sent a message, to desire that what the secretary had read might be laid before the house. The governor refused, at first, but, upon further consideration consented, desiring they would speedily return it. They sent it back to him and let him know they would not agree to it, unless he would speak in the name of the general court, and the house of representatives might be present when the speech was delivered. This was disagreeable to him, and a novelty to the Indians, who had always considered in their treaties, the governor of Pennsylvania, as well as the governor of New York, to be treating with them in their own names, or the name of the king, and not of their respective assemblies, but he submitted.

In consequence of the vote of the house, in the last session, the governor had directed an expedition to Penobscot, although it was not altogether agreeable to his own judgment. It seems he had hopes of an accommodation, with that tribe at least. Col. Walton, who had the command on the eastern frontiers, selected forces proper for the purpose, and they had actually began their march, when intelligence arrived to the Colonel, that Arowsick was attacked by a great number of Indians. He immediately sent an express with orders to the forces to return, and acquainted the governor with his proceedings. The council advised to keep the whole forces for the defence of our own inhabitants, and to suspend acting upon the offensive until winter, which they judged a more proper season for the expedition; and the men, in consequence of this new advice, were employed in marches on the borders of the frontiers. But the house were dissatisfied, and sent a message to the governor "to desire him to order, by express, Col. Walton to appear forthwith before the house, to render his reasons why the orders relating to the expedition had not been executed." This was not only to take Walton from the command, as long as the house should think fit to detain him, but the orders, "relating to the expedition," might be understood to mean the orders which had been given by the house, and not what he had received from the captain general. The governor told the committee that he would take no notice of the message from the house unless it was otherwise expressed; besides he and the council were well satisfied, and he thought every body else was. He added, that he intended the officers should give an account "to him" of their conduct. The next day (Nov. 20),

they sent another message to him to desire him to inform the house, whether he would send for Walton as they had desired. He then told the committee, he would send his answer to the house when they thought proper. Upon this, they seem to have appointed a messenger to go to the eastward, upon what occasion does not appear, and the next day passed the following extraordinary vote: "Whereas this house did, on Thursday last, appoint a committee to wait on his excellency the governor, praying his orders for Col. Walton's appearance before the house, and renewed their request to him yesterday, and his excellency has not yet seen cause to comply with that vote, and the denial of Col. Walton's being sent for has extremely discouraged the house, in projecting any further schemes for carrying on the war, under any views of success. And this house being zealously inclined to do what in them lies to bring this people out of the calamities and perplexities of the present war, and to spare no cost and charge to effect so great a good, were some things at present remedied: We do, therefore, once more, with the greatest sincerity and concern for our country's good, apply to your excellency for your speedy issuing your orders concerning Col. Walton, to be dispatched by the messenger of this house going into those parts." The governor did not like to be so closely pressed, and when the committee came to his house, he told them he would not receive the vote, and, as it was inserted in the report and journal of the house, "he went his way." They then appointed their speaker and eight principal members, a committee to wait upon the governor and desire him to return to the chair, "on some important affairs which lay before the house," but he refused to see the committee, and directed his servant to tell them he would not then be spoke to by any body.

Walton was a New Hampshire man at the head of the forces, a small part only of which were raised in that government. This might prejudice many, but there was a private grudge against him, in some of the leading men of the house, and they never left pursuing him until they effected his removal.

The house, finding the governor would not comply, all their messages to him being exceptionable, as founded upon a supposed right in the house to call the officers out of the service to account before them whensoever they thought proper, and also to order the particular services in which the forces should be employed without leaving it in the governor's power to vary, they made some alterations in the form of their request, and (Dec. 4th) passed the following vote: "Whereas this house have been informed of divers miscarriages in the management of the war in the eastern country, voted that his excellency the governor be desired to express to Col. Walton, that he forthwith repair to Boston, and when he hath attended upon his excellency, that he would please to direct him to wait on this house, that they might examine him concerning his late conduct in prosecuting the war, more especially referring to the late intended expedition to the fort of Penobscot." This being more general, and not confined to the laying aside the expedition, which was known to be in consequence of orders, the governor was willing it should be construed favourably and sent for Walton.

The council having steadily adhered to the governor, he took this opportunity to recommend to the house, to act jointly with the council in messages to him of general concern, and at the same time, in a verbal message to the secretary, endeavoured to

soften the temper of the house. "Mr. Speaker, his excellency commands me to acquaint this honourable house, that he has taken into consideration the several messages relating to Col. Walton, and thinks it most agreeable to the constitution, and what would tend to keep up a good agreement between the council and house of representatives, for all their messages, of a public nature and wherein the whole government is concerned, to be sent up to the council for their concurrence, and not immediately to himself; however, that he will give order for Col. Walton's coming up to town, and when he has received an account of his proceedings, the whole court shall have the hearing of him if they desire it." In this way, the governor intended to guard against any undue proceeding, there being no danger of the council's condemning a measure to which a little while before they had given their advice and consent; but the house improved the hint to a very different purpose, and on the 5th of December voted "that a committee, to consist of eleven members of the two houses, seven of the house of representatives and four of the council, shall meet in the recess of the court, once in fourteen days, and oftener if occasion shall require, to concert what steps and methods shall be put in practice relative to the war, and having agreed upon any projections or designs, to lay them before his excellency for his approbation, who is desired to take effectual care to carry them into speedy execution." In affairs of government, of what nature soever, this was an innovation in the constitution; but in matters relative to the war it was taking the powers from the governor, which belonged to him by the constitution, and vesting them in a committee of the two houses. The council unanimously nonconcurred the vote, and an altercation ensued between them and the house, but the council persevered. In the mean time the governor was engaged in the house with new disputes.

The committee of the house, which had been sent to the eastern frontiers, returned, and instead of making their report to the governor, which was the condition of his consent to their authority, and of his orders to the officers to submit to them, they made their report to the house. This was disingenuous. It would not do to urge that he had no right to make conditions to their votes, for he had given no consent, unless it was conditional, and without his consent they could have no authority. As soon as he heard of the report, he sent to the house for his original order, which he had delivered to the committee. They answered that they were not possessed of it, but the chairman of the committee had left an attested copy on their files, which he might have if he pleased, but he refused the copy and insisted upon the original. He then sent for John Wainwright, the chairman of the committee, to attend him in council, and there demanded the return of the original order. Wainwright, in general, was what was called a prerogative man, but the house had enjoined him not to return the order. He acknowledged he had the order in his possession, but desired to be excused from delivering it, the house having directed him to deliver no original papers. The original vote of the house and the governor's order were as follows:

"In the house of representatives, Nov. 11, 1712.

"Whereas this house have been informed of repeated abuses and mismanagements among the officers now in pay, tending greatly to the dishonour and damage of the government, and are desirous to use all proper and suitable methods for the full dis-

covery thereof. And, to effect the same, have sent a committee from the house, to enquire into these rumours and report how they find things. We, the representatives, do most earnestly desire your excellency's orders, by the same committee, to the commanding officer and all others in command there, to pay all proper deference to the vote and order of this house respecting the matter.

"John Clarke, Speaker."

"Boston, Nov. } To the officer commanding in chief  
the 17th, 1722. } to the eastward.

"I do hereby give orders to the commanding officers and all other inferior officers, to pay deference to the committee, and do expect that the committee lay first before me their report as captain general, and, afterwards, upon the desire of the house of representatives, it shall be laid before them.

"Samuel Shute."

The house expected the governor would complain of them for usurping a military power, and might refuse to part with the original votes or orders by which he had signified his consent to it, the condition not preceding the exercise of such power.

Soon after (Dec. 18th) Col. Walton came to town, and the house sent their committee to desire the governor to direct him to attend the house the next morning, but the governor refused to give such orders, and told the committee, that if his officers were to answer for their conduct, it should be before the whole court. They then sent their door keeper and messenger to Walton, and let him know the house expected his attendance. He went immediately, but refused to give any account of his proceedings, without leave from the governor. The next day, Walton was ordered to appear before the whole court, and the governor sent a message by the secretary, to acquaint the house, that they might then ask any questions they thought proper relative to his conduct; but they resolved, that their intention in sending for him was that he should appear before them. The next day, he sent another message to acquaint the house that Walton was then before the governor and council with his journal, and if the house inclined to it, he desired them to come up, and ask any questions they thought proper. They returned for answer, that they did not think it expedient, for they looked upon it not only their privilege, but duty, to demand, of any officer in the pay and service of the government, an account of his management, while employed by the public.

This perhaps, in general, was not the cause of dispute, but the question was, whether he was culpable for observing the orders which the governor had given contrary to the declared mind and order of the house. They then passed an order for Walton forthwith to lay his journal before the house. This was their last vote relative to this affair, whilst the governor was in the province. He had, without making it public, obtained his majesty's permission to leave the province and go to England. The prejudice, in the minds of the common people, increased every day. It was known to his friends, that as he sat in one of the chambers of his house, the window and door of a closet being open, a bullet entered through the window and door passages, and passed very near him. If some thought this a mere accident, yet as he knew he had many virulent enemies, he could not be without suspicion of a wicked design; but his principal intention in going home, was to represent the conduct of the house, to call them to answer before his majesty in council, and to obtain a decision of the points in controversy, and

thereby to remove all occasion or pretence for further disputes. His departure was very sudden. The Seahorse man of war, Captain Durell, lying in Nantasket, bound to Barbadoes, to convoy the Saltortugas fleet, the governor went on board her, Dec. 27th, intending to go from Barbadoes the first opportunity for London. Not one member of the court was in the secret, nor indeed any person in the province except two or three of his domestics. The wind proved contrary for three or four days, during which, the owners of the ship *Ann*, Captain Finch, which was then loading for London, by employing a great number of hands, had her fitted for the sea and sent her to Nantasket, and offered the governor his passage in her, and he went on board and sailed the 1st of January.

Colonel Shute had the character of being humane, friendly, and benevolent, but somewhat warm and sudden upon provocations received, was a lover of ease and diversions, and for the sake of indulging his inclinations, in those respects, would willingly have avoided controversy with particular persons or orders of men in the government; but it was his misfortune to arrive when parties ran high, and the opposition had been violent. With great skill in the art of government, it might not have been impossible for him to have kept both parties in suspense, without interesting himself on either side, until he had broken their respective connections or the animosity had subsided; but, void of art, with great integrity, he attached himself to that party which appeared to him to be right, and made the other his irreconcilable enemies. His negating Mr. Cooke, when chose to the council, was no more than what he had an undoubted right to do by charter, but the refusal to accept him as speaker, perhaps, was impolitic, the country in general supposing it to be an invasion of the rights of the house, and it would have been less exceptionable to have dissolved them immediately, which he had a right to do, than to dissolve them after an unsuccessful attempt to enforce his negative, when his right was doubtful in the province, although not so with the attorney and solicitor general, who supposed the house of representatives claimed a privilege which the house of commons did not. The leading men in the house of representatives did not think so. That point had not been in question in England since the reign of King Charles the Second, when it was rather avoided than determined, and it was not certain that the house of commons in the reign of King George the First would more readily have given up the point than their predecessors in the time of King Charles. The house, in the other parts of the controversy, had less to say for themselves, and, with respect to the attempts upon his military authority, were glad to be excused by an acknowledgment of their having been in the wrong. The reducing his salary, which, at the highest, would no more than decently support him, was highly resented by him, and his friends said that he would have remained in the government, and waited the decision of the other points, if the two hundred pounds, equal to about fifty pounds sterling, the deduction made, had been restored.

Under an absolute monarch the people are without spirit, wear their chains despairing of freedom. A change of masters is the sum of their hopes, and, after insurrections and convulsions, they still continue slaves. In a government founded upon the principle of liberty, as far as government and liberty can consist, such are the sweets of li-

berty, that we often see attempts for a greater degree of it than will consist with the established constitution, although anarchy, the greatest and worst of tyrannies may prove the consequence, until the eyes of the people are opened, and they see the necessity of returning to their former happy state of government and order.

The lieutenant-governor took the chair, under the disadvantage of being obliged to maintain the same cause which had forced his predecessor out of it. Personal prejudice against the governor was the cause of assuming rights reserved by charter to the crown. The cause now ceased, but power once assumed is not willingly parted with. Mr. Dummer had conducted himself very discreetly. His attachment to the cause of the governor lost him some friends, and proved a prejudice to him and to his successors, for it had been usual to make an annual grant or allowance to the lieutenant-governor, in consideration of his being at hand, or as they expressed it, ready to serve the province, in case of the governor's absence, but, after the two or three first years from his arrival, they withheld it. Without any mention of the unhappy state of affairs, in a short speech to the two houses, he let them know that he would concur with them in every measure for his majesty's service, and the good of the province. An aged senator, Mr. Sewall, the only person alive who had been an assistant under the old charter, addressed himself to the lieutenant-governor with great gravity and simplicity, in a primitive style, which, however obsolete, may be worth preserving. "If your honour and the honourable board please to give me leave, I would speak a word or two, upon this solemn occasion. Although the unerring providence of God has brought your honour to the chair of government, in a cloudy and tempestuous season, yet you have this for your encouragement, that the people you have to do with are a part of the Israel of God, and you may expect to have of the prudence and patience of Moses communicated to you, for your conduct. It is evident, that our Almighty Saviour counselled the first planters to remove hither, and settle here, and they dutifully followed his advice, and therefore he will never leave nor forsake them, nor theirs; so that your honour must needs be happy in sincerely seeking their happiness and welfare, which your birth and education will incline you to do. *Difficilia quæ pulchra*. I promise myself, that they who set at this board will yield their faithful advice to your honour, according to the duty of their place."

The house thought it necessary to take immediate measures for their defence and vindication in England. The governor had mentioned nothing more to their lieutenant-governor than, that he was embarked, and intended to return to his government early in the fall. This, the lieutenant-governor communicated to the council, and the council to the house. They sent a committee immediately to the lieutenant-governor, to pray him to inform them what he knew of the governor's intended voyage; but he could tell them no more. They then appointed another committee "to prepare and lay before the house what they think proper to be done in this critical juncture, in their just and necessary vindication at the court at home," and a ship, Captain Clerk, then ready to sail for London, was detained until the dispatches were ready. Anthony Sanderson, a merchant of London, had been recommended by Mr. Popple, of the plantation office, in a letter to the speaker, as a proper person for the province agent. To him the

house sent their papers, to be improved as they should order.

(1723.) The house was loth, suddenly, to recede, and, the day after the governor sailed, they appointed a committee, to join with a committee of council, to consider of proper ways for carrying into execution the report of a committee of war. This was the province of the captain general, and the council refused a concurrence. The house then passed another vote, protesting against carrying on an offensive war, unless Walton, the colonel, and Moody, the major, should be removed, and other suitable persons appointed. Before the council passed upon this vote, the two obnoxious persons were prevailed upon to write to the lieutenant-governor, and desire a dismissal, provided they might be paid their wages, and, the letters being communicated to the council, they passed another vote, desiring the lieutenant-governor to dismiss the officers, agreeable to the letters received from them. This vote the house non-concurred, and insisted upon their own vote, which the council then non-concurred. The house then passed a resolve, that, unless Walton and Moody were dismissed, they should be necessitated to draw off part of the forces, and sent their 'resolve to be laid upon the council table.' The lieutenant-governor, by a message, let the house know, that the king had appointed him general of the forces, and that he, only, had the power to draw them off, and added, that he expected all messages from the house should be properly addressed to him, otherwise he should pay no regard to them. The house were sensible they had gone too far, and appointed a committee to wait upon the lieutenant-governor, to desire they might have leave to withdraw their resolve, and declared that, however expressed, they intended only that they would not vote any further pay and subsistence. They persisted, however, in their refusal to provide for the pay of the two officers, whose 'dismissal they required, nor would they make provision for further carrying on the war until other officers were appointed.

Among the other instances of additional power to the house they had, by degrees, acquired from the governor and council the keys of the treasury, and no monies could be issued without the vote of the house for that purpose. This is no more than some colonies, without charters, claim and enjoy; but by the charter, all monies are to be paid out of the treasury 'by warrant' from the governor, with advice and consent of the council. The right of the house to originate all acts and orders for raising monies from the people and to appropriate such monies to such services as they thought proper, was not disputed, but they went further, and would not admit that payment should be made for such services until they had judged whether they were well performed, and had passed a special order for such payment. Thus they kept every officer-dependent, and Walton, because he had not observed their orders to go to Penobscot, but had conformed to the governor's orders, from whom he derived all the authority he had to march any where, was denied his pay. Other matters were alleged against Walton in the course of the dispute, but this seems to have been the principal.

The exposed state which the frontiers must have been in, if the forces had been drawn off, and they could not be kept there without pay, induced the lieutenant-governor to dismiss Walton, and to appoint Thomas Westbrooke colonel and commander-in-chief, whereupon an establishment was settled by

the house, premiums were granted for Indian scalps and prisoners, and an end was put to the session.

The Indians, we have observed, were instigated by the French to begin the war. The old men were averse to it. Rallé, with difficulty, prevailed upon the Norridgewocks. The Penobscots were still more disinclined and, after hostilities began, expressed their desires of an accommodation. The St. Francois Indians, who lived upon the borders of Canada, and the St. John's, as also the Cape Sable Indians, were so remote, as not to fear the destruction of their villages by the English. They mixed with the Norridgewocks and Penobscots, and made the war general. In the latter part of July the enemies surprized Canso, and other harbours near to it, and took sixteen or seventeen sail of fishing vessels, all belonging to the Massachusetts. Governor Phillips happened to be at Canso, and caused two sloops to be manned, partly with volunteer sailors from merchant vessels, which were loading with fish, and sent them, under the command of John Eliot of Boston, and John Robinson of Cape Ann, in quest of the enemy. Eliot, as he was ranging the coast, observed seven vessels in a harbour called Winnepaug, and concealed all his men, except four or five, until he came near to one of the vessels, which had about forty Indians aboard, who were in expectation of another prize falling into their hands. As soon as he was within hearing, they hoisted their pennants and called out, 'strike, English dogs, and come aboard, for you are all prisoners.' Eliot answered, that he would make all the haste he could. Finding he made no attempt to escape, they began to fear a tartar, and cut their cable, with intent to run ashore, but he was too quick for them, and immediately clapped them aboard. For about half an hour they made a brave resistance; but, at length some of them jumping into the hold, Eliot threw his hand grenades after them, which made such havoc, that all which remained alive took to the water, where they were a fatal mark for the English shot. From this, or a like action, probably took rise a common expression among English soldiers, and sometimes English hunters, who, when they have killed an Indian, make their boast of having killed a black duck. Five only reached the shore.

Eliot received three bad wounds, and several of the men were wounded, and one killed. Seven vessels, with several hundred quintals of fish, and fifteen of the captives, were recovered from the enemy. They had sent many of the prisoners away, and nine they had killed in cold blood. The Nova Scotia Indians had the character of being more savage and cruel than the other nations.

Robinson retook two vessels, and killed several of the enemy. Five other vessels the Indians had carried so far up the bay, above the harbour of Malagash, that they were out of his reach, and he had not sufficient men to land, the enemy being very numerous.

The loss of so many men enraged them, and they had determined to revenge themselves upon the poor fishermen, above twenty of whom yet remained prisoners at Malagash harbour, and they were all destined to be sacrificed to the manes of the slain Indians. The powowing and other ceremonies were performing when Captain Blin, in a sloop, appeared off the harbour, and made the signal, or sent in a token, which had been agreed upon between him and the Indians, when he was their prisoner, should be his protection. Three of the Indians went

aboard his vessel, and agreed for the ransom both of vessels and captives, which were delivered to him, and the ransom paid. In his way to Boston he made prisoners of three or four Indians near Cape Sables, and, about the same time, Captain Southack took two canoes, with three Indians in each, one of which was killed, and the other five brought to Boston.

This Nova Scotia affair proved very unfortunate for the Indians. The Massachusetts frontiers afforded them less plunder, but they were in less danger. On the 16th of September, between four and five hundred Indians were discovered upon Arowsick Island, by a party of soldiers who were employed as a guard to the inhabitants while at their labour. They immediately made an alarm, by firing some of their guns, and the inhabitants of the island, by this means, had sufficient notice to shelter themselves in the fort or garrison house, and also to secure part of their goods before the enemy came upon them.

They fired some time upon the fort, and killed one man, after which they fell to destroying the cattle, about fifty head, and plundering the houses, and set fire to twenty-six houses, the flames of which the owners beheld from the fort, lamenting the insufficiency of their numbers to sally out and prevent the mischief.

These were the Indians who put a stop to the march to Penobscot. There were in the fort about forty soldiers, under Capt. Robert Temple and Capt. Penhallow. Capt. Temple was a gentleman who came over from Ireland, with an intent to settle in the country with a great number of families from the north of Ireland, but this rupture with the Indians broke his measures, and having been an officer in the army, Col. Shute gave him a command here. Walton and Harman, upon the first alarm, made all the dispatch they could, and before night came to the island in two whaleboats with thirty men more. With their joint force the English made an attempt to repel the enemy, but the disproportion in numbers was such that, in a bush fight or behind trees, there was no chance, and the English retreated to the fort. The enemy drew off the same night, and passing up Kennebeck river, met the province sloop, and firing upon her killed the master, Bartholomew Stretton, and then made an attempt upon Richmond fort, and from thence went to the village of Norridgewock, their head quarters.

A man was killed at Berwick, which was the last mischief done by the enemy this first year of the war.

When the general court met in May, next year, no advice had been received of any measures taken by the governor in England. The house chose their speaker, and placed him in the chair without presenting him to the lieutenant-governor, which he took no notice of. They continued their claim to a share in the direction of the war, and insisted, that if any proposals of peace should be made by the Indians, they should be communicated to the house and approved by them. They repeated also a vote for a committee of the two houses to meet in the recess of the court, and to settle plans for managing the affairs of the war, which the lieutenant-governor was to carry into execution, but in this the council again nonconcurred. The lieutenant-governor's seal being affixed to a belt, given to the delegates from the Iroquois, who came to Boston to a conference, the house passed a resolve "that the seal be defaced, and that the seal of the province be affixed to the belt, as the

committee of the two houses have agreed," and sent the resolve to the council for their concurrence. The council, instead of concurring, voted, as well they might, that the resolve contained just matter of offence, and therefore they desired the house to withdraw it. This produced another resolve from the house still higher, "that the affixing a private seal, contrary to the agreement of a committee, was a high affront and indignity to them, and therefore they very justly expected the advisers and promoters thereof to be made known to the house." There was a double error in this transaction of the house, the lieutenant-governor having the unquestionable right of ordering the form of proceeding in treaties or conferences of this kind, and the house having no authority to direct the king's seal to be applied to any purpose, the governor being the keeper of the seal; and although, in common parlance, called the province seal, yet, properly speaking, it was the king's seal for the use of the province.

The lieutenant-governor took no public exception to any votes of the house this session, which we must presume to be owing to his apprehensions, that in a short time, a full consideration would be had in England of matters of the same nature during Col. Shute's administration. Before the next session of the general court (Oct. 23d), the agent, Mr. Sanderson, transmitted to the speaker a copy of the heads of complaint exhibited against the house, for encroaching upon his majesty's prerogative in seven instances.

1. "In their behaviour with respect to the trees reserved for masts for the royal navy.
2. For refusing to admit the governor's negative upon their choice of a speaker.
3. Assuming power in the appointment of days for fasting and thanksgiving.
4. Adjourning themselves to a distant day by their own act.
5. Dismantling forts, and directing the artillery and warlike stores to other than the custody of the captain general, or his order.
6. Suspending military officers and refusing their pay.
7. Appointing committees of their own to direct and muster his majesty's forces."

The house voted the complaint groundless, and ordered one hundred pounds sterling to be remitted Sanderson, to enable him to employ counsel to justify the proceedings of the house. The vote being sent to the council was unanimously nonconcurred.

The house then prepared an answer to the several articles of complaint, and an address to the king, to which they likewise desired the concurrence or approbation of the council; but they were disapproved and sent back with a vote or message, that "in faithfulness to the province, and from a tender regard to the house of representatives, the board cannot but declare and give as their opinion, that the answer is not likely to recommend this government and people to the grace and favour of his majesty, but on the contrary, has a tendency to render us obnoxious to the royal displeasure."

The house, however, ordered the answer and address to be signed by the speaker, and forwarded to Mr. Sanderson, to be improved as they should order.

The council thereupon prepared a separate address to his majesty, and transmitted it to the governor. The nonconcurrence of council with these measures of the house, was resented, and the house desired to know what part of their answer had a ten

**dency** to render the government and people obnoxious. Here the council, very prudently, avoided engaging in controversy with the house. "It was not their design to enter into a detail, but only to intimate their opinion, that considering the present circumstances of affairs, some better method might be taken than an absolute justification." They had shewn their dissatisfaction with the conduct of the house, in every article which furnished matter for the complaint, except that of the speaker, and did all in their power to prevent them; but now this conduct was impeached, the arguments used by the council in a dispute with the house, might be sufficient to justify the council and set their conduct in an advantageous light, but they would strengthen and increase the prejudice against the country in general. This was an instance of public spirit worthy of imitation.

The house then resolved, "that being apprehensive that the liberties and privileges of the people are struck at, by governor Shute's memorial to his majesty, it is therefore their duty as well as interest, to send some suitable person or persons from hence, to use the best method that may be to defend the constitution and charter privileges." They had no power over the treasury, without the council, and therefore sent this vote for concurrence; but it was refused, and the following vote passed in council instead of it: "The liberties and privileges of his majesty's good subjects of this province being in danger, at this present critical conjuncture of our public affairs at the court of Great Britain, and it being our duty as well as interest to use the best methods that may be in defence of the same; and whereas Jeremiah Dummer, Esq., the agent of this court, is a person of great knowledge and long experience in the affairs of the province, and has greatly merited of this people, by his printed defence of the charter, and may reasonably be supposed more capable of serving us in this existence, than any person that may be sent from hence, voted, that the said Mr. agent Dummer be directed to appear in behalf of the province, for the defence of the charter, according to such instructions as he shall receive from this court." This vote plainly intimated, that by the late conduct of the house, the charter of the province was in danger, but the house seem to have overlooked it, and concurred with an amendment, "that Mr. Sanderson and a person sent from hence be joined with Mr. Dummer." The council agreed, that a person should be sent home, but refused to join Sanderson. Before the house passed upon this amendment, they made a further trial to obtain an independency of the council, and voted, that there should be paid out of the treasury, to the speaker of the house, three hundred pounds sterling, to be applied as the house should order. Near three weeks were spent in altercations upon this subject, between the council and the house; at length it was agreed that one hundred pounds should be at the disposal of the house, and two hundred to be paid to such agents as should be chosen by the whole court. The house were in arrears to Sanderson, which they wanted this money to discharge, and then were content to drop him.

The manner of chusing civil officers had been by a joint vote or ballot of council and house. This gave a great advantage to the house, who were four times the number of the board. But to be more sure of the person the majority of the house were fond of, they chose Mr. Cooke for agent, and sent the vote to the board for concurrence. The council

nonconcurred, and insisted on proceeding in the usual way, which the house were obliged to comply with. The choice, however, fell upon the same person, and he sailed for London the 18th of January.

Col. Westbrook with 230 men set out from Kenebeck, the 11th of February this year, with small vessels and a whale-boat, and ranged the coast as far east as Mount Desart. Upon his return, he went up Penobscot river, where, about thirty-two miles from the anchoring place of the transports, he discovered the Indian castle or fortress, walled with stockadoes, about seventy feet in length and fifty in breadth, which inclosed twenty-three well finished wigwams. Without, was a church sixty feet long and thirty broad, very decently finished within and without, and a very commodious house in which the priest dwelt. All was deserted, and all the success attending this expedition was the burning the village. The forces returned to St. Georges, the 20th of March.

Captain Harman was intended, with about 120 men, for Norridgewock at the same time, and set out the 6th of February, but the rivers were so open and the ground so full of water, that they could neither pass by water nor land; and having with great difficulty reached to the upper falls of Amascoggin, they divided into scouting parties, and returned without seeing any of the enemy.

An attempt was made to engage the six nations and the Scatacook Indians in the war, and commissioners were sent to Albany empowered to promise a bounty for every scalp if they would go out against the enemy, but they had no further success than a proposal to send a large number of delegates to Boston.

The commissioners for Indian affairs in Albany had the command of the six nations, and would not have suffered them to engage in war if they had inclined to it. The Massachusetts commissioners were amused, and a large sum was drawn from the government in valuable presents to no purpose. No less than sixty-three Indians came to Boston, August the 21st, the general court then sitting. A very formal conference was held with them, in the presence of the whole court, but the delegates would not involve their principals in war; if any of their young men inclined to go out with any parties of the English, they were at liberty and might do as they pleased. Two young fellows offered their service, and were sent down to Fort Richmond, on Kenebeck river. Capt. Heath the commander, ordered his ensign (Coleby) and three of the garrison to go up the river with them. After they had travelled a league from the fort, they judged by the smell of fire that a party of the enemy must be near. The Mohawks would go no further until they were strengthened by more men, and sent to the fort for a whaleboat, with as many men as she could carry. Thirteen men were sent, and soon after they had joined the first party, about thirty of the enemy appeared, and after a smart skirmish fled to their canoes, carrying off two of their company dead, or so badly wounded as to be unable to walk, and leaving their packs behind. Coleby, who commanded the party, was killed, and two others wounded. The Mohawks had enough of the service and could not be prevailed on to stay any longer, and were sent back to Boston.

Small parties of the enemy kept the frontiers in constant terror, and now and then met with success.

In April they killed and took eight persons at Scarborough and Falmouth. Among the dead, was

the serjeant of the fort, Chubb, whom the Indians took to be Capt. Harman, and no less than fifteen of them aimed at him at the same time, and lodged eleven bullets in his body. This was lucky for the rest, many more escaping to the fort than would otherwise have done. In May, they killed two at or near Berwick, one at Wells, and two travelling between York and Wells. In June, they came to Roger Dering's garrison, at Scarborough, killed his wife and took three of his children as they were picking berries, and killed two other persons. In July, Dominicus Jordan, a principal inhabitant and proprietor of Saco, was attacked in his field by five Indians, but keeping his gun constantly presented, without firing, they did not care to close in with him, and after receiving three wounds recovered the garrison. In August, the enemy appeared westward, and on the 13th killed two men at Northfield; and the next day a father and four of his sons, making hay at a meadow at Rutland, were surprised by about a dozen Indians. The father escaped in the bushes, but the four sons fell a prey to the enemy. Mr. Willard, the minister of Rutland, being abroad, armed, fell into their hands also, having killed one and wounded another before he was slain himself. The last of the month, they killed a man at Coheco, and killed or carried away another at Arundel. The 11th of October, about seventy of the enemy attacked the blockhouse above Northfield, and killed or wounded four or five of the English. Col. Stoddard marched immediately with fifty men from Northampton to reinforce Northfield, fifty men belonging to Connecticut having been drawn off the day before. Justice should be done to the government of Connecticut. Their frontiers were covered by the Massachusetts, and if they had not contributed to the charge of the war, it was not probable that the Massachusetts people would have drawn in and left Connecticut frontiers exposed. Nevertheless, they generally, at the request of the Massachusetts, sent forces every year during the summer, in this and former wars, and paid their wages, the provisions being furnished by this government.

In October, the enemy surprised one Cogswell, and a boat's crew, which were with him at Mount Desart. December 25th, about sixty Indians laid siege to the fort at Museongus or St. George's. They surprised and took two of the garrison, who informed them the fort was in a miserable condition, but the chief officer there, Kennedy, being a bold, resolute man, the garrison held out until Colonel Westbrook arrived, with force sufficient to scatter the besiegers and put them to flight.

This summer, also, July 14th, the Indians surprised one Captain Watkins, who was on a fishing voyage at Canso, and killed him and three or four of his family upon Durell's Island.

Douglas, and other writers, applaud the administration for conducting this war with great skill. The French could not join the Indians, as in former wars. Parties of the English kept upon the march, backwards, and forwards, but saw no Indians. Captain Moulton went up to Norridgewock, and brought away some books and papers of the jesuit, Rallé, which discovered that the French were the instigators of the Indians to war, but he saw none of the enemy. He came off without destroying their houses and church. Moulton was a discreet, as well as brave, man, and probably imagined this instance of his moderation would provoke in the Indians the like spirit towards the English.

August 25. A Nipmug Indian, John Quittamug,

came to Boston, and was entertained by several gentlemen, who accounted him a great prodigy. Forty years before he had been remarked as an old Indian, and must now have been above 112 years of age. He constantly affirmed, that in the year 1630, upon a message from the English that they were in want of corn, soon after their arrival, he went with his father to Boston, and carried from the Nipmug country a bushel and a half of corn all the way upon his back, that there was then only one cellar began in the town, and that somewhere near the common. He was in good health, his understanding and memory entire, and travelled on foot ten miles a day. He lived near the town of Woodstock. His journey to Boston proved as fatal to him as old Thomas Parr's journey to London, surviving it a very short time after his return home, having been feasted by some of the principal gentlemen here as Parr had been at London.

(1724.) The next year was unfavourable to the English in the former part of it, and the losses, upon the whole, exceeded those of the enemy; but a successful stroke or two against them, in the course of the year, made them weary of war, and were the means of an accommodation. The 23d of March they killed one Smith, serjeant of the fort at Cape Porpoise. In April one Mitchell was killed at Black Point, and two of his sons taken, and about the same time John Felt, William Wormwell, and Ebenezer Lewis, were killed in a saw mill on Kennebeck river, and one Thomson at Berwick met with the same fate in May, and one of his children was carried into captivity, another child was scalped, and left on the ground for dead, but soon after was taken up and carried home alive. In the same month they killed elder Knock, at Lamprey river, George Chapley, and a young woman, at Oyster river, as they were going home from public worship and took prisoners a man and three boys at Kingston. The beginning of June a scout of thirty men, from Oyster river, were attacked before they left the houses, and two men were shot down. The rest ran upon the Indians, and put them to flight, leaving their packs and one of their company, who was killed in the skirmish. One Englishman was killed and two taken prisoners at Hatfield; another, with a friend Indian, and their horses, were killed between Northfield and Deerfield.

This month, news was brought to Boston of the loss of Captain Josiah Winslow and thirteen of his company, belonging to the fort at St. George's river. There went out seventeen men in two whale boats, April 30. The Indians, it seems, watched their motions and waited the most convenient time and place to attack them. The next day, as they were upon their return, they found themselves, on a sudden, surrounded with thirty canoes, whose compliment must be an hundred Indians. They attempted to land, but were intercepted, and nothing remained but to sell their lives as dear as they could. They made a gallant defence, and the bravery of their captain was, in an especial manner, applauded. Every Englishman was killed. Three Indians, of those called the Cape Ann Indians, who were of the company, made their escape, and carried to the fort the melancholy news.

Encouraged by this success, the enemy made a still greater attempt, by water, seized two shallops at the Isle of Shoals, and, afterwards, other fishing vessels in other harbours, and, among the rest, a large schooner, with two swivel guns, which they manned and cruized about the coast. A small force

was thought sufficient to conquer these raw sailors, and the lieutenant-governor commissioned Doctor Jackson, of the province of Main, in a small schooner, with twenty men, and Silvanus Lakeman, of Ipswich, in a shallop with sixteen men, to go in quest of them. They soon came up with them, and, not long after, returned, with their rigging much damaged by the swivel guns, and Jackson and several of his men wounded, and could give no other account of the enemy than that they had gone to Penobscot.

The Seahorse, man-of-war, Captain Durrell, being then upon the Boston station, the lieutenant, master, and master's mate, each of them took the command of a small vessel, with thirty men each, and went after the Indians, but, it is probable, they were soon tired of this new business, for they were not to be found, nor do we meet with any further intelligence about them. They took eleven vessels, with forty-five men, twenty-two of whom they killed, and carried twenty-three into captivity.

At Groton they killed one man, and left dead one of their own number. August 3d, they killed three, wounded one, and made another prisoner at Rutland. The 6th, four of them came upon a small house in Oxford, which was built under a hill. They made a breach in the roof, and, as one of them was attempting to enter, he received a shot in his belly, from a courageous woman, the only person in the house; she had two muskets and two pistols charged, and was prepared for all four, but they thought fit to retreat, carrying off the dead or wounded man. The 16th a man was killed at Berwick, another wounded, and a third carried away. The 26th, one was killed, and another wounded, at Northampton, and the 26th, the enemy came to the house of John Hanson, one of the people called quakers, at Dover, and killed or carried away his wife, maid, and six children, the man himself being at the friends' meeting. This unfortunate man, Hanson, went afterwards to Ganda and redeemed his wife, three of his children, and the maid. Two of his sons were killed, a daughter, of seventeen years of age, he was obliged to leave in their hands. The Indians would permit him to see and converse with her, but would not part with her upon any terms.

Discouraged with the ineffectual attempts to intercept the enemy, by parties of our forces marching upon the back of the frontiers, another expedition was resolved upon, in order to surprise them in their principal village at Norridgewock.

Four companies, consisting in the whole of 208 men, were ordered up the river Kennebeck, under Captain Harman, Captain Moulton, Captain Bourn, and lieutenant Bean. Three Indians, of the six nations, were prevailed with to accompany our forces. The different accounts given by the French and English of this expedition may afford some entertainment. Charlevoix, who was about that time in Canada, and might receive there or from thence the account given by the Indians themselves, relates it in this manner. "The 23d of August, 1724, eleven hundred men, part English, part Indians, came up to Norridgewock. The thickets, with which the Indian village was surrounded, and the little care taken by the inhabitants to prevent a surprise, caused that the enemy were not discovered, until the very instant when they made a general discharge of their guns, and their shot had penetrated all the Indian wigwams. There were not above fifty fighting men in the village. These took

to their arms, and ran out in confusion, not with any expectation of defending the place against an enemy who were already in possession, but to favour the escape of their wives, their old men and children, and to give them time to recover the other side of the river, of which the English had not then possessed themselves.

"The noise and tumult gave father Rallé notice of the danger his converts were in. Not intimidated, he went to meet the enemy, in hopes to draw all their attention to himself, and secure his flock at the peril of his own life. He was not disappointed. As soon as he appeared, the English set up a great shout, which was followed by a shower of shot, and he fell down dead near to a cross which he had erected in the midst of the village, seven Indians, who accompanied him to shelter him with their own bodies, falling dead round about him. Thus died this kind shepherd, giving his life for his sheep, after a painful mission of thirty-seven years. The Indians, who were all in the greatest consternation at his death, immediately took to flight, and crossed the river, some swimming and others fording. The enemy pursued them, until they had entered far into woods, where they again gathered together to the number of an hundred and fifty, men, women, and children. Although more than two thousand shot had been fired upon them, yet there were no more than thirty killed and fourteen wounded. The English, finding they had no body left to resist them, fell first to pillaging and then burning the wigwams. They spared the church, so long as was necessary for their shamefully profaning the sacred vessels and the adorable body of Jesus Christ, and then set fire to it. At length they withdrew, with so great precipitation that it was rather a flight, and they seemed to be struck with a perfect panic. The Indians immediately returned to their village, where they made it their first care to weep over the body of their holy missionary, whilst their women were looking out for herbs and plants for healing the wounded. They found him shot in a thousand places, scalped, his skull broke to pieces with the blows of hatchets, his mouth and eyes filled of mud, the bones of his legs fractured, and all his members mangled an hundred different ways. Thus was a priest treated in his mission, at the foot of a cross, by those very men who have so strongly exaggerated the pretended inhumanity of our Indians, who have never made such carnage upon the dead bodies of their enemies. After his converts had raised up, and oftentimes kissed the precious remains, so tenderly and so justly beloved by them, they buried him in the same place where, the evening before, he had celebrated the sacred mysteries, namely, where the altar stood, before the church was burnt."

Besides the great error in the number of the English forces, there are many embellishments in this relation in favour of the Indians, and injurious to the English. Not satisfied with the journal alone which was given in by Captain Harman, Captain Moulton's minute and circumstantial account of this affair has been compared with it. And the following is the result.

The forces left Richmond fort, on Kennebeck river, the 8th of August. The 9th, they arrived at Taconick, where they left their whaleboats, with a lieutenant and 40 of the 208 men to guard them. With the remaining forces, on the 10th, they began their march by land for Norridgewock. The same evening, they discovered and fired upon two Indian

women, one of them, the daughter of the well known Bomazeen, they killed, the other his wife, they took prisoner. From her they received a full account of the state of Norridgewock. The 12th, a little after noon, they came near to a village: it was supposed that part of the Indians might be at their corn-fields, which were at some distance, and it therefore was thought proper to divide this small army.

Harman, with about eighty men, chose to go by way of the fields, and Moulton, with as many more, were left to march straight to the village, which, about three o'clock, suddenly opened upon them. There was not an Indian to be seen, being all in their wigwams. The men were ordered to advance softly and to keep a profound silence. At length, an Indian came out of one of the wigwams, and, as he was making water, looked round him and discovered the English close upon him: he immediately gave the war whoop and ran in for his gun. The whole village, consisting of about sixty warriors, besides old men, women, and children, took the alarm, and the warriors ran to meet the English, the rest fled to save their lives. Moulton, instead of suffering his men to fire at random through the wigwams, charged every man not to fire upon pain of death, until the Indians had discharged their guns. It happened as he expected; in their surprise they overshot the English, and not a man was hurt. The English then discharged in their turn, and made great slaughter, but every man still kept his rank. The Indians fired a second volley, and immediately fled towards the river: some jumped into their canoes, but had left their paddles in their houses, others took to swimming, and some of the tallest could ford the river, which was about sixty feet over, and the waters being low, it was no where more than six feet deep. The English pursued, some furnished themselves with paddles and took the Indian canoes which were left, others waded into the river. They soon drove the Indians from their canoes into the river, and shot them in the water; and they conjectured that not more than fifty of the whole village landed on the other side, and that some of them were killed before they reached the woods.

The English then returned to the town, where they found the jesuit, in one of the wigwams, firing upon a few of our men, who had not pursued after the enemy. He had an English boy in the wigwam with him, about fourteen years of age, who had been taken about six months before. This boy he shot through the thigh, and afterwards stabbed in the body, but by the care of the surgeons he recovered. We find this act of cruelty in the account given by Harman upon oath. Moulton had given orders not to kill the jesuit, but, by his firing from the wigwam, one of our men being wounded, a lieutenant Jaques stove open the door and shot him through the head. Jacques excused himself to his commanding officer, alleging that Rallé was loading his gun when he entered the wigwam, and declared that he would neither give nor take quarter. Moulton allowed that some answer was made by Rallé which provoked Jacques, but doubted whether it was the same as reported, and always expressed his disapprobation of the action. Mog, a famous old chief among the Indians, was shut up in another wigwam, and firing from it killed one of the three Mohawks. His brother was so enraged that he broke down the door and shot Mog dead. The English, in their rage, followed and killed the poor squaw and two helpless children. Having cleared

the village of the enemy, they then fell to plundering and destroying the wigwams. The plunder of an Indian town consisted of but little corn, it being not far from harvest, a few blankets, kettles, guns, and about three barrels of powder, all which was brought away. New England puritans, of course, thought it no sacrilege to take the plate from an idolatrous roman catholic church, which was all the profaneness offered to the sacred vessels. There were some expressions of zeal against idolatry, in breaking the crucifixes and other imagery which were found there. The church itself, a few years before, had been built by carpenters from New England. Beaver and other Indian furs and skins had paid for the church, and a zeal against a false religion destroyed the ornaments of it.

Harman and the men who went to the corn-fields did not come up till near night, when the action was over. Both parties lodged in the wigwams, keeping a guard of forty men; the next morning they found twenty dead bodies, besides that of the jesuit, and had one woman and three children prisoners. Among the dead were Bomazeen, Mog, Job, Carabesett, Wissememet, and Bomazeen's son in law, all noted warriors. They marched early for Taconick, being in some pain for their men and whaleboats, but found all safe. Christian, one of the Mohawks, was sent, or of his own accord returned, after they had begun their march, and set fire to the wigwams and to the church, and then joined the company again. The 16th they all arrived at Richmond fort. Harman went to Boston with the scalps, and being the chief in command, was made a lieutenant-colonel for an exploit in which Moulton was the principal actor, who had no distinguishing reward, except the applause of the country in general. This has often been the case in much more important services. The Norridgewock tribe never made any figure after this defeat.

Encouraged by this success, Col. Westbrook was ordered to march with 300 men across from Kennebeck to Penobscot, which he performed with no other advantage than exploring the country, which before was little known. Other parties were ordered up Amaseconti Amarecoggin, and a second attempt was made upon Norridgewock, but no Indians were to be found.

The frontiers, however, continued to be infested. September the 6th, an English party of fourteen went from Dunstable in search of two men who were missing. About thirty Indians lay in wait, and shot down six, and took three prisoners. A second party went out, and lost two of their number. The western frontier seems to have been better guarded, for, although often alarmed, they were less annoyed.

(1725.) The government increased the premium for Indian scalps and captives to one hundred pounds. This encouraged John Lovewell to raise a company of volunteers to go out upon an Indian hunting. January 5th, he brought to Boston a captive and a scalp, both which he met with above forty miles beyond Winnepesaukee lake. Going out a second time, he discovered ten Indians round a fire, all asleep. He ordered part of his company to fire, who killed three; the other seven, as they were rising up, were shot by the other part of the company reserved for that purpose. The ten scalps were brought to Boston 3d of March. Emboldened by repeated success, he made a third attempt, and went out with thirty three men. Upon the 8th or May they discovered an Indian upon a point of

land which joined to a great pond or lake. They had some suspicion that he was set there to draw them into a snare, and that there must be many Indians near, and therefore laid down their packs, that they might be ready for action, and then marched near two miles round the pond to come at the Indian they had seen. The Indian remained, although it was certain death to him, and when the English came within gun-shot, discharged his piece, which was loaded with beaver shot, and wounded Lovewell and one of his men, and then immediately fell himself, and was scalped. His name ought to have been transmitted, as well as that of Mutius Curtius, the Roman, who jumped into the gulf or chasm, upon less rational grounds, to save his country.

The Indians, who lay concealed, seized all the English packs, and then waited their return at a place convenient for their own purpose. One of the Indians being discovered, the rest, being about eighty, rose, yelled, and fired, and then ran on with their hatchets with great fury. The English retreated to the pond to secure their rear; and although so unequal in numbers, continued to fight five or six hours, till night came on. Captain Lovewell, his lieutenant, Farwell, and ensign, Robins, were soon mortally wounded, and, with five more, were left dead on the spot. Sixteen escaped, and returned unhurt, but were obliged to leave eight of their wounded companions in the woods without provisions: their chaplain, Mr. Fry, of Andover, was one, who had behaved with great bravery, and scalped one Indian in the heat of the action, but perished himself for want of relief.

One of the eight, afterwards, came into Berwick, and another to Saco. This misfortune discouraged scalping parties. But Indians, as well as English, wished to be at peace. After Rallé's death they were at liberty to follow their inclinations. The Penobscot tribe, however, being best disposed, were first founded. An Indian hostage and a captive were permitted, upon their parole, to go home in the winter of 1724, and they came back to the fort at St. George's the 9th of February, accompanied with two of the tribe, one a principal sachem or chief. They brought an account that, at a meeting of the Penobscots, it was agreed to make proposals of peace. The sachem or chief was sent back, with the other Indian, and promised to return in twenty-three days, and bring a deputation, to consist of several other chiefs, with him; but Captain Heath, having gone out upon a march from Kennebeck, across the country, to Penobscot, fell upon a deserted village of about fifty Indian houses, which he burned, but saw none of the inhabitants. The Indians who went from St. George's knew nothing of this action until they came home, and it seems to have discouraged them from returning according to their promise, and the treaty, by this means, was retarded. But upon new intimations, in June following, John Stoddard and John Wainwright, Esqs., were commissioned by the lieut.-governor, and sent down to St. George's, to treat with such Indians as should come in there and settle preliminaries of peace.

A cessation of arms was agreed upon, and four delegates came up, soon after, to Boston, and signed a treaty of peace, and, the next year, the lieut.-governor, in person, attended by gentlemen of the court and others, and the lieut.-governor of New Hampshire, with gentlemen from that province, ratified the same at Falmouth in Casco-bay. This

treaty has been applauded as the most judicious which has ever been made with the Indians. A long peace succeeded it.

The pacific temper of the Indians, for many years after, cannot be attributed to any peculiar excellency in this treaty, there being no articles in it of any importance, differing from former treaties. It was owing to the subsequent acts of government in conformity to the treaty. The Indians had long been extremely desirous of trading houses to supply them with necessaries, and to take off their furs, skins, &c. This was promised by Governor Shute, at a conference, but the general court, at that time, would make no provision for the performance. Mr. Dummer promised the same thing. The court, then, made provision for trading houses at St. George's, Kennebeck, and Saco rivers, and the Indians soon found that they were supplied with goods upon better terms than they could have them from the French, or even from private English traders. Acts or laws were made, at the same time, for restraining private trade with the Indians; but the supplies, made by the province at a cheaper rate than private traders could afford, would have broke up their trade without any other provision, and laws would have signified little without that. Mr. Dummer engaged that the Indians should be supplied with goods at as cheap rate as they were sold in Boston. This was afterwards construed favourably for the government. The goods, being bought by wholesale, were sold to the Indians at the retail price, in Boston, and a seeming profit, by the commissary's account, accrued to the government; but, when the charge of trading houses, truckmasters, garrisons, and a vessel employed in transporting goods was deducted, the province was still tributary to the Indians every year. However, it was allowed to be a well-judged measure, tending to preserve peace, and was more reputable than if a certain pension had been every year paid for that purpose.

Delegates from all the tribes of Indians, particularly the Norridgewocks, not having been present at this first treaty, another was thought necessary the next year, when the former was renewed and ratified. It was most acceptable to the Indians to hold their treaties near their own settlement, and in a proper season of the year it was an agreeable tour to the governors or commanders in chief, and the gentlemen accompanying them.

To bring this war to a close, we have passed over the other affairs of the government for a year or two past. Soon after Mr. Cooke's arrival in London, Governor Shute exhibited a second memorial against the house of representatives, for matters transacted after he left the province. The principal articles of complaint were the several orders relative to the forts and forces, which, he said, the house had taken out of the hands of the lieut.-governor, and the affront offered to the lieut.-governor, in ordering his seal to be effaced upon the belt of wampum. Several other things seem to be brought in to increase the resentment against them, as their choosing Mr. Cooke, who had been at the head of all the measures complained of in the first memorial, for their agent; their refusing to confer with the council upon a money bill; their endeavouring by their votes to lessen the members of the council in the esteem of the people; their withholding his salary in his absence; and their assuming more and more the authority of government into their hands. The council, in this memorial, are also complained

of, they having put their negative to the vote for choosing Mr. Cooke, and yet, afterwards, joined in election with the house, when they had reason to suppose, by the great superiority of the house in number, that he would be the person.

Mr. agent Dummer, who was to act jointly with Mr. Cooke, made an attempt to reconcile the governor to him, but he refused to see him; and the attempt offended Mr. Cooke also, and occasioned a warm discourse between him and Dummer, which caused the latter to refuse to act in concert, especially as Mr. Cooke had shewn him a private instruction from the house, by which their defence against the charge of invading the royal prerogative was committed to Mr. Cooke and Mr. Sanderson, to the exclusion of Mr. Dummer.

After divers hearings upon the subject matter of the complaints, the reports of the attorney and solicitor general, of the lords committee, and finally the determination of his majesty in council, were all unfavourable to the house of representatives.

The several acts or votes of the house relative to the king's woods, and to the forts and forces, seem to have been generally deemed indefensible, the agents were advised to acknowledge them to be so, and it was so far relied upon, that they would be so acknowledged in the province, as that no special provision was thought necessary for the regulation of their future conduct, the charter being express and clear. But the governor's power to negative the speaker, and the time for which the house might adjourn, were points not so certain. What was called an explanatory charter was therefore thought necessary, and such a charter accordingly passed the seals. By this charter, the power of the governor to negative a speaker is expressly declared, and the power of the house to adjourn themselves is limited to two days. With respect to the latter, perhaps this new charter may properly enough be called explanatory, the governor having the power, by the principal charter, of adjourning the assembly, and yet, from the nature of the thing, it was necessary that the house, a part of that assembly, should have the power of adjourning themselves for a longer or shorter time; but the power of negating a speaker seems to be a new article, wherein the charter is silent; so that whatever right it might be apprehended the king had to explain his own patents, where there was ambiguity, yet when an alteration is to be made in the charter, or a new rule established in any point wherein the charter is silent, the acceptance of the people, perhaps, is necessary. This seems to have been the reason of leaving it to the option of the general court, either to accept or refuse the explanatory charter. It was intimated at the same time, that if the charter should be refused, the whole controversy between the governor and the house of representatives would be carried before the parliament. Had the two points mentioned in the explanatory charter, or the conduct of the house relative to them, been all that was to be carried into parliament, the general court, probably, would not have accepted this charter. They would have urged, that it was not certain that a house of commons would have determined that the king, by his governor, had a right to negative the speaker of a house of representatives in the colonies, especially as the attorney-general had inferred this right from the right of negating the speaker of the house of commons; but it was their misfortune that in the other articles of complaint the house was generally condemned in England, the ministry were highly

incensed, and it was feared the consequence of a parliamentary enquiry would be an act to vacate the charter of the province. The temper of the house was much changed, and although there were several members, who had been active in all the measures which brought this difficulty upon the country, still resolute to risk all, rather than by their own act give up any one privilege, yet the following vote was carried in the house for accepting the charter, and in such terms as would induce one to imagine it rather the grant of a favour than the deprivation of a right.

January 15, 1725.

"In the house of representatives.

"Whereas, his honour the lieutenant-governor has laid before this court, in their present session, for their acceptance, an explanatory charter received from his grace the Duke of Newcastle, with a copy of his majesty's order in council concerning the same, wherein his majesty has been pleased to confirm the charter granted by their late majesties, king William and queen Mary, in which former charter there being no express mention made relating to the choice of a speaker, and the house's power of adjourning, to both which points, in the said explanatory charter, his majesty has been pleased to give particular directions:

"We, his majesty's loyal and dutiful subjects, being very desirous to signalise our duty and obedience, which we at all times owe to his most excellent majesty, have and do hereby accept of the said explanatory charter, and shall act in conformity thereto for the future, not doubting but that we shall thereby recommend his majesty's loyal and dutiful subjects, the inhabitants of this province, to his further most gracious favour and protection.

"In council, read and concurred,

"Consented to. Wm. Dummer."

It has been said that the English are islanders, and therefore inconstant. Transplanted to the continent they are, nevertheless, Englishmen. When we reflect upon the many instances of frequent sudden changes, and from one extreme to the other, in ancient times in the parliament of England, we may well enough expect, now and then, to meet with the like instances in the assemblies of the English colonies. This was the issue of the unfortunate controversy with governor Shute, unless we allow that it was the occasion also of the controversy with his successor, which is not improbable.

The governor was offended with Mr. Dummer for receiving grants from the court, made to him for his service as commander in chief, it being expected that when the governor is absent, with leave, his salary should be continued, one half of which, by a royal instruction, is to be allowed to the lieutenant-governor; but the house took a more frugal method, and made grants of little more than one half the governor's usual salary, to the lieutenant-governor immediately, any part of which he could very ill afford to spare from his own support. His pacific measures, and accommodation or suspension of some of the controverted points, might be another cause of coldness, at least between the governor and him.

Another affair occasioned a mark of royal displeasure upon the lieutenant-governor. Synods had been frequent under the first charter, either for suppressing errors in principles, or immoralities in practice, or for establishing or reforming church government and order, but under a new charter no synod had ever been convened. A convention of ministers had been annually held, instead, at the time for election

of the council. This might have been, in many respects, useful, but it was thought could not have that weight for promoting any of the intended purposes which a synod convened would have, especially if their decrees were ratified by the government. There were many ancient members in both houses, who had not then lost their affection for these synods; and the following application was made by the ministers:—

“To the very honourable William Dummer, Esq., lieutenant-governor and commander in chief. To the honourable the counsellors. To the honoured the representatives in the great and general court of his majesty’s province of the Massachusetts-bay, assembled, and now sitting. A memorial and address humbly presented.

“At a general convention of ministers, from several parts of the province, at Boston, May the 27th, 1725.

“Considering the great and visible decay of piety in the country, and the growth of many miscarriages, which we fear may have provoked the glorious Lord in a series of various judgments wonderfully to distress us. Considering also the laudable example of our predecessors, to recover and establish the faith and order of the gospel in the churches, and provide against what immoralities may threaten to impair them, in the way of general synods convened for that purpose, and considering that about forty-five years have now rolled away since these churches have seen any such conventions. It is humbly desired that the honoured general court would express their concern for the interests of religion in the country, by calling the several churches in the province to meet by their pastors and messengers in a synod, and from thence offer their advice upon that weighty case, which the circumstances of the day do loudly call to be considered,—‘What are the miscarriages whereof we have reason to think the judgments of heaven, upon us, call us to be more generally sensible, and what may be the most evangelical and effectual expedients to put a stop unto those or the like miscarriages?’ This proposal we humbly make, in hopes that, if it be prosecuted, it may be followed with many desirable consequences, worthy the study of those whom God has made, and we are so happy to enjoy, as the nursing fathers of our churches.

“Cotton Mather,

“In the name of the ministers assembled in their general convention.”

This memorial was granted by the council, but the house did not concur. Afterwards, by a vote of both houses, it was referred to the next session, to which the lieutenant-governor gave his consent. Opposition was made by the episcopal ministers, but a doubt of success in the province caused them to apply in England, most probably to the bishop of London. The king being at that time at Hanover, an instruction came from the lords justices to surcease all proceedings, and the lieutenant-governor received a reprimand for “giving his consent to a vote of reference, and neglecting to transmit an account of so remarkable a transaction.” A stop was put to any further proceeding in the affair, nor has any attempt for a synod been made since.

(1726.) The remainder of Mr. Dummer’s short administration was easy to him. The war being over, the principal ground of dispute, the ordering the forces, ceased. Other affairs, relative to the treasury, the passing upon accounts and the form of supplies he suffered to go on according to the claim of the house. Mr. Cooke the first election after his

return from England, May, 1726, was chose of the council. This was a mark of the house’s approbation of his conduct in the agency, although it had not been attended with success. The lieutenant-governor did not think it convenient to offend the house by a negative. The small allowance made him as a salary, about two hundred and fifty pounds sterling per annum, he also acquiesced in for the sake of peace. The governor was expected by almost every ship for a year or two together, but by some means or other was delayed until the summer of 1727, when he was upon the point of embarking, but the sudden death of the king prevented. The principal cause of delay seems to have been the insufficiency of the salary which had been granted for his support, and the uncertainty whether the assembly would make an addition to it.

(1727.) Upon the accession of King George the Second, a gentleman, who, it is said, was in particular esteem with the king himself, was appointed governor of New York and the Jerseys, in the room of Mr. Burnet, whose administration had, in general, been very acceptable to those colonies, and approved in England. The bishop, his father, had likewise been a most steady friend to the house of Hanover. Governor Burnet’s fortune being reduced in the general calamity of the year 1720, he parted with a place in the revenue of 1200*l.* per annum, and received commissions for these governments, with a view to his retrieving his fortune in a course of years. He thought it hard, in so short a time, to be superseded; for although Massachusetts and New Hampshire were given to him, yet he was to part with very profitable posts for such as, at best, would afford him no more than a decent support, an easy administration for one which he foresaw would be extremely troublesome. He complained of his hard fate, and it had a visible effect upon his spirits. Colonel Shute was provided for, more to his satisfaction than if he had returned to his government, a pension of 400*l.* sterling per annum being settled upon him, to be paid out of the  $4\frac{1}{2}$  per cent. duty raised in the West India islands. The West Indians, who would perhaps have been content if it had been applied to one of their own governors who had been superseded, have taken exception to the payment of it to a governor of the northern colonies. The duties granted by Barbados and the leeward islands upon their own produce, to be disposed of by the crown, are the only instances of the kind in the colonies. Jamaica is exempt. It was said in parliament, in the reign of Charles the Second, that this duty was consented to, upon condition the planters should be released from a duty of forty cwt. sugar per head reserved when the king granted the lands. Jamaica was chiefly disposed of by Cromwell, free from any such burden or charge.

The earthquake on the 29th of October, 1727, although not confined to the Massachusetts, was so remarkable an event in providence, that we may be excused if we give a circumstantial account of it. About forty minutes after ten at night, when there was a serene sky, and calm, but sharp air, a most amazing noise was heard, like to the roaring of a chimney when on fire, as some said, only beyond comparison greater, others compared it to the noise of coaches upon pavements, and thought that of ten thousand together would not have exceeded it. The noise was judged by some to continue about half a minute before the shock began, which increased gradually, and was thought to have con-

tinued the space of a minute before it was at the height, and, in about half a minute more, to have been at an end by a gradual decrease. When terror is so great, no dependence can be placed upon the admeasurement of time in any person's mind, and we always find very different apprehensions of it. The noise and shock of this, and all earthquakes which preceded it in New England were observed to come from the west or north-west, and go off to the east or south-east. At Newbury, and other towns upon Merrimack river, the shock was greater than in any other part of Massachusetts, but no buildings were thrown down, part of the walls of several cellars fell in, and the tops of many chimneys were shook off. At New York it seems to have been equal to what it was in the Massachusetts, but at Philadelphia it was sensibly weaker, and, in the colonies southward, it grew less and less, until it had spent itself, or became insensible. The seamen upon the coast supposed their vessels to have struck upon a shoal of loose ballast. More gentle shocks were frequently felt in most parts of New England for several months after. There have seldom passed above fifteen or twenty years without an earthquake, but there had been none, very violent, in the memory of any then living. There was a general apprehension of danger of destruction and death, and many, who had very little sense of religion before, appeared to be very serious and devout penitents, but, too generally, as the fears of another earthquake went off, the religious impressions went with them; and they, who had been the subjects of both, returned to their former course of life.

The trade of the province being in a bad state, and there being a general complaint of scarcity of money, the old spirit revived for increasing the currency by a further emission of bills of credit. It would be just as rational when the blood in the human body is in a putrid corrupt state to increase the quantity by luxurious living, in order to restore health. Some of the leading men, among the representatives, were debtors, and a depreciating currency was convenient for them. A bill was projected for fortifying the sea ports. The town of Boston was to expend ten thousand pounds in forts and stores, and, to enable them to do it, thirty thousand pounds was to be issued in bills, and lent to the town for thirteen years. Salem, Plimouth, Marblehead, Charlestown, Gloucester, and even Truro, on the cape, were all to be supplied with bills of credit for the like purposes. After repeated nonconurrence and long altercation, the council were prevailed upon to agree to the bill. When it came to the lieutenant-governor, he laid the king's instruction before the council, and required their opinion, upon their oaths, whether, consistent with the instruction, he could sign the bill, and they answered he could not. Not only the lieutenant-governor, but several of the council, were dependent on the house for the grant of their salaries, and this dependence was made use of as, in divers instances, it had been formerly. The house referred the consideration of allowance to the next session, and desired the court might rise. The lieutenant-governor let them know, by a message, that he apprehended his small support was withheld from him because he would not sign a bill contrary to his instructions. They replied, that he had recommended to them the making the provision for fortifying the province, and now they had passed a bill for that purpose he refused to sign it, and they were obliged, in prudence and faithfulness to their principals, to come into a vote, referring allowances and

other matters to another session, when a way may be found to enable the inhabitants to pay into the treasury again such sums as may be drawn out for gratuities and allowances. After a recess of about a fortnight, an expedient was found. Instead of a bill for fortifying, another was prepared, with a specious title, "An act for raising and settling a public revenue for and towards defraying the necessary charges of the government by an emission of 60,000*l.* in bills of credit." This was done to bring it within the words of the instruction, which restrained the governor from consenting to the issuing bills of credit, except for charges of government. The interest of four per cent on 2400*l.* was to be applied annually to the public charges, and gave colour for issuing the principal sum of 60,000*l.* The lieutenant-governor was prevailed upon to sign it, and, the same day, the house made the grant of his salary, and the usual allowance to the judges, most of whom were members of the council, and to the other officers of the government. This was afterwards alledged to be a compulsion of the lieutenant-governor and such members of the council as were salary men, to comply with the house of representatives, by withholding from them their subsistence. The eagerness of the body of the people for paper bills, more easily acquired in this way than the righteous way of industry and frugality, no doubt, facilitated a compliance.

The council, upon this occasion, declined answering, upon their oath, as counsellors, when the lieutenant-governor asked their advice. They swear, that to the best of their judgment they will at all times freely give their advice to the governor for the good management of the public affairs of the government. The lieutenant-governor proposed the following question to them in writing: "Gentlemen, I find it necessary, in order to my signing the bill entitled an Act for raising and settling a revenue, &c., which has passed both houses, to have your advice whether I can sign the said bill without the breach of the instruction of the lords justices of Great Britain, dated the 27th of September, 1720, and the order of the lords commissioners of trade and plantations, dated the 8th of February, 1726-7. W. Dunmer, Feb. 17, 1727." Upon which, the council came to the following vote. "In council, Feb. 19, 1727, Read, and as the council have already, as they are one part of the general court, passed a concurrence with the honourable house of representatives upon the said bill, they cannot think it proper for them to give your honour any further advice thereupon, nor do they apprehend the oath of a counsellor obliges them thereto. At the same time, they cannot but think it will be for the good and welfare of the province, and the necessary support of the government thereof, if the bill be consented to by your honour.

J. Willard, Secretary."

They had given their advice or opinion, the same session, upon the bill for fortifying, after they had passed it, that it was contrary to the instruction, and instances of the like kind have been frequent before and since this time.

The lieutenant-governor had a further opportunity before Mr. Burnet's arrival, of meeting the assembly in May for election of counsellors.

The house discovered, in one instance, this session, a desire to amplify their jurisdiction. The council and house had made it a practice, ever since the charter, to unite in the choice of the treasurer, impost officer, and other civil officers, the appointment whereof is reserved to the general assembly.

The council, being in number less than a third part of the house, have by this means no weight in such elections, except when there are two or more candidates for an office set up by the house, and then the balance of power, if they are united themselves, may be with them. This seems to have been an old charter practice and handed down. The two houses, when parties to any petition or cause desire to be heard, often meet in one house, which no doubt also came from the old charter, but after they are separated, they vote separately upon the subject matter of the hearing. In this session, after a hearing of this sort, the house passed a vote, "that when a hearing shall be had on any private cause before both houses together, the subject matter shall be determined by both houses conjunctly." They might as well have voted, that after a conference between the two houses, the subject matter should be determined conjointly. The council were sensible this was taking from the little weight they had, and unanimously nonconcurrent the vote.

The manner of chusing civil officers is a defect in the constitution, which does not seem to have been considered at the framing the charter; and, as by charter, officers must annually be elected, it was a defect which must be submitted to. In the early days of the charter, it had been made a question, whether in any acts of government the council had a negative voice, and were not rather to vote in conjunction with the house of representatives, and Constantine Phips gave his opinion that they had no negative. He seems to have considered, that the charter and the commissions to governors of other colonies, evidently intended a legislature after the pattern of the legislature of England, as far as the state and circumstances of the colonies would admit.

The government, under the old charter and the new, had been very prudent in the distribution of the territory. Lands were granted for the sake of settling them. Grants for any other purpose had been very rare, and ordinarily a new settlement was contiguous to an old one. The settlers themselves, as well as the government, were inclined to this for the sake of a social neighbourhood, as well as mutual defence against an enemy. The first settlers on Connecticut river, indeed, left a great tract of wilderness between them and the rest of the colony, but they went off in a body, and a new colony, Connecticut, was settling near them at that time. Rivers were also an inducement to settle, but very few had ventured above Dunstable, upon the fine river Merrimack, and the rivers in the province of Main had no towns at any distance from the sea into which they empty. But on a sudden, plans were laid for grants of vast tracts of unimproved land, and the last session of Mr. Dummer's administration, a vote passed the two houses appointing a committee to lay out three lines of towns, each town of the contents of six miles square, one line to extend from Connecticut river above Northfield to Merrimack river above Dunstable, another line on each side Merrimack as far as Penicook, and another from Nichewanock river to Falmouth in Casco-bay.

Pretences were encouraged, and even sought after, to entitle persons to be grantees. The posterity of all the officers and soldiers who served in the famous Naraganset expedition, in 1675, were the first pitched upon; those who were in the unfortunate attempt upon Canada, in 1690, were to come next. The government of N. Hampshire supposed these grants were made in order to secure the possession of a tract of country challenged by them as within their

bounds. This might have weight with some leading men, who were acquainted with the controversy, but there was a fondness for granting land in any part of the province. A condition of settling a certain number of families in a few years, ordinarily was annexed to the grants; but the court, by multiplying their grants, rendered the performance of the condition impracticable, there not being people enough within the province willing to leave the old settled towns, and the grantees not being able to procure settlers from abroad.

The settlement of the province was retarded by it; a trade of land jobbing made many idle persons; imaginary wealth was created, which was attended with some of the mischievous effects of the paper currency, viz., idleness and bad economy, a real expense was occasioned to many persons, besides the purchase of the grantees' title, for every township by law was made a propriety, and their frequent meetings, schemes for settlement, and other preparatory business, occasioned many charges. In some few towns houses were built and some part of the lands cleared. In a short time, a new line being determined for the northern boundary of the Massachusetts colony, many of these townships were found to be without it. The government of New Hampshire, for the crown, laid claim to some of them, and certain persons calling themselves proprietors under Mason, to others, and the Massachusetts people, after a further expence in contesting their title, either wholly lost the lands, or made such composition as the new claimers thought fit to agree to.

Mr. Burnet, the new governor, arrived on the 13th of July, and was received with unusual pomp. Besides a committee of the general court, many private gentlemen went as far as Bristol to wait upon him, and, besides the continual addition that was making in the journey, there went out of Boston to meet him at a small distance such a multitude of horses and carriages, that he entered the town with a greater cavalcade than had ever been seen before or since. Like one of the predecessors, Lord Bellamont, he urged this grand appearance, in his first speech to the assembly, as a proof of their ability very honourably to support his majesty's government; and, at the same time, acquainted them with the king's instruction to him to insist upon an established salary, and his intention firmly to adhere to it, as the following extract of his speech, of the 24th of July, will shew:—"It is not easy to express the pleasure I have had in coming among you. The commission with which his majesty has honoured me (however unequal to it), has been received in so respectful and noble a manner, and the plenty and wealth of this great province has appeared to me in such a strong light, as will not suffer me to doubt of your supporting his majesty's government by an ample, honourable, and lasting settlement. The wisdom of parliament has made it an established custom, to grant the civil list to the king for life; and as I am confident the representatives of the people here, would be unwilling to own themselves outdone in duty to his majesty by any of his subjects, I have reason to hope that they will not think such an example has any thing in it which they are not ready to imitate. I shall lay before you his majesty's instruction to me on this subject, which, as it shall be an inviolable rule for my conduct, will, without question, have its due weight with you." He had asked the opinion of a New England gentleman, who was then the minister of the presbyterian church at New York, whether the assembly would

comply with his instruction, and received a discouraging answer which caused him to reply, that he would not engage in a quarrel, or to that effect; but he either received different advice upon his arrival, or for some other reason altered his mind. The assembly seemed, from the beginning, determined to withstand him. To do it with better grace and a more reasonable prospect of success, the quantum of the salary, it was agreed, was not worth disputing. It bore no proportion to the privilege and right of granting it for such time as they thought proper. The same persons, therefore, who six or seven years before refused to make governor Shute, and perhaps the government, easy, by granting not more than five hundred pounds sterling a year, now readily voted for a thousand, or a sum which was intended to be equal to it. As soon as addresses from the council and house, the usual compliments upon the first arrival of a governor, had passed, the house made a grant of 1,700*l.* towards his support, and to defray the charge of his journey. In a day or two, the governor let them know he was utterly unable to give his consent to it, being inconsistent with his instruction. After a week's deliberation, a grant was made of three hundred pounds for the charge of his journey, which he accepted; and another of fourteen hundred pounds towards his support, which was accompanied with a joint message from the council and house, prepared by a committee, wherein they asserted their undoubted right as Englishmen and their privilege by the charter, to raise and apply monies for the support of government and their readiness to give the governor an ample and honourable support, but they apprehended it would be most for his majesty's service, &c., to do it without establishing a fixed salary. The governor was always very quick in his replies, and once when a committee came to him with a message, having privately obtained a copy of it, gave the same committee an answer in writing to carry back. The same day this message was delivered he observed to them, in answer, "that the right of Englishmen could never intitle them to do wrong, but their privilege of raising money by charter was expressed to be 'by wholesome and reasonable laws and directions,' consequently such as were hurtful to the constitution and the ends of government; but their way of giving a support to the governor could not be honourable, for it deprived him of the undoubted right of an Englishman, viz., to act his judgment, or obliged him to remain without support, and he appealed to their own consciences, whether they had not formerly kept back their governor's allowance until other bills were passed, and whether they had not sometimes made the salary depend upon the consent to such bills; that if they really intended from time to time to grant an honourable support, they could have no just objection to making their purposes effectual by fixing his salary, for he would never accept of a grant of the kind they had then made." We shall be convinced that Mr. Burnet was not a person who could be easily moved from a resolution he had once taken up.

Upon the receipt of this message and the peremptory declaration of the governor, the house found this was like to be a serious affair, and that they should not so easily get rid of it as they had done of the like demands made by Dudley and Shute, and again appointed a committee to join with a committee of council to consider of this message. The exclusive right of the house in originating grants they have often so far given up, as to join with the council

by committees to consider and report the expediency of them, the reports, generally, being sent to the house, there to be first acted upon. The report of this committee was accepted in council and sent to the house, but there rejected, and not being able to unite in an answer, the house tried the council with a resolve, sent to them for concurrence, the purport of which was, that fixing a salary on the governor or commander in chief for the time being, would be dangerous to the inhabitants and contrary to the design of the charter, in giving power to make wholesome and reasonable orders and laws for the welfare of the province. This vote, in so general terms, the council did not think proper to concur, and declared, August 19th, that, although they were of opinion it might prove of ill consequence to settle a salary upon the governor for the time being, yet they apprehended a salary might be granted for a certain time, to the present governor, without danger to the province, or being contrary to the design of the charter.

This occasioned a conference, without effect, both houses adhering to their own votes, and from this time the house was left to manage the controversy themselves. August 28th, they sent a message to the governor, to desire the court might rise. He told them, that if he should comply with their desire he should put it out of their power to pay an immediate regard to the king's instruction, and he would not grant them a recess until they had finished the business for which the court was then sitting. They then, in a message to him, declared that, in faithfulness to the people of the province, they could not come into an act for establishing a salary on the governor or commander in chief for the time being, and therefore they renewed August 29th, their request that the court might rise.

Both the governor and the house seem to have had some reserve in their declarations. Perhaps a salary during his administration would have satisfied him, although he demanded it for the commander in chief for the time being; and the house did not say that it would not settle a salary for a limited time. Each desired that the other would make some concessions. Both declined, and both by long altercation were irritated, and, at last, instead of closing, as seemed probable at first, widened the breach until they fixed at the opposite extremes. The major part of the council and about a sixth part of the house were willing to settle a salary upon Mr. Burnet for a term not exceeding three years, possibly even some who were finally the most zealous in the opposition, would have submitted to this if they could have been sure of its being accepted, and they had been at liberty to act their judgment. Mr. Cooke had experienced the ill success of the controversy with governor Shute, and seemed desirous of being upon terms with his successor, who, upon his first arrival and until the province house could be repaired, lodged at Mr. Cooke's house, but a friendship could not long continue between two persons of so different opinions upon civil government. The language of the governor's messages was thought too dictatorial by the people, and particularly by the inhabitants of Boston, and he had been somewhat free in his jokes upon some of the shopkeepers and principal tradesmen who were, then, the directors of the councils of the town, and very much influenced those of the house. An intimation in the governor's next message that, if they did not comply with the instruction, the legislature of Great Britain would take into consideration the support of the government,

and, perhaps, something besides, meaning the charter, increased the prejudices against him. The house, August 31, thought themselves obliged to be more particular than they had yet been, fully to assert their rights. This was what the governor desired, and, without any delay, September 2nd, he sent them an answer. As these two messages seem to begin, in earnest, the argument on each side of the question, we shall insert them.

“ August 31st, 1728.

“ The house of representatives sent the following message to his excellency the governor.

“ May it please your excellency,

“ The representatives in general court assembled, before they proceed to make reply to what they received from you on Thursday last, respecting their answer of that morning to your message of the 28th current, beg leave to recur to what the council and representatives, the 7th instant, in great truth and sincerity, among other things, laid before your excellency, viz. They humbly apprehend that his majesty's service in the necessary defence and support of the government and the protection and preservation of the inhabitants thereof, the two great ends proposed in the power granted to this court for the raising taxes, would be best answered without establishing a salary. Your excellency was pleased to let us know, that the answer of the house contained no reasons that appeared to you sufficient why his majesty's 23d instruction might not be complied with, since the same methods that are found no ways to prejudice the rights and liberties of the people of Great Britain, nor of other colonies, cannot prejudice those of the province. If the method practised in Great Britain is not prejudicial to the rights and liberties of the people there, it does not therefore follow, that fixing a salary will not prejudice the people of this province. The British constitution differing from ours in many respects; and other colonies coming into any particular method, we not knowing the motives inducing them thereto, nor the several constitutions of government they are put under, ought not to influence or prompt us to imitate them.

“ May it please your excellency,

“ The house, being heartily desirous to cultivate a good agreement and harmony with your excellency, take this opportunity to assure you, that we have, once and again, deliberately considered your message for fixing a salary, and do humbly conceive that it is against the good design of the powers vested and reposed in us by the royal charter, to pass acts pursuant to the instructions laid before us, for as much as passing such acts, as we apprehend, has a direct tendency to weaken our happy constitution; for that their late majesties King William and Queen Mary, of glorious memory, were graciously pleased to gratify the inhabitants here, and did grant to them certain powers, privileges, and franchises, to be used and employed for the benefit of the people; and, in the same grant, reserved other powers to be used and exercised by the crown or the governors sent by them, agreeable to the directions and instructions contained in said grant and their commissions, having reference for their better guidance and directions to the several powers and authorities mentioned in the said charter; if, therefore, the general assembly should at any time come into any act that might tend to infringe the prerogative or disserve the crown, his majesty's governors have a negative voice on all such acts; furthermore, should any governor incautiously give his consent to such acts, his

majesty has reserved to himself a power to disallow the same, by the use and exercise of the other powers and privileges lodged in the general assembly, his majesty justly expects they will never make use of them in prejudice of the rights and liberties of the people, but at all times exert themselves in defence thereof. If we resemble the British constitution, as your excellency has done us the honour to declare, we humbly apprehend that no part of the legislature here should be entirely independent, as your excellency has very justly denoted to us, that the three distinct branches of the legislature, preserved in a due balance, forms the excellency of the British constitution, and if any of those branches should become less able to support its own dignity and freedom, the whole must inevitably suffer by the alteration. Your excellency is pleased to say, that a support given as has been usual here, cannot be honourable, because that implies no sort of confidence in the government. To which we humbly offer, that if your excellency would take notice of our grants, you would see that the very method itself is founded on nothing else, inasmuch as they always look forward and are given to enable the governor to go on and manage the public affairs. Thus, in this our first session at your excellency's first and welcome arrival, the assembly made a grant of 1400*l.*, to enable your excellency to manage the affairs of this province, fully confiding in your conduct. If your excellency intends that we do not put so much confidence in you as the parliament do in our most gracious sovereign, to whom the civil list is granted for life (which God long preserve) we freely acknowledge it. Is it reasonable or possible, that we should confide in any governor whatsoever, so much as in our gracious king, the common father of all his people, who is known to delight in nothing so much as in their happiness, and whose interest and glory, and that of his royal progeny, are inseparable from the prosperity and welfare of his people; whereas it is most obvious, that neither the prosperity nor adversity of a people affect a governor's interest at all, when he has once left them.

“ Your excellency goes on, and declares that the support of the government in this manner visibly depends on an entire compliance with the other parts of the legislature. Had the governor no authority nor checks upon them, we must acknowledge this to be the case, but as both the other parts have a great dependence upon the governor's discretionary power, the council (as the practice usually is) for their very being, and both they and the representatives for every law and proper act of government, and for every penny put into and drawn out of the treasury, for their whole defence and security in every case of danger, as he is their captain general, besides other obvious particulars, needless and too numerous to be named, that if in this single instance the governor should have dependence on the assembly as to his support, according as they shall see the province able, the other things that they depend upon him for are so vastly more than a counterbalance, that it cannot be thought that the commander in chief can be hereby prevented acting according to his judgment, or remain without support. We assure your excellency that it is not any exception to your person or administration (which we hope other parts of our conduct have made evident) that determines us against fixing a salary as prescribed.

“ May it please your excellency,

“ Since we have so many times heretofore, and do now, in the most solemn manner, and after the

most strict scrutiny we are able to make in this important affair, manifest that in faithfulness to our country we cannot think it advisable for this house to be concerned in passing an act for fixing a salary as prescribed, we do therefore most ardently move your excellency, that you would permit us to repair to our several homes, and not keep us sitting here in order to our acting contrary to our native freedom and declared judgment, and so betraying the great trust and confidence our principals have reposed in us."

On the 3d of September the secretary carried down to the house the following message from his excellency the governor:—

"Gentlemen of the house of representatives,—It is not at all agreeable to my inclination to enter into disputes with your house, and, for that reason, I have endeavoured hitherto to be as short as the importance of the matters which I have recommended to you will allow me. But since you have thought fit to lay such stress on the reasons offered in your reply of Saturday, I cannot avoid, once more for all, entering into a particular examination of them, that not only yourselves, but those whom you represent, may be enabled to judge of the controversy between us.—You begin with reminding me that the council and representatives apprehended that his majesty's service, in the necessary defence and support of the government, and the protection and preservation of the inhabitants thereof, the two great ends proposed in the power granted to this court, would be best answered without establishing a fixed salary. It ought not to be forgotten, at the same time, that the council had altered the words *would be best* into *may be well*, though you prevailed with them to recede from the amendment, and that they made this addition, 'We esteem it a great unhappiness that his majesty should think our method of supporting the governors of this province a design of making them dependent on the people,' to which you agreed, though nothing to that effect had been asserted in your own draught. By these instances, the council appear, from the first, to have different apprehensions from you of the regard to be paid to his majesty's instruction, and of the weight of his displeasure, which last consideration (though the greatest part of my message) was not, it seems, thought by you to deserve any room at all in so long a reply. But supposing the council and you were agreed, that is to say, that two branches of the legislature thought it best to keep the third entirely dependent on them, (which would be a manifest piece of partiality and injustice) is this any reason why the third should be of the same opinion? Or rather, does it not confirm the too just suspicion his majesty has of a design so dangerous to his own authority? Two branches of legislature can bring nothing to effect without the third, and, consequently, if what seems best to them only cannot be consented to by the other, it becomes their duty to consider what next best thing can be done, in which all three can concur, for it does not follow that if what some imagine best cannot be done, therefore nothing should be done at all.—And so much for what you have said before you proceed to make reply.

"You may perceive from what I have already expressed, upon how many accounts the reasons of the house can never appear sufficient to me why his majesty's twenty-third instruction should not be complied with, and I am far from thinking, that you give any answer to my former reasons. You say, 'that if the method practised in Great Britain is not

prejudicial to the rights and liberties of the people there, it does not therefore follow that fixing a salary would not prejudice the people of this province.' Rights and liberties are words that have, naturally, the same meaning in all countries, and, unless you can shew me wherein the British rights and liberties are defective, (which you have not done,) I may conclude that they are not so, and, in that case, it is a natural consequence that the methods under which they have been so long safe and flourishing, are most likely to produce the same effects. But you say, 'the British constitution differs from yours in many respects.' I take the chief difference to have been in the use made of the constitution, which has been no ways to your advantage, for by Great Britain's keeping up to their constitution, public credit still continues at a height, notwithstanding the vast charges and debts of the nation, but with you credit has fallen lower and lower in an amazing manner, and this has proceeded plainly from the want of a sufficient check in the other branches of the legislature to the sudden and unadvised measures of former assemblies; so that if ever you come near the happiness of Great Britain, it must be by supporting those parts of the legislature which of late have been too much depressed, but are in themselves necessary to guard the liberties and properties of the inhabitants, as well as the house of representatives.

"As to the case of other plantations, I shall only say; if you enjoy larger privileges by the favour of the crown than they, and, by consequence, have more to lose by his majesty's displeasure, the arguments both of gratitude and interest plead stronger with you for a compliance with an instruction in itself so just and reasonable.

"I cannot see why you apprehend that passing acts pursuant to the instruction has a direct tendency to weaken your happy constitution, especially since you now acknowledge what I had formerly observed, 'that each branch of the legislature, and consequently the governor, ought to be enabled to support its own dignity and freedom,' which is all that is intended by the instruction.

"I had observed, 'that the usual way of supporting the government implied no sort of confidence in the governor.' You offer 'that if I would take notice of your grants I should see that the very method itself is founded upon nothing else, inasmuch as they always look forward, and are given to enable the governor to go on and manage the public affairs.' I can scarce believe that this is intended for a serious argument, since a time no longer ago than last winter session affords a plain proof to the contrary. The lieutenant governor informed the house, in answer to their message, expressing their desire of an adjournment, 'that he had consented to all the acts and votes passed the two houses, except the bill for emitting bills of credit, which he would have signed were it consistent with his majesty's instruction, which it was not, in the opinion of the council.' And he concludes with reminding them, 'that the proper and usual season for granting salaries is already outrun, and that he expects they will provide for the honourable support of the government before they rise.' The house entered into the consideration of the above message, and after some debate had thereon, the question was put, whether the house will now come to the consideration of allowances, it passed in the negative. Then the question was put, whether the consideration of allowances shall be referred to the next session of this court.

resolved in the affirmative. In this manner was this method of grants 'that always look forward' brought to look directly upon the present business, in order to compel a compliance or, if you like that better, to look backward by way of punishment for a denial; and so the public affairs were left to manage themselves for any care that was taken of them.

"Your next observation is not one jot a juster representation of the case before you. You say you are not for fixing a salary 'because it is not reasonable or possible you should confide in any governor whatsoever, so much as in our most gracious king.' As if this instruction to demand a salary came from a governor, and not from his majesty himself; and as if the salary was to be given directly to the governor, and not to his majesty, for the use of his governor or commander in chief; or as if upon just complaint his majesty could not or would not remove an ill governor, and, in short, as if your doing the thing would not be altogether upon confidence in his majesty, and not in any governor whatsoever. The words of respect here used to his majesty came with a very ill grace, and have not that gravity in them which would be more becoming, since in the same breath you are disregarding his own demand, and undervaluing his favour, and making light of his declaration, 'that if you do not pay an immediate regard to his instruction, he will look upon it as a manifest mark of your undutiful behaviour to himself.'

"You carry on the same kind of reasoning to the end of your paper, which seems much better adapted to amuse than to prove any thing.

"In the first place, you make a very pompous representation of the governor's authority, and of the great dependance the other parts of the general court have on his discretionary power, and call his support the single instance in which he has some dependance on the assembly; and, just after, you give an odious aspersion on an undoubted branch of the power lodged in the governor, which is 'to keep the general court together as long as he thinks the public affairs require it.' I am at a loss to know whether your insinuation, that I keep you here in order to compel you to act contrary to your native freedom and declared judgment, be more injurious to me or yourselves. You seem to allow the governor's powers only so far as he uses them according to your pleasure; but, in using your own powers, to take it very ill to be directed by any body. You said before, 'that the other things which the house depends on a governor for, are so vastly more than a counterbalance to his support, (you might have said subsistence, and then the irony would have appeared more openly,) that it cannot be thought that the commander in chief can be thereby prevented acting according to his judgment, or remain without support.' As if you were ignorant of the aforementioned proceedings of the last winter; and yet you are very ready to think, that to keep you sitting here is a compulsion to you to act contrary to your native freedom and declared judgment, and so betray the great trust your principals have reposed in you. But I persuade myself that your faithfulness to your country put you above any such temptation.

"And, as I am still of opinion that you have acted upon mistaken notions, I cannot give over the hopes of your coming to see things in that true light, in which, I flatter myself, I have stated the point in question; and as I am disposed to gratify you as far as is consistent with my duty and my honour, I hope you will consider what advances you can make towards a compliance, that so the present session may

not be a needless burden to the people, but still have a great issue to his majesty's and the country's service.

"W. Burnet."

Not long after the house, instead of any advances towards a compliance, which the governor wished to obtain, came to resolutions upon two questions which shewed still more fully their sense of the point in controversy. The first question was, Whether the house would take under consideration the settling a temporary salary upon the governor or commander in chief for the time being. This passed in the negative. Then this question was put:—Whether the house can, with safety to the people, come into any other method for supporting the governor or commander in chief for the time being, than what has been heretofore practised. This also passed in the negative, and was the first instance of the house's declaring they would make no advances, for in their message last preceding they only say, they do not think it advisable to pass an act for fixing a salary as prescribed. These votes caused the governor to put them in mind of a letter from their agent, in the year 1722, wherein he mentions that Lord Cartaret, in conversation, desired him to write to the assembly not to provoke the government in England to bring their charter before the parliament, for if they did, it was his opinion, it would be dissolved without opposition, and the governor advised them to take care their proceedings did not bring their charter into danger at that time. This caution did not prevent the house from preparing a state of the controversy between the governor and them, concerning his salary, to transmit to their several towns, in the conclusion of which they say that they dare neither come into a fixed salary on the governor for ever, nor for a limited time, for the following reasons:

"1. Because it is an untrodden path, which neither they nor their predecessors have gone in, and they cannot certainly foresee the many dangers that may be in it, nor can they depart from that way which has been found safe and comfortable.

"2. Because it is the undoubted right of all Englishmen, by magna charta, to raise and dispose of money for the public service, of their own free accord, without compulsion.

"3. Because it must necessarily lessen the dignity and freedom of the house of representatives, in making acts, and raising and applying taxes, &c., and consequently cannot be thought a proper method to preserve that balance in the three branches of the legislature, which seems necessary to form, maintain, and uphold the constitution.

"4th. Because the charter fully impowers the general assembly to make such laws and orders as they shall judge for the good and welfare of the inhabitants; and if they, or any part of them, judge this not to be for their good, they neither ought nor could come into it; for, as to act beyond or without the powers granted in the charter might justly incur the king's displeasure, so not to act up and agreeable to those powers might justly be deemed a betraying the rights and privileges therein granted; and, if they should give up this right, they would open a door to many other inconveniences."

This representation was prepared to be carried home by the several members, upon the rising of the court, in order to their towns giving their instructions; but, the house being kept sitting, it was printed and sent through the province. The governor sent a message to the house, a few days after, in which he takes their representation to pieces, and, in the close of his message, appeals to them

whether he had not answered all their objections, "except the unknown inconveniences to which a door would be opened," which could not be answered until they could tell what they were; and charges them with calling for help from what they had not mentioned, from a sense of the imperfection of what they had, and with sending to their several towns for advice; and declaring at the same time, that they did not dare follow it.

It would be tedious to recite at length the several messages which passed during the remainder of the controversy, from the chair to the house and from the house to the chair, which followed quick one upon the back of another; the sum of the argument, upon the part of the governor was, that it was highly reasonable he should enjoy the free exercise of his judgment in the administration of government; but the grants, made for a short time only by the house, were thus limited for no other reason than to keep the governor in a state of dependence, and with design to withhold from him the necessary means of subsistence, unless he would comply with their acts and resolves, however unreasonable they might appear to him: that in fact they had treated governor Shute in this manner, and no longer since than the previous year, the house had refused to make the usual grants and allowances, not only to the lieutenant-governor, but to other officers, until they had compelled him to give his consent to a loan of sixty thousand pounds in bills of credit; that a constitution which, in name and appearance, consisted of three branches was, in fact, reduced to one; that it was a professed principle in the constitution of Great Britain, to preserve a freedom in each of the three branches of the legislature; and it was a great favour shewn the province, when king William and queen Mary established, by the royal charter, a form of government so analogous to the government of Great Britain; a principle of gratitude and loyalty, therefore, ought to induce them to establish a salary for the governor of this province, in order to his supporting his dignity and freedom, in like manner as the parliament always granted to the king what was called the civil list, not once in six months or from year to year, but for life; that this was no more than other provinces which had no charters had done for their governors; that there was nothing in the province charter to exempt them from the same obligation which other his majesty's colonies were under, to support the government; and that they could have no pretence to greater privileges by charter, than the people of England enjoyed from magna charta, no clause of which was ever urged as an objection against granting to the king a revenue for life; and a power by charter to grant monies could not be a reason against granting them either for a limited or unlimited time.

On the part of the house, the substance of their defence against the governor's demand, and his reasons in support of it, was, that an obligation upon an assembly in the plantations could not be inferred from the practice of the house of commons in Great Britain; the king was the common father of all his subjects, and their interests were inseparably united, whereas a plantation governor was affected neither by the adversity nor prosperity of a colony when he had once left it; no wonder then a colony could not place the same confidence in the governor which the nation placed in the king; however, the grants to the governor always looked forward, and were made, not for service done, but to be done. It must be admitted, the governor is in some measure depend-

ent upon the assembly for his salary, but he is dependent in this instance only; whereas he has a check and controul upon every grant to any person in the government, and upon all laws and acts of government whatsoever; nor can an exact parallel be drawn between the constitution of Britain and that of the province, for the council are dependent upon the governor for their very being, once every year, whereas the house of lords cannot be displaced unless they have criminally forfeited the rights of peers; the house was not to be governed by the practice of assemblies in some of the other colonies, nor were they to be dictated to and required to raise a certain sum for a certain time and certain purposes; this would destroy the freedom which the house apprehended they had a right to in all their acts and resolves, and would deprive them of the powers given to them, by charter, to raise money and apply it when and how they thought proper.

The messages of the house, at first, were short, supposed to have been drawn by Mr. Cooke, who never used many words in his speeches in the house, which generally discovered something manly and open, though sometimes severe and bitter, and often inaccurate. In the latter part of the controversy they were generally drawn by Mr. Welles, another member from Boston, the second year of his coming to the house. These were generally more prolix, and necessarily so, from the length of the messages to which they were an answer. The house had justice done them by their committees who managed this controversy, and they were then willing to allow, that the governor maintained a bad cause with as plausible reasons as could be.

The contending parties, for a little while, endeavoured to be moderate and to preserve decorum, but it was impossible to continue this temper.

On the 4th of September, the house repeated to the governor the request they had formerly made, to rise; but he refused to grant it, and told them, that unless his majesty's pleasure had its due weight with them their desires should have very little weight with him.

The council, who had been for some time out of the question, now interposed and passed a vote "that it is expedient for the court to ascertain a sum as a salary for his excellency's support, as also the term of time for its continuance." This was sent to the house for concurrence. The council seem to have gone a little out of their line; but the house took no other notice of the vote than to nonconcur it. The house, being kept sitting against their will, employed part of their time in drawing up the state of the controversy which we have mentioned.

This was not occasioned by any doubt they had themselves, but to convince the governor that the people throughout the province were generally of the same mind with the house, and for this purpose they thought it necessary to obtain from their towns an express approbation of their conduct. It was well known, that not a town in the province would then have instructed their representatives to fix a salary upon the governor for the time being.

One of the king's governments (Barbadoes) was at this time warmly contending with its governor against fixing a salary. The assembly of that island, some years before, had settled a very large salary upon a governor, against whom they afterwards made heavy complaints, charging him with rapaciousness and grievous oppressions; and his successor having demanded the like settlement upon him, they resolved to withstand the demand, and the spirit seemed to be as high there as in Massachusetts.

This had no small tendency to strengthen and confirm the resolution of the people here, who supposed their charter rather an additional privilege and security against this demand. There was a minor part, however, very desirous of an accommodation. The ill success of the controversy with governor Shute was fresh in their minds. Many amiable qualities in Mr. Burnet caused them to wish he might continue their governor, and employ those powers and that attention which were now wholly engaged in this single point, in promoting the general welfare and prosperity of the province.

About a third part of the house of representatives, and a major part of the council, would have been content to have granted a salary for two, or perhaps, three years. If we are to judge by his declarations, this would not have satisfied him, and it was far short of his instructions; but his friends were of opinion, that such a partial compliance would have produced a relaxation of the instruction, and issued in lasting agreement and harmony.

The house made what they would have the governor think a small advance towards it. Instead of a grant for the salary, supposed, though not expressed, for half a year, they made a grant (September 20th,) of three thousand pounds, equal to one thousand sterling, in order to enable him to manage the affairs of the province, and although it was not expressly mentioned, it was generally understood to be for a year. This was concurred by the council, but he let it lie without signing his consent, which caused the house to make at least a seeming farther advance; for on the 24th of October, they by a message intreated him to accept the grant, and added, "We cannot doubt but that succeeding assemblies, according to the ability of the province, will be very ready to grant as ample a support; and if they should not, your excellency will then have the opportunity of shewing your resentment." Still they had no effect; the governor knew how natural it would be for a future assembly to refuse being governed by the opinion of a former, besides the reserve "according to the ability of the province," left sufficient room for a further reason for reducing the sum whensoever a future assembly should think it proper.

A little before this message from the house, the governor had informed them that he was of opinion the act which passed the last year, issuing sixty thousand pounds in bills of credit by way of loan, would be disallowed, the lieutenant-governor having given his consent to it directly contrary to a royal instruction, and recommended to them, as the most likely way to obtain his majesty's approbation, to apply the interest of the money arising from the loan towards the governor's salary. This was one of those acts which have their operation so far, before they are laid before his majesty, that great confusion may arise from their disallowance. The house therefore, had no great fears concerning it; but it would have been a sufficient reason to prevent their complying with the proposal, that it would be a fixing the salary so long as the loan continued, and for this reason they refused it.

The country in general, as we have observed, was averse to a compliance with the king's instruction, but no part more so than the town of Boston. Generally, in the colonies, where there is a trading capital town, the inhabitants of it are the most zealous part of the colony in asserting their liberties when an opinion prevails that they are attacked. They follow the example of London, the capital of the nation. The governor had frequently said, that the

members of the house could not act with freedom, being influenced by the inhabitants of the town. Besides, the town, at a general meeting of the inhabitants for that purpose, had passed a vote, which was called the unanimous declaration of the inhabitants of the town of Boston, against fixing a salary upon the governor, and this vote they ordered to be printed. The governor was in great wrath, and called it "an unnecessary forwardness, an attempt to give law to the country." This seems to have determined him to remove the court out of town, and on the 24th of October he caused it to be adjourned to the 31st, then to meet at Salem, in the county of Essex, "where prejudice had not taken root, and where of consequence his majesty's service would in all probability be better answered." Jocosely, he said there might be a charm in the names of places, and that he was at a loss whether to carry them there or to Concord.

The house thought their being kept so long sitting at Boston a great grievance. In one of their messages, they ask the governor, "Whether it has been customary that the knights, burgesses, and other freemen of the land, should be told that they are met to grant money in such a peculiar way and manner, and so they should be kept till they had done it, and this in order to gain their good will and assent." In his reply, he tells them he would consider their question in all its parts: "1st, 'Whether freemen, &c. should be told they are met to grant money.' I answer, the crown always tells them so. 2d. 'In such a particular way and manner?' I answer, if you mean the way and means of raising money, the crown leaves that to the commons; but if you mean the purpose for which it is to be granted, the crown always tell them what that is, whether it is for an honourable support, the defence of the kingdom, carrying on a war, or the like. 3d. 'And so they should be kept till they had done it.' The crown never tells the parliament so, that I know of; nor have I told you any thing like this as an expedient to get the thing done. I have given you a very different reason for not agreeing to a recess, altogether for your own sakes, lest I should thereby make your immediate regard to his majesty's pleasure impossible."

The house could not easily be persuaded they were kept so long together merely for their own sakes, and thought this part of the governor's answer evasive of the true reason; and considered themselves as under duress whilst at Boston, and their removal to Salem to be a further hardship, and an earnest of what was still further to come, a removal from place to place until they were harassed into a compliance. The members of the general court privately lamented the measures which had driven away governor Shute, who would have been easy with a salary of about 500*l.* sterling, granted from year to year; and the same persons, by whose influence his salary was reduced, were now pressing Mr. Burnet to accept 1000*l.* in the same way, and could not prevail.

The house met, according to the adjournment, but immediately complained of their removal from Boston as illegal or unconstitutional, and a great grievance. The same, and the only reason which was now given, had been given before in the controversy with governor Shute. The form of the writ for calling an assembly, directed by the province law, mentions its being to be held at the town house at Boston; but this had been determined by the king in council to be, as no doubt it was, mere matter of form or example only, and that it did not limit the power which the crown before had of summoning

and holding assemblies at any other place. They prayed the governor, however, to adjourn them back to Boston, but without success.

They endeavoured to prevail upon the council to join with them, but the council declared they were of a different opinion, and urged the house to proceed upon business, which occasioned repeated messages upon the subject; but the whole stress of the argument on the part of the house lay upon the form of the writ for calling the assembly, which the board answered by saying, that the house might as well insist that all precepts to the towns should go from the sheriff of Suffolk, because the form of the precept in the law has "Suffolk ss."

The alteration of place had no effect upon the members of the house. Votes and messages passed, but no new arguments; the subject had been exhausted, and nothing remained but a determined resolution on both sides to abide by their principles, consequently, the house met and adjourned, day after day, without doing any business. The governor was the principal sufferer, not being allowed by the king to receive any thing towards his support, except in a way in which the assembly would not give it. The members of the court, in general, were as well accommodated at Salem as Boston, and the members of Boston, who had not been used to the expense and other inconvenience of absence from home, received a compensation from their town, over and above the ordinary wages of representatives. It was a time of peace without, and a cessation of public business, for that reason, was less felt.

The house, from an apprehension that their cause was just, and therefore that they were entitled to relief, resolved to make their humble application to his majesty. Francis Wilks, a New England merchant, in London, who had been friendly to Mr. Cooke in his agency, and who was universally esteemed for his great probity, as well as his humane obliging disposition, was fixed upon for their agent.

Mr. Belcher, who had been several years of the council, always closely attached to governor Shute, and, in general, what was called a prerogative man, by some accident or other became, on a sudden, the favourite of the house, and he was thought the properest person to join with Mr. Wilks. At the last election he had been left out of the council, by what was called the country party, but now declared against the governor's measures, and became intimate with Mr. Cooke and other leading members of the house. Such instantaneous conversions are not uncommon. A grant was made by the house to defray the charges of the agency, but this was nonconcurrent by the council, because it was for the use of agents in whose appointment they had no voice. The want of money threatened a stop to the proceeding, but the public spirit of the town of Boston was displayed upon this occasion, and by a subscription of merchants and other inhabitants, a sum was raised which was thought sufficient for the purpose, the house voting them thanks, and promising their utmost endeavours that the sums advanced should be repaid in convenient time. The governor desired a copy of their address to the king, but they refused it.

The only argument or reason in the king's instruction for fixing a salary is, "that former assemblies have, from time to time, made such allowances and in such proportion as they themselves thought the governor deserved, in order to make him more dependent upon them." The house, in the first part of their memorial or address, declare they cannot

in faithfulness settle or fix a salary, because, after that is done, the governor's particular interest will be very little affected by serving or diserving the interest of the people. This was shewing, that they apprehended the reason given by his majesty for settling a salary was insufficient, and that the governor ought to be paid according to his services in the judgment of those who paid him, but in the close of the address they say, "we doubt not succeeding assemblies, according to the ability of the province, will come into as ample and honourable a support, from time to time, and should they not, we acknowledge your majesty will have just reason to shew your displeasure with them." It was remarked, that in order to make the last clause consist with the first, the ample and honourable support must be understood in proportion to the services of the governor in the judgment of the house, but in this sense it was saying nothing, and trifling with the king; for no case could happen, at any time, in which he would have just reason to shew his displeasure. It would always be enough to say that the house, in faithfulness to the people, had withheld part of the governor's support, because, in their judgment, he had neglected their interest and his duty.

It is curious to observe the progress of a spirit, which afterwards manifested itself in the entire emancipation of the colonies. At this time it was suggested that the people of the Massachusetts were aiming at independency, and in consequence of what was then deemed an aspersion, the following remark was made in the brief drawn up previous to the hearing before the committee in council: "From the universal loyalty of the people, even beyond any other part of his majesty's dominions, it is absurd to imagine they can have thoughts of independency; and, to shew the reverse, it is the custom for all persons coming from thence for London, though they and their fathers and grandfathers were born in New England, to say and always deem it coming 'home,' as naturally as if born in London, so that it may be said, without being ludicrous, that it would not be more absurd to place two of his majesty's beef-eaters to watch a child in the cradle, than to guard these infant colonies to prevent their shaking off the British yoke. Besides they are so distinct from one another in their forms of government, in their religious rites, in their emulation of trade, and consequently in their affections, that they can never be supposed to unite in so dangerous an enterprise." The repeated opposition to instructions from the crown also tended to raise a jealousy in the minds of some, that there was danger of the colonies emancipating themselves. Col. Bladen, in particular, for many years one of the board of trade, often expressed to the agents and other persons who appeared for New England, his apprehensions of such designs. It is, nevertheless, certain, that such a scheme then appeared to the generality of the country to be altogether as wild and extravagant as the foregoing excuse represents it. The following paragraph in the report of the lords of trade to the lords committee of council, had been the immediate occasion of the matter being agitated: "The inhabitants, far from making suitable returns to his majesty for the extraordinary privileges they enjoy, are daily endeavouring to wrest the small remains of power out of the hands of the crown, and to become independent of the mother kingdom. The nature of the soil and product are much the same with those

of Great Britain, the inhabitants upwards of 94,000, and their militia, consisting of sixteen regiments of foot and fifteen troops of horse, in the year 1718, 15,000 men, and, by a medium taken from the naval officers' accounts for three years, from the 24th of June 1714 to the 24th of June 1717, for the ports of Boston and Salem only, it appears that the trade of this country employs continually no less than 3,493 sailors, and 492 ships, making 25,406 tons. Hence your excellencies will be apprised of what importance it is to his majesty's service, that so powerful a colony should be restrained within due bounds of obedience to the crown, and more firmly attached to the interests of Great Britain than they now seem to be, which we conceive cannot effectually be done without the interposition of the British legislature, wherein, in our humble opinion, no time should be lost."

The house had great encouragement given them by Mr. Wilks, that their address would obtain for them the wished for relief. He had been heard by counsel, Mr. Fazakerley and Doctor Sayes, before the board of trade, Mr. Belcher not being then arrived; but soon after they received letters from their joint agents, inclosing the report of the board of trade, highly disapproving the conduct of the house; and their agents let them know it was their opinion that if the house should persist in their refusal to comply with the king's instruction, the affair might be carried before the parliament; but, if this should be the case, they thought it better, a salary should be fixed by the supreme legislature than by the legislature of the province; better the liberties of the people should be taken away from them, than given up by their own act. The governor likewise communicated to the house his letters from the lords of trade approving his conduct.

All hopes of success from the agents seemed to be over, and their business in England would have been very short if the governor had not given occasion for further application. His administration for many months, except in this affair of the salary, had been unexceptionable. Indeed the members of the house thought themselves aggrieved, that he would not sign a warrant upon the treasury for their pay, and his reason for refusing it, viz. that one branch of the legislature might as well go without their wages as another, they thought insufficient. Being driven to pecuniary embarrassments, and obliged to his friends to assist him in the support of his family, he thought he might be justified in establishing a fee and perquisite which had never been known in the province before. At New York, all vessels took from the governor, a pass, for which there was no law, but the owners of vessels submitted to it, and it was said that they, "*volenti non fit injuria*," were willing it should not be deemed an injury, but this could be no justification of an arbitrary imposition.

The governor required all masters to take the same passes, against their will, and demanded 6s., or 2s. sterling for every vessel bound a foreign voyage, and 4s. for coasters. The stated fee, by law, for registers was 6s., but the bills having depreciated more than one half in value since the law was made, he required 12s. This was a rather different case from the other, but they were alike complained of as grievous and oppressive, and the governor's enemies were not displeased with the advantage he had given them against him, and, upon a representation made by the agents, notwithstanding the hardship of being restrained from receiving a salary in any

way except such as the assembly would not give it in, yet such was the regard to law and justice, that his conduct, so far as related to the passes, was immediately disapproved. There were other matters, besides that of the salary, to be settled before Mr. Burnet could be easy in his government, but this grand affair caused the lesser to be kept off as much as possible. One was the appointment of an attorney general. By the charter the election of the civil officers, except such as belong to the council and courts of justice, is in the general assembly. Until after governor Dudley's time it had generally been allowed that the attorney general was an officer of the courts of justice, and included in the exception; but lieutenant-governor Tailer, in the year 1716, consented to an election made by the two houses, and the choice had been annually made and approved ever since, not without notice from Mr. Shute of the irregularity of it, but he had so many other affairs upon his hands, that he waived this.

Mr. Burnet was determined not to part with the right of nomination, and the council were of the opinion he ought not, and refused to join with the house in the election. There was some altercation between the two houses upon it, and both adhered to their principles.

Another affair, of more extensive influence, would have been more strenuously insisted upon.

In governor Shute's administration, the house, after long disputes with the governor and with the council, carried the point as to the form of supply of the treasury, which differing, as we have already observed, from the former practice, and, as both governor and council insisted, from the rule prescribed by the charter, Mr. Burnet had determined to return to the first practice. The house passed a vote for supplying the treasury with twenty thousand pounds, which the council concurred, the practice having been the same for eight or nine years together, but the governor refused his consent, and assured them that he would agree to no supply of the treasury but such as was in practice before the year 1721. This declaration was made not long before his death. The settlement of the point in controversy remained for his successor.

The court was allowed a recess from the 20th of December to the 2d of April, (1729), and then sat until the 18th, at Salem again, without any disposition to comply.

The new assembly for the election of counsellors was held at the same place: there was a general expectation that a new set of counsellors would be chosen. The council, of the last year, had been of very different opinion from the house, in many points. They had no doubt of the governor's power to call, adjourn, or prorogue the assembly to any part of the province he thought proper, and, although they were not for a fixed salary, according to the instruction, yet they would willingly have consented to settle it for longer term than a year, and some of them, during Mr. Burnet's administration; but the house were most offended with the nonconcurrence of their grant of money to their agents. After all, only four new counsellors were elected. Immediately after the council was settled, the court was prorogued to the 25th of June, and, having sat until the 10th of July, he prorogued them again until the 20th of August, having made no speech at either of the sessions, or taken any notice of any business he thought proper for them to do. The reason of this omission appeared at the session in August. He had waited the final determination of his majesty in

council, upon the report of the lords committee. This he now communicated to the house, whereby they perceived that his conduct was approved, that of the house condemned, and his majesty advised to lay the case before the parliament. As this is a curious state document, and gives an idea of the tenets held by the English court, we shall preserve it in our history.

“At the Court at Kensington, the 22d day of May, 1729, present, the Queen’s most excellent majesty, guardian of the kingdom of Great Britain, and his majesty’s lieutenant within the same, in council, his Royal Highness the Prince of Wales, Archbishop of Canterbury, Lord Chancellor, Lord Privy Seal, Lord Steward, Lord Chamberlain, Duke of Somerset, Duke of Bolton, Duke of Rutland, Duke of Argyle, Duke of Montross, Duke of Kent, Duke of Ancaster, Duke of Newcastle, Earl of Westmorland, Earl of Burlington, Earl of Scarborough, Earl of Coventry, Earl of Grantham, Earl of Godolphin, Earl of Loudoun, Earl of Finlater, Earl of Marchmont, Earl of Ilay, Earl of Uxbridge, Earl of Sussex, Earl of Lonsdale, Viscount Cobham, Viscount Falmouth, Lord Wilmington, Mr. Speaker, Mr. Chancellor of the Exchequer, Master of the Rolls, Sir Paul Methuen, Henry Pelham, Esq. ;

“Upon reading this day at the board a report to his majesty from the lords of the committee of his majesty’s most honourable privy council, dated the 22d of the last month, in the words following, viz.

“Your majesty having been pleased, by your order in council of the 1st of February, to refer unto this committee an address from the house of representatives of the province of the Massachusetts bay, offering the reason and grounds of their proceedings and conclusions against settling a fixed salary of one thousand pounds per annum on the governor of that province for the time being, according to your majesty’s instructions to the present governor, and complaining against the governor for having adjourned the general court from Boston to Salem; the lords of the committee did, in obedience to your majesty’s said order, proceed, the same day, to take the said address into their consideration; but being informed that the lords commissioners for trade and plantations had under their examination several letters from William Burnet, Esq. your majesty’s governor of that province, relating to the behaviour of the said assembly in this affair, the lords of the committee did thereupon send a copy of the said address to the said lords commissioners, that they might have the whole matter before them, and directed them to report their opinion thereupon to this committee. And the said lords commissioners having accordingly considered the said several papers, and heard Mr. Attorney and Solicitor-general in support of your majesty’s said instructions, and also counsel in behalf of the said assembly, have reported upon the whole. That they seemed entirely averse to settle a certain salary upon the present governor and those which shall succeed him, yet the said lords commissioners judge it absolutely necessary that the assembly should settle a fixed salary of 1000*l.* sterling per annum, at least, upon the governor, during the whole time of his government, it being absolutely necessary for your majesty’s service that the independency of the governor upon the assembly should be preserved: And that as to the complaint against the governor for removing the assembly from Boston to Salem, his majesty in council, upon a former complaint of this nature against colonel Shute, had determined that point in favour of the governor, and, therefore, the lords commissioners were of opinion

the present governor had acted in this matter agreeable to that determination.

“The lords of the committee hereupon beg leave to acquaint your majesty, that notwithstanding the said lords commissioners for trade had fully heard all the reasons that were offered in behalf of the said assembly, yet the agents of the said assembly petitioned this committee the 19th instant, praying that they might be admitted to be heard before their lordships, who thought it proper to know upon what terms they would insist, that your majesty’s attorney and solicitor-general might be prepared to answer the same, and they desiring to be heard upon the reasons they had to offer why the said assembly should not settle a fixed salary upon his majesty’s governor of that province during the whole time of his government, their lordships appointed this day for hearing them thereupon; they having accordingly attended with their counsel, their lordships heard all that was offered on their behalf against settling such a fixed salary, and also heard Mr. Attorney and Solicitor-general in support of your majesty’s said instructions recommending it to them: And do thereupon agree humbly to report to your majesty,

“That by the charter granted to the Massachusetts-bay, the legislative power is vested in a governor, council and assembly, of whom the governor alone is nominated by your majesty; that the assembly is chosen annually by the people, and that the council is likewise chosen annually by the assembly in conjunction with the members of the council; that by the reasons insisted on by the council for the assembly in refusing to settle a fixed salary, it appeared, the point contended for was to bring the governor appointed by your majesty over them into a dependence on their good will for his subsistence, which would manifestly tend to a lessening of his authority, and consequently, of that dependence which this colony ought to have upon the crown of Great Britain, by bringing the whole legislative power into the hands of the people.

“The power of raising taxes being by the charter granted to the general assembly, it was from thence argued, that they ought to be left at liberty for the doing or omitting it, as they shall think proper; but the words of the charter shew the intent of granting them this power to be, that they should use it for the service of the crown, in the necessary defence and support of your majesty’s government of the said province, and the protection and preservation of the inhabitants; and that, therefore, the refusing or neglecting to make due provision for the support of your majesty’s governor, who is so essential a part of the government, must be looked upon as acting contrary to the terms of the said charter, and inconsistent with the trust reposed in them thereby. That, besides the instruction given to the present governor by your majesty for this purpose, instructions have always been given by your majesty’s predecessors to former governors, to recommend to the assembly the establishing a salary suitable to the dignity of that post; notwithstanding which the assembly have hitherto refused to comply therewith, although they have by act of assembly settled a fixed salary or allowance of six shillings a day on themselves, and ten shillings a day on the council. The present assembly have, indeed, offered your majesty’s governor a salary equal to what was recommended by your majesty’s instructions, for the time he has been with them; but it is apprehended this was done only to tempt him to give up your majesty’s instructions for settling it for the whole time of his government.

"And here their lordships cannot, in justice to Mr. Burnet, omit taking notice, that by his steady pursuit of your majesty's instructions and rejecting the temptations offered by the assembly, he has acted with the utmost duty to your majesty, and a just regard to the trust reposed in him as governor of that province.

'Upon a due consideration of all that has been offered on the part of the assembly in justification of their refusing to comply with your majesty's instructions, the lords of the committee cannot but agree in opinion with the lords commissioners for trade and plantations, that it is absolutely necessary for your majesty's service and for preserving that dependency which this colony ought to have upon Great Britain, and better securing a due execution of the laws for trade and navigation, that a salary of 1000*l.* sterling per annum should be settled upon the governor during the whole time of his government, and considering that the assembly of the province has shewn so little regard to your majesty's instructions or to those of your royal predecessors in this behalf, which the governors, from time to time, have been directed to lay before them, the lords of the committee do advise your majesty to lay the whole matter before the parliament of Great Britain.

"Her majesty, this day, took the said report into consideration, and was pleased, with the advice of his majesty's privy council, to approve thereof, and to order, as is hereby ordered, that one of his majesty's principal secretaries of state should receive the pleasure of the crown thereupon.

"A true copy, Temple Stanyan."

The house received with the foregoing order, a letter from their agents, who, it seems, had altered their opinions, and now intimated to the house, that notwithstanding the determination or advice of the privy council, it was not likely the affair would ever be brought before the parliament. This letter the house ordered to be printed. The governor in one of his messages characterizes it as "an undeniable proof of their endeavours to keep the people in ignorance of the true state of their affairs."

The governor having held several sessions at Salem, without any success, he adjourned the court, to meet the 21st of August, at Cambridge. This widened the breach, and the house grew warmer in their votes and messages, and complained that they were to be compelled to measures against their judgment, by being harassed and drove from one part of the province to another. The governor's friends observed the effect the controversy had upon his spirits. In a few days, he fell sick of a fever, and died at Boston the 7th of September. Some attributed his illness to his taking cold, his carriage overturning upon the causeway at Cambridge, the tide being high, and he falling into the water. The resentment which had been raised ceased, with people in general, upon his death. Many amiable parts of his character revived in their minds. He had been steady and inflexible in his adherence to his instructions, but discovered nothing of a grasping avaricious mind; it was the mode, more than the quantum, of his salary upon which he insisted. The naval office had generally been a post for some relation or favourite of the governor, but Colonel Tainter having been lieutenant-governor, and in circumstances far from affluent, he generously gave the post to him, without any reserve of the issues or profits. The only instance of his undue exacting money, by some, was thought to be palliated by the established custom of the government he had quit-

ted. This did not justify it. In his disposal of public offices, he gave the preference to such as were disposed to favour his cause, and displaced some for not favouring it, and, in some instances, he went further than good policy would allow. He did not know the temper of the people of New England. They ever had a strong sense of liberty, and were more easily led than driven. He disobliterated many of his friends by removing from his post Mr. Lynde, a gentleman of the house, esteemed by both sides for his integrity and other valuable qualities, and he acknowledged that he could assign no other reason except that the gentleman had not voted for a compliance with the instruction. However, an immoral or unfair character was a bar to office, and he gave his negative to an election of a counsellor, in one instance, upon that principle only. His superior talents, and free and easy manner of communicating his sentiments, made him the delight of men of sense and learning. His right of precedence in all companies facilitated the exercise of his natural disposition to a great share in the conversation, and at the same time 'caused it to appear more excusable.' His own account of his genius was, that it was late before it budded, and that, until he was near twenty years of age, his father despaired of his ever making any figure in life. This, perhaps, might proceed from the exact severe discipline of the bishop's family, not calculated for every temper alike, and might damp and discourage him. To long and frequent religious services at home, in his youth, he would sometimes pleasantly attribute his indisposition to a very scrupulous exact attendance upon public worship, but this might, really, be owing to an abhorrence of ostentation and mere formality in religion, to avoid which, as most of the grave serious people of the province thought, he approached too near the other extreme. A little more caution and conformity to the different ages, manners, customs, and even prejudices of different companies, would have been more politic, but his open, undisguised mind could not submit to it. Being asked to dine with an old charter senator, who retained the custom of saying grace sitting, the grave gentleman desired to know which would be more agreeable to his excellency, that grace should be said standing or sitting; the governor replied, standing or sitting any way or no way, just as you please. He sometimes wore a cloth coat lined with velvet. It was said to be expressive of his character. He was a firm believer of the truth of revealed religion, but a bigot to no particular profession among Christians, and laid little stress upon modes and forms. By a clause in his last will, he ordered his body to be buried, if he died at New York, by his wife, if in any other part of the world, in the nearest churchyard or burying-ground, all places being alike to God's all-seeing eye. The assembly ordered a very honourable funeral at the public charge.

Mr. Dummer reassumed the administration. He did not intend to enter into the controversy about the salary; no advantage could arise from it, no new arguments could be used, the king's instructions were to be his rule, and he would not depart from them by accepting any grant as lieutenant-governor; but the affair having been under consideration before his majesty in council, and further proceedings expected, he would wait for further intelligence and directions. The house were not willing to admit that the instruction had any respect to the salary of a lieutenant-governor, but if it had, they had given sufficient reasons against it, and were deter-

mined to come into no act for fixing a salary. Having continued the session at Cambridge until the 26th of September, he ordered an adjournment to the 29th of November, at Boston, which was a further indication that he did not intend to press the instruction; however, at their first coming together, he recommended to them a compliance with it, and, upon their assuring him, by a message, that, although they could not settle a salary, yet they were ready to give him an ample and honourable support, he desired them to lose no time about it, for he would accept of no support unless it should be exactly conformable to his majesty's instruction. The house, notwithstanding, made a grant of 750*l.* to enable him to manage the affairs of government. The council concurred with an amendment, adding, 'for the half year current;' but this being fixing a salary for half a year, the house refused it.

Upon the news of Mr. Burnet's death, Mr. Belcher applied with all his powers to obtain the commission for the government. Governor Shute might have returned, but he declined, and generously gave his interest to Mr. Belcher, who, fourteen years before, had given 500*l.* sterling, which was never repaid, to facilitate Colonel Shute's appointment. The controversy, which it was supposed a governor must be engaged in, caused fewer competitors, and the ministry were the more concerned to find a proper person. Lord Townshend asked Mr. Wilks, who had much of his confidence, whether he thought Mr. Belcher would be able to influence the people to a compliance with the king's instructions, he replied that he thought no man more likely. Their choosing him agent was a mark of their confidence in him, but it seemed natural to expect that they would be under stronger prejudices against him than against a person who had never engaged in their favour. Mr. Belcher's appointment occasioned the removal of Mr. Dummer from the place of lieutenant-governor. A young gentleman, with whose family Mr. Wilks was connected, (Mr. Thornton) Mr. Belcher had engaged to provide for, and he had no post in his gift, worth accepting, besides the naval office. To make a vacancy there, Colonel Tailer was appointed lieutenant-governor. The pleasure, if there was any, in superseding Mr. Dummer, who had superseded him before, could be no equivalent for the difference between a post of naked honour, and a post of profit, which gave him a comfortable living. Mr. Dummer's administration has been, justly, well spoken of. His general aim was to do public service. He was compelled to some compliances which appeared to him the least of two evils. It lessened him in Mr. Burnet's esteem, who thought he should have shewn more fortitude; but he retired with honour, and, after some years, was elected into the council, where, from respect to his former commission, he took the place of president; but, being thought too favourable to the prerogative, after two or three years, he was left out. He seemed to lay this slight more to heart than the loss of his commission, and aimed at nothing more, the rest of his life, than selecting for his friends and acquaintance men of sense, virtue, and religion, and enjoyed in life, for many years, that fame which, for infinitely wise reasons, the great Creator has implanted in every generous breast a desire of, even after death.

Colonel Tailer's commission was received and published before Mr. Belcher's arrival, and it gave him an opportunity of doing a generous thing for Mr. Dummer. A vote had passed the two houses,

granting him nine hundred pounds, which, from a regard to his instructions, he had not signed, nor had he expressly refused it, and the court having been adjourned only, not prorogued, the next meeting was considered as the same session, and Colonel Tailer ventured to sign it, not being a grant to himself, and not against the letter of his instructions; and it was really saving money to Mr. Dummer, the grant being intended for services to come as well as past, would not have been renewed, or in part only.

*From the arrival of Governor Belcher, in 1730, to the reimbursement of the charge of the expedition against Cape Breton, and the abolition of paper money, 1749.*

Mr. Belcher arrived the beginning of August, in the Blandford man of war, Capt. Prothero.

No governor had been received with a shew of greater joy. Both parties supposed they had an interest in him. For men to alter their principles and practice, according to their interest, was no new thing. A sketch of Mr. Belcher's life and character will in some measure account for his obtaining the government, for the principal events in its administration and for the loss of his commission.

Being the only son of a wealthy father, he had good prospects from the beginning of life. After an academical education in his own country, he travelled to Europe, was twice at Hanover, and was introduced to the court there, at the time when the princess Sophia was the presumptive heiress to the British crown. The novelty of a British American, added to the gracefulness of his person, caused distinguished notice to be taken of him, which tended to increase that aspiring turn of mind which was very natural to him. Some years after, he made another voyage to England, being then engaged in mercantile affairs, which, after his return home, proved, in the general course of them, rather unsuccessful, and seem to have suppressed or abated the ruling passion; but being chosen agent for the house of representatives, it revived and was gratified to the utmost, by his appointment to the government of Massachusetts-bay and New Hampshire, and discovered itself in every part of his administration. Before he was governor, except in one instance, he had always been a favourer of the prerogative, and afterwards he did not fail of acting up to his principles. A man of high principles cannot be too jealous of himself, upon a sudden advancement to a place of power. The council never enjoyed less freedom than in his time. He proposed matters for the sake of their sanction rather than advice, rarely failing of a majority to approve of his sentiments.

He lived elegantly in his family, was hospitable, made great shew in dress, equipage, &c. and although by his depreciation of the currency he was curtailed of his salary, yet he disdained any unwarrantable or mean ways of obtaining money to supply his expenses. By great freedom in conversation, and an unreserved censure of persons whose principles or conduct he disapproved, he made himself many enemies. In a private person, this may often pass with little notice, but from a governor it is sure to be remembered, and some never ceased pursuing him until they had him displaced.

The general court met the 9th of September at Cambridge, the small-pox being at Boston. The people waited with impatience the governor's first speech. Many flattered themselves that the instruction for a fixed salary was withdrawn; others, that

if it was continued, he would treat it rather as Dudley and Shute had done, than as his immediate predecessor; others, who did not expect a relaxation, were, from curiosity, wishing to know how he would acquit himself with the people who sent him to England to oppose the instruction. After premising that the honour of the crown and interest of Great Britain are very compatible with the privileges and liberties of the plantations, he tells the two houses that he had it in command from his royal master, to communicate to them his 27th instruction, respecting the governor's support; that whilst he was in England he did every thing, consistent with reason and justice, for preserving and lengthening out the peace and welfare of the province; that they were no strangers to the steps taken by his majesty with respect to the unhappy dispute between the late governor and them, and he hoped after such a struggle, they would think it for the true interest of the province to do what might be perfectly acceptable; that nothing prevented this controversy, and several other matters of dangerous consequence, being laid before the parliament, but his majesty's great lenity and goodness, which inclined him to give them one opportunity more of paying a due regard to what in his royal wisdom he thinks so just and reasonable. Had he stopped here, perhaps, less could not have been expected from him, but he unfortunately attempted to shew the similitude between the case of Cato shut up in Utica, and the Massachusetts-bay under the restraint of the royal instruction; commended the wisdom of Cato in making so brave a stand for the liberties of his country, but condemned his putting an end to his life when affairs became desperate, rather than submit to a power he could no longer resist; which instance he brought as some illustration of the late controversy, though he would not allow it to run parallel, Cæsar being a tyrant, and the king the protector of the liberties of his subjects.

It was said, upon this occasion, that the governor must allow that the Massachusetts assembly had done wisely hitherto in defending their liberties, for, otherwise, he had brought an instance of a case in no one respect similar to theirs; and if they had done so, it was because the instruction was a mere exertion of power, and then the parallel would run farther than he was willing to allow.

The instruction was conceived in much stronger terms than that to governor Burnet, and it is declared that in case the assembly refuses to conform to it, "his majesty will find himself under a necessity of laying the undutiful behaviour of the province before the legislature of Great Britain, not only in this single instance but in many others of the same nature and tendency, whereby it manifestly appears that this assembly, for some years last past, have attempted by unwarrantable practices to weaken, if not cast off the obedience they owe to the crown, and the dependance which all colonies ought to have on their mother country." And in the close of the instruction his majesty expects "that they do forthwith comply with this proposal as the last signification of our royal pleasure to them upon this subject, and if the said assembly shall not think fit to comply therewith, it is our will and pleasure and you are required immediately to come over to this kingdom of Great Britain, in order to give us an exact account of all that shall have passed upon this subject, that we may lay the same before our parliament."

The house proceeded just as they had done with

governor Burnet. They made a grant to Mr. Belcher of 1,000*l.* currency, for defraying the expense of his voyage to New England, and as a gratuity for services while in England: 500*l.* was also granted to the governor, for his services in England as agent for the house of representatives; and the sum of 1,503*l.* 1*s.* 1*d.*, which had been advanced by merchants in Boston and others and supplied the agents, was also granted to be paid out of the public treasury, and to the several persons respectively. The honour of the governor who had spent the money, as well as that of the house, was concerned. The council, although in general the same persons who had refused to consent to any grant of money, for the use of an agent in the choice of whom they had no share, were prevailed upon by the governor and the influence of a great number of the principal merchants of Boston, who had advanced the money, to consent to a grant for the repayment of it. The house, expecting the like difficulty might arise upon a like occasion in future time, took this favourable opportunity of passing a vote for the taking the sum of 500*l.* sterling out of the province treasury, and depositing it in the bank of England for the use of the house. To this vote the council gave their concurrence and the governor his consent. He repented of it afterwards, when he found the agent employed by the house and supported with this money was the principal promoter of the complaints against him which caused his removal from the government; and sometime after they voted him a sum equal to a thousand pounds sterling, to enable him to manage the public affairs, &c., but would fix no time. The council concurred in it with an amendment, viz., "and that the same sum be annually allowed for the governor's support." This, without a fund for the payment of it, was doing little more than the house had repeatedly done by their declarations, that they doubted not future assemblies would make the like honourable provision for the governor's support, according to the ability of the province; the amendment, notwithstanding, was not agreed to, and the house adhered to their own vote. This produced a second amendment, viz., "that the same sum should be annually paid during his excellency's continuance in the government and residence here:" but this also was nonconcurrent. The two houses then conferred upon the subject, the governor being present, which was unusual, at the conference. Mr. Shirley had been desirous of acquainting himself with the arguments on both sides, in some affair in controversy between the two houses, intimated to the council his inclination to be present. When the house came up the speaker, Mr. Cushing, seeing the governor in the chair, started back and remaining at the door of the council chamber, expressed his surprise at seeing his excellency in the chair, the conference being intended between the two houses only, but if his excellency intended to remain in the chair, only to hear the arguments, he imagined the house would have no objection to conferring in his presence: and Mr. Shirley remained, as in the present instance did Mr. Belcher, and made a long speech, expressing the great pleasure the council had given him in the part they had taken, and his concern and surprize at the conduct of the house, in running the risk of the consequences of their refusal to comply with the instruction, reminded them of the vast expense which their former unsuccessful disputes with their governors had occasioned to the province, but used no arguments to convince them of the reasonableness

of the demand, and its compatibility with their rights and privileges.

The small-pox being in the town of Cambridge, where the court sat, the house desired to rise; but the governor let them know he would meet them in any other town, and the same day ordered an adjournment to Roxbury, where a bill passed both houses for the support of the governor, but not coming up to the instruction, the governor could not consent to it. The country party in the house, as much a solecism as it was, was the most zealous for the prerogative; and, except a few prerogative men who were always willing to fix the salary, none went so great a length, at this time, towards fixing it, as those who opposed any one step towards it, under Mr. Burnet.

The people, in general, were well pleased with the governor. It is not improbable that he would have obtained the settlement of a salary during his administration, if it had not been, in effect, a settlement for his successors also, for such a precedent could not easily have been resisted. The two parties which had long subsisted in the government were vying, each with the other, in measures for an expedient or accommodation. The prerogative men were Mr. Belcher's old friends, who were pretty well satisfied that his going over to the other side was not from any real affection to the cause, and that he must, sooner or later, differ with those who adhered to it, and for this event they waited patiently. The other party, by whose interest he had been sent to England, adhered to him, expecting their reward. Accordingly, Mr. Cooke was soon appointed a justice of the common pleas for the county of Suffolk. To make way for him and another favourite, Colonel Byfield, to whom Mr. Belcher was allied, two gentlemen, Colonel Hutchinson and Colonel Dudley, were displaced. They were both in principle steady friends to government, and the first of them was a fast friend to the governor. Mr. Belcher would not have been able to advance so many of his friends as he did, if he had not persuaded the council that, upon the appointment of a new governor, it was necessary to renew all civil commissions. Having obtained this point, he took the most convenient time to settle the several counties. Before he settled the county of York, he recommended to the judges a person for clerk of the court. This officer the province law empowers the judges to appoint. Some of them sent their excuse, being well satisfied with the clerk they had, who was a faithful well approved officer; but the governor let the judges know, if he could not appoint a clerk he could a judge, and accordingly removed those who were not for his purpose and appointed others in their stead. There was an inconsistency in delaying appointments, with the principles he advanced. If new commissions were necessary, they were necessary immediately, and they might as well be delayed seven years as one.

It was said that when Mr. Belcher, some years after, was ordered by the king to remove his son-in-law, Mr. Lyde, from the naval office, the power of appointment to which office is, by act of parliament, given to the governor, he was advised to make an excuse, Mr. Lyde being an officer who gave general satisfaction; but Mr. Belcher replied, that although the king could not make a naval officer yet he could make a governor, and he was forced to give up his son-in-law. This was the first instance of an appointment made by the crown immediately to this office, and perhaps to any office in the province, the nomination to which is, by the charter and royal com-

mission, left to the judgment and discretion of the governor.

The commissions to civil officers being in the king's name and tested by the governor, the renewal of such commissions upon the appointment of a governor has not been practised since Mr. Belcher's time. It was proposed in council by his successor, but Mr. Read, a very eminent lawyer, and which is more, a person of great integrity and firmness of mind, being then a member of the council, brought such arguments against the practice, that the majority of the board refused to consent to it. Besides this general new appointment, Mr. Belcher, in the course of his administration, made more frequent removals of persons from office than any governor before or since. This was owing to the pusillanimity of the council. No appointment can be made without their advice. The governor, it is true, could refuse his consent, every year, to their election; but the emoluments of a Massachusetts counsellor were very small, and caused no great temptation to sacrifice virtue. It is said, that one of the judges of the superior court expecting to be removed, in the latter part of Mr. Belcher's administration, applied by a friend in England to lord chief justice Willes, who signified his resolution, that if any judge should be removed without good reason assigned, he would himself complain to his majesty against the governor. The freedom and independence of the judges of England is always enumerated among the excellencies of the constitution. The Massachusetts judges were far from independent. In Mr. Belcher's administration, they were peculiarly dependent upon the governor. Before and since they were dependent upon the assembly for their salary, granted annually, which sometimes was delayed, sometimes diminished, and rarely escaped being a subject of debate and altercation.

(1731.) Two or three sessions passed, when little more was done on the governor's part, than repeating his demand for a fixed salary, and intimating that he should be obliged to go to England and render an account of their behaviour to the king. The major part of the house were very desirous of giving satisfaction to the governor and to their constituents both, but could not. Mr. Cooke's friends in the town of Boston began to be jealous of him. A bill was prepared, which sets forth in the preamble, that settling a salary would deprive the people of their rights as Englishmen. After granting 3400*l.*, which was about equal to 1000*l.* sterling, it is further enacted, that as his majesty had been graciously pleased to appoint J. B., Esq. to be the governor, who was a native of the country, whose fortune was here, who, when a member of the council, as well as when in a private station, has always consulted the true interest of his country as well as the honour and dignity of the crown, therefore, it is most solemnly promised and engaged to his most excellent majesty, that there shall be granted the like sum for the like purpose, at the beginning of the sessions in May every year during the governor's continuance in the administration and residence within the province; provided, this act shall not be pleaded as a precedent, or binding on any future assembly, for fixing a salary on any succeeding governor. The bill is in Mr. Cooke's hand writing, and it is minuted at the bottom, that the governor approved of it. The governor could not imagine so evasive a thing could be approved in England. He might hope to improve it, as being a further advance than had been before made; and, by using this argument, that it

would be much more rational for the house to do what they now had fully in their power to do, than to make a solemn promise that another house should do the same thing, the performance of which promise they would not have in their own power. The scheme failed, the bill did not pass; and from that time Mr. Belcher, despairing of carrying his point, turned his thought to obtaining a relaxation of his instruction. Instead of applying himself, he advised to an address from the house, not for the withdrawal of the instruction, but that the governor might have leave to receive the sum granted. This was allowed; but it was to be understood, that he was to insist upon a compliance with his instruction as much as ever. Leave for consent to particular grants was obtained two or three years, and at length a general order of leave to receive such sums as should be granted. This was the issue of the controversy about a fixed salary. Until Mr. Belcher's arrival, Mr. Cooke had differed from most who, from time to time, have been recorded in history for popular men. Generally, to preserve the favour of the people, they must change with the popular air, and when we survey a course of action it will not appear altogether consistent. He had the art of keeping the people steady in the applause of his measures. To be careful never to depart from the appearance of maintaining or enlarging rights, liberties, and privileges, was all he found necessary. As soon as he was defective in this respect, and tried to secure his interest both with the governor and town of Boston, he had like to have lost both. In the election of representatives for Boston, in 1733 or 1734, the governor's party appeared against him; he had lost many of the other party by what they called too great a compliance, and he had a majority, after several trials, of one or two votes only in six or seven hundred.

(1732.) The dispute about the manner of issuing money out of the treasury, was settled unfavourably for the house. The charter provided, that all money should be issued by warrant from the governor, with advice and consent of the council. Until the year 1720 the money was brought into the treasury, by a vote or act originating in the house, and destined to certain purposes, and drawn out for those purposes by warrant from the governor, with advice, &c.; but after that, the house not only destined the money when put into the treasury, but provided that none of it, except some trifling sums for expresses and the like, should be issued without a vote of the whole court for payment. After such a vote they were willing the governor should give his warrant. This appeared to the king to render his governor contemptible, and entirely to defeat the provision in the charter, and there was no prospect of any relaxation of the instruction to the governor. When the servants of the government had suffered a long time for want of their money, the house passed a bill, which supplied the treasury in a way not materially differing from what had been in practice before 1720.

Mr. Belcher had another instruction, not to consent to the issuing any bills of credit for a longer term than those were to remain current which had before been issued, none of which extended beyond the year 1741. It would have been but a small burden upon the inhabitants to have paid the charges of every year, and the debt which lay upon such year besides; but, instead of that wise measure, they suffered one year after another to pass with light taxes, and laid heavy burdens upon distant years, and the last year, 1741, had more laid upon it than any four

or five preceding years; and although even this was far short of what has been paid in some succeeding years, yet it was deemed an insupportable burden, and it was generally supposed, the promises made by the acts of government to draw in the bills in that year would, by some means or other, be evaded or openly violated. Mr. Belcher seemed determined to adhere to his instruction, and there was an expectation of some great convulsion, which was prevented by his being superseded before that period arrived.

Captain Coram pursued the project for settling the eastern country, until he procured an order or instruction to Colonel Phillips, the governor of Nova Scotia, in 1730, to take possession of the land between St. Croix and Kennebeck, and thirty men, with an officer, were sent to the fort at Pemaquid, built by the Massachusetts. Colonel Dunbar, a gentleman out of employ, came over about the same time, took the command of the fort, and assumed the government of that part of the province. Mr. Belcher was applied to by the proprietors of the lands there, and the house of representatives asserted the right of the province. The governor, with advice of council, issued a proclamation, requiring the inhabitants to remain in their obedience and due subjection to the laws and government of the province. This seems to have been all that in prudence he could do. Some were for taking further measures to remove Dunbar, which, as he had a royal commission, however liable to exceptions, Mr. Belcher thought by no means warrantable. The minds of the people were inflamed, and when Dunbar came up to Boston he persisted in his claim to the country which, with reports of some not very decent expressions of the governor, raised the resentment of many. Persons of ill design perhaps might have been able to have caused a tumult. The lands indeed were claimed by a few particular persons, but it was spread abroad that when this country should be detached from the rest of the province the supplies of fuel to the sea-port towns would cease, or be burdened with heavy duties, and the poor oppressed. It happened that Mr. Samuel Waldo, a gentleman of good capacity, and who would not easily relinquish his right, undertook for the proprietors of the principal tract of the country claimed, and, upon representation to his majesty in council, the order to Phillips and the authority to Dunbar were revoked in 1732, and the government of the province afterwards thought it proper to place a garrison in their own pay at Fort Frederick, the name given by Dunbar to the fort at Pemaquid.

We shall take notice of two or three only, and those the most remarkable events during the rest of Mr. Belcher's administration.

(1733.) In 1733 there was a general complaint throughout the four governments of New England of the unusual scarcity of money. There was as large a sum current in bills of credit as ever, but the bills having depreciated, they answered the purposes of money so much less in proportion. The Massachusetts and New Hampshire were clogged with royal instructions. It was owing to them that those governments had not issued bills to as great an amount as Rhode Island. Connecticut, although under no restraint, yet, consisting of more husbandmen and fewer traders than the rest, did not so much feel the want of money. The Massachusetts people were dissatisfied that Rhode Island should send their bills among them, and take away their substance and employ it in trade, and many people wished to see the bills of each government current

within the limits of such government only. In the midst of this discontent, Rhode Island passed an act for issuing 100,000*l.* upon loan, for about twenty years, to their own inhabitants, who would immediately have it in their power to add 100,000*l.* to their trading stock from the horses, sheep, lumber, fish, &c. of the Massachusetts inhabitants. The merchants of Boston therefore confederated, and mutually promised and engaged not to receive any bills of this new emission, but, to provide a currency, a large number formed themselves into a company, entered into covenants, chose directors, &c. and issued 110,000*l.* redeemable in ten years, in silver, at 19*s.* per oz. the then current rate, or gold in proportion, a tenth part annually. About the same time the Massachusetts treasury, which had been long shut, was opened, and the debts of two or three years were all paid at one time in bills of credit; to this was added the ordinary emissions of bills from New Hampshire and Connecticut, and some of the Boston merchants, tempted by an opportunity of selling their English goods, having broke through their engagements, and received the Rhode Island bills, all the rest soon followed the example. All these emissions made a flood of money, silver rose from 19*s.* to 27*s.* the oz., and exchange with all other countries consequently rose also, and every creditor was defrauded of about one third of his just dues. As soon as silver rose to 27*s.*, the notes issued by the merchants payable at 19*s.*, were hoarded up, and no longer answered the purposes of money. Although the currency was lessened by taking away the notes, yet what remained never increased in value, silver continuing several years about the same rate, until it took another large jump. Thus very great injustice was caused by this wretched paper currency, and no relief of any sort obtained; for, by this sinking in value, though the nominal sum was higher than it had ever been before, yet the currency would produce no more sterling money than it would have done before the late emissions were made. William Tailer, the lieut.-governor, dying in 1732, in 1733 Spencer Phips, nephew by the sister, and adopted son to Sir William Phips, succeeded. Mr. Belcher used his interest for Adam Winthrop, Esq.: both Winthrop and Phips had been several years members of the council.

(1737.) In 1737 a controversy, which had long subsisted between the two governments of Massachusetts bay and New Hampshire was heard by commissioners for that purpose appointed by the crown. Various attempts had been made to settle this dispute, and it had been often recommended by the crown to the assemblies of the two provinces to agree upon arbitrators from neighbouring governments, and to pass acts which should bind each province to be subject to their determinations. Several such acts passed, but they were not exactly conformable one to the other, or the operation of them was by some means or other obstructed. The Massachusetts refused terms which, afterwards, they would gladly have accepted. They have done the like in other controversies. Long possession caused them to be loth to concede any part of the territory. New Hampshire took its name from the grants made by the council of Plymouth to Captain John Mason. Of these there had been four or five, all containing more or less of the same lands. Exceptions were taken to all of them, and that which was the least imperfect was dated after the grant of Massachusetts bay, so that the whole controversy

turned upon the construction of the Massachusetts' charters. The first charter made the northern boundary to be three miles to the northward of Merrimack river, or to the northward of any and every part thereof. After running westward about thirty miles from the sea, the river alters its course, and tends to the north, or, to speak with more propriety, having run from its crotch or the meeting of Pemigewasset river, and Winnepissauke pond, to the southward about fifty miles, it then tends to the eastward about thirty miles, until it empties into the sea. It was urged by the advocates for Massachusetts colony, that their boundary was to be three miles to the northward of the northernmost part of the river, and to extend east and west from the Atlantic to the South sea. This swallowed up all New Hampshire, and the greatest part of the province of Main. At a hearing before the king in council, in 1677, the agents for Massachusetts, by advice, disclaimed all right of jurisdiction beyond the three miles north of the river according to the course, and it was determined they had a right as far as the river extended, but how far the river did extend was not then expressly mentioned. It seems, however, not to have been doubted, for although at the time of the grant of the first charter, it does not appear that the course was known any great distance from the sea, yet, soon after the government was transferred from Old England to New, it was as well known by the name of Merrimack as far as Penicook as it is at this day, and the tribe of Indians which dwelt there had a correspondence with the English, and in 1639 persons were employed by the government of Massachusetts to explore that part of the country, and there are still preserved the testimonies of divers persons declaring that they, before that time, always understood the river to be called by the same name, from the crotch to the mouth. If the first charter of the Massachusetts had continued, it is not probable any different construction would ever have been started; but in the new charter the boundary is thus expressed, "extending from the great river commonly called Monomack, alias Merrimack, on the north part, and from three miles northward of the said river, to the Atlantic or western sea, or ocean on the south part, &c. The whole, however, of the old colony being included in the new province, many years passed without any thought of a different construction of bounds in the two charters, and the disputes between New Hampshire and the Massachusetts have been, principally, concerning the towns of Salisbury and Haverhill, which, when first granted by the Massachusetts, were made to extend more than three miles from the river, and the part beyond the three miles remained under the jurisdiction by which they had been granted, which New Hampshire complained of. A new line, to begin three miles north of the mouth of Merrimack, and so run west to the south sea, was a modern construction. Some hints had been given of such a line, before or about the year 1726, and it was supposed by New Hampshire that the Massachusetts were induced thereby to make grants of townships between Merrimack and Connecticut river, in order to strengthen their title by possession, still there was a prospect of accommodation, and, in the year 1731, the committees from the assemblies of two provinces differed only upon the point of equivalents, the Massachusetts desiring to retain under their jurisdiction the whole of those towns which lay upon the river, and to give other lands as an equivalent for the property; but about

the same time the principal men of New Hampshire thinking, and perhaps justly, that they were not well treated by Mr. Belcher, determined to exert themselves to obtain a governor for that province, and to remain no longer under the same governor with the Massachusetts. They had but little chance for this unless they could enlarge their bounds. The very proposal of a distinct government, as it increased the number of officers of the crown, they thought would be a favourable circumstance in settling the controversy with Massachusetts.

The house of representatives of New Hampshire, Oct. 7, 1731, by a vote appointed John Ridge, Esq., a merchant there, who was bound to England, their agent to solicit the settlement of the boundaries. But their main dependance was upon Mr. Tomlinson, a gentleman who had been in New Hampshire, and was then a merchant of note in London, and perhaps was as capable of conducting their cause as any person they could have pitched upon. He had the friendship of Col. Bladen, who at that day had great weight in the board of trade, and had conceived very unfavourable sentiments of the Massachusetts in general, and did not like Mr. Belcher, the governor. He employed a solicitor, Ferdinando Paris, one of the first rate, and who had a peculiar talent at slurring the characters of his antagonists. Many of his briefs abound in this way. The first step in consequence of Mr. Ridge's petition was a question sent by the lords of trade to the attorney and solicitor-general for their opinion, "From what part of Merrimack river, the three miles from whence the dividing line between the province of New Hampshire and the province of the Massachusetts bay, is to begin, ought to be taken according to the intent of the charter of William and Mary." This was a plain intimation that if the point where to begin could be settled, nothing more was necessary, the west line claimed by New Hampshire was to follow of course. The Massachusetts agent (Mr. Wilks) by his council would say nothing upon the question, because it would not determine the matters in dispute. Report was made, however, that it ought to begin three miles north of the mouth of Merrimack river. It was then proposed that commissioners should be appointed to settle this controversy. This the Massachusetts were averse to, unless they knew who they were to be. They were at the same time afraid of its being determined in England, *ex parte*, if they should refuse to consent. A committee of the general court reported "that the agent should be instructed that the province would agree to commissioners to be appointed, to settle the controversy, here." This report was accepted, the house intending the commissioners should be agreed upon by the two governments, some of the committee intending the agent should understand his instructions, to consent to the appointment of commissioners provided they sat here, or in one of the two governments. A comma after the word 'appointed,' and after the word 'controversy,' would give the sense of the house, the last comma left out it might be taken in the sense of the committee; but as it is most probable the letter had no regular pointing, their meaning was to be guessed at.

This was treating the agent ill, and he was censured by the house for not observing his instructions. The committee privately excused themselves for this equivocal report as being necessary for the public service, the house not being willing to consent to an explicit submission. It was made a condition of the submission that private property should not be af-

ected. The ministry in later instances have not waited for an express submission, but have appointed commissioners upon application from one party only.

The commissioners were all such as the New Hampshire agent proposed, five counsellors from each of the governments of New York, Rhode Island, and Nova Scotia. With the two former governments, the Massachusetts were then in controversy about lines. The latter it was said was disaffected to charter government. Connecticut, proposed by Massachusetts, was rejected because of a bias from their trade, religion, &c., which New Hampshire was afraid of. The place for the meeting of commissioners was Hampton in New Hampshire, the 1st of August.

The commissioners from Nova Scotia, with some of Rhode Island, met at the time appointed, and were afterwards joined by Mr. Livingstone, from New York, who presided. After many weeks spent in hearing the parties and examining their evidence, the only doubt in the commissioners minds was, whether the Massachusetts new charter comprehended the whole of the old colony. Not being able to satisfy themselves, and perhaps not being unwilling to avoid the determination, they agreed to make a special judgment or decree, the substance of which was, that if the charter of William and Mary grants to the Massachusetts-bay, all the lands granted by the charter of Charles the First, they then adjudge a curve line to begin three miles north of the mouth of the river, and to keep the same distance from the river as far as the crotch or parting at Pemigewasset and Winepesiaukkee, and then to run west towards the south sea until it meets with his majesty's other governments; but if the charter of William and Mary did not contain &c., then they adjudge a west line to begin at the same place three miles north of the mouth and to run to the south sea. This point in doubt they submitted to his majesty's royal pleasure.

The Massachusetts were sure of their cause. It was impossible, they thought, consistent with common sense, that the point in doubt should be determined against them. They thought it safest however to send to England a special agent, Edmund Quincy, Esq., one of the council, who had been one of the court's agents before the commissioners. He was joined with Mr. Wilks, and Mr. Belcher by his interest prevailed upon the assembly to add a third, his wife's brother, Richard Partridge. Exceptions, called an appeal, were offered to the judgment of the commissioners. Mr. Quincy died of the small pox by inoculation soon after his arrival in London, the other two knew little or nothing of the controversy. The commissioner, however, had rendered it as difficult to determine a line against the Massachusetts as if they had given a general judgment in their favour. The New Hampshire agent and solicitor thought of no expedient. In their brief they pray the lords committee to report "that all the lands lying to the northward of Merrimack river, which were granted by the charter of King Charles the First to the late colony of the Massachusetts bay, are not granted to the present province of the Massachusetts-bay by the charter of King William and Queen Mary." This never could have been done. At the hearing, it was thought proper to lay aside all regard to the judgment of the commissioners, and to proceed upon an entirely new plan. No doubt was made that the old colony was all included in the new province. The question was, what were

the northern bounds of the colony of Massachusetts-bay, which the council of Plymouth when they sold the territory to the patentees, and the king when he granted the jurisdiction, had in contemplation. This, it was said, must be a line three miles north of a river not fully explored, but whose general course was supposed to be east and west. So far therefore as it afterwards appeared that the river kept this course, so far it was equitable the line should continue; but, as on the one hand, if the river had altered its course and turned to the south, it would have been inequitable to have reduced the grant to a very small tract, so on the other hand, when it appeared to turn to the north it was inequitable to extend the grant and make a very large territory, and therefore defeat other grants made about the same time. The grant to Sir Henry Roswell and others, was March the 19th, 1627. That to Mason, was November 7th, 1619, and was to extend sixty miles from the sea. But the river Merrimack turning to the north after about thirty miles from the sea, if the Massachusetts bounds had continued three miles distant from the river to the crotch, it would comprehend more than half of Mason's grant. It was therefore determined that the northern boundaries of Massachusetts-bay, should be a line three miles from the river as far as Pantucket-falls, then to run W. 10 deg. N. until it meets New York line.

The Massachusetts thought themselves aggrieved. They submitted the controversy to commissioners to be appointed by the crown, and had been fully heard. The whole proceedings of the commissioners were set aside, and without any notice to the government, the controversy was determined by a committee of council, upon a new point on which their agent had never been instructed. And however there might be the appearance of equity in the principle upon which their lordships proceeded, yet the Massachusetts supposed, if their possession for one hundred years, together with the determination of the king in council, in 1677, and the acquiescence of all parties in this determination for about fifty years had been urged and duly weighed, the balance upon the sole principle of equity would have been in their favour. It increased their mortification to find that they had lost by this new line several hundred thousand acres more than the utmost claim ever made by New Hampshire; for Merrimack river from the mouth to Pantucket-falls tending to the south, it made a difference of four or five miles in breadth, the whole length of the line, between a line to run west from Pantucket falls, and a line west from the black rocks.

The dispute about the bounds of the province of Main, which lies on the other side New Hampshire, was upon the construction of the word north-westward. The Massachusetts urged, that it was the evident design of the grantors of the province of Main, to describe a territory about 120 miles square. At that day, this was probably the reputed distance from Newichawannock or Piscataqua river to Kennebeck, along the sea coast, the general course of which was north-east and south-west; after going up the two rivers to the heads, the lines were to run north-westward until 120 miles were finished, and then a line back parallel to the line upon the sea. The agents for New Hampshire, at the court of commissioners, insisted that every body understood north-westward to be north a little, perhaps less than a quarter of a point west. It not being possible to think of any reason for a line to run upon that course, the Massachusetts could scarce suppose the

New Hampshire agents to be serious, and imagined the commissioners would need no other reply, than that every body understood a line running westward to be a line from east to west; and by the same rule of construction, they supposed north-westward to be from south-east to north-west: that north-eastward being explained in the same grant to be as the coast lay, proved in fact to be from south-west to north-east. They were, however, surprised with the determination of the commissioners, that north westward intended north two degrees west. Why not one degree or three degrees, as well as two? From this part of the judgment the Massachusetts appealed. The agents in England obtained the celebrated Doctor Halley's opinion, in writing under his hand, that in the language and understanding of mathematicians, a line to run north-westward is a line to run north-west; but this opinion did not prevail, and the judgment of the commissioners upon this point was confirmed by his majesty in council.

It behoved Mr. Belcher, the governor of both provinces, to carry an even hand. It happened, that the general court of the Massachusetts, whilst it sat at Salisbury on the occasion of this controversy, made him a grant of 800*l.* currency, in consideration of the deficiency of their former grants, for his salary and his extraordinary expense and trouble in attending the court at a distance from his house and family. Soon after this grant he adjourned the general courts of both provinces, in order to their determining whether to abide by the result of the commissioners or to appeal from it; but the court of New Hampshire was adjourned to a day or two after the Massachusetts court, and it was said they were prevented entering the appeal within the time limited. He did not care that either assembly should do any business when he was absent, and therefore intended first to finish the Massachusetts business, and immediately after proceed to New Hampshire.

This afforded matter of complaint from that province, which Mr. Belcher was called upon to answer, and it was determined the complaint was well founded; and it being urged that the 800*l.* was intended as a bribe to influence him to this measure, the Massachusetts thought their own honour concerned, and joined with him in his defence, which perhaps increased the suspicion of guilt and hastened his removal. That we may finish what relates to the controversy between the two provinces, we must take notice of the conduct of the Massachusetts upon receiving his majesty's order in council. The lines, by the order, were to be run by two surveyors, one on the part of each province; but if either province refused, the other was to proceed *ex parte*. New Hampshire, whose highest expectations were exceeded, proposed to join, but were refused by the Massachusetts; and thereupon appointed surveyors to run the lines of the Massachusetts and province of Main *ex parte*. Both lines were complained of as being run favourably for New Hampshire: that of the province of Main is a subject of new controversy, it having been suggested that the surveyor mistook the main branch of the river Newichewanock, which, if he had pursued, would have made five or six miles in breadth to the advantage of Massachusetts. This refusal to join, proceeded from the feeble irresolute state of the minds of the house of representatives. Unwilling by any act of their own to express their submission to what they called an unequal decree, they ran the risk of its being carried into execution still more unequally; and yet succeeding houses, by a subsequent long continued passive submission, as

effectually subjected the province as if it had been explicitly acknowledged at first.

After the controversy about the governor's salary and the supply of the treasury was finished, there seemed to be a general disposition to rest, and we hear little of a party in opposition to the governor for several years together. Whilst the controversy with New Hampshire was depending, all of every party engaged in defence of the right of the province. Besides, Mr. Cooke, who had been many years at the head of the popular party, was worn out with service; and having been some time in a declining state, died in the fall of the year 1737, and the town of Boston was so far from an apprehension of danger to their liberties, that they chose in his stead Mr. Wheelwright, the commissary-general, who depended upon the governor every year for his approbation after being elected by the council and house, and in 1738, three of the representatives of the town had the character of friends to government; but towards the end of the year a great clamour arose against the governor for adhering to his instruction about paper money, and against the three representatives for their pernicious principles upon the subject of paper money; and at the town election for 1739, three others were chosen in their stead, two of them professedly disaffected to the governor and promoters of popular measures, the third, although of great integrity, and for that reason desirous of a fixed currency, yet in his judgment against reducing the paper money, and a favourer of schemes for preventing its depreciation. Many country towns followed the example of Boston, and it appeared that a majority of the house were of the same principles with the town members. After Mr. Belcher's arrival, the house, as we have observed, had passed a vote for depositing 500*l.* sterling in the bank of England, to be used as they or their successors should think proper. This was concurred in council, and consented to by the governor. This money, it was said, could not be better applied, than in soliciting a relaxation of the governor's instruction concerning paper money; and Mr. Kilby, one of the Boston representatives, was chosen agent for the house, and a petition was by him presented from the house to his majesty in council, but it had no effect.

(1739.) A general dread of drawing in all the paper money without a substitution of any other instrument of trade in the place of it, disposed a great part of the province to favour what was called the land bank or manufactory scheme, which was began, or rather revived in this year 1739, and produced such great and lasting mischiefs, that a particular relation of the rise, progress, and overthrow of it, may be of use to discourage and prevent any attempts of the like nature in future ages. By a strange conduct in the general court, they had been issuing bills of credit for eight or ten years annually for charges of government, and being willing to ease each present year, they had put off the redemption of the bills as far as they could; but the governor being restrained by his instruction from going beyond the year 1741, that year was unreasonably loaded with thirty or forty thousand pounds sterling taxes, which according to the general opinion of the people it was impossible to levy, not only on account of the large sum, but because all the bills in the province were but just sufficient to pay it, and there was very little silver or gold, which by an act of government was allowed to be paid for taxes as equivalent to the bills. A scheme was laid before the general court by Mr. Hutchinson, the author of

the History of Massachusetts, then one of the representatives of Boston, in which it was proposed to borrow in England upon interest, and to import into the province a sum in silver, equal to all the bills then extant, and therewith to redeem them from possessors and furnish a currency for the inhabitants, and to repay the silver at distant periods, which would render the burden of taxes tolerable by an equal division on a number of future years, and would prevent the distress of trade by the loss of the only instrument, the bills of credit, without another provided in its place. But this proposal was rejected. One great frailty of human nature, an inability or indisposition to compare a distant though certain inconvenience or distress with a present convenience or delight, is said by some former visitors to that country, to be prevalent in America, so as to make it one of the distinguishing characteristics. Be that as it may, it is certain that at this time a great number of private persons alledging that the preceding general court having suffered the province to be brought into distress, from which it was not in the power of their successors to afford relief, the royal instruction being a bar to any future emissions of bills until all that were then extant should be redeemed, resolved to interpose. Royal instructions were no bar to the proceedings of private persons. The project of a bank in the year 1714 was revived (1740). The projector of that bank now put himself at the head of seven or eight hundred persons, some few of rank and good estate, but generally of low condition among the plebeians and of small estate, and many of them perhaps insolvent. This notable company were to give credit to 150,000*l.* lawful money, to be issued in bills, each person being to mortgage a real estate in proportion to the sums he subscribed and took out, or to give bond with two sureties; but personal security was not to be taken for more than 100*l.* from any one person. Ten directors and a treasurer were to be chosen by the company. Every subscriber or partner was to pay 3 per cent. interest for the sum taken out, and 5 per cent. of the principal; and he that did not pay bills, might pay the produce and manufacture of the province at such rates as the directors from time to time should set, and they should commonly pass in lawful money. The pretence was, that by thus furnishing a medium and instrument of trade, not only the inhabitants in general would be better able to procure the province bills of credit for their taxes, but trade, foreign and inland, would revive and flourish. The fate of the project was thought to depend upon the opinion which the general court should form of it. It was necessary, therefore, to have a house of representatives well disposed. Besides the eight hundred persons subscribers, the needy part of the province in general favoured the scheme. One of their votes will go as far in popular elections, as one of the most opulent. The former are most numerous; and it appeared, that by far the majority of the representatives for 1740 were subscribers to or favourers of the scheme, and they were long after distinguished by the name of the land bank house.

Men of estates, and the principal merchants in the province, abhorred the project, and refused to receive the bills, but great numbers of shopkeepers, who had lived for a long time before upon the fraud of a depreciating currency, and many small traders, gave credit to the bills. The directors, it was said, by a vote of the company, became traders, and issued just what bills they thought proper, without

any fund or security for their ever being redeemed. They purchased every sort of commodity, ever so much a drug, for the sake of pushing off their bills; and, by one means or other, a large sum, perhaps fifty or sixty thousand pounds, was abroad. To lessen the temptation to receive the bills, a company of merchants agreed to issue their notes or bills, redeemable by silver and gold at distant periods, much like the scheme in 1733, and attended with no better effect. The governor exerted himself to blast this fraudulent undertaking, the land bank. Not only such civil and military officers as were directors or partners, but all who received or paid any of the bills, were displaced. The governor negatived the person chosen speaker of the house, being a director of the bank, and afterwards negatived thirteen of the new elected counsellors, who were directors or partners in or reputed favourers of the scheme. But all was insufficient to suppress it. Perhaps the major part, in number, of the inhabitants of the province, openly or secretly, were well wishers to it. One of the directors afterwards acknowledged, that although he entered in the company with a view to the public interest, yet when he found what power and influence they had in all public concerns, he was convinced it was more than belonged to them, more than they could make a good use of, and therefore unwarrantable. Many of the most sensible discreet persons in the province saw a general confusion at hand. The authority of parliament to control all public and private persons and proceedings in the colonies was, in that day, questioned by no body. Application was therefore made to parliament for an act to suppress the company, which, notwithstanding the opposition made by their agent, was very easily obtained, and therein it was declared that the act of the 6th of King George the First, chapter the eighteenth, did, does, and shall extend to the colonies and plantations in America. It was said the act of George the First, when it passed, had no relation to America, but another act, twenty years after, gave it a force even from the passing it, which it never could have had without. This was said to be an instance of the transcendent power of parliament. Although the company was dissolved, yet the act of parliament gave the professors of the bills a right of action against every partner or director for the sums expressed with interest. The company were in amaze. At a general meeting some, it was said, were for running all hazards, although the act subjected them to a præmunire, but the directors had more prudence, and advised them to declare that they considered themselves dissolved, and met only to consult upon some method of redeeming their bills from the possessors, which every man engaged to endeavour in proportion to his interest, and to pay in to the directors, or some of them, to burn or destroy. Had the company issued their bills at the value expressed in the face of them, they would have had no reason to complain of being obliged to redeem them at the same rate, but as this was not the case in general, and many of the possessors of the bills had acquired them for half their value, as expressed, equity could not be done, and, so far as respected the company, perhaps the parliament was not very anxious, the loss they sustained being but a just penalty for their unwarrantable undertaking if it had been properly applied. Had not the parliament interposed, the province would have been in the utmost confusion, and the authority of government entirely in the land bank company.

Whilst Mr. Belcher, by his vigorous opposition to the land bank, was rendering himself obnoxious to one half the people of the province, measures were pursuing in England for his removal from the government. Besides the attempts which we have mentioned from New Hampshire, which had never been laid aside, there had always been a disaffected party in Massachusetts who had been using what interest they had in England against him. Lord Wilmington, president of the council, the speaker of the house of commons, and Sir Charles Wager, first lord of the admiralty, all had a favourable opinion of Mr. Belcher, so had Mr. Holden, who was at the head of the dissenters in England, and all, upon one occasion or another, had appeared for him.

The most unfair and indirect measures were used with each of these persons to render Mr. Belcher obnoxious and odious to them. The first instance was several years before this time. A letter was sent to Sir Charles Wager in the name of five persons, whose hands were counterfeited, with an insinuation that Mr. Belcher encouraged the destruction of the pine trees reserved for masts for the navy, and suffered them to be cut into logs for boards. Calumnies of this kind strike us with more horror than false insinuations in conversation, and perhaps are equally mischievous in their effects. The latter may appear the less criminal because abundantly more common.

An anonymous letter was sent to Mr. Holden, but the contents of it declared that it was the letter of many of the principal ministers of New England, who were afraid to publish their names, lest Mr. Belcher should ruin them. The charge against him was a secret undermining the congregational interest, in concert with Commissary Price and Doctor Cutler, whilst at the same time he pretended to Mr. Holden and the other dissenters in England to have it much at heart. To remove suspicion of fraud the letter was superscribed in writing, either in imitation of Doctor Colman's hand, a correspondent of Mr. Holden, or, which is more probable, a cover of one of his genuine letters had been taken off by a person of not an unblemished character, to whose care it was committed, and made use of to inclose the spurious one. Truth and right are more frequently, in a high degree, violated in political contests and animosities than upon any other occasion. It was well known that nothing would more readily induce a person of so great virtue as the speaker to give up Mr. Belcher than an instance of corruption and bribery. The New Hampshire agents therefore furnished him with the votes of the Massachusetts assembly, containing the grant of 800*l.* and evidence of the adjournment of New Hampshire assembly, alledged to be done in consequence, nor was he undeceived until it was too late.

Mr. Wilks, the Massachusetts agent, who was in great esteem with Lord Wilmington, and was really a person of a fair upright mind, had prevented any impressions to Mr. Belcher's prejudice, but it unluckily happened that the land bank company employed Richard Partridge, brother by marriage to Mr. Belcher, as their agent. He had been many years agent for his brother, which fact was well known to his lordship, but, from an expectation of obtaining the sole agency of the province by the interest of the prevailing party there, engaged zealously in opposing the petitions to the house of commons, and gave out bills at the door of the house. It was said that all Mr. Belcher's opposition to the scheme, in the province, was mere pretence; had

he been in earnest, his agent in England would never venture to appear in support of it, and this was improved with Lord Wilmington to induce him to give up Mr. Belcher, and it succeeded. Still the removal was delayed one week after another, two gentlemen from the Massachusetts continually soliciting. At length, it being known that Lord Euston's election for Coventry was dubious, one of these gentlemen undertook to the Duke of Grafton to secure the election, provided Mr. Belcher might immediately be removed, and, to accomplish his design, he represented to Mr. Maltby, a large dealer in Coventry stuffs, and a zealous dissenter, that Mr. Belcher was, with the episcopal clergy, conspiring the ruin of the congregational interest in New England, and unless he was immediately removed it would be irrecoverably lost; that the Duke of Grafton had promised, if Lord Euston's election could be secured, it should be done; that letters to his friends in Coventry would infallibly secure it, that he could not better employ his interest than in the cause of God and of religion. Maltby swallowed the bait, used all his interest for Lord Euston, the two gentlemen spent three weeks at Coventry, and having succeeded, agreeable to the duke's promise, Mr. Belcher was removed a day or two after their return. This account was given by Mr. Maltby himself, who lamented that he had suffered himself to be so easily imposed on.

A few weeks longer delay would have baffled all the schemes. The news arrived of his negating thirteen counsellors, and displacing a great number of officers concerned in the land bank, and his zeal and fortitude were highly applauded when it was too late. Certainly, in public employments, no man ought to be condemned from the reports and accusations of a party, without a sufficient opportunity given him to exculpate himself, a plantation governor especially, who, be he without guile, or a consummate politician, will infallibly have a greater or lesser number disaffected to him.

Mr. Shirley, successor to Mr. Belcher, was a gentleman of Sussex, bred in the law and had been in office in the city, but having prospect of a numerous offspring, was advised to remove to Boston in the Massachusetts, where he had resided six or eight years and acquired a general esteem, and if there must be a change it was said to be as acceptable to have it in his favour as any person whatsoever. His lady was then in London, and had obtained the promise of the collector's place for the port of Boston and would have preferred it to the government, but a strong interest being made for Mr. Frankland, since Sir Henry Frankland, there was no way of providing for both, except by giving the government to Mr. Shirley.

The news came to Boston the first week in July. Mr. Shirley was, at Providence in Rhode Island government, counsel for the Massachusetts before a court of commissioners appointed to settle the line between the two governments. As the records of that time were burnt, we cannot give so particular an account of the proceeding of those commissioners as otherwise might have been. It is certain that for many years past, the only part in controversy between the two governments, was a small gore of land between Attleborough in the Massachusetts and the old township of Providence. A great part of the Massachusetts assembly wished it might be ceded to Rhode Island, but a few tenacious men, who do not always regard consequences, influenced a majority against it. Besides a settlement made by commis-

sioners in 1664 or 65, another settlement had been made, or the old one confirmed in 1708; but Rhode Island, encouraged by the ill success of the Massachusetts in the controversy with New Hampshire, applied to his majesty to appoint commissioners to settle the line between the two governments. The consent or submission of the Massachusetts to such appointment was not thought necessary, and if they would not appear, the commissioners were to proceed *ex parte*. The Massachusetts assembly thought proper to appear by their committee, having no apprehensions the controversy would turn, in the judgment of the commissioners, upon a point never before relied upon, viz., that the colony of New Plymouth having no charter from the crown, Rhode Island charter must be the sole rule of determining the boundary, although the patent from the council of Plymouth to Bradford and associates was prior to it. The colony of New Plymouth was a government *de facto*, and considered by King Charles as such in his letters and orders to them before and after the grant of Rhode Island charter, and when the incorporation was made of New Plymouth with Massachusetts, &c., the natural and legal construction of the province charter seems to be, that it should have relation to the time when the several governments incorporated respectively, in fact, became governments. A gentleman of the council of New York had great influence at the board of commissioners. The argument which had been made use of in former controversies, that Massachusetts was too extensive, and the other governments they were contending with, of which New York was one, were too contracted, was now revived. To the surprise of Massachusetts, a line was determined which not only took from them the gore formerly in dispute, but the towns of Bristol, Tiverton, and Little Compton, and great part of Swansey, and Barrington. All this country was conquered by Massachusetts and Plymouth from Philip, and to prevent dispute, was expressly granted to Plymouth by Charles the Second. An appeal was claimed and allowed to his majesty in council, where, after lying four or five years, the decree of the court of commissioners was confirmed. In the prosecution and defence of this title, it has been said, that some material evidence was never produced which would have supported the Massachusetts claim.

(1741.) Mr. Shirley found the affairs of the province in a perplexed state. The treasury was shut and could not be opened without some deviation from the royal instructions, the bills of credit were reduced and nothing substituted as a currency in their stead; the land bank party carried every point in the house, there seemed to be a necessity of securing them; the great art was to bring them over to his measures, and yet not give in to their measures so as to lose his interest with the rest of the province, and with the ministry in England. Some of the principal of them, who knew their own importance, were willing to have some assurance of favour from him, at the same time they engaged to do every thing to serve him. The first step on their part, was the advancement of the governor's salary to the full value of one thousand pounds sterling per annum. This had been most unjustifiably evaded all the latter part of Mr. Belcher's administration, by granting a sum in bills of credit without a due regard to their depreciation. Mr. Kilby, who had been very active for Mr. Shirley's interest, and against Mr. Belcher, in England, was chosen agent for the province in England; and Mr. Wilks, who

and been agent the whole of the last administration, was laid aside. Mr. Auchmuty, who had been one of the land bank directors, was joined with Mr. Kilby in the affair of the Rhode Island line. A grant of about 200*l.* sterling was made to John Sharpe, Esq., for his account of charge in defending Mr. Belcher against New Hampshire's complaint to the king in council. This had been repeatedly refused in Mr. Belcher's time, which gave great offence to Mr. Sharpe. It was thought extraordinary that Mr. Shirley should make it a point with the land bankers that this debt for his predecessor should be paid, but to take Mr. Sharpe off from Mr. Belcher and engage him for Mr. Shirley, the friends and solicitors for the latter in England had engaged, that if he was appointed governor Mr. Sharpe's account should be paid.

But the grand affair to settle was that of the bills of credit. The instruction was express not to consent to any act which should continue the bills beyond the time fixed for their being brought in. If this was complied with, a tax must have been made for the whole sum extant in that year 1741. This it was said would be a burden that the people would never bear. Mr. Shirley was sensible that the intent of his instruction was the prevention of a depreciating currency. No matter how large a sum in bills was current if their value could be secured. If the spirit of the instruction could be preserved, an exact conformity to the letter would not be required. Every scheme for fixing the value of the bills had failed. A new project was reported by a committee of the house, and accepted, and afterwards concurred by the council, and consented to by the governor. This was a scheme to establish an ideal measure in all trade and dealings, let the instrument be what it would. The act which passed the court declared that all contracts should be understood payable in silver at 6*s.* 8*d.* the ounce, or gold in proportion. Bills of a new form were issued, 20*s.* of which expressed in the face of the bill three ounces of silver, and they were to be received accordingly in all public and private payments, with this saving that, if they should depreciate in their value, an addition should be made to all debts, as much as the depreciation from the time of contract to the time of payment. How to ascertain the depreciation from time to time was the great difficulty in framing the act. To leave it to a common jury would never do. There was some doubt whether a house of representatives would be wholly unbiassed. At length it was agreed that the eldest council, in each county, should meet once a year and ascertain the depreciation. This is said to have been the scheme of Col. Stoddard, of Northampton, a gentleman of good sense and great virtue, who probably saw the defects, but hoped to substitute a lesser evil in the place of a greater.

This at best must have been a very partial cure. It did not prevent the loss from the depreciation of the bills in those persons' hands through which they were continually passing. All debts, which were contracted and paid between the periods when the value of the bills were fixed annually, could not be affected by such fixing; and unless in debts of long standing, which the debtor could not pay without an action at law, demand was not ordinarily made for depreciation; and what rendered it of little effect in all other cases, the counsellors appointed to estimate the depreciation, never had firmness enough in any instance to make the full allowance; but when silver and exchange had rose 20 per cent or more, an

addition was made of four or five only. The popular cry was against it; and one year when Nathaniel Hubbard, Esq., the eldest counsellor for the county of Bristol, a gentleman of amiable character, and who filled the several posts he sustained with applause, endeavoured to approach nearer to a just allowance than had been made in former years, he felt the resentment of the house, who left him out of the council the next election. In short, the act neither prevented the depreciation of the bills, nor afforded relief in case of it, and was of no other service than to serve as a warning, when an act passed for the establishing a fixed currency a few years after, to leave nothing to be done by any person or bodies of men, or even future legislatures, to give the act its designed effect, but in the act itself to make full provision for its execution in every part.

Even this act, which, with its fair appearance, justified Mr. Shirley in departing from his instruction, and afforded a supply of the treasury for the payment of debts and future support of government, could not have been obtained, if he had not prevailed with the land bank party, contrary to the inclinations of many of them, to join in promoting it.

He made them return, by consenting to any new elections that were made of any of them into the council, by restoring now and then one and another to the posts they had been deprived of; which, though it was done by degrees, caused many who condemned the land bank and all who were concerned in it, to be very free in their censures upon it.

But the great favour they expected, was relief from the severity of the act of parliament. This was to be touched with great tenderness and delicacy. Every person concerned was liable to the demands of the possessors of the bills. If large demands should be made upon any particular persons, it seemed but just that the rest should contribute their proportion; but no demand was given by the act to one partner against another in such case. A bill was therefore prepared, with a professed design to carry the act of parliament equitably into execution. Three commissioners were appointed by the bill, with power to tax all who had been concerned in the scheme in proportion to their interest in it, and with the monies thus raised to redeem the company's bills from the possessors; and after the redemption of the bills, to make an equitable adjustment between the members and the company. Great care was taken to avoid all opposition to the act of parliament; Mr. Shirley, however, did not think proper to sign the bill until he had sent a copy of it to England, and received directions concerning it. After it had passed both houses, to oblige the principal bankers, he continued the session of the court by long repeated adjournments many months, and before the expiration of the year gave his consent to the bill. Having thus secured a considerable party in the government, without losing those who had been in opposition to them, he rendered his administration easy, and generally obtained from the assembly such matters as he recommended to them.

From the Spanish war in 1740, a French war was expected every year to follow. Castle William, the key of the province, was not only effectually repaired, but a new battery of twenty 42-pounders, which takes the name of Shirley battery, was added to the works, with a larger magazine than any before, and a large supply of powder, all at the expense of the province. The cannon, mortars, shot, and other stores, were the bounty of the crown. The forts upon the frontiers were also put into good

order, and upon a representation from Mr. Mascarene, commander in chief at Annapolis, in Nova Scotia, of the defenceless state of that province and the danger they were in from the enemy, Mr. Shirley, in 1744, prevailed upon the Massachusetts assembly to vote, pay, &c. for 200 men which were sent there, and who were the probable means of saving that country from falling into the enemy's hands.

(1744.) But the great event in this administration was the siege and reduction of Louisburgh. Canso had been surprised and taken by 900 men under Duvivier from Louisburgh, before the war with France was known at Boston. With another party, Duvivier made an attempt the same summer upon Annapolis, but was disappointed. Many of our vessels had been taken by the French men-of-war and privateers, and carried into Louisburgh. The fishermen had no intention to go upon their voyages the next summer, and every branch of trade, it was supposed, must be carried on by vessels under convoy. It was the general voice, in the fall of the year, that Louisburgh must be taken, but nobody supposed that the united force of the colonies could take it; application must be made to his majesty for sea and land forces sufficient for the purpose. As winter approached, it began to be suggested that it was not improbable the place might be surprised or taken by a *coup de main*, the inhabitants and garrison being shut up within the walls. Some of the garrison of Canso, who had been prisoners, and who professed to be well acquainted with the fortifications and garrison at Louisburgh, favoured this opinion; and declared, that in winter the snow often lay in drifts or banks against a particular part of the wall, where there were no embrasures nor any cannon mounted; that the crust would bear a man's weight; and, in that part at least, the walls might be scaled, and perhaps by the help of ladders it would not be difficult in other parts; that the grand battery, intended for defence in case of an attack by sea, would not be capable of long resisting if attacked by land. Mr. Vaughan, who had been a trader at Louisburgh, was very sanguine also that the place might be taken by surprise; and it was generally agreed, that if they should be mistaken, yet it would not be possible for the enemy, who were scant of provisions, to stand a siege until the time the supplies usually arrive to them from France; and to prevent any chance vessels from entering, a sufficient naval force might be provided to cruise before the harbour. Whilst this was the conversation abroad, Mr. Shirley was diligently enquiring of those persons who had been traders, and of others who had been prisoners there, into the condition of the place, the usual time for the arrival of supplies from Europe, the practicability of cruising off the harbour, &c. He had before wrote to the ministry, and represented the necessity of a naval force early in the spring for the preservation of Annapolis. If this should arrive, he might be able to prevail with the commander to cover our forces with it. Commodore Warren was with several ships at the Leeward islands; it was possible, when he was acquainted with the expedition, he would come with or send part of his force to strengthen it. These were the only chances for a naval strength sufficient to cope with a single capital French ship that might be bound to Louisburgh in the spring. The ministry, indeed, would by express be immediately acquainted with the expedition, if engaged in; but Europe was at too great a distance to expect timely aid from thence. The plan of the expedition was, a land

force of 4000 men in small transports to proceed to Canso, and the first favourable opportunity to land at Chapeaurouge bay, with cannon, mortars, ammunition and warlike stores, and all other necessities for carrying on a siege; and, to prevent a supply of provision and stores to the enemy, several vessels were to cruise off the harbour of Louisburgh, as soon as the season of the year would permit. An estimate was made of all the naval force which could be procured in this and the neighbouring colonies, the largest vessel not exceeding 20 guns. With this land and sea force, it was said there was good chance for success; and if the men-of-war should arrive, which there was good reason to hope for, there was all imaginable grounds to depend upon the reduction of the place.

(1755.) The general court being sitting the beginning of January, the governor sent a message to the two houses, to let them know he had something to communicate to them of very great importance, but of such a nature that the publishing it might wholly defeat the design, he therefore desired they would lay themselves under an oath of secrecy for such time as each house should think proper. This they did, although it was the first instance in the house of representatives, without any scruple, and then he communicated to them his proposed plan of the expedition. Many of the members, who had heard little or nothing of the conversation upon the subject, were struck with amazement at the proposal. The undertaking was thought to be vastly too great, if there was a rational prospect of success. However, in deference to the recommendation of the governor, a committee of the two houses was appointed to consider the proposal. Here, the proposal was for several days deliberated and it was argued, "if Louisburgh be left in the hands of the French, it would prove the Dunkirk of New England; their trade had always been inconsiderable their fishery was upon the decline, and for several years past they had bought fish of the English at Canso cheaper than they could catch and cure it themselves; both trade and fishery they might well lay aside, and, by privateering, enrich themselves with the spoils of New England; and, to all these dangers, was added that of losing Nova Scotia, which would cause an increase of six or eight thousand enemies in an instant. The garrison of Louisburgh was disaffected, provisions were scant, the works mouldering and decayed, the governor an old man, unskilled in the art of war; this therefore was the only time for success, another year the place would be impregnable. We had nothing to fear from the forces at Louisburgh, before additional strength could arrive from France they would be forced to surrender. We had, it must be owned, no ships of strength sufficient to match the French men of war, unless, perhaps, a single ship should fall in by herself, and in that case five or six of ours might be a match for her; but there was no probability of men of war so early, and it was very probable English men of war from Europe, or the West Indies, would arrive before them. There was always uncertainty in war, a risk must be run, if we failed we should be able to grapple with the disappointment, although we should bear the whole expense, but if we succeeded, not only the coasts of New England would be free from molestation, but so glorious an acquisition would be of the greatest importance to Great Britain, and might give peace to Europe, and we might depend upon a reimbursement of the whole charge we had been at."

On the other hand it was replied, "that we had better suffer in our trade, than by so expensive a measure deprive ourselves of all means of carrying on any future trade; that we are capable of annoying them in their fishery as much as they could annoy us in ours; and, in a short time, both sides would be willing to leave the fishery unmolested; that the accounts given of the works and the garrison at Louisburgh could not be depended upon, and it was not credible that any part of the walls should be unguarded and exposed to surprise; that instances of disaffection rising to mutiny were rare, and but few instances were to be met with in history, where such expectation has not failed. The garrison at Louisburgh consisted of regular experienced troops who, though unequal in number, would be more than a match in open field for all the raw unexperienced militia which could be sent from New England; that twenty cruizers at that season of the year would not prevent supplies going into the harbour, it being impossible to keep any station for any length of time, and the weather being frequently so thick, that a vessel was not to be discovered at a quarter of a mile's distance; that there was no room to expect any men of war for the cover of our troops, that if only one sixty gun ship should arrive from France, or the French Islands, she would be more than a match for all the armed vessels we could provide, our transports at Chapeaurouge bay would be every one destroyed, and the army upon Cape Breton obliged to submit to the mercy of the French; that we should be condemned in England for engaging in such an affair without their direct approbation, and we should be no where pitied, our misfortunes proceeding from our own rash and wild measures." To these arguments were added the uncertainty of raising a sufficient number of men, or of being able to procure provisions, warlike stores, and transports, discouragement from the season of the year when, frequently, for many days together no business could be done out of doors. Money indeed could be furnished, or bills of credit in lieu of it, but the infallible consequence would be the sinking the value of the whole currency, to what degree no man could determine, but, probably, in proportion to the sum issued; and finally, if it should succeed, a general national benefit would be the consequence, in which the benefits of success would be far short of the vast expense of treasure, and perhaps of lives, in obtaining it, and if it failed, such a shock would be given to the province, that half a century would not recover the colony. After mature deliberation, a majority of the committee disapproved the proposal, and their report was accepted, and, for a few days, all thoughts of the expedition with the members of the court were laid aside. In the mean time the governor, who wished the proposal had been agreed to, but did not think it proper to press it any farther by message, or by privately urging the members, either directed or encouraged the carrying about a petition, which was signed by many of the merchants in the town of Boston, but principally by those of Salem and Marblehead, directed to the house of representatives, or to the two houses, praying, for reasons set forth, among others the saving the fishery from ruin, they would reconsider their vote, and agree to the governor's proposal of an expedition against Louisburgh. A second committee, appointed upon this petition, reported in favour of it, and, the 26th of January, their report came before the house, who spent the day in debating it, and, at night, a vote was carried in favour

of it by a majority of one voice only. Never was any affair deliberated upon with greater calmness and moderation, the governor indeed laid the affair before the court, but left the members free to act their judgment without any solicitation, and there appeared no other division than what was caused by a real difference in opinion, as to the true interest of the province.

The point once settled, there was immediately a union of both parties in the necessary measures for carrying the design into execution, those who had opposed it before being employed upon committees, and exerting themselves with zeal equal to that of the principal promoters. An embargo was laid upon every harbour in the province, and messengers were immediately dispatched to the several governments, as far as Pennsylvania, to entreat an embargo on their ports, and that they would join in the expedition. All excused themselves from any share in the adventure, except Connecticut, who agreed to raise 500 men, New Hampshire 300, and Rhode Island 300. Connecticut and Rhode Island also consented their colony sloops should be employed as cruizers. A small privateer sloop, about 200 tons, a snow of less burden, belonging to Newport, were hired there by the Massachusetts, a new snow, Captain Rouse, a ship, Captain Snelling, were taken into the service at Boston, which, with a snow, Captain Smethurst, and a brig, Captain Fletcher, three sloops, Captains Sanders, Donahew, and Bosch, and a ship of twenty guns, purchased on the stocks, Captain Tyng the commodore, made the whole naval force.

From the day the vote passed until the place was reduced, a series of favourable incidents contributed to success. They will be obvious enough in the course of the narrative, and will not require being specially remarked. The time for preparing was short. The winter proved so favourable that all sorts of out-door business was carried on as well, and with as great dispatch as at any other season of the year. In the appointment of a general officer, one qualification was considered as essential, that he should be acceptable to the body of the people, the inlistment depended upon this circumstance. It was not easy to find a person, thus qualified, willing to accept the trust: Col. Pepperell, having the offer from the governor, was rather pressed into the service than voluntarily engaged. Besides a very great landed interest, he was largely concerned in mercantile affairs, which must necessarily suffer by his absence, and this being generally known had no small influence, from the example, with inferior officers and even private soldiers, to quit their lesser affairs for a season for the service of their country. Many of the private soldiers were freeholders, and many more sons of wealthy farmers, who could have no other views in consenting to the inlistment of their children than the public interest.

Mr. Shirley had set his heart so much upon the expedition, that many points were conceded by him which he would not have given up at any other time, and the people of the province submitted to compulsory measures from the government, which, at another time, would have been grievous and not very patiently borne. Such officers were nominated by the governor as the people proposed or called for, because they were most likely to inlist men. Instead of a commissary general, an officer appointed by the governor, a committee of war was chosen by the two houses out of their own members. Nothing further was heard of the royal instruction against

bills of credit. Such sums as the service called for and to be redeemed at such periods as the house thought proper, were consented to by the governor. It soon appeared that these sums would vastly exceed what had been computed, and many declared that had a right estimate been made, they should never have voted for the expedition, but it was now too late to go back. It was found also, that transports and vessels of war could not be engaged unless the government would become insurers, which although it occasioned no additional expense at first, yet, in case of ill success, would greatly increase the public debt and distress. The committee of war were likewise convinced that a sufficiency of provisions, clothing, and warlike stores could not be procured within the province. Whosoever was possessed of any of these articles, by an act or order of government, his property was subjected to the committee, who set such price as they judged equitable; and upon refusal to deliver, entered warehouses, cellars, &c., by a warrant for that purpose to the sheriff, and took possession. In the course of the preparation many vessels unexpectedly arrived with more or less of each of these articles, and after all, the army was poorly enough provided. Ten cannon, eighteen pounders, were obtained upon loan, not without difficulty, from New York, otherwise Mr. Shirley himself seemed to doubt whether they could proceed. Some dependence was placed upon cannon from the grand battery, but this was too manifest a disposal of the skin before the bear was caught. By force of a general exertion in all orders of men, the armament was ready, and the general, on board the Shirley snow, Captain Rouse, with the transports under her convoy, sailed from Nantasket the 24th of March, and arrived at Canso the 4th of April. The Massachusetts land forces consisted of 3,250 men, exclusive of commission officers. The Hampshire forces, 304, including officers, arrived four days before. Connecticut, being 516, officers inclusive, did not arrive until the 25th. The deputy governor of the colony, Roger Walcott, had the command, and was the second officer in the army. Rhode Island waited until a better judgment could be made of the event, their 300 not arriving until after the place had surrendered. The 23d of March, an express boat sent to Commodore Warren in the West Indies, returned to Boston. As this was a provincial expedition, without orders from England, and as his small squadron had been weakened by the loss of the Weymouth, Mr. Warren excused himself from any concern in the affair. This answer must necessarily strike a damp into the governor, as well as the general, and Brigadier Waldo then next in command, who were the only persons in the army made privy to it before the fleet sailed. Several of the cruising vessels had sailed the middle of March, but they could be no protection to the army against two capital ships; if they intercepted small vessels it was the most that was expected. A blockhouse with eight cannon was built at Canso. Whether some good reason would not have been given for proceeding no further than Canso, if there had been a disappointment in the expected junction of men of war from the several quarters to which notice of the expedition had been sent, may well enough be made a question. Mr. Shirley hoped, if the reduction of Louisburgh was not effected, at least Canso would be regained, Nova Scotia preserved, the French fishery broke up, and the New England and Newfoundland fisheries restored. But on the 23d of April, to the great joy of the army, arrived at

Canso, the Eltham of forty guns, from New England, by order from Mr. Warren, and on the 23d the commodore himself, in the Superb of sixty guns, with the Launceston and Mermaid of forty each, arrived also. This gave great spirits to all who had the success of the expedition at heart, for although this was not a naval force to enter the harbour or annoy the forts, yet it was a cover to the army and equal to any expected force from France. It seems that, in two or three days after the express sailed from the West Indies for Boston, the Hind sloop brought orders to Mr. Warren, to repair to Boston with what ships could be spared, and to concert measures with Mr. Shirley for his majesty's general service in North America. Upon the passage to Boston, the commodore received intelligence that the fleet had sailed for Canso, and meeting with a schooner at sea he sent her to Boston, to acquaint Mr. Shirley that he would proceed to Canso, and, at the same time, sent orders to any ships which might be in these seas to join him. The Eltham was actually under sail with the mast fleet, when an express sent from Boston with the commodore's orders arrived at Portsmouth in New Hampshire, but being followed and overtaken by a boat, the captain ordered his convoy into port again and sailed for Canso. After a short consultation with the general, the men of war sailed to cruise before Louisburgh. The cruisers before this, had intercepted several small vessels bound in there with West India goods and provisions, and had engaged the Renommee, a French ship of thirty-six guns sent from France with dispatches, and who kept a running fight with our vessels for some time, being able with ease to outsail them, and after two or three attempts to enter the harbour, went back to France, to give an account of what had been met with. She fell in with the Connecticut troops, under convoy of their own and the Rhode Island colony sloops, both which she had strength enough to have carried, but after some damage to the Rhode Island sloop, she went her way. The forces landed at Chapeaurouge bay the 30th of April. The transports were discovered early in the morning from the town, which was the first knowledge of any design against them. The cruisers had been seen every fair day before the harbour, but these were supposed to be privateers in search after their trading and fishing vessels. The night before, it is said, there was a grand ball at the fort, and the company had scarce been asleep, when they were called up by an alarm. Bouladrie, a French officer, was sent with 150 men to oppose the landing, but the general making a feint of landing at one place, drew the detachment there, and this opportunity was taken for landing 100 men at another place without opposition, although they were soon after attacked by the detachment, six of which were killed on the spot, and about as many more with Bouladrie their leader, were taken prisoners, the rest fled to the town, or they would soon have fallen into the hands of the men, who were landing fast one upon the back of another.

The next morning after they landed, 400 men marched round to the north-east harbour, behind the hills, setting fire to all the houses and store-houses, until they came within a mile of the grand battery. Some of the store-houses having in them pitch, tar, and other combustibles, caused such a thick smoke, that the garrison were unable to discover an enemy, though but a few rods distant; and, expecting the body of the army upon them, they deserted the fort, having thrown their powder into a well, but leaving

the cannon and shot for the service of the English. A small party, of less than twenty English, first came up to the battery, and discovering no signs of men suspected a plot, and were afraid to enter; at length, it is said, a Cape Cod Indian went in alone and discovered the state of it to the rest of the party, just as some of the French were relanding in order to regain the possession of it.

The army found they had near two miles to transport their cannon, mortars, shot, &c. through a morass. This must be done by meer dint of labour. Such of the men who had been used to drawing pine trees for masts, and those who had the hardiest and strongest bodies, were employed in this service. Horses and oxen would have been buried in mud, and were of no use. Brigadier Waldo had the command of the grand battery. The French kept firing upon the battery from the town as well as from the island battery, but to little purpose, the town being near 2000 yards distant, and the island about 1600. A constant fire was kept from the grand battery upon the town with the 42-pounders. This greatly damaged the houses, but caused so great an expense of powder, that it was thought advisable to stop and reserve it for the fascine batteries. Five of these were erected, the last the 20th of May, called Tidcomb's battery, with five 42-pounders, which did as great execution as any. The men knew nothing of regular approaches, they took the advantage of the night, and when they heard Mr. Bastide's proposals for zig-zags and epaulements, they made merry with the terms and went on, void of art, in their own natural way. Captain Pierce, a brave officer, standing at one of these batteries, had his bowels shot away by a cannon ball, and lived just long enough to say, "Its hard to die."

Whilst our people were thus busy ashore, the men-of-war and other vessels were cruising off the harbour whenever the weather would permit; and, the 18th of May, the *Vigilant*, a French man-of-war of 64 guns, having 560 men on board, and stores of all sorts for the garrison, was met by the *Mermaid*, whom she attacked; but Captain Douglass, the commander, being of unequal force, suffered himself to be chased by her until he drew her under the command of the commodore and the other ships cruising with him, to whom, or as some say, to the *Mermaid*, she struck, because she had first met with her. This capture gave great joy to the army, not so much for the addition made to the naval force, as for the disappointment to the enemy. A proposal had been made a few days before, that the men-of-war should anchor in Chapeaurouge bay, and that the marines and as many sailors as could be spared, should land and join the army. The *Vigilant* would then have got in, and the siege would have been given over. Affairs were now in such a state, that the anxiety at Boston was much lessened. It was hoped the army might retreat with safety whenever it should be determined to give over the siege; for Bouladrie, who belonged to the town of Louisburgh, and the Marquis de la Maisonforte, commander of the *Vigilant*, who was well acquainted with the state of the place, when they came to Boston were sanguine that it would hold out; but soon after was received the news of a fruitless and perhaps a rash attempt upon the island battery of 400 men, 60 of whom were killed, and 116 taken prisoners. The *Cæsar*, Snelling, one of the ships in the provincial service, arrived at Boston with letters from the general, and an application for more men and a further supply of powder. The Massachusetts agreed, and

actually did raise 400 men, and sent all the powder that could be purchased, and Connecticut raised 200 men, but there were neither men nor powder arrived when the siege was finished.

The *Princess Mary* of 60, and the *Hector* of 40 guns, unexpectedly had arrived at Boston from England, and were immediately sent to join the commodore, pursuant to his general orders, and arrived before Louisburgh the 22d of May. This increase of naval force occasioned conjectures, some being of opinion, that rather than the siege should be raised, the ships would attempt to go in; but it was generally supposed the hazard would be too great. It was commonly reported that Colonel More, of the New Hampshire regiment, offered to go on board the *Vigilant* with his whole regiment and to lead the van, if, in case of success, he might be confirmed in the command of the ship. He had been an experienced sea captain, and had a very good character. It is certain, an attempt with the ships was not then thought advisable. A new battery about this time was erected upon the light-house point, which being well attended by Lieut.-Colonel Gridley of the artillery, did great execution upon the island battery, silenced many of the guns, and it was expected it would not be long tenable. Soon after, June 10th, arrived before Louisburgh, the *Chester*, a 50 gun ship, in consequence of the dispatches from Mr. Shirley, with an account of the expedition. The *Canterbury* and *Sunderland*, two 60 gun ships, sailed with her and arrived the 12th. Here was now a fleet of eleven ships, and it is said to have been determined the ships should make an attack by sea the 18th, while the army did the same by land. It was not certain that when the day should come, some sufficient reason would not have been found for a further delay. Those who give the most favourable accounts of the siege say, "the west gate was entirely beat down, the wall adjoining very much battered, and a breach made ten feet from the bottom; the circular battery of 16 cannon, and the principal one against ships almost ruined; the north-east battery of 17 cannon damaged and the men drove from the guns, and the west flank of the king's bastion almost demolished." Others say "the west gate was defaced, and the adjoining curtain, with the flank of the king's bastion were much hurt, but no practicable breach." Whether a general storm was really intended upon the 18th or not, it seems the French expected it from the preparations on board the men-of-war, and did not incline to stand it; and on the 15th sent a flag of truce to the general, desiring a cessation, that they might consider of articles to be proposed for a capitulation. Time was allowed for this purpose until the next morning, when such articles were offered as were rejected by the general and commodore, and others offered to the enemy in their stead, which they accepted of, and hostages were exchanged; and the next day, the 17th, the city was delivered up.

Many of the men had taken colds and many fallen into dysenteries, so that 1500 were taken off from duty at one time; but the weather proving remarkably fine during the forty-nine days siege, they generally recovered. The day after the surrender the rains began, and continued ten days incessantly, which must have been fatal to many, they having nothing better than the wet ground to lodge on, and their tents, in general, being insufficient to secure them against a single shower, but in the city they found barracks to shelter them. Captain Bennet, in a schooner, was sent immediately to Boston, and ar-

rived with the great news the 3d of July, about one in the morning. The bells of the town were ringing by break of day, and the day and night following were spent in rejoicing. The news flew through the continent. The colonies which declined any share in the expense and hazard, were sensible they were greatly interested in the success. It was allowed every where, that if there had been no signal proof of bravery and courage in time of action, there having been only one sally from the town and a few skirmishes with French and Indians from the woods, in all which the Massachusetts behaved well; yet here was the strongest evidence of a generous noble public spirit, which first induced the undertaking, and of steadiness and firmness of mind in the prosecution of it, the labour, fatigue, and other hardships of the siege, being without parallel in all preceding American affairs. A shade was thrown over the imprudence at first charged upon the New Englanders. Considerate persons among themselves could not, however, avoid gratefully admiring the favour of divine providence in so great a number of remarkable incidents which contributed to this success. The best use to be made by posterity seems to be, not to depend upon special interpositions of providence because their ancestors have experienced them; but to avoid the like imminent dangers, and to weigh the probability and improbability of succeeding in the ordinary course of events.

The commodore was willing to carry away a full share of the glory of this action. It was made a question whether the keys of the town should be delivered to him or to the general, and whether the sea or land forces should first enter. The officers of the army say they prevailed. The marines took possession of one or more of the batteries, and sometimes the commodore took the keys of the city gates. The command however until orders should arrive from England was to be joint, and a dispute about precedence to be avoided as much as could be. The commodore dispatched Mr. Montague in the *Mermaid* to England with intelligence, and the general, the day after, sent the *Shirley* Galley, Captain Rouse. The *Mermaid* arrived first.

It was very happy that disputes arose to no height between sea and land forces during the siege. This has often proved fatal. This expedition having been begun and carried on under a commission from a provincial governor seems to be distinguished from ordinary cases, and to leave less room for dispute. Whether the land or sea force had the greatest share in the acquisition may be judged from the relation of facts. Neither would have succeeded alone. The army, with infinite labour and fatigue to themselves, harrassed and distressed the enemy, and, with perseverance, a few weeks or days longer must have compelled a surrender. It is very doubtful whether the ships could have lain long enough before the walls to have carried the place by storm, or whether, notwithstanding the appearance of a design to do it, they would have thought it advisable to attempt it; it is certain they prevented the arrival of the *Vigilant*, took away all hopes of further supply and succour, and it is very probable the fears of a storm might accelerate the capitulation. The loss by the enemy and sickness did not exceed 101 men. The loss of the *Snow*, *Prince of Orange*, belonging to the province, and supposed to be overset, was a heavy blow upon the town of Marblehead, the captain and most of the crew belonging to that town, and it is a rare thing for a Marblehead man to die without leaving a widow and a number of children surviving.

As it was a time of year to expect French vessels from all parts to Louisburgh, the French flag was kept flying to decoy them in. Two East India and one South sea ship, supposed to be all together of the value of 600,000*l.* sterling, were taken by the squadron at the mouth of the harbour, into which they would undoubtedly have entered. The army, at first, supposed they had acquired a right to the island of Cape Breton and its dependencies, and, until they were undeceived by Mr. Shirley, were for dividing the territory among the officers and men. With greater colour they might have claimed a share with the men of war in these rich prizes. Some of the officers expected a claim would have been laid in, but means were found to divert it, nor was any part decreed to the vessels of war in the province service, except a small sum to the brig *Boston* packet, Captain Fletcher, who being chased by the south sea ship, led her directly under the command of the guns of one of the men of war. It seemed to be conceded that, as this acquisition was made under the commission of the governor of Massachusetts bay, the exercise of government there appertained to him, until his majesty's pleasure should be known. We know of no precedent in the colonies, except that of the conquest of Nova Scotia in 1690. It was necessary then to admit this principle, the acquisition could not otherwise have been retained, Mr. Shirley made a voyage to Louisburgh, took the government upon him, prevailed upon a great part of the army to consent to remain in garrison over the winter, or until regiments, which were expected, arrived, engaged that their pay should be increased, and clothing provided, and settled other matters to general satisfaction. Pennsylvania contributed 4000*l.*, New York, 3000*l.*, and New Jersey, 2000*l.*, some in money, others in provisions, for support of the troops.

Duvivier had been sent to France the winter of 1741, to solicit a force not to defend Cape Breton, but to conquer Nova Scotia, and accordingly sailed the beginning of July with seven ships of war for that purpose, who were to stop at Louisburgh. This fleet took a prize bound from Boston to London, on board of which was lieut.-governor Clark of New York, and by this means they were informed of the conquest of Louisburgh, and the strong squadron there, otherwise some or all of them would also have probably fallen into the hands of the English. Upon this intelligence they went back to France. Thus Nova Scotia no doubt was saved by the Massachusetts expedition. There would not have been men of war sufficient to match this squadron.

(1746.) The reduction of Louisburgh by a British colony must have been a surprize to Great Britain and to France. It caused very grand plans of American measures for the next year with both powers. Great Britain had in view the reduction of Canada, and the extirpation of the French from the northern continent. France intended the recovery of Louisburgh, the conquest of Nova Scotia, and the destruction of the English sea coast from Nova Scotia to Georgia. Upon the English plan, eight battalions of regular troops, with the provincial forces to be raised in the four New England governments, were to rendezvous at Louisburgh, and, with a squadron under Admiral Warren, were to go up the river Saint Lawrence to Quebec, other provincials from Virginia and the colonies northward, including New York, were to rendezvous at Albany and go across the country to Montreal; the land forces to be under General St. Clair. No province

had a certain number assigned, it was expected there should be at least 5000 in the whole. The colonies voted to raise men in very unequal proportions. New Hampshire 500, Massachusetts, 3,500, Rhode Island, 300, Connecticut, 1000, New York, 1,600, New Jerseys, 500, Maryland, 300, Virginia, 100. Pennsylvania raised 400, though not by an act of government. The whole number was 8,200. The Massachusetts forces were ready to embark by the middle of July, about six weeks after the first notice. The preparations making at Brest for America, were well known in England, and was ordered to block up that harbour. Notwithstanding all the caution used, the Brest squadron slipped out, and sailed to the westward, and it is certain no English squadron followed. Whilst they were impatiently waiting for news of the arrival of the fleet at Louisburgh, a fisherman went in, some time in August, with an account of his being brought to by four French capital ships not far from Chibucto, that he was required to pilot them there, that as he lay under the stern of one of them he read the word *le Terrible*, but a fog suddenly rising he made his escape. After that some days had passed without any further account, the fisherman's news was generally discredited. It appeared some months after, that these were four ships under M. Conflans, who had escaped an English squadron from Jamaica, and were bound to Chibucto, in order to join the Brest fleet, but after cruising some time, and meeting with storms and fogs, upon a coast they were unacquainted with, they returned to France.

The beginning of September, vessels arrived at Boston from Hull and Liverpool, with advice that the Brest fleet had sailed, and it was supposed for North America, and from the middle to the latter end of the month, frequent accounts were brought of a great fleet seen to the westward of Newfoundland, which might have been English as likely as French; but on the 28th, an express arrived from Louisburgh with certain advice these ships were the French fleet, which it was affirmed consisted of seventy sail, fourteen of which were capital ships, and that there were twenty smaller men of war, and the rest fire ships, bombs, tenders, and transports for eight thousand troops. The same day a vessel from Jamaica arrived with advice that the four men of war, who had engaged with commodore Mitchell, were intended to join the fleet, and it was now no longer doubted that these were the ships seen by the fishermen, and it was supposed soon after got into Chibucto. England was not more alarmed with the Spanash Armada, in 1588, than Boston and the other North American sea ports were with the arrival of this fleet in their neighbourhood. The firmest mind will bend upon the first advice of imminent danger to its country. Even the great De Witt swooned when he first opened a letter giving intelligence of England's confederating with France to enslave the Dutch, though the next moment he recovered his natural courage and vivacity.

Every practicable measure for defence was immediately pursued by the authority of the Massachusetts province, but the main dependance was upon a squadron from England sufficient, in conjunction with the ships then at Louisburgh, to overcome the French. It was impossible the ministry should be ignorant of the sailing of this fleet, and unless they were willing the colonies should be exposed to the ravages of the enemy, it was impossible an English squadron should not be soon after them. This was the general voice, but this dependance failed: how-

ever the probability of the arrival of the Massachusetts squadron was from day to day lessened, the apprehensions of danger from the enemy lessened also. At length there was such authentic account of the distresses of the French, that it was not only agreed that Admiral Townsend's ships at Louisburgh were more than a match for them, but if that should prove otherwise, the utmost they would be able to effect by their grand plan, would be the conquest of Annapolis and the whole province of Nova Scotia; and if the winter did not prevent a farther progress, their strength was not sufficient for an attempt upon Boston.

The misfortunes of this grand armament are really very remarkable. The loss of Cape Breton filled the French with a spirit of revenge against the British colonies. The duke d'Anville, a French nobleman, in whose courage and conduct great confidence was placed, was appointed to the command of the expedition. As early as the beginning of May the fleet was ready to sail, but detained by contrary winds until the 22d of June, when it left Rochelle, and then consisted of eleven ships of the line, thirty smaller vessels from ten to thirty guns, and transport ships with 3,130 land forces commanded by Monsieur Pommeret, a brigadier general. The French of Nova Scotia, it was expected, would join them, and Ramsay, a French officer, with 1,700 Canadians and Indians were actually in arms there ready for their arrival. To this force Conflans with four ships from the West Indians were to be added. It was the 3d of August before the fleet had passed the western Islands. The 24th, they were 300 leagues distant from Nova Scotia, and one of their ships complained so much that they burnt her. The 1st of September, in a violent storm, the Mars, a sixty-four gun ship, was so damaged in her masts and so leaky, that she bore away for the West Indies, and the Alcide, of sixty-four guns, which had also lost her topmast, was sent to accompany her. The 15th, the Ardent, of sixty-four guns, most of her crew being sick, put back for Brest.

The Duke d'Anville, in the Northumberland, arrived at Chibucto the 12th of September, with only one ship of the line, the Renommee and three or four of the transports. There he found only one of the fleet, which had been in three days; and after waiting three days and finding that only three more, and those transports, had arrived, the 16th, in the morning, he died, the French said of apoplexy, the English that he poisoned himself. In the afternoon, the vice admiral, d'Estournelle, with three or four more of the line came in. Mons. de la Jonquiere, governor of Canada, was aboard the Northumberland, and had been declared a chief d'escadre after the fleet left France, and by this means was next in command to the vice admiral. In a council of war, the 18th, the vice admiral proposed returning to France. Four of the capital ships, the Ardent, Caribou, Mars, and Alcide, and the Argonaute fire-ship they were deprived of, there was no news of Conflans and his ships, so that only seven ships of importance remained; more or less of the land forces were on board each of the missing ships, and what remained were in a very sickly condition. This motion was opposed for seven or eight hours by Jonquiere and others of the council, who supposed, that at least they were in a condition to recover Annapolis and Nova Scotia, after which they might either winter securely at Casco bay, or, at worst, then return to France: the sick men by the constant supply of fresh provisions from the Acadians, were daily recovering and would be soon fit for service.

The motion not prevailing, the vice admiral's spirits were agitated to such a degree as to throw him into a fever attended with a delirium, in which he imagined himself among the English, and ran himself through the body. Jonquiere succeeded, who was a man experienced in war, and although above sixty, still more active than either of his predecessors, and the expectations of the fleet and army were much raised. From this time Annapolis seems to have been their chief object. An account, supposed to be authentic, having been received at Boston of the sailing of Admiral Lestock, Mr. Shirley sent an express to Louisburgh to carry the intelligence. The packet boat was taken and carried into Chibucto, which accelerated the sailing of the fleet. Most of the sick had died at Chibucto, and but about one half of their number remained alive. They sailed the 13th of October, and the 15th, being near Cape Sables, they met with a violent cold storm, which, after some intermission, increased the 16th and 17th and separated the fleet, two of which only, a fifty and a thirty-six gun ship, were discovered from the fort at Annapolis, where the Chester man of war, Capt. Spry, then lay with the Shirley frigate and a small vessel in the service of the board of ordnance, who being discovered by the French to be under sail, they made off, and this was the last of the expedition. The news of the beginning of the misfortunes of the French having reached France by some of the returned vessels, two men of war were sent immediately with orders, at all events, to take Annapolis, but the fleet had sailed three or four days before they arrived.

Pious men saw the immediate hand of Divine Providence in the protection, or rather rescue, of the British colonies this year, as they had done in miraculous success of the Cape Breton expedition the former year.

When the summer had so far passed as to render it too late to prosecute the expedition against Canada, if the fleet had arrived, Mr. Shirley's enterprising genius led him to project an attempt upon the French fort at Crown-point, with part of the Massachusetts forces, in conjunction with those of the other colonies, but the alarm of the French fleet prevented until it was judged, by some concerned, to be too late. Fifteen hundred of the Massachusetts men were intended for Nova Scotia, upon the news of Ramsay's appearing there, and 400 actually went there, convoyed by the Chester, and late in the fall an additional number were sent thither. Those posted at Minas were surprised, the first day of January, by a body of French and Indians commanded by Le Corne, a French officer, and, after having 160 of their number killed, wounded, and taken prisoners, the rest capitulated, engaging not to bear arms against the French in Nova Scotia for the term of one year. De Ramsay, with his troops, soon after returned to Canada.

The troops raised for the Canada expedition continued in pay until September the next year, 1747. Some of them served for defence of the frontier, the rest were inactive. The inactive prosecution of the war in Europe on both sides indicated peace to be near, which the next year was effected.

(1747.) War had been declared in 1744 against the Cape Sable and St. John's Indians, and in 1745 against the Penobscots and Norridgewocks. The frontiers did not escape molestation. They suffered less than in any former wars. The Indians were lessened in number, and having withdrawn to the French frontiers, were sometimes detained for their

defence upon an apprehended invasion, and at other times engaged to be in readiness to join in the great designs against the English.

In 1747 (Nov. 17th) there occurred a tumult in the town of Boston equal to any which had preceded it. Mr. Knowles was commodore of a number of men of war then in the harbour of Nantasket. Some of the sailors had deserted. Deserters generally flee to some of the neighbouring ports, where they were out of danger of discovery. The commodore thought it reasonable that Boston should supply him with as many men as he had lost, and sent his boats up to town early in the morning, and surprised not only as many seamen as could be found on board any of the ships, outward bound as well as others, but swept the wharfs also, taking some ship carpenters, apprentices, and labouring land men. However such conduct might be tolerated in England, it was not to be borne in Boston. The people had not been used to it, and men of all orders resented it, but the lower class were beyond measure enraged, and soon assembled with sticks, clubs, pitchmops, &c. They first seized an innocent lieutenant, who happened to be ashore upon other business. They had then formed no scheme, and the speaker of the house passing by, and assuring them that he knew that the lieutenant had no hand in the press, they suffered him to be led off to a place of safety. The mob increasing, and having received intelligence that several of the commanders were at the governor's house, it was agreed to go and demand satisfaction. The house was soon surrounded, and the court, or yard before the house, filled, but many persons of discretion inserted themselves, and prevailed so far as to prevent the mob from entering. Several of the officers had planted themselves at the head of the stair way with loaded carbines, and seemed determined to preserve their liberty or lose their lives. A deputy sheriff attempting to exercise his authority, was seized by the mob, and carried away in triumph, and set in the stocks, which afforded them diversion, and tended to abate their rage, and disposed them to separate and go to dinner.

As soon as it was dusk, several thousand people assembled in King-street, below the town house, where the general court was sitting. Stones and brickbats were thrown through the glass into the council chamber. The governor, however, with several gentlemen of the council and house, ventured into the balcony, and, after silence was obtained, the governor, in a well judged speech, expressed his great disapprobation of the impress, and promised his utmost endeavours to obtain the discharge of every one of the inhabitants, and at the same time gently reproved the irregular proceedings both of the forenoon and evening. Other gentlemen also attempted to persuade the people to disperse, and wait to see what steps the general court would take. All was to no purpose. The seizure and restraint of the commanders and other officers who were in town was insisted upon as the only effectual method to procure the release of the inhabitants aboard the ships.

It was thought advisable for the governor to withdraw to his house, many of the officers of the militia and other gentlemen attending him. A report was raised, that a barge from one of the ships was come to a wharf in the town. The mob flew to seize it, but by mistake took a boat belonging to a Scotch ship, and dragged it, with as much seeming ease through the streets as if it had been in the water, to the governor's house, and prepared

to burn it before the house, but from a consideration of the danger of setting the town on fire were diverted, and the boat was burnt in a place of less hazard. The next day the governor ordered that the military officers of Boston should cause their companies to be mustered, and to appear in arms, and that a military watch should be kept the succeeding night, but the drummers were interrupted, and the militia refused to appear. The governor did not think it for his honour to remain in town another night, and privately withdrew to the castle. A number of gentlemen who had some intimation of his design, sent a message to him by Colonel Hutchinson, assuring him they would stand by him in maintaining the authority of government, and restoring peace and order, but he did not think this sufficient.

The governor wrote to Mr. Knowles, representing the confusions occasioned by this extravagant act of his officers, but he refused all terms of accommodation until the commanders and other officers on shore were suffered to go on board their ships, and he threatened to bring up his ships and bombard the town, and some of them coming to sail, caused different conjectures of his real intention. Captain Erskine, of the Canterbury, had been seized at the house of Colonel Brinley in Roxbury, and given his parole not to go abroad, and divers inferior officers had been secured.

The 17th, 18th, and part of the 19th, the council and house of representatives, sitting in the town, went on with their ordinary business, not willing to interpose lest they should encourage other commanders of the navy to acts of the like nature, but towards noon of the 19th some of the principal members of the house began to think more seriously of the dangerous consequence of leaving the governor without support when there was not the least ground of exception to his conduct. Some high spirits in the town began to question whether his retiring should be deemed a desertion or abdication. It was moved to appoint a committee of the two houses, to consider what was proper to be done. This would take time, and was excepted to, and the speaker was desired to draw up such resolves as it was thought necessary the house should immediately agree to, and they were passed by a considerable majority, and made public.

"In the house of representatives, Nov. 19, 1747.

"Resolved—That there has been, and still continues, a tumultuous riotous assemblage of armed seamen, servants, negroes, and others in the town of Boston, tending to the destruction of all government and order.

"Resolved—That it is incumbent on the civil and military officers in the province to exert themselves to the utmost, to discourage and suppress all such tumultuous riotous proceedings whensoever they may happen.

"Resolved—That this house will stand by and support, with their lives and estates, his excellency the governor, and the executive part of the government, in all endeavours for this purpose.

"Resolved—That this house will exert themselves, by all ways and means possible, in redressing such grievances as his majesty's subjects are and have been under, which may have been the cause of the aforesaid tumultuous disorderly assembling together.

"T. Hutchinson, Speaker."

The council passed a vote, ordering that Captain Erskine, and all other officers belonging to his majesty's ships, should be forthwith set at liberty and

protected by the government, which was concurred by the house. As soon as these votes were known, the tumultuous spirit began to subside. The inhabitants of the town of Boston assembled in town meeting in the afternoon, having been notified to consider, in general, what was proper for them to do upon this occasion; and notwithstanding it was urged by many, that all measures to suppress the present spirit in the people would tend to encourage the like oppressive acts for the future, yet the contrary party prevailed; and the town, although they expressed their sense of the great insult and injury by the impress, condemned the tumultuous riotous acts of such as had insulted the governor and other branches of the legislature, and committed many other heinous offences.

The governor, not expecting so favourable a turn, had wrote to the secretary to prepare orders for the colonels of the regiments of Cambridge, Roxbury, and Milton, and the regiment of horse, to have their officers and men ready to march at an hour's warning to such place of rendezvous as he should direct; but the next day there was an uncommon appearance of the militia of the town of Boston, many persons taking their muskets who never carried one upon any other occasion, and the governor was conducted to his house with as great parade as when he first assumed the government.

The commodore dismissed most, if not all, of the inhabitants who had been impressed, and the squadron sailed, to the joy of the rest of the town.

By the expedition to Louisburgh, the preparations for the reduction of Canada, and the several supplies of men for Nova Scotia, the province had issued an immense sum in bills of credit, between two and three millions, according to their denomination in the currency. The greatest part of this sum had been issued, when between five and six hundred pounds was equal to one hundred pounds sterling, and perhaps the real consideration the government received from the inhabitants who gave credit to them, was near four hundred thousand pounds sterling; but by thus multiplying the bills they had so much depreciated, that at the end of the war, eleven or twelve hundred pounds was not equal to more than an hundred pounds sterling, and the whole debt of the province did not much exceed two hundred thousand pounds sterling. Thus the people had paid two hundred thousand pounds sterling in two or three years, besides a large sum raised by taxes each year, as much as it was supposed the people were able to pay; but to pay by the depreciation of the bills, although infinitely unequal, yet, as they were shifting hands every day, it was almost insensible; a possessor of a large sum for a few days, not perceiving the difference in their value between the time when he received them, and the time when he parted with them. The apprehension of their depreciation tended to increase it, and occasioned a quick circulation; and for some time, even for English goods, which ordinarily sell for the longest credit, nobody pretended to ask credit. They were constantly, however, dying in somebody's hand, though nobody kept them long by them. Business was brisk, men in trade increased their figures, but were sinking the real value of their stock; and what is worse, by endeavours to shift the loss attending such a pernicious currency from one to another, fraudulent dispositions and habits are acquired, and the morals of the people depreciate with the currency.

The government was soliciting for the reimbursement of the charge in taking and securing Capo

Breton, and by the address, assiduity, and fidelity of William Bollan, Esq., who was one of the agents of the province for that purpose, there was a hopeful prospect that the full sum, about 180,000*l.* sterling, would be obtained.

Some of the ministry thought it sufficient to grant such sum as would redeem the bills issued for the expedition, &c. at their depreciated value, and Mr. Kilby, the other agent, seemed to despair of obtaining more; but Mr. Bollan, who had an intimate knowledge of our public affairs, set the injustice of this proposal in a clear light, and made it evident that the depreciation of the bills was as effectually a charge borne by the people, as if the same proportion of bills had been drawn in by taxes, and refused all proposals of accommodation, insisting upon the full value of the bills when issued.

Mr. Hutchinson, who was then speaker of the house of representatives, imagined this to be a most favourable opportunity for abolishing bills of credit,

the source of so much iniquity, and for establishing a stable currency of silver and gold for the future. About two million two hundred thousand pounds would be outstanding in bills in the year 1749. One hundred and eighty thousand pounds sterling, at eleven for one, which was the lowest rate of exchange with London for a year or two before, and perhaps the difference was really twelve for one, would redeem nineteen hundred and eighty thousand pounds, which would leave but two hundred and twenty thousand pounds outstanding, it was therefore proposed, that the sum granted by parliament should be shipped to the province in Spanish milled dollars, and applied for the redemption of the bills as far as it would serve for that purpose, and that the remainder of the bills should be drawn in by a tax on the year 1749. This would finish the bills. For the future, silver of sterling alloy at 6*s.* 8*d.* the ounce, if payment should be made in bullion, or otherwise milled dollars at 6*s.* each, should be the lawful money of the province, and no person should receive or pay within the province, bills of credit of any of the other governments of New England. This proposal being made to the governor, he approved of it as founded in justice, and tending to promote the real interest of the province; but he knew the attachment of the people to paper money, and supposed it impracticable. The speaker, however, laid the proposal before the house, where it was received with a smile, and generally thought to be an Utopian project, and rather out of deference to the speaker than from an apprehension of any effect, the house appointed a committee to consider of it. The committee treated it in the same manner, but reported that the speaker should be desired to bring in a bill for the consideration of the house. When this came to be known abroad, exceptions were taken, and a clamour was raised from every quarter. The major part of the people, in number, were no sufferers by a depreciating currency; the number of debtors is always more than the number of creditors, and although debts on specialties had allowance made in judgments of court for depreciation of the bills, yet on simple contracts, of which there were ten to one specialty, no allowance was made. Those who were for a fixed currency were divided. Some supposed the bills might be reduced to so small a quantity as to be fixed and stable, and therefore were for redeeming as many by bills of exchange as should be thought superfluous; others were for putting an end to the bills, but in a gradual way, otherwise it was said a *fatal shock* would be

given to trade. This last was the objection of many men of good sense. Douglass, who had wrote well upon the paper currency, and had been the oracle of the anti-paper party, was among them; and, as his manner was with all who differed from him, discovered as much rancour against the author and promoters of this new project, as he had done against the fraudulent contrivers of paper money emissions.

The bills it was said had sunk gradually in their value, and as by this means creditors had been defrauded, it was but reasonable they should rise gradually that justice might be done: but the creditors and debtors would not be the same in one instance in a thousand, and where this was not the case the injury was the same, to oblige any one to pay more as to receive less than was justly due. Others were for exchanging the bills at a lower rate than the then current price of silver. The inhabitants had given credit to the government, when silver was at 30*s.* the ounce, and ought to be paid accordingly. Two of the representatives of Boston urged their being exchanged at 30*s.*, which would have given a most unreasonable profit to the present possessor, who had taken them at 55*s.* or 60*s.* To draw over some of this party concessions were made, and the bills were exchanged at 50*s.* the ounce, instead of 55*s.* as was at first proposed.

Some of the directors and principal promoters of the land bank scheme, being at this time members of the general court, unexpectedly joined with the party who were for finishing paper money, but the opposition was so great, that after many weeks spent in debating and settling the several parts of the bill, and a whole day's debate at last in a committee of the whole house upon the expediency of passing the bill, as thus settled, it was rejected, and the report of the committee accepted.

The house, although upon some occasions exceptions are taken to motions and proceedings which come before them, as not being in parliamentary form, yet are not strict in conforming to some of the most useful rules of parliament. A bill or motion is not only referred from one session to another, but a bill, after rejecting upon a second or third reading, is sometimes taken up and passed suddenly the same session. They have an order of the house, that when any affair has been considered, it shall not be brought before the house again the same session, unless there be as full a house as when it was passed upon. This, if observed, would still be liable to inconvenience, as any designing person might take an opportunity upon a change of faces, the number being as great as before, suddenly to carry any point; but even this rule, like many other of what are called standing orders, is too frequently by votes, on particular occasions, dispensed with, which lessens the dignity of the house.

It seems to be of no consequence to the prerogative whether the currency of a colony be silver or paper, but the royal instructions from time to time for preventing a depreciating currency, caused merely by a gracious regard to the interest of the people, had generally engaged what was called the country party, in opposition to them and in favour of paper. It was the case at this time. However, the next morning, two of the members of the house zealous adherents to this party, and who had been strong opposers of the bill, came early to the house to wait the coming of the speaker, and in the lobby let him know, that although they were not satisfied with several parts of the bill, yet they were alarmed with the danger to the province from the schemes

of those persons who were for a gradual reduction of the bills, and by that means, for raising the value of the currency without any provision for the relief of debtors, and therefore they had changed their minds; and if the bill could be brought forward again, they would give their voice for it, and others who had opposed it would do the same. The speaker who had looked upon any further attempt to be to no purpose, acquainted them that he did not think it proper to desire any of the favourers of the bill to move for a reconsideration of it, inasmuch as it had been understood, and agreed in the house the day before, that if upon a full debate had, the bill should be rejected, no further motion should be made about it. As soon as the house met, upon a motion by one of these members seconded by the other, the bill was again brought under consideration, and passed the house as it afterwards did the council, and had the governor's consent.

The provision made by this act for the exchange of the bills, and for establishing a silver currency, was altogether conditional, and depended upon a grant of parliament for reimbursement of the charge of the Cape Breton expedition. This being at a distance and not absolutely certain, the act had no sudden effect upon the minds of the people, but when the news of the grant arrived, the discontent appeared more visible, and upon the arrival of the money there were some beginnings of tumults, and the authors and promoters of the measure were threatened. The government passed an act with a severe penalty against riots, and appeared determined to carry the other act for exchanging the bills into execution. The apprehension of a shock to trade proved groundless, the silver took place instead of them; a good currency was insensibly substituted in the room of a bad one; and every branch of business was carried on to greater advantage than before. The other governments, especially Connecticut and Rhode Island, who refused, upon being invited to conform their currency to the Massachusetts, felt a shock in their trade which they were long in recovering from. The latter had been the importers, for the Massachusetts, of West India goods for many years, which ceased at once. New Hampshire, after some years, revived its business and increased the trade in English goods, which formerly had been supplied from the Massachusetts.

*From the close of the war with France, to the end of Governor Pownall's administration, in the year 1760.*

(1749.) The people of Massachusetts Bay were never in a more easy and happy situation, than at the close of the war with France. By the generous reimbursement of the whole charge incurred by the expedition against Cape Breton, the province was set free from a heavy debt, in which it must otherwise have remained involved, and was enabled to exchange a depreciating paper medium, which had long been the sole instrument of trade, for a stable medium of silver and gold; the advantage whereof, to all branches of their commerce, was evident, and excited the envy of the other colonies, in each of which paper was the principal currency.

They flattered themselves that Cape Breton would remain subject to Great Britain; and it was a mortification to them, that, what they called "their own acquisition," should be restored to France; but they had nothing to fear from it, so long as peace continued. The French fishery had failed before the war, and whilst the English could catch and cure

fish cheaper than the French, there was no danger of its revival.

The Indians upon the frontiers were so reduced, that new settlements were made without danger, which not only caused the territory settled to increase in value, but afforded materials for enlarging the commerce of the province.

There was but little subject for controversy in the general assembly. Governor Shirley's administration had been satisfactory to the major part of the people. There was an opposition, but it was not powerful; perhaps not more powerful than may, generally, be salutary. During the last seven years, no great change of counsellors had been made at any of the elections, and they were, in general, well affected to the governor. This prosperous state of the province was very much owing to the success of his active, vigorous measures; of which he wished to give an account in person, and for that purpose had obtained leave to go to England. He had further views. Soon after the peace was proclaimed in America, the French discovered a design of enlarging their territory on the back of New York, and of taking fresh possession of the country of Acadia; and it was a common report, that French settlements were begun east of Crown Point. By a hint from the governor to some of his friends, the council and house were brought to join in an address, praying him to represent to the king the necessity of building a strong fort near to Crown Point; and of settling and fortifying a town at Chibucto, or some other harbour in Nova Scotia. The governor of Canada had written to the Indians upon the eastern frontiers of New England, to dissuade them from a peace with the English, and a copy of the letter had been obtained by Mr. Shirley.

The contest about the bounds between the French and English in America, which was, by the treaty, to be left to commissaries, instead of being amicably settled, would probably be increased, and finally decided by the sword. It looked as if the peace could be of no long continuance. At such a time, he thought he could be of more service to himself, and to the public, in England, than in America. He sailed from Boston in September, 1749.

Soon after his arrival in England, he was appointed one of the commissaries for settling the American boundaries. He spent much time in France with little success. The documents produced by the commissaries on each side shewed that, on different occasions, different bounds had been assigned to the territory of Acadia. In the commission to the last French governor before the treaty of Utrecht, Acadia was made to extend to the river Kennebeck, and the whole was ceded, by the treaty, to the English. The French commissaries, notwithstanding, refused to agree to so great an extent, and confined Acadia, which they suppose in the treaty intended Nova Scotia, to the peninsula. They could no better agree upon the limits of Canada; and each party urged that their claims were strengthened by the evidence produced on this occasion.

When the Indians have taken part in a war with the French, or, by themselves have engaged in war against the English, a formal treaty of peace has always been thought expedient.

The necessary preparation for Mr. Shirley's voyage prevented his attending the treaty in person; and commissioners were appointed, who met some of the principal Indians, in the character of delegates from the several tribes, at Falmouth in Casco Bay; and, after several days spent in conference, agreed

with them upon terms of peace, between the provinces of Massachusetts Bay and New Hampshire, on the one part, and the several tribes of Indians situated between New England and Canada, on the other part.

The commissioners from Massachusetts Bay were Thomas Hutchinson, John Choate, Israel Williams, and James Otis, Esqrs. Sir William Pepperell had been appointed at the head of the commission, but sailed for England before the treaty took place. Theodore Atkinson and John Downing, Esqrs. were the commissioners from New Hampshire.

The Indians began the treaty with an act of pleasantry and good humour. Notice had been given, that they must bring in such English captives as were among them, and particularly a boy whose name was Macfarlane, and who was taken in the beginning of the war. They apologised for not bringing Macfarlane, and feigned some excuse, promising he should be sent when they returned home. The commissioners shewed great resentment, and insisted upon the delivery of the captive previously to their entering upon the treaty. Some time was spent in altercation. At length an old Sachem rose up, and took one of the handsomest and best dressed young Indians by the hand, and presented him to Mr. Hutchinson, the chairman of the commissioners, as the captive Macfarlane. This increased the resentment, and it was thought too serious an affair to be jested with. The young man then discovered himself, and (having spoken before nothing but Indian) in the English language, thanked the commissioners for their kind care in procuring his redemption. He had so much the appearance of an Indian, not only in his dress, but in his behaviour, and also his complexion, that nobody had any suspicion to the contrary. He had made himself perfectly acquainted with their language, and proved serviceable as an interpreter at the French house so long as he lived.

The treaty made by Mr. Dummer in 1726, was considered as the basis of this, and the same articles were renewed, those only, which concerned trade, being so explained, as to take away all those pretences for discontent, which had been at different times urged by the Indians.

This treaty was scarcely finished, when an affair happened which threatened a new war. While the commissioners were at Falmouth, they were informed that a bad spirit prevailed among many of the common people of New Hampshire, and of the eastern part of Massachusetts Bay; that many threatened revenge upon the Indians, notwithstanding the peace, for the depredations made during the war; and the latter end of November, or beginning of December, an Indian was killed, and two others dangerously wounded, by some of the English inhabitants of a place called Wiscasset, in the county of York. Two persons, Samuel Ball and Benjamin Ledyte, were committed to prison, and a proclamation was issued by Mr. Phipps, the lieutenant-governor, promising a reward for apprehending a third, Obadiah Alby; all supposed to be concerned in the murder. Agreeably to the provision in such case made by the laws of the province, a special court was summoned, and the persons, or some of them, brought upon trial. It was said, that a jury in the county of York, where the inhabitants had suffered so much from the Indians, let the case be ever so plain, would not convict an Englishman of murder for the death of an Indian. It was, therefore, moved in the general assembly, that a law should pass to empower the judges to summon a jury from another

county, but the motion did not succeed; and though one or more of the persons were brought upon trial, there was no conviction. Many good people, at this time, lamented the disposition, which they thought was discovered, to distinguish between the guilt of killing an Indian, and that of killing an Englishman, as if God had not "made of one blood all the nations of men upon the face of the earth."

The Indians were enraged at the murder; but by fair words and kind deeds, ordered by government, in relieving some distressed families among them, they were kept quiet; but, at length, despairing of justice upon the murderers, they resolved to revenge themselves upon the public, and made an attempt to surprise Richmond fort, on Kennebeck river. Failing of success, they fell upon the inhabitants near the fort, and made several of them prisoners; but were reduced to so small a number as to be incapable of much mischief; and, after a short time, the injury they received was forgotten.

(1750.) In the early days of the New England colonies, Massachusetts Bay had, by mere dint of power, compelled Connecticut and the other colonies, to give way to the decision of the Massachusetts assembly, in a way that could not well be justified. Connecticut, in its turn, now gave to Massachusetts much greater cause of complaint.

When the line between the two colonies was settled in 1713, it was agreed, that the towns of Woodstock, Somers, Suffield, and Enfield, though, according to that line, they fell within Connecticut, should remain under the jurisdiction of Massachusetts Bay, by whose inhabitants they had been settled; and an equivalent was given for the property, by the assignment of an equal quantity of uncultivated lands in the Massachusetts province. Connecticut had accepted the equivalent, had made sale of the lands, and had applied the produce to the use of that colony. The inhabitants of the towns thought themselves happy under the Massachusetts government, until they felt a greater proportion of burden from the charge of the war, than they would have done under Connecticut. At the expiration of the war, a much heavier debt also lay upon Massachusetts than Connecticut; and the relief from this debt by the grant which was afterwards made by parliament, was then uncertain. The inhabitants, thereupon, made application to the general assembly of Connecticut, and prayed to be received as under that government, and to be protected by them. Considerable sums, which had been assessed by the Massachusetts government, remained in arrear, and these they refused to pay. Notice was given by the governor of Connecticut to the governor of Massachusetts Bay, of the application, without expressing any resolution on the part of Connecticut to grant, or to refuse their request. It was reasonable to suppose that an agreement made with great formality, and conformed to for nearly forty years, would not be violated. The sheriffs and other officers of Massachusetts Bay, were at first opposed by the inhabitants of the towns, who resolved to stand upon their defence. The Massachusetts assembly having, but a few years before, succeeded so ill in their controversies with New Hampshire and Rhode Island, were more easily disposed to avoid this controversy, fearing that Connecticut also, if the boundary line should be again considered at large, would not only gain the particular territory in dispute, but a large addition to it. They, therefore, did not act with their usual spirit; but rather faintly went into measures for maintaining their authority. This encour-

raged the assembly of Connecticut; and it then appeared, that they countenanced the revolt. After a resolve to receive the towns into their jurisdiction, they proposed to the Massachusetts assembly, that commissioners should be appointed by each government to run the boundary line; but, in their proposal, had no respect to the settlement made in 1713, which left the towns to Massachusetts Bay. The proposal in this form, was rejected; but in lieu of it, an offer was made to treat upon ways and means, in general, for preventing a controversy between the two governments. This would not answer the purpose of Connecticut. The settlement in 1713, and the equivalent received for the towns, were both acknowledged; but it was urged, that the inhabitants had an unalienable right to the jurisdiction of Connecticut, by charter, which the legislature of Connecticut could not take from them, and which the act of the inhabitants in 1713 could not take from the inhabitants in 1749. No subject affords a larger field, not for mere cavils only, but for plausibility of exception, than that of government. Upon this feeble pretence, Connecticut supported its claim, and kept possession of their jurisdiction over the towns. It would, at least, have been decent in the Connecticut assembly, to offer to return the equivalent which their predecessors had received.

The aversion, in the common people, to a silver and gold currency, had occasioned several tumultuous assemblies in and near the town of Boston. The paper, they said, was not worth hoarding, but silver and gold would all fall to the share of men of wealth, and would either be exported or hoarded up, and no part of it would go to the labourer, or the lower class of people, who must take their pay in goods, or go without. In a short time experience taught them, that it was as easy for a frugal industrious person to obtain silver, as it had been to obtain paper; and the prejudice in the town of Boston was so much abated, that when a large number of people from Abington, and other towns near to it, came to Boston, expecting to be joined by the like people there, they were hooted at, and insulted by the boys and servants, and obliged to return home disappointed.

The assembly being then sitting, it was thought proper to pass an act for preventing riots, upon the plan of the act of parliament known by the name of the Riot Act, except that the penalty was changed from death, to other severe and infamous punishment.

This was a temporary act, but not suffered to expire; and continued in force until riots took place to prevent the execution of acts of parliament which were deemed grievous, and then it was discontinued.

From an aversion to a silver currency, the body of the people changed in a few months, and took an aversion to paper, though it had silver as a fund to secure the value of it. A sufficient quantity of small silver for change could not be procured in England, when the grant made by parliament was sent to America. The assembly, therefore, ordered a deposit to remain in the treasury, of three thousand pounds in dollars, and issued small paper bills of different denominations, from one penny to eighteen pence; and every person, possessed of them to the amount of one dollar or any larger sum, might exchange the bills at the treasury for silver upon demand. The whole sum was prepared, but a small part only was issued, and scarcely any person would receive them in payment, choosing rather a base coin imported from Spain, called pistorines, at 20 per cent more than the intrinsic value.

From the first introduction of paper money, it

had been the practice of government to issue bills for public charges, and to make a tax for the payment of the sum issued, in future years, into the treasury again. The bills being all exchanged by the silver imported from England, and provision made by law, that no bills of credit should ever after pass as money, there was a difficulty in providing money for the immediate service of government, until it could be raised by a tax. Few people were, at first, inclined to lend to the province, though they were assured of payment in a short time with interest. The treasurer, therefore, was ordered to make payment to the creditors of government in promissory notes, payable to the bearer in silver in two or three years, with lawful interest. This was really better than any private security; but the people, who had seen so much of the bad effects of their former paper money, from its depreciation, could not consider this as without danger, and the notes were sold for silver at discount, which continued until it was found that the promise made by government was punctually performed. From that time, the public security was preferred to private, and the treasurer's notes were more sought for than those of any other person whomsoever. This was the era of public credit in Massachusetts Bay.

Peace being restored, and the Indians upon the frontiers almost extinct, a more extensive view was opened for the enlargement of the colony. There were many judicious persons, who were content with the natural increase of the inhabitants, and with an extension of the *pomeria*, only in proportion as the interior parts became crowded, and pressed for enlargement. But there were many others, who were proprietors of large tracts of uncultivated land, which afforded no income, and some, who had obtained grants of land, which, unless cultivated within a limited time, were to revert to the grantors.

These persons endeavoured to represent the great benefit arising to the community from the speedy increase of population; and, not contented with the natural growth of a colony, which, it was then agreed, would double its number every twenty-five years, nor with such additions as might be made from other parts of the British dominions, they persuaded the general assembly to countenance and encourage their private endeavours to bring a large body of foreign protestants into the colony. They were intended not only for the frontiers, both east and west, as a barrier in case of any rupture with Indians or French, but some were to be placed within and near the principal sea ports and large inland towns, to introduce useful manufactures.

Mr. Waldo, a proprietor of a large tract of land upon the eastern frontiers, had carried on a correspondence with Mr. Crelleies, and had, by his means, procured many emigrants from Germany, to whom conditional grants had been made by Mr. Waldo. Another person, who seemed to be of more importance, Mr. Luther, a counsellor of law in Germany, by some means or other, became a correspondent with the general assembly, and they expressed to him their desire to introduce foreign protestants, and signified to him, in general terms, that his assistance to those persons who were entering into contracts for that purpose, would be kindly received. Mr. Luther, from this correspondence, considered himself as a sort of public person, and proposed many plans, and, probably, was at much pains, and some expense, to encourage the emigration. The expectations, neither of the emigrants which arrived, nor of the province, were answered.

Such as settled upon the frontiers suffered exceedingly, and many died the first winter, for want of necessary lodging, food, and clothing.

(1751.) An attempt was made to settle a manufacturing German town, a few miles from Boston, within the limits of the township of Braintree; but it never flourished. The private undertakers grew discouraged; the emigrants complained of being disappointed and deserted; the assembly first slackened their correspondence with Mr. Luther, and, after a year or two, ceased answering his frequent letters, which were filled with complaints of neglect, and hard usage. Mr. Phipps, the lieut.-governor, was concerned for the honour of the government, and repeatedly recommended to the assembly a proper notice of Mr. Luther, and a consideration of his service and expense, but without any effect. The house had been brought into the correspondence, by the influence of a few persons who deserted the cause, and were under no apparent concern at the reproaches upon government. Some of the members, both of the council and of the house, earnestly endeavoured to persuade the general assembly to do as a collective body, that, which every individual would in honour have been bound, and perhaps by law might have been compelled, to do; but they could not prevail.

Possession had been taken of the harbour at Chibucto in Nova Scotia, by the British government, the year after the peace. A plan was laid for the settlement of a fortified town, by the name of Halifax, and the plan was vigorously executed; but it appeared that the French were more early in their measures, for, upon the arrival of Governor Cornwallis at Halifax, he found the French had taken possession of Chignecto, and had erected a fort there, and claimed the river St. John, and all Acadia, as far as Penobscot; which must cut off Nova Scotia from the rest of the British dominions upon the continent; and that many of the French Acadians, commonly called neutrals, who had acknowledged themselves subjects of the crown of Great Britain, ever since the surrender of Acadia to Nicholson in 1710, had now declared their revolt, and their adherence to the crown of France. Mr. Cornwallis wrote, in very pressing terms, to Mr. Phipps for aid; who recommended to the assembly the measures necessary on their part, to enable him to raise, and transport a proper force to Nova Scotia; but they declined it.

Mr. Shirley would have had a better chance of success; though the assembly urged, as an excuse, that they had enough to do in providing for their own security.

The lieut.-governor had, about the same time, received information, to which he gave full credit, that the French had also taken possession of the river Lechock, within the province of Massachusetts bay, about five leagues east of Penobscot. Governor Clinton, also, wrote from New York, that the governor of Canada was endeavouring to draw over the Indians of the six nations, and urged a meeting of commissioners from the English colonies to counteract him.

The possession of Chibucto by the English, was perfectly agreeable to the last treaty, it being a part of the peninsula of Nova Scotia to which the French made no pretence; but Chignecto and the country of the six nations, were the territories in dispute, which, in pursuance of the last treaty, the commissioners at Paris were then litigating. Thus, before peace was fully settled, the French engaged in mea-

sures which had a direct tendency to renew the war

There was an affair, of some importance to the province, which came under consideration in the assembly, while Mr. Phipps was in the administration. Many of the province laws had become obsolete; others, by frequent additions and alterations, were perplexed and unintelligible, and had been differently understood and acted upon, at different times, and on different occasions.

(1752.) The case had been much the same in Virginia, where the assembly had made a general revisal of their code of laws, except such as were personal, or of a private nature, and had framed, very successfully, a complete and well-digested body, which was well approved of by the government in England. This success was the occasion of an instruction from the lords justices, the king being in Hanover, to the governor of Massachusetts bay, to recommend to the assembly a like revisal of their laws, to be passed, and sent to England for the royal approbation.

In consequence of a message from the lieut.-governor to the two houses, the council appointed a committee to consider the proposal in conjunction with a committee of the house; but the house declined joining; and, though the lieut.-governor repeated his recommendation, they neglected or refused to comply with it.

It was allowed that the laws were deficient, and it was evident that if any laws should be repealed by the assembly, and other provision be made by a new law, and the king should disallow the new law, he would also disallow the repeal, and the old law would remain in force; for the king could not disallow part of a law, and approve of other parts. This was a security for any favourite law, which the people might suspect the king wished they had not approved of. And, then, no new law could be imposed upon them; because no alteration could be made in England, but the whole must be allowed or rejected, as it originated in the province. Many acknowledged that there was the appearance of much benefit from the proposal, that they could not see any danger. A majority, however, were jealous of a latent design. They feared, that in the prosecution of the business, a way would be found to give a new construction to some of their laws, especially some which respected the ecclesiastical part of the constitution. It was also a part of the plan, and very necessary, that there should be a clause in every law, suspending the operation of it until the king's pleasure should be known. A prejudice had long lain upon the minds of the people against such a clause, though it is not easy to conceive of any inconvenience which could arise from it; and it was added, that, in the present state of the laws, the people were well satisfied; that the effect of alterations was uncertain, and that, therefore, it was best not to attempt them.

(1753.) Mr. Phipps's administration was short, and, as that of a lieut.-governor had generally been, quiet. Mr. Shirley arrived in Boston from England, August the 6th, 1753. He made an ill-judged step when he was in France, which he had reason to repent of as long as he lived. At the age of three-score, he was captivated with the charms of a young girl, his landiord's daughter in Paris, and married her privately.

When he came back to England, he would have concealed his match. Lord Halifax had heard the report, but did not credit it, until some of her letters were shewn him, which had been privately taken

out of Mr. Shirley's desk, by persons who wished to defeat his design of obtaining a better government, and to oblige him to return to New England. This imprudence lessened him in Lord Halifax's esteem; and, though he had shewn himself to be very capable of his trust of commissary of France, as well as very faithful in the discharge of it, yet, as he failed of success, which more frequently than real merit entitles to reward, his private fortune was much hurt by his employment. His allowance being 4*l.* only per diem, he used to say, it did not cover his necessary expense in that public character. The rumour of his marriage came to New England before his arrival, and some who were not well affected to him, were ready enough to insinuate that his French connexions might induce him to favour the French cause, but his conduct evinced the contrary. He pronounced an accommodation desperate, that the sword must settle the controversy, that it ought to be done without delay, otherwise the French would make themselves too strong for all the force the English could bring against them.

A session of the general assembly was held soon after his arrival, September the 5th, in which the two houses politely thanked him for his services during his absence. This was a short session, not intended for the general business of the province.

In his speech at opening the next session, on the 4th of December, he set forth at large his services in England and France, which indeed were of general concern to the British Empire, but they respected the colonies, and particularly Massachusetts bay, more than any other parts, and he urged the assembly to make him an adequate consideration.

It has always been the expectation of the crown, that the salaries of the governors should be continued to them, whenever they are absent with leave, and that one-half should be allowed to the lieutenant-governors or commanders in chief in such absence; but the Massachusetts assembly would never allow a salary to a governor in his absence, and their grants to the lieutenant-governors never exceeded, and were often short of, one-half the usual salary to the governor.

The assembly, about three months before Mr. Shirley left the province, had made him a grant of his salary for a year to come; it seemed, therefore, to be the mind of a great part of the house, not to grant any further salary until nine months had passed after his return; but his friends carried a vote for 1,400*l.* lawful money, which was equal to 1,050*l.* sterling. This was more than they expected, and they wished he would be contented with it; but he delayed giving his assent to the grant, and by repeated messages, long and argumentative, one following on another, urged the increase of the sum; and insisted on a voyage to Cape Breton, at the request of the assembly 1745, for which a grant was made by the assembly of that day, of 300*l.* sterling, and which he then declined accepting, lest it should be a prejudice to him in England, from whence he expected a reward adequate to his services, but had been disappointed. The house excused themselves by observing, that if he had taken the grant at that time, it would have been added to the charge of the expedition to Cape Breton, and would have been reimbursed by parliament. He would not allow this to be a proper article of charge. He generally urged the measures which he proposed to the assembly, as far as he could without annoying them and putting them out of temper, and no further. He pressed them too hard in this instance, and they

sent him an angry message, and not only peremptorily refused to enlarge the grant, but gave this reason for it, that if his services and their payments since his appointment to the government could be fully stated, the balance would be in their favour.

He was hurt by this message, but though he wanted money, he had other views of more importance than a few hundred pounds, and it would not consist with those views to be upon ill terms with the assembly.

From the beginning of his administration, until the year before he went to England, he had been constantly employed in projecting and prosecuting plans, offensive or defensive, against the king's enemies. At this time it was the general opinion in England and in America, and we must suppose it was his opinion, that the French were engaged in such encroachments as would make a new war unavoidable, and the longer the encroachments should be permitted, the more difficult it would be to remove them. A regard, therefore, to the public interest, seemed to call upon him to promote a war. He had a fair prospect, in this way, of forwarding his private interest. Nine years only had passed since he commenced soldier. He stood forward, however, in the list of colonels in the army; and in case of war, expected a regiment, and to be made a general officer. He not only urged the necessity of opposing the French, and removing the settlements they were making in the controverted territory, but he recommended to the Massachusetts assembly to extend their own settlements into such part of this territory, as is included within their charter, that they might be beforehand, and put themselves on the defensive.

(1754.) In Acadia, the French had taken possession of the Isthmus, near Bay Vert, and had built a fort there, which secured their passage to Quebec without going upon the occasion. They had a blockhouse about thirteen miles distant from this fort, towards Chignecto, and three miles further they had a large and strong fort, within half a mile of the basin of Chignecto, at the bottom of the bay of Fundy. Up the river St. John's, they had also built two forts, before the peace of Utrecht. These they now repaired and fortified. Of all this, there was undeniable evidence.

There was also a rumour, that they had begun a settlement near the river Kennebec, which is in Massachusetts province, and so had secured the carrying place from that river, to the river Chaudiere. It soon obtained credit, though really there was no grounds for it.

They had forts upon the back of Virginia, Pennsylvania, and New York, before the year 1744. The journal of an English trader, who was taken prisoner upon the river Ohio, soon after that war began, mentions his being carried from fort to fort, until he arrived at Quebec, and gives an account of other forts, twenty or thirty miles distant one from the other, between the Ohio and the Mississippi. It is probable, they had built other forts since the last peace; besides one, which was more inconsiderable than the rest, to which they gave the name of Fort du Quesne, within the colony of Virginia. But a report, that they had built a fort eastward of, and not far distant from Crown Point, which was more alarming to the western part of Massachusetts bay, than any of the rest, was not well founded.

Thus stood affairs between the English and French in America, in the beginning of the year 1754, when government in England thought fit to recom-

mend a convention of delegates from the assemblies of the several colonies, to be held at Albany in the province of New York. The city of Albany is the place where the Indians of the six nations had generally been treated with, either by the governors of New York, or by governors or commissioners from any other colonies; and as large presents were to be made this year to the Indians, and the French were using every art to bring them over to the interest of France, it was thought proper at such a time, to have the joint council of all the English colonies.

Insinuations had been made, that there had not been a fair and full distribution of the former presents to the Indians, and this was said to be one reason why the distribution at this time was ordered to be made by all the colonies, and not left to New York alone, as had been usual. But the principal design of this meeting seems to have been, to unite the colonies in measures for their general defence, and to settle a quota of men and money, whenever they might be necessary against a common enemy.

The letter from the secretary of state by order from the king, was directed to the governor of New York, who was required to notify the governors of Virginia, Maryland, Pennsylvania, New Jersey, Massachusetts bay, and New Hampshire, by name, of the time of the meeting, and also to endeavour to prevail on any other colonies to join in the treaty.

Virginia, and New Jersey, though expressly named, did not send commissioners. Connecticut and Rhode Island were the only colonies which sent, of those who were not expressly named. This was an assembly the most deserving of respect of any which had been convened in America, whether we consider the colonies which were represented, the rank and characters of the delegates, or the purposes for which it was convened.

After "brightening the chain," to use the Indian metaphor, between the British colonies, and the six nations with their confederates, a representation to the king was agreed upon, in which were set forth the unquestionable designs of the French to prevent the colonies from extending their settlements, a line of forts having been erected for this purpose, and many troops transported from France; and the danger the colonies were in, of being driven by the French into the sea, was urged.

The commissioners then proceeded to the consideration of a plan for the union of the colonies. The king, in his instructions for this convention, proposed that a quota should be settled, and that, by acts of the respective assemblies, this should be established as the rule for raising men and monies. The plan for a general union was projected by Benjamin Franklin, Esq., one of the commissioners from the province of Pennsylvania, the heads whereof he brought with him.

A representation was proposed by delegates from each colony, to be chosen by its assembly. The president was to be appointed by the crown. The delegates to be newly elected once in three years. The president to have a negative upon all acts: the acts were to be sent to England for the king's allowance or disallowance; if not disallowed in three years, they were to be considered as if expressly allowed. This assembly was to have power to make peace with, or declare war against the Indians; to enact laws for the regulation of the Indian trade; to purchase from the Indians, for the crown, such lands as are not within the bounds of any colony, or which may not be within such bounds, when some

of the colonies shall be reduced to more convenient dimensions; to grant such lands upon quit-rents, to be paid into the general treasury of the colonies for the purpose of making settlements; to make laws for regulating such settlements, until the king forms them into governments; to raise and pay soldiers, and to erect forts for the defence of the colonies; to build ships of war for protection of trade on the ocean, as well as on the lakes; and for these purposes to impose and levy such imposts, duties, and taxes as may be just and reasonable. These were the capital parts of the plan.

Previously to any debate upon it, a doubt arose, whether an act of parliament was not necessary to establish such an union. The charters and commissions by which the powers of government were granted to the colonies, gave no authority to form one general government over the whole. It might be said, if the king could give and grant powers of government separately to each colony, he could do the like to the whole collectively; but this would be altering the powers given by charter, if a new government was appointed over the inhabitants for any purposes to which the government by charter was constituted; and, as the power of parliament had not then been called in question, an act of parliament was judged necessary for removing all exception, and made part of the plan.

Some of the delegates had very full powers, while others were limited, and held to make report to their constituents. This plan, therefore, though unanimously voted, was to be of no force until confirmed by the several assemblies.

Not one of the assemblies from Georgia to New Hampshire, when the report was made by their delegates, inclined to part with so great a share of power as was to be given to this general government.

The plan met with no better fate in England. It was transmitted, with the other proceedings of the convention, to be laid before the king. The convention was at an end; and no notice was afterwards publicly taken of the plan. To erect a general government over the whole, though in its original formation it might be limited to special purposes, was a matter of great importance, and of uncertain consequences, men in possession of power being generally inclined to amplify their jurisdiction; and some of the delegates who agreed to it in Albany, doubted whether it would ever be approved of by the king, the parliament, or any of the American assemblies.

Mr. Shirley seems to have been in favour of an assembly to consist of all the governors of the colonies, and a certain number of the council of each colony, with powers to agree upon measures for the defence of the colonies, and to draw upon the treasury in England for money necessary to carry such measures into execution; for the reimbursement whereof, a tax should be laid on each colony by an act of parliament. This plan was communicated by Mr. Shirley to Mr. Franklin, one of the delegates from Pennsylvania, who a few months after the convention ended, went to Boston. Mr. Franklin defended his own plan, and took exceptions to Mr. Shirley's in several ingenious letters. Upon this occasion, much was said in favour of an exemption of English subjects in the colonies from tax, unless by their representatives, of which they had none in parliament. The restrictions laid by parliament on the commerce of the colonies, were considered as "secondary" taxes, of which they did not complain, though they had no share in laying, or disposing of

them : and the benefit arising to the kingdom from these restrictions, was deemed a full equivalent to what was saved to the colonies, by an exemption from what might be called "primary" taxes, or such as should be laid in another form, and appropriated by parliament. Upon the whole, however, Mr. Franklin concluded in favour of a more intimate union with Great Britain by representatives in parliament, and he was of opinion that such an union would be very acceptable to the colonies, provided they had a reasonable number of representatives allowed them, and that all the old acts of parliament restraining the trade, or cramping the manufactures of the colonies, be at the same time repealed, and the British subjects there be on the same footing, in those respects, with the subjects in Great Britain, till the new parliament, representing the whole, shall think it for the interest of the whole, to re-enact some or all of them : not that he imagined so many representatives would be allowed the colonies, as to have any great weight by their numbers ; but he thought they might be sufficient to occasion those laws to be better and more impartially considered, and perhaps to overcome the private interest of a corporation, or of any particular set of artificers or traders in England. He looked upon the colonies as so many counties gained to Great Britain, and all included in the British empire, which had only extended itself by their means ; and it was of no importance to the general state whether a merchant, a smith, or a hatter, grew rich in Old or New England, any more than whether an iron manufacturer lived at Birmingham or Sheffield, or both, seeing they were still within its bounds, and their wealth and persons at its command.

This correspondence was carried on with great privacy. Mr. Shirley saw that his assembly had no disposition to adopt the Albany plan of union, and he took no public part, but left them to themselves.

The representation of the imminent danger to the colonies from the French encroachments, probably accelerated those measures in England which brought on the war with France.

While the convention was sitting, and attending principally to the frontiers of the colonies in the western parts, Mr. Shirley was diligently employed in the east, prosecuting a plan for securing the frontiers of Massachusetts Bay.

A rumour sometimes obtains credit, because the subject, from the nature of it, is probable. From the rumour of a French settlement between Kennebeck and Chaudiere, it was urged, that this must be a very fit place for a French settlement, or there would be no such rumour.

The Massachusetts assembly was influenced by the friends of the governor, to address him to raise a small army, and to order a detachment to this supposed settlement, and, if the rumour should be well founded, to break it up ; and, at all events, to secure by forts the passes from Quebec, for New England, by the way of Kennebeck. The assembly also desired him to go into the eastern part of the province, and there to take upon himself the immediate direction of the affair. He accordingly made a voyage from Boston to Falmouth, in Casco Bay, and took with him a quorum of his council, and several principal members of the house, who, having by their advice, been instrumental in promoting his measures, would think themselves bound, upon their return, to promote a sanction of them in the general assembly.

He first held a treaty or conference with the In-

dian chiefs at Falmouth, to prevent their being alarmed from fear of hostilities against them ; and then ordered the forces which he had raised, consisting of eight hundred men under the command of Mr. John Winslow, who had been a captain in the royal army at the siege of Carthagene, and was on half pay, to the river Kennebeck. There they first built a fort, about three quarters of a mile below Tacomeck falls, and about thirty-seven miles above Richmond fort. This new fort took the name of Halifax, out of respect to the then secretary of state. A number of persons who claimed a tract of land upon this river, under a long dormant and lately revived grant from the assembly of New Plymouth, obtained leave from the governor to erect another fort, eighteen miles below the first, at a place called Cushnock. This he called Fort Western, from a gentleman of his acquaintance in Sussex, in England, and in each fort a garrison was placed in the pay of the province.

Five hundred men then marched to what was called the carrying-place, and to a pond which they supposed to be half way over it, without finding any marks of French or Indian settlements, made or intended to be made ; and then returned to Casco Bay.

Thus ended this expedition, which was very expensive ; and though it was, in every part of it, the project of the governor, yet, as it had the appearance of originating in the assembly, there was no room for complaint. Besides, it was said by the governor, that the forts built on the Kennebeck, in the vicinity of this carrying-place, would be a check upon the Indians, who, in time of war passed over it.

The expense was to no beneficial purpose. Both French and Indians soon ceased from any thoughts of taking possession of the British territories, and their attention was taken up, in defending themselves against the vigorous measures of their provoked enemies.

Soon after governor Shirley's return to Boston from this expedition, in October or November, he received letters from the secretary of state, signifying his majesty's pleasure, that in concert with colonel Lawrence, lieutenant-governor and commander-in-chief of Nova Scotia, he should take the most proper measures for removing the subjects of the French king from the forts in that province ; and, in the winter following, lieutenant-colonel Monckton came to Boston, with proposals from colonel Lawrence for raising two thousand men, to be employed in this service.

They were to be raised by enlistment, and though they were to be carried out of the province, it must be with their own consent. The charge also of raising, paying, transporting, &c., was to be paid by the crown. It seemed, therefore, that there was no occasion for meeting the general assembly. But the governor knew, that it would much forward the enlistment, if he could give the assembly a favourable opinion of the expedition. In a very long speech, he therefore laboured to set before them the danger to which the whole British interest in America, as he alleged, would be exposed, if these encroachments were suffered to continue ; and that if this critical opportunity should be lost, it would be much more difficult to remove them hereafter. Mr. Shirley had one peculiar advantage for promoting his military schemes in the assembly. Many of the field officers and others who were at Louisburg, and in other services, the last war, were now members of assembly, and the more readily fell in with his proposals. At this time, the assembly not only acquiesced in the

governor's proposals, but the members in the several parts of the province encouraged the enlistment, and the proposed number was complete sooner than expected; and sooner than otherwise it would have been, by assurances that the governor himself would take the command of the whole battalion, and that major-general Winslow would be the next officer; and Mr. Winslow was made to believe it also. It is not probable that Mr. Monckton, who had the rank of lieutenant-colonel in the army, ever intended to serve under Mr. Winslow, who had only the rank of captain. There was the appearance of discontent, on the part of Mr. Winslow, when colonel Monckton's claim to the superior command first transpired. Governor Shirley managed the affair very skilfully. The business of the province would not admit of his leaving it, and, though it was called his regiment, he could not take the command in person. A commission for the first battalion was given to Mr. Monckton, and Mr. Winslow was brought, upon such consideration as was thought fit, to be content with the command of the second.

The only inconvenience to the province from this expedition, was the loss of the men who enlisted, which increased the difficulty of raising men for further services. For, when the governor had brought the assembly to an acquiescence, and had secured the enlistment, he opened to them a further part of his plan; which would take both men and money from the province.

The rumours of a French fort near to Crown Point, it was now acknowledged, were groundless, but it was certain that there was a rocky eminence, which would command Crown Point fort, and the governor proposed, that whilst the expedition was going on against the French forts in Nova Scotia, which must draw the attention of the French in Quebec, to that province, possession should be taken of this eminence, and a strong fort be erected there, and well garrisoned. This would be a security to the frontiers of the English colonies against the inroads of French and Indians, and would be a good post from whence parties of English, and Indians in their interest, might issue to make depredations on the French; and, whenever it should be thought proper to make an attempt upon Crown Point by means of this post such attempt would be much facilitated.

The assembly thought favourably of the project. They did not, however, immediately resolve to make provision for the charge which must attend it, but desired the governor to carry it on at the charge of the crown, and gave their opinion, that he would run no risk in it. He, on the other hand, recommended to them to raise the money necessary for the purpose, and intimated to them, that they had no more reason now to distrust his majesty's paternal regard, in affording them relief, so far as they should overburden themselves, than they had when they engaged the last war, in the successful expedition against Louisburg. Many members, who would not otherwise have been in favour of the proposal, were made to believe that the charge would be repaid; and a majority of the house came to a resolve, to desire the governor to engage in an attempt to erect a fortress near to the French fort at Crown Point, and to repel and revenge any hostilities which might be offered to his majesty's forces, whilst they should be employed in that service. This they did, in humble trust that his majesty would be graciously pleased to relieve the province from the expense of this undertaking, though at all events, they would not leave the governor to suffer.

(1753.) Thus the assembly was brought, expressly to desire the governor to oppose the French by force, if they should interrupt the English; which looks as if he had some doubts whether he did not run a risk of the measures not being approved, and imagined such a desire would be of service to him in England.

Although he considered the Massachusetts as the leading colony, yet he designed to engage other colonies to take part with it. Less than five thousand men was deemed insufficient. The Massachusetts assembly resolved to make provision for the pay and subsistence of 1,200. It was proposed, that New Hampshire should raise 600, Rhode Island 400, Connecticut 1,000, and New York 800; and as the governor and Sir William Pepperell had, each of them, been ordered by the king to raise a regiment upon the establishment, it was part of the plan that those regiments should join.

New Jersey, it was expected, would make some addition, and Pennsylvania, which scrupled raising men, was desired to contribute to the charge by raising provisions. Commissioners were sent from Massachusetts to each of the other colonies to solicit a junction.

The governor was much at a loss for a proper general. Mr. Hutehinson, who had been one of the commissioners at Albany, proposed to him Colonel Johnson, one of the council at New York, who was also a commissioner at Albany. Governor Shirley approved of the proposal, but doubted whether the assembly would not dislike his appointing a general who lived in another province. The assembly were brought to acquiesce, by being informed, that no man had so great an influence over the Indians as Colonel Johnson, and that he would, undoubtedly, be the means of bringing several hundred to join in the expedition.

The commissions to the general officers then came to be considered. It was a new case, and it was judged necessary that each governor in the colony, where any forces of which the army consisted, were raised, should give commissions to the general officers, and that the regimental commissions for each colony should subject the regiments to such general command.

While preparations were making for the expeditions to Nova Scotia and Crown Point, General Braddock arrived in Virginia from England, and immediately gave notice to governor Shirley, and to several other governors, to meet him at Annapolis, in Maryland, in order to consult upon measures for his majesty's service. The place was afterwards changed to Alexandria.

At this meeting, the expedition to the west, under General Johnson, as well as that to Nova Scotia, under Colonel Monckton, was approved of: and it was determined, that another expedition should be formed against Fort du Quesne, upon the back of Virginia, with a force under General Braddock, consisting of two regiments which he brought with him from England, two independent companies which were posted at New York, and so many provincials, to be raised in the southern colonies, as should amount in the whole to 2,400 men. It was further determined that the two newly raised regiments of Shirley and Pepperell, with 500 men raised in New Jersey, and 300, of the 1,200 raised in Massachusetts, and which had been destined for the expedition to Crown Point, should be taken from that service, and employed under governor Shirley, in an attempt to dislodge the French who were posted at Niagara, in a fort there. Thus there were four

expeditions on foot at the same time, in three of which the Massachusetts had a share.

The success was various. That to Nova Scotia answered expectation. The French forts at Beau Sejour were taken; and, thereupon, those at the river St. John were abandoned.

That under General Braddock was entirely frustrated. In marching through the woods, when about ten miles distant from Fort du Quesne, the army was surprised by an attack, on every quarter, from an invisible enemy. A body of French and Indians having been posted, every man behind a tree, at a convenient distance, made a sudden fire upon them, and killed and wounded a great number. They could not see, but they could hear their enemies; and the yells of the savages, which of all noises is the most horrid, added much to the terror with which the army was seized. The fire was returned, but to little purpose. The general was mortally wounded; his secretary, eldest son to Governor Shirley, shot through the head. Sir Peter Halkett, and many of the officers were among the slain; Sir John Sinclair, and many others, among the wounded. The army retreated under the command of Lieut.-colonel Gage. General Braddock died in the woods soon after the action.

His body was buried in the most secret manner, to prevent indignities from the savages, if the place should be discovered by them: and thus ended this unfortunate expedition. There was not the least apprehension of a force in that quarter, equal to that of the English. Much confidence was placed in an experienced English general. All this tended to make the disappointment greater.

The main strength of the enemy was expected to oppose the army destined to Crown Point: neither the general, nor the greater part of that army, had ever seen service. Some part of the officers and men had been employed in the last war against Louisburg. The news of Braddock's defeat might well cause a general despair of Johnson's success.

Soon after, letters were received from him by lieut.-governor Phipps, governor Shirley being absent, urging an immediate reinforcement of the army then under his command at or near lake George. He had not only received advice that the strength of the enemy was superior to what had been expected, but his own strength was inferior to what he had been made to believe he might depend upon, when he accepted of the command. It is doubtful whether Mr. Shirley ever intended that the two regiments of regular troops should serve under a provincial general; but the deduction of the Massachusetts and New Jersey forces he could not have in view. General Johnson was not only disappointed, but was much displeased; and it caused a breach between him and governor Shirley, to whom he supposed it to be owing, which was never made up.

At best, the issue of this expedition was very doubtful, and every man who had the interest of his country at heart was full of anxiety.

Such extraordinary incidents as had given success beyond all rational probability, to the expedition against Louisburg, and in as wonderful a manner had defeated the expedition under the Duke d'Anville, it was presumption to expect.

The Massachusetts assembly stood prorogued to the 24th of September. The lieut.-governor was advised to order a special session, by proclamation, on the 5th. There had been no precedent for this in the province. Recourse was had to precedents in parliamentary proceedings. When the Dutch

threatened an invasion in 1667, King Charles II. having prorogued the parliament to October 10th, called, by proclamation, an intermediate session on the 25th of July. The Dutch did what mischief they could, and withdrew their ships. The parliament was again prorogued to the 10th of October, and, as no business was done, there was no room to call in question the validity of any proceedings.

The necessity of the case induced Mr Phipps to comply with the advice given him, and the assembly having sat every day, Sunday included, from the 5th to the 9th, and made provision for raising two thousand men as an additional force, were prorogued to the 10th of October; when it was thought proper, by an act passed for that purpose, to establish all the proceedings of the intermediate session, and sufficient ground for a refusal to obey them, which might be of very bad consequence.

On the 15th of September, an express arrived from General Johnson with intelligence which relieved the people of Massachusetts bay from their fears.

The English army, which had marched near to lake George, formed a camp, which they fortified with the best breast-work the time would admit of, such as trees felled for that purpose.

Advice was soon received of an army of French and Indians, upon their march from South bay. Colonel Ephraim Williams, a Massachusetts officer, was ordered to march out with one thousand English and two hundred Indians, and to endeavour to ambush the enemy; but he was met by them sooner than he expected, and fell in the beginning of the action. The men fled back to the camp with great precipitation. Many of them were killed or badly wounded, and those who escaped came to the camp in tumultuous hurry, and struck terror into the whole army. The enemy, which consisted of regular troops, militia, and Indians mixed, came on in good order. The English within the camp lay flat upon the ground, until they had received the first fire, which was made at a great distance, and with muskets only, the enemy having no artillery. The cannon from the English camp did no great execution.

The baron Dieskau, general of the French army, soon received a wound, whether from the English, or from his own army, is uncertain. It was a fortunate stroke for the English, as it disabled him for any further service, cooled the ardour of the French, raised the spirits of the English, and caused both French and Indians to retreat, leaving their general a prisoner. In the action, and in their retreat, it was reported that the enemy lost one thousand men; but this was much too large a computation. Of the English, about one hundred and thirty were killed and mortally wounded; among whom was colonel Titcomb of the Massachusetts, who behaved with great bravery in the expedition against Louisburg. Hendrick also, a Mohawk chief, was slain. He had been influenced by general Johnson to join the English army, at the head of two or three hundred Indians of different tribes.

Johnson, it was allowed by all, discovered a firm, steady mind, during the action. He received a shot in one of his thighs, which he complained of as very painful, but not dangerous.

The enemy was so much dispirited by the loss of their general, and the garrison left at Crown Point was so weak, that it is probable it would have been an easy acquisition, if an immediate attack had been made; but the general did not think it advisable.

This repulse of the enemy caused great rejoicings in the several colonies, and it was represented in the most favourable light in England.

The Massachusetts assembly, though they could find no fault with the conduct of the general in the field, or as is related to the common interest with which he was intrusted, yet they were not pleased with his distinguishing New York in his correspondence; and, in a message to the lieutenant-governor, they desired he would acquaint general Johnson, that, as the Massachusetts province bore the greatest part of the charge and burden of the expedition, it ought to be considered the principal in all respects; and that all papers and advices of importance ought to be first sent to that province; and that the French general, and other prisoners of note, ought to be sent to Boston. General Johnson's correspondence was, notwithstanding, principally with the government of New York. Dieskau and the other prisoners were sent there; and it was most convenient for the wounded that they should be sent there also, it being nearest to the army, and the passage to it being by water.

Thus arose a coldness between the province and the general, which seemed to give him no great concern. All he could expect from the colonies bore no proportion to his expectations from government in England, which were fully answered. The king conferred on him the dignity of a baronet. The parliament made him a grant of 5000*l.*, or rather compelled the colonies to the payment of 5000*l.*, by deducting so much from the sum intended as a reimbursement to the colonies, and appropriating it to general Johnson's benefit.

Massachusetts assembly, by repeated votes, declared their sense of the expediency of proceeding upon the expedition without delay; and that, at least, an attempt ought to be made to remove the enemy from Ticonderara, where they had taken post; and commissioners were sent to Albany, and authorised to make all necessary provisions for that purpose. But it grew late in the year, and the army was disbanded without effecting any thing more than the repelling of an enemy, who, if this expedition had not been formed, would not have come out against the English, or not in this quarter.

The other part of the plan of measures for the present year fell short of what was intended.

After the consultation at Alexandria, governor Shirley returned to Boston, and having attended an assembly for the election of counsellors, and other ordinary business, he left Boston, and proceeded westward, in order to prepare for the expedition against Niagara. Upon general Braddock's death, the command of the forces devolved upon him. This did not hinder his proceeding to lake Ontario, where he spent the remainder of the summer and the autumn in building forts at Oswego; reserving the attempt upon Niagara for the next season. While he was at Albany, returning to Boston, he received a commission appointing him commander in chief of all his majesty's forces upon the continent of North America. At this moment, he was in his zenith. His friends saw the risk he was running, and wished he had contented himself with his civil station. The affairs of North America called for a general of the first military accomplishments. By his letters from Albany, he recommended to the assembly the appointment of commissioners to confer with commissioners from the other colonies upon measures for the further prosecution of the war. But being chagrined at so little effect from the ex-

pense of the last year, they received those recommendations very coldly, and declined a compliance, alleging, that "securing his majesty's territories is a design which his majesty only is equal to project and execute, *and the nation to support*; and that it cannot reasonably be expected that these infant plantations should engage as principals in the affair."

He went from Albany to New York, where he spent several weeks in consultations with the officers of the army upon the necessary preparations for the measures of the next year; and did not return to his own government until the middle of winter.

The French forts at Beau Sejour, Bay Verte, and the river St. John, in Nova Scotia, had been recovered. The state of that province was, notwithstanding, deemed very insecure; many thousand French inhabitants still continuing in it. They had been admitted by lieutenant-governor Armstrong, after that province was reduced in the reign of queen Anne, upon such a sort of oath, as to consider themselves rather in a neutral state between England and France, than in a subjection to either, and from thence they took the name of French neutrals. Being all Roman catholics, and great bigots, and retaining the French language, they were better affected to France than to England. In civil matters, they had been more indulged by the English than they would have been by the French, being in a manner free from taxes; and a great part of them were so sensible of it, that they wished to avoid taking part on the one side or the other. But the Indians, who were engaged on the part of the French, had constant intercourse with them, their houses being scattered, and where there were any number together to form a village, open to both French and Indians from Canada, without any sort of defence. And it was the general opinion, that, if any attempt should be made by the French to recover the province of Nova Scotia, the whole body of the Acadians, some from inclination, others from compulsion, would join in the attempt.

The commander-in-chief of his majesty's ships, then at Halifax, as well as the governor of the province, supposed that the principle of self-preservation would justify the removal of these Acadians; and it was determined to take them by surprise, and transport them all, men, women, and children, to the English colonies. A few days before the determination was executed, notice was given to the governors of the several colonies to prepare for their reception. Far the greatest part were accordingly seized by the king's troops, which had remained in the province, and hurried on board small vessels prepared to receive them, with such part of their household goods as there was room for; the remainder, with their stock of cattle, the contents of their barns, their farm utensils, and all other moveables, being left behind and never recovered, nor any satisfaction made for them.

In several instances, the husbands who happened to be at a distance from home, were put on board vessels bound to one of the English colonies, and their wives and children on board other vessels, bound to other colonies remote from the first. One of the most sensible of them, describing his case, said, "it was the hardest which had happened since our Saviour was upon earth."

About a thousand of them arrived at Boston, just in the beginning of winter, crowded almost to death. No provision was made, in case government should refuse to take them under its care. As it happened, the assembly were sitting when they arrived; but

several days were spent without any determination, and some aged and infirm persons, in danger of perishing, were received on shore in houses provided for them by private persons. At length the assembly passed a resolve, that they should all be permitted to land, and that they should be sent to such towns as a committee appointed for that purpose should think fit; and a law of the province was passed, to authorize justices of the peace, overseers of the poor, &c., to employ them in labour, bind them out to service, and, in general, provide for their support, in like manner as if they had been indigent inhabitants of the province.

Favour was shewn to many elderly people among them, and to others who had been in circumstances superior to the rest, and they were allowed support without being held to labour. Many of them went through great hardships, but in general they were treated with humanity. They fared the better, because the towns where they were sent, were to be reimbursed out of the province treasury, and the assembly was made to believe that the province would be reimbursed by the crown; but this expectation failed. It was proposed to them to settle upon some of the unappropriated lands of the province, and to become British subjects, but they refused. They had a strong persuasion, that the French king would never make peace with England, unless they were restored to their estates. A gentleman who was much affected with their sufferings, prepared a representation proper for them to make to the British government, to be signed by the chief of them in behalf of the rest, praying that they might either have leave to return to their estates, or might receive a compensation; and he offered to put it into the hands of a proper person in England to solicit their cause. They received the proposal thankfully, took the representation to consider of, and, after some days, returned it without having signed it. They were afraid of losing the favour of France, if they should receive or solicit for compensation from England. Despair of the free exercise of their religion, was another bar to every proposal tending to an establishment.

The people of New England had more just notions of toleration than their ancestors, and no exception was taken to their prayers in their families, in their own way, which, I believe, they practised in general, and sometimes they assembled several families together; but the people would upon no terms have consented to the public exercise of religious worship by Roman catholic priests. A law remained unrepealed, though it is to be hoped it would never have been executed, which made it a capital offence in such persons to come within the province. It was suspected that some such were among them in disguise; but it is not probable that any ventured. One of the most noted families, when they were dissuaded from removing to Quebec, lest they should suffer more hardship from the French there than they had done from the English, acknowledged they expected it; but they had it not in their power since they left their country, to confess and to be absolved of their sins, and the hazard of dying in such a state, distressed them more than the fear of temporal sufferings.

When these unhappy persons despaired of being restored to their own estates, they began to think of a removal to places where they might find priests of their own religion, and other inhabitants of their own language. Many hundreds went from the New England colonies to Hispaniola, where, in less than

a year, by far the greatest part died. Others went to Canada, where they were considered as an inferior race of Frenchmen, and they were so neglected, that some of them wrote to a gentleman in Boston who had patronised them, that they wished to return. In 1763, Monsieur Bougainville carried several families of them, who had found their way to France, to the Malouines, or Falkland Islands, where they remained but a short time, being turned off by Mr. Byron. Bougainville says, "they are a laborious intelligent set of men, who ought to be dear to France, on account of the inviolate attachment they have shewn as honest but unfortunate citizens." Thus they were dispersed through the world, until they were in a manner extinct, the few which remained being mixed with other subjects in different parts of the French dominions.

The whole surviving force, employed by the colonies upon the expedition under general Johnson, returned before winter, except six hundred men, which remained to keep post at lake George, where a wooden fort was built, and at another station near Hudson's river, which took the name of fort Edward.

These, with some small vessels and a large number of boats on the lake, and works erected by Mr. Shirley at Oswego, where he had placed garrisons, and lodged large magazines of provisions and military stores, were all the strength of the English upon the western frontiers, at the close of the year 1755. The French had a strong fort at Crown Point, and works at Ticonderoga, another fort at Cataraqui, upon or near lake Ontario, called Fort Frontenac, and another near the falls of Niagara.

During Mr. Shirley's absence from his government, he had held a conference with several Sachems of the six nations, and had promised to build forts in the countries of the Onandagoes, Oneidas, and Tuscaroras, and to provide garrisons for and to send men to the Cayugas, to protect and assist them in their husbandry, and he had received assurances from the other two nations, the Senekas and Maquas, that they would join him in the spring.

The year 1755 was rendered remarkable by an earthquake more violent than any other since the discovery of America. It seems to have been greater in Massachusetts than any other colony. In Boston, many chimneys and walls of houses were much shattered, but no house thrown down. A stack of chimneys, in one large house, was lifted off from the wall of the house, and brought so far upon the roof, that if it had been an inch or two more, that part of the stack which was above the roof must have fallen over, and made a passage through the house to the cellar. At Newport, on Rhode Island, it was less sensibly felt than on the main land near the island: no lives were lost. This was the third remarkable earthquake in New England, since the English arrived there.

Of the first, in 1638, we have but an imperfect account. The inhabitants were few in number. At the time of the second, in 1727, there was no remembrance nor tradition of the effect of the first upon the minds of the people. That, in 1727, was accompanied with a most tremendous noise, which greatly increased the terror from the danger of the shock, which was not greater than this of 1755. Besides, the first great shock was followed by others less violent, the same night: and such smaller shocks were frequently felt for several weeks after. The places of public worship were then crowded, one day after another, in most parts of the country; and a strong and permanent religious impression was made upon the

minds of many people. This, in 1755, had less of that kind of effect. Public fasts were ordered by authority, but the terror was soon over, there being very few repetitions of the shock. A great part of the people remembered the earthquake in 1727, and there had been other less violent ones in a few years, which made them more familiar, and lessened the apprehension of danger in proportion.

(1756.) It was part of the plan for the year 1756, to remove the French from the lakes; and as soon as the governor returned to Boston, he called on his assembly to afford their assistance.

They were not in a temper suddenly to hearken to this call. Many of them were not satisfied, that a better use might not have been made of the repulse of the French the last year, than remaining altogether on the defensive. Accounts had been received that General Johnson was expected at Ticonderoga and Crown Point immediately after Dieskau's defeat, and that, if he had proceeded, both places would have fallen into his hands without defence.

At first they desired to be wholly excused: any further charge must ruin them. The treasure and power of France were likely to be employed against the English colonies. They hoped his majesty would graciously afford a sufficient force to oppose so powerful an enemy.

The governor, in his reply, said to them, that their furnishing a quota of men for the service of the next year would probably free them from future taxes, as it would remove that enemy which otherwise would make them to be necessary; and the most likely way to obtain a compensation for what they had already done would be by a further vigorous exertion. They assigned a further reason for their non-compliance. They had not been able to borrow money sufficient to pay the charges of the last year, and it was absolutely out of their power to provide for the charge of the next.

This objection he obviated too, by an offer to lend the province 30,000*l.* sterling, out of the monies which had been remitted for the king's troops, and to repay himself out of the grant which it was expected parliament would make to the province for last year's charges; but with this caution, that an act of assembly should pass for levying a tax in the years 1757 and 1758, of 30,000*l.* sterling, as a collateral security, the act to have no effect if the grant should be before made by parliament.

Declarations made to serve political purposes oftentimes will not bear a strict scrutiny.

The province was never in better credit than at this time. They could have borrowed enough to pay the charges of the past and present year: but this mode of proceeding induced many members of the assembly to come into the measure. They were made to believe it tended to facilitate the obtaining of a grant from parliament.

In this way the assembly was brought to agree to the governor's proposal, and to resolve to make provision "for raising 3,000 men, in order to remove the encroachments of the French from his majesty's territories at or near Crown Point; in humble confidence, that his majesty will be graciously pleased, hereafter, to give orders for defraying the expense of this expedition, and for establishing such garrisons as may be needed, in order to maintain the possession of that country." They intimated to the governor, that it would encourage men to enlist, if a gentleman belonging to the province might have the chief command; and this intimation was not disagreeable to him, as he could

with better grace decline making the offer to Sir William Johnson.

Mr. Shirley had formed a plan to raise 3,000 men in Massachusetts bay, as the proportion of that province to an army of 9,000, to be completed by Connecticut, New Hampshire, Rhode Island, and New York. Mr. John Winslow, who was second in command the last year at Nova Scotia, was appointed commander-in-chief in this service.

It was expected that a proper bounty would soon encourage the whole number to enlist; but the enlistment went on slowly, and an act of assembly passed to make up the deficiency by impressing men out of the militia; but this act was not seasonably executed; for the governor, who left the province the latter part of April, complains, in a letter of the 25th of May, that there was likely to be a deficiency of 500 men; and Winslow urged, not only to make up that number, but to raise an additional force. When the army arrived at Fort Edward, either Ticonderoga and Crown Point had been really made stronger than was expected, or appeared more formidable from some other cause; and men of judgment were under great concern, lest an unsuccessful attempt should be made by a body of raw, undisciplined militia, and they should be repelled, scattered, and cut to pieces.

On the other hand, it was painful to think of losing another year, by the continuance of the army in a state of inactivity.

Mr. Shirley had remained at Albany and New York, directing the necessary measures for the king's service upon lake Ontario, completing the armed vessels, whaleboats, batteaus, provisions, and warlike stores, necessary for strengthening Oswego, and carrying on an expedition against the French forts at Cataragui and Niagara.

While at New York in the month of June, he received despatches from the secretary of state, signifying that it was his majesty's pleasure that he should come to England, in order to his being consulted upon measures for carrying on the war; that Lord Loudoun would soon leave England, in order to take the command of his majesty's forces, which, in the mean time, Mr. Shirley was to leave to general Abercrombie. Though this had the appearance of letting him down tenderly, it was a mortifying stroke, and the more so, as it was altogether unexpected. It seems to have proceeded from a more mature consideration of his want of military knowledge, and his unfitness for so great a command. He was never charged with want of fidelity; and the state of his own affairs, after he had quitted the service shewed that he had paid more attention to the public, than to his private fortune. He was obliged to continue at New York many weeks to settle his accounts, which gave him much greater trouble, as the whole affairs of the army had been carried on by agents employed to purchase provisions, stores, &c., on the best terms they could, and not by contractors at certain rates. Here he had the further mortification of receiving news of the loss of Oswego, taken by Montcalm, the 14th of August, with all the shipping, stores, &c., of every kind, and of immense value. The garrison were prisoners of war. Colonel Mercer, chief in command, was killed by a cannon ball.

Mr. Shirley was charged with not giving a full information of the condition of the place to his successor in command. He denied the truth of the charge, and attributed the loss of the place to the want of skill, or courage, or both, in those with

whom the defence of it was entrusted. Neglect from many, who had been servile courtiers a short time before, convinced him of the truth of the old observation, "that you are to number your friends so long as you continue in prosperity, and no longer."

He wished to spend a little time with his family in Boston; but his successor, judging that he should be better able to transact business with the assembly after the governor had left the province, called on him repeatedly, by letters, to embark, and he sailed several weeks sooner than otherwise he would have done.

Mr Shirley made no doubt of his return to his government, if he could not obtain a better. Soon after his departure, private letters from England mentioned the high displeasure of the duke of Cumberland at his conduct, and some mark of it was feared by his friends. Before he arrived, a successor to his government was nominated. Considering how much of his life had been spent in public service, how small his emoluments had been, and especially considering the acquisition of Louisburg, and the preservation of Nova Scotia, in the former war, he seems to have met with hard treatment. He suffered, besides, by the delay in passing his accounts; and some persons employed under him in the service were great losers, by not having observed the forms required in the army; though, as he alleged, the whole expense of victualling the army, by his accounts, did not exceed four-pence per day for each man; and the government contract, under his successor, was at sixpence per day; the same articles of charge being contained in the first as in the last. There was no inquiry into his conduct. After long solicitations, he obtained the small government of the Bahama islands.

When Oswego surrendered to the French, a body of English troops were on their way from Albany in order to strengthen the garrison. The French force was represented to be very formidable, and it was expected, would come down to Albany; but while general Webb was employing the English troops in felling trees to fill up or stop the passage through Wood Creek, general Montcalm took the other route, and went back by the river St. Lawrence, in order to preserve Crown Point and Ticonderoga from the army under Winslow. This army consisted of seven or eight thousand men. If it was advisable for them to have proceeded at any time this season, it was when the army under Montcalm had marched against Oswego.

Just at this time the general command of the forces were changed, and all affairs seemed to be at a stand

After Lord Loudoun had received information of the state of the army, and of the force, and success, of the enemy, it is probable that he laid aside all thoughts of acting upon the offensive for that campaign; though he did not make his resolutions public until October. In the mean time he received intelligence, that the enemy, flushed with success, had arrived at Ticonderoga. He therefore ordered such of the regular forces as could be spared, to join Winslow's army, which it was supposed would be attacked by Montcalm; and it is probable that the intelligence which was carried by scouting parties to Montcalm of this junction, diverted him from his design. As soon as the main body of the enemy went back to Canada, the provincial army broke up, and returned to the government in which it had been raised. Many had deserted, and more had died, while they lay encamped. Many died upon

the road, and many died of the camp distemper after they were at home.

The measures of this year were in every part unsuccessful. When the Massachusetts forces returned, no provision had been made by government for their pay. Three commissioners were appointed to apply to Lord Loudoun at Albany, to enable the government to discharge this debt, but without success, and provision was made by the assembly as usual. Lord Loudoun consulted with the commissioners at Albany, upon the expediency of his meeting the governors, with commissioners from the assemblies of the New England colonies, at Boston, in order to facilitate the measures of the next year; and intimated his intention to propose such a meeting. Whatever engagements were jointly made, he supposed might be depended on.

In former years, when each assembly was left to send what they thought fit, the number had always been short of expectation.

(1757.) Lord Loudoun came soon after to Boston, where, besides Mr. Phipps, lieut governor of Massachusetts, he found Mr. Fitch and Mr. Hopkins, the governors of Connecticut and Rhode Island, and commissioners from each of the assemblies and also from the assembly of New Hampshire.

The number of men proposed to be raised by the four governments was four thousand only. This being less than expected, met with no opposition; but it was as difficult to settle the proportion of each government, as if the number had been much larger. After ten days spent by the commissioners without agreeing, Lord Loudoun proposed to them a proportion, in which they acquiesced, and promised to recommend a compliance to the respective assemblies. Massachusetts, one thousand eight hundred; Connecticut, one thousand four hundred; Rhode Island, four hundred and fifty; New Hampshire, three hundred and fifty. Respect was had to the force employed by Massachusetts, both by sea and land, exclusive of this force.

Lord Loudoun offered to victual the men, and to furnish ammunition and artillery stores, and to admit into the king's hospital those whose eases required it. He would not say where they would be employed, lest the enemy should come to the knowledge of it; but, as he knew where the assemblies desired they should not be employed, he declared he had no intention to carry them there; and, as it had been the practice to raise men for one year only, he did not expect to detain them so long as that.

These proposals were very agreeable to the commissioners. The assembly of Massachusetts bay, which was then sitting, discovered a dislike to the demands which had been made by Lord Loudoun, for barrack articles and quarters for the king's troops, when they occasionally came into the province; but it proceeded to no length, and the demands were complied with.

Mr. Phipps, the lieut.-governor, rejoiced in the success of this convention. His declining age and health would not admit of his giving close attention to it; but Lord Loudoun facilitated this measure by application to the commissioners, as a board, and to such of them personally, as had the greatest influence at the board, or in the assemblies. Much respect was shewn to his lordship, and there had been, at no time, a fairer prospect of a good harmony between the officers of the crown and the assemblies and people of the colonies, than there was at this time

Although the plan of operations for the next year

was not made public, enough appeared, to make it probable that the principal object was the reduction of Louisburg, by a competent naval force, and the regular troops; and that the provincials, joined to such a number of regulars as should be judged proper, were to remain on the defensive, as guards and garrisons for the protection of the frontiers.

In all former wars between England and France, the Indians, upon the eastern frontiers, had taken part with the French. The poor creatures had lately been visited with the small pox, which is remarkably fatal to them, and they were reduced to so small a number that the French neglected them; and fearing they should irrecoverably lose the territory which remained to them, they desired to continue in peace, and made proposals for renewing the treaty. The lieut.-governor, willing to take the advantage of this pacific disposition, had determined to meet the assembly the last of March, but, a few days before the time of meeting he fell sick, and died the 4th of April.

It fell to the council to act in a twofold capacity, as governor, and as the second branch of the legislature. Not judging it convenient to proceed on a treaty with the Indians, until a governor should arrive in the province, and little other business being necessary, after several votes for completing the levies, and an act for laying an embargo on all vessels in the several harbours, within the province, the assembly was dissolved. The design of this act was to prevent the discovery of the expedition against Louisburg. A flag of truce from thence was detained at Boston, and the people belonging to her put under confinement.

Before the session, in May 1757, for the election of counsellors, letters came to hand from Mr. Bollan, the province agent in England, informing the council that the king had been pleased to appoint Thos. Pownall, Esq., to be the governor of the province in the room of Mr. Shirley; and that the newly appointed governor was to embark for his government by way of Halifax, the next day after the date of the letters. The council, therefore, in a speech to the house, recommended to act only upon business of great necessity, and to defer all other matters until the governor's arrival. This was a compliment to the new governor, but did not prevent either house from going on with whatever business came before them as usual.

Among other matters, a bill was brought in and passed both houses, for making the district of Danvers a town, by which a right would be acquired of sending two members to the general assembly. By the king's instructions to the governor, he was strictly charged to consent to no act for making a new town, unless, by a clause in it, there should be a restraint of this power of sending representatives; and Danvers, a few years before, when it had been separated from the town of Salem, was made a district and not a town, because districts had not this power. Every governor and lieut governor had observed this instruction; and it was thought by some of the council an ill-judged measure, to concur with the house in passing this bill, as it carried the appearance of influence by the house, on whom they depended for their election. The house had always disliked the instruction, as it prevented the increase of the number of members, which added to the importance of the house. The council should have approved of it, because, as the importance of the house increased, that of the council lessened in proportion; especially in all elections which were made by the joint votes of council and house. In earlier times of the consti-

tution, when the powers of the governor had devolved upon the council, they had been very scrupulous in maintaining the prerogative in every part, and considered themselves under as strong obligations to adhere to the observance of the royal instruction, as the governor or lieut.-governor. There had not been any instance of a protest in form, in imitation of the practice in the house of lords. Upon this occasion, one of the council desired his dissent might be entered, and it stands upon record.

"The question, whether the bill entitled an act for erecting the district of Danvers into a township shall be enacted, having passed in the affirmative, I dissent for the following reasons:—

"First. Because it is the professed design of the bill to give the inhabitants, who now join with the town of Salem in the choice of representatives, a power of choosing by themselves; and the number of which the house of representatives may at present consist, being full large, the increase must have a tendency to retard the proceedings of the general court, and to increase the burden which, by their long session every year, lies upon the people, and must likewise give the house an undue proportion to the board of the legislature, where many affairs are determined by a joint ballot of the two houses.

"Second. Because, there being no governor nor lieut.-governor in the province, it is most agreeable to his majesty's commission to the late governor, to the message of this board to the house, at opening the session, and, in itself, is most reasonable, that all matters of importance should be deferred until there be a governor or lieut.-governor in the chair.

"Third. Because the board, by passing this bill, as the second branch of the legislature, necessarily bring it before themselves, as the first branch, for assent or refusal; and such members as vote for the bill in one capacity, must give their assent to it in the other, directly against the royal instruction to the governor, when the case is in no degree necessary for the public interest; otherwise their doings will be inconsistent and absurd.

"Council Chamber, Thomas Hutchinson."  
June 9, 1757.

A bill, receiving the assent of the governor contrary to the instructions given by the king, it is natural to suppose, would have been disallowed by the king; but the council kept no correspondence by letters with the king's ministers, and this bill, with others, received the royal allowance, probably without being observed to be contrary to the instructions; which would not have been the case, if there had been a governor or lieut.-governor, it having been their constant practice to make their observations upon every act, when sent to England to be laid before the king.

The military operations for the year 1757 were carried on upon the plan which had been conjectured. The men raised in Massachusetts bay and the other colonies of New England, were posted at Fort William Henry, Fort Edward, and other places on the frontiers, under the command of an officer of the regular forces.

Lord Loudoun with the main body of the regular troops, under the convoy of one fifty-gun ship, one twenty, and two sloops, the whole fleet consisting of ninety sail, and the troops being in number 6,000, left New York the 20th of June, to proceed to Halifax. The fleet had lain ready for some time, expecting intelligence of the arrival of men of war and transports from England, destined also to Halifax; but, it growing late, at length sailed without advice.

Soon after the news of the sailing of this fleet, intelligence was brought to Boston, of six French ships of the line and one frigate, seen off Cape Sable; which filled with anxiety every man who had the public interest at heart, until advice was received of the arrival of the English fleet at Halifax, ten days after it left New York.

Admiral Holburne, with the fleet and transports from England, joined those from New York, at Halifax, the 9th of July.

In this fleet came Mr. Pownall, the newly appointed governor for Massachusetts bay; and from Halifax he proceeded to Boston, where he arrived the 2nd of August. This was his third passage to America. In 1754, when Sir Danvers Osborne came over to the government of New York, Mr. Pownall was in his family, and brought with him, or received soon after, a commission as lieutenant-governor of New Jersey, the governor whereof, Mr. Belcher, was old and infirm; and in case of his death, Mr. Pownall would probably have been his successor. With a view to make himself acquainted with the affairs of the colonies, he was present at Albany while the commissioners held their meeting there, and, soon after, made a visit to Massachusetts bay; and Mr. Shirley appointed him, in conjunction with a gentleman of the council and another of the house, to solicit the aid of the colonies of Pennsylvania and New York, in carrying on the war. He also accompanied to Alexandria the governors, &c., who met General Braddock at that place. In 1755, he went back to England, and returned to America with Lord Loudoun in 1756, but continued there a few months only. Upon his arrival again in England, he was appointed to succeed Mr. Shirley. He had acquired great knowledge of the geography, history, and polity of the several American colonies, and came into office with many advantages.

Great part of the people of the province who had been attached to Mr. Shirley, were, in principle, friends to government, and disposed to support his successor in pursuing the ends of government. Many who had been inimical to him, and who kept up a strong party against him, though always the minority, had not the esteem of the people, any further than they acquired it by their opposition to government, and professions of maintaining liberty. These were the men who were most forward in offering incense to the new governor; and these he took most pains to secure to his interest, depending upon the principles of those who were in favour of government, without immediate respect to the person of the governor, to promote his measures for the public good. But besides these, there were many who were attached to Mr. Shirley, merely because he kept them in places, and, upon their recommendation, disposed of places to their friends, and also hearkened much to their opinion and advice, in many affairs which came before the general assembly. Between these persons, and many of those who had been in opposition to Mr. Shirley, there was great personal enmity; and it soon appeared impracticable to unite them in public measures. In a short time most of the chief friends to Mr. Shirley became opposers of Mr. Pownall, and most of Mr. Shirley's enemies became Mr. Pownall's friends. A part, however, of those who had been in favour of government from principle, continued to support the measures of government. In the latter part of his administration, they who had acquired the favour of the people by opposing Mr. Shirley, lost it by supporting Mr. Pownall, and were no longer able to do him any more service.

They failed of their elections into the assembly, where only they could be of use, and when he left the province, he observed himself, that he had very few friends remaining in the house.

The governor scarcely had time to inquire into the state of public affairs, before an express arrived from Major-General Webb at Fort Edward, informing him that a large army of French and Indians were in motion, in order to attack the forts under his command, and urging, that all possible assistance should immediately be afforded. The inhabitants of the province, by charter, cannot be carried beyond the limits of it except by their own consent, or by virtue of an act of the general assembly.

The governor with the council had, in many instances, since the charter for the public safety, done those acts, which, strictly and constitutionally, the general assembly only had power to do.

Upon this occasion the governor caused the council to be convened, and required their opinion, whether, in case of an attack made by the enemy upon his majesty's forts without the limits of the province, it would be a breach of duty in him to order the militia to march beyond those limits, the restriction in the charter notwithstanding.

The council considered the marching of the militia beyond the bounds of the province, to join the other forces there, as tending more to the defence of the province, than if the militia should wait within its limits, to meet the enemy there; and though an order for that purpose was not within the words, yet it was within the reason, of the charter; and, therefore, they gave their opinion, that he should require the militia to march.

In two or three days more, accounts arrived of the progress of the enemy, to the 4th of August, when they laid siege to Fort William Henry. The first step taken by the governor was the creation of a new officer not known in the province before; and Sir William Pepperell received a commission as lieutenant-general over all the militia throughout the province.

Orders were then issued by the governor, to the colonels of the several regiments through the province, to cause every man to be completely furnished with arms and ammunition according to law; to hold himself in readiness to march at a minute's warning; and to observe the orders of Sir William Pepperell.

Sir William repaired to the town of Springfield, to collect there a magazine of provisions and military stores, and to issue his orders from thence.

Soon after his arrival there, he received intelligence of the surrender of Fort William Henry on the 9th of August, and immediately communicated the same by express to the governor at Boston; earnestly urging that all the aid possible should be afforded.

The governor, by advice of council, issued orders, that the several troops of horse, and one-fourth part of all the regiments of foot, the counties of York, Nantucket, and Duke's county excepted, should be drawn out immediately for the protection of the province, and for the aid and assistance of his majesty's forces. A train of artillery was also ordered to be provided, and a regiment of artillery to be formed. The governor proposed to march himself, and to take the command of the force of the province; and his company of cadets had orders to be ready to attend him. Sir William Pepperell was ordered to require the inhabitants west of Connecticut river to destroy their wheel carriages, and to drive in their cattle. In case of the approach of the enemy, it

was proposed to make a stand on the east side of the river.

Several regiments, from the counties of Hampshire and Worcester, marched towards Fort Edward, into the unsettled country beyond Albany; but, before they reached the fort, they were stopped by orders from General Webb, who was convinced that the enemy was satisfied with the acquisition of Fort William Henry, and did not design to attack Fort Edward; and before the 18th of August, the governor received such intelligence as caused him to revoke his orders for raising the militia.

All that were upon the march, as soon as they came to the knowledge of General Webb's orders, returned home.

It is almost incredible, that 4 or 5,000 men, most of them Canadians and savages, should give such an alarm to so great a province.

Reports were spread among the people, that, after the surrender of the fort, the garrison had been massacred by the Indians, by the countenance and connivance of the French general; and it is certain, that, when a detachment of the French army was escorting the prisoners on their way to Fort Edward, the Indians, who had been disappointed in their expectations of plunder, fell upon the English, and stripped many of them. The two colonels, Munro and Young, with a great part of the prisoners, either had not left, or went back to the French army, and complained of this breach of the capitulation. About six hundred fled into the woods, some quite, and others almost, naked; and the first who came into Fort Edward reported the massacre of the rest. Some few were killed, or never heard of; the rest came in, one after another, many having lost their way in the woods, and suffered extreme hardships. The commander of the Massachusetts forces, colonel Frye, was thought to be lost; but, after wandering about some days, came in with no other apparel than his shirt. The prisoners acknowledged that the French strove to restrain the Indians, but were overpowered.

When the accounts of the charge attending this alarm were exhibited to the general assembly, it was then said by many to be more than necessary. The charge, however, was allowed. The men were paid at the same rate as the soldiers who had enlisted into the service, and were then on the frontier. The members of the assembly have always taken care that justice should be done to the soldiers in public service, whether they have been impressed without any promise of pay, or enlisted upon encouragement, or assurances given.

Upon the news of the loss of Fort William Henry, an express was sent to Lord Loudoun, at Halifax, to inform him of it, and of the probability that Fort Edward would meet with the same fate, and that the enemy would make advances towards New England and New York.

The express met his lordship, with the forces under his command, on his passage from Halifax to New York. He wrote to governor Pownall, that he proposed, as soon as he should come to land, to march directly to meet the enemy, and hoped to give a good account of them. He recommended to the governor, in the mean time, to harass and distress them, but not to hazard an engagement.

While the English fleet and army were at Halifax, preparing for a descent upon the island of Cape Breton, endeavours were used to obtain the fullest knowledge of the enemy's force there; but the accounts varied, and were uncertain. The English

troops were embarked, in order to proceed on the 1st of August. On the 4th of August, a French prize was brought into Halifax, having left Louisbourg a few days before. It appeared, by the examination of the prisoners, that there were seventeen ships of the line and twelve frigates then at Louisbourg, with four thousand regular troops, beside the garrison. The summer was far advanced. The troops, without great loss, might make good their landing at Chapeau-rouge bay; but there was no probability of carrying the town against so strong a land force, and a sea force superior to that of the English. A defeat would have exposed the English colonies to the ravages of the enemy, and would have been of fatal consequence to the British interest in America. It was therefore determined, in a council of war of the sea and land officers, by all but one voice, not to proceed.

The English fleet, however, remained waiting the motions of the French fleet, until the 25th of September; when, cruising off Louisbourg, a violent storm arose, in which the *Tilbury*, a sixty gun ship was driven upon the rocks and lost; ten or twelve other ships were dismasted, and others damaged, and the whole fleet scattered, most of which returned to England.

The French fleet had an opportunity, the whole month of October, of laying waste the sea-ports of New England; and the people of Boston were not free from fears, until news arrived of its having sailed for Europe.

The return of Lord Loudoun, with his troops, freed the colonies from apprehensions of danger from any new inroads of French or Indian enemies; but winter was approaching, which caused all thoughts of offensive measures to be laid aside. Thus ended the third unsuccessful campaign in America.

When the governor arrived, the general assembly stood prorogued to the 16th of August.

Nothing memorable happened in this short session, except a proposal from the governor to the assembly, to pass an act, "to empower and require the civil magistrate to take up and assign quarters for such of the king's troops as should come into the province, under such regulations, that the troops might be well accommodated, and the province be burdened as little as possible."

The council and house, in a joint message to the governor, excused themselves, and supposed the barracks at the castle, which were intended to accommodate one thousand men, together with the barrack utensils, fire, and light, were all the provision proper to be made by the province.

The next session began the 23d of November. In the recess, recruiting parties arrived in Boston from Nova Scotia. They made application to the governor for quarters. He directed them to apply to the magistrates in Boston. They declined doing any thing. Upon representation to Lord Loudoun, at New York, he sent an express to the governor; made a demand, in form, of quarters in the town of Boston, alleging, that the act of parliament for quarters extended to the colonies, which made any provincial law unnecessary; complained of the magistrates in Boston for not complying with the act of parliament; and added, that he had ordered his messenger to wait forty-eight hours for answer, and if, within that time, his demand was not complied with, he would march one regiment which he had in Connecticut, another which was at Long Island, and a third at New York; and observed, that he had two more in Pennsylvania, and, if they began their

march, he would on no terms revoke them, until they arrived in Boston.

The assembly having met before this letter arrived, the governor laid the letter before them, and recommended it to their serious and immediate consideration.

It is probable that the governor himself was of opinion that the act of parliament did not extend to America; for, in three or four days, an act of the province passed the three branches of the legislature, making provision for quartering troops in public houses, as similar to the provisions made by act of parliament, as the difference between the circumstances of the kingdom and those of the province would admit. Upon transmitting a copy of this act to Lord Loudoun, he was dissatisfied, and would not allow that the assembly had any concern in the dispute; and added, "that in time of war, the rules and customs of war must govern."

This also was laid before the assembly, and produced a message to the governor, declaring the opinion of the assembly, that the act of parliament did not extend to the plantations, and that the rules and customs of war were not the rules which the civil magistrate was to govern himself by, but that a law of the province was necessary for his justification. The governor's letter, or perhaps further consideration upon the subject, abated the resentment of the general, and caused some change of sentiments. The answer which he wrote to it, being communicated to the assembly, produced a memorable message to the governor, which so fully expresses the sense which they then had of the constitutional authority of parliament, that it seems to be very proper to insert it at large.

"May it please your excellency,

"We are very glad to perceive by the letter from his excellency the earl of Loudoun, which you have been pleased to direct the secretary to lay before us, that the conduct of the general court is so well approved of, and that he has, thereupon, countermanded the orders which he had given for marching the troops to be quartered and billeted within this province.

"We thank your excellency for your good offices in our behalf, and for the care and pains which we are sensible you have taken to avert the troubles which seemed to be coming upon us. We doubt not, that future assemblies will act upon the same principles with this assembly; and that the Massachusetts province will always deserve the favourable opinion of the general of his majesty's forces.

"We wish to stand perfectly right with his lordship, and it will be a great satisfaction to us, if we may be able to remove his misapprehension of the spring and motive of our proceedings.

"His lordship is pleased to say, that we seem willing to enter into a dispute upon the necessity of a provincial law to enforce a British act of parliament.

"We are utterly at a loss what part of our conduct could give occasion for this expression. The point in which we were obliged to differ from his lordship was the extent of the provision made by act of parliament for regulating quarters. We thought it did not reach the colonies. Had we thought that it did reach us, and yet made an act of our own to enforce it, there would have been good grounds for his lordship's exception, but being fully persuaded, that the provision was never intended for us, what better step could we take, than, agreeable to the twentieth section in the articles of war, to regulate

quarters as the circumstances of the province require; but still, as similar to the provision made in England as possible? And how can it be inferred from thence, that we suppose a provincial act necessary to enforce an act of parliament?

"We are willing, by a due exercise of the powers of civil government, (and we have the pleasure of seeing your excellency concur with us,) to remove, as much as may be, all pretence of necessity of military government. Such measures, we are sure, will never be disapproved by the parliament of Great Britain, our dependence upon which we never had a desire, or thought of lessening. From the knowledge your excellency has acquired of us you will be able to do us justice in this regard.

"In our message to your excellency, which you transmitted to his lordship, we declared that the act of parliament, the extent of which was then in dispute, as far as it related to the plantations, had always been observed by us.

"The authority of all acts of parliament which concern the colonies, and extend to them, is ever acknowledged in all the courts of law, and made the rule of all judicial proceedings in the province. There is not a member of the general court, and we know no inhabitant within the bounds of the government, that ever questioned this authority.

"To prevent any ill consequences which may arise from an opinion of our holding such principles, we now utterly disavow them, as we should readily have done at any time past, if there had been occasion for it; and we pray that his lordship may be acquainted therewith, that we may appear in a true light, and that no impressions may remain to our disadvantage."

This address or message was drawn up by Mr Hutchinson, then a member of the council, and of the committee.

The expectation of favour from parliament, in the reimbursement of their expenses, induced the council and assembly to make and publish so explicit a declaration of their principles, lest the construction which the general had put upon their refusal to conform to the mutiny act might operate to their prejudice. They were nevertheless the real principles of those who made the declaration, and not merely pretended, to serve a purpose.

The governor, observing that his predecessor had suffered the house to take to themselves some share of that military authority, which the charter gives to the office of a governor, endeavoured to make a reform. In the grants of money for the defence of the province, the house, with whom all grants must originate, in several late instances, had appropriated the money granted, to the payment of such a number of men as should be posted in such places, or employed in such service, as the votes of the house expressed, and restrained the governor and council from drawing it out of the treasury for any other purpose. Mr. Shirley, to keep the house in good humour, and thereby to promote his general design, had submitted to this invasion. Mr. Pownall, for some days, suffered a grant, made in this form, to lie before him; and endeavoured to prevail on the house to depart from this irregularity; but they were tenacious of it, and he gave his assent, protesting against the vote as a breach of the constitution. No notice was taken of this in England, where there was no disposition to contend with the colonies, nor any apprehension of serious consequences from the advances made by the people upon the prerogative.

The Massachusetts assembly, which had been

used to take the lead, proposed to the other New England assemblies a meeting by commissioners, to agree upon measures for the defence of the New England colonies. New Hampshire and Rhode Island returned no answer to this proposal. Connecticut appointed commissioners, who met the Massachusetts commissioners at Boston, and a plan of measures was agreed upon, and New Hampshire and Rhode Island were invited to accede; but the whole affair dropped, by the neglect of the assemblies to act upon the report of the commissioners.

(1758.) Lord Loudoun, soon after, appointed a meeting of the governors of New York and of the New England colonies, or of commissioners from the colonies, together with such officers of the army as he thought fit, to be held at Hartford in Connecticut, 20th of February, where he intended to lay before them a plan of measures for the ensuing year. The governor of Massachusetts bay, New York, and Connecticut, and two commissioners from Rhode Island, met accordingly; but it soon appeared, that whatever might be the private opinions of the governors or commissioners, they could not ensure the concurrence of the assemblies. The general, not being able to effect his purpose at this meeting, went forward to Boston, hoping to succeed as well there as he had done the last year. But he was disappointed. He came to town the first day of the session of the assembly. The governor, in his speech, recommended to make provision for a suitable body of forces to co-operate in aid and assistance to his majesty's troops, to the eastward.

This gave room to conjecture that another expedition to Louisburg was intended. The season was advanced, and there was no time to spare. Twenty-two hundred men was the full number desired. From some cause or other, the general and the governor did not perfectly harmonize. The proposal laboured in the assembly. Six days were spent without any vote. Certain queries were then laid before the general, to which answers were desired. How long are the men to continue in service? What officers are they to be under? Where is the command to be? How are they to be paid, armed, and victualled? What is their destination? What will be the whole force, when they shall have joined it?

The general was much displeased with these queries, considered them as dilatory pleas, and was deliberating in what manner to reply to them, when an express came to town from New York, bringing intelligence that the Earl of Loudoun was superseded, and Major-General Abercrombie appointed commander in chief of his majesty's forces. The same express brought letters to the governor from the secretary of state, Mr. Pitt, recommending, in the strongest terms, an exertion on the part of the province, and giving encouragement that a compensation should be made in proportion. It was expected, that the forces would be employed in the reduction of Canada; the object, above all others, wished for by the people of New England. The house now made no queries, but came immediately to a resolve, "to raise seven thousand men by enlistment for the intended expedition against Canada, to be formed into regiments under such officers, being inhabitants of the province, as his excellency the captain-general shall appoint; to continue in service no longer than the first of November, and to be dismissed as much sooner as his majesty's service shall admit."

This was the greatest exertion ever made by the province. From the proposal made by Lord Loudoun, they expected nothing more than another at-

tempt upon Louisburg. Now, they had in view the country westward, considered the reduction of Ticonderoga and Crown Point to be certain, and that the possession of all Canada would soon follow. But the benefits expected from this acquisition were nothing more than a freedom from that distress which they were liable to, every time a war broke out between England and France. Whenever America should be actually subject to the supreme authority of the British empire, there would be no longer any reason to fear French nor Indian enemies, which had been a scourge to the colonies from their first settlement. An empire, separate or distinct from Britain, was then expected, or desired. From the common increase of inhabitants, in a part of the globe which nature afforded every inducement to cultivate, settlements would gradually extend; and, in distant ages, an independent empire would probably be formed. This was the language of that day.

Seven thousand men was a great proportion of the whole people to be raised, and sent out of the province. The bounty to enlist was large; the wages of a soldier were much higher than those of any soldiers in Europe. Many officers depended upon the number of men they could enlist, to entitle them to their commissions. Four thousand five hundred only could be raised by voluntary enlistment, and the remaining twenty-five hundred, by a subsequent act or order of court, were drawn from the militia, and impressed into the service. Between two and three thousand men were raised by the other colonies, which made more than nine thousand provincials, who, with between six and seven thousand regulars and rangers in the king's pay included, all marched to lake George, where general Abercrombie in person was in command. Lord Howe arrived in Boston, from England, after the forces had left the province, and, immediately upon his landing, began his journey, and joined the army before any action took place.

This body of men, the greatest which had ever been assembled in arms in America, since it was settled by the English, embarked on lake George, the 5th of July, for the French fortress at Ticonderoga, and landed the next day at a cove, and landing-place, from whence a way led to the advanced guard of the enemy. Seven thousand men, in four columns, then began a march through a thick wood. The columns were necessarily broken; their guides were unskilful; the men were bewildered and lost; and parties fell in one upon another. Lord Howe, the life of the army, at the head of a column which was supported by the light infantry, being advanced, fell in with a party of the enemy, consisting of about four hundred regulars and some Indians. Many of them were killed, and one hundred and forty eight taken prisoners. This, however, was a dearly purchased victory, for lord Howe was the first who fell on the English side: whether shot by the enemy, or by his own people, was uncertain. One of the provincial colonels present supposed the last, not merely from the disorderly firing, but from a view of the body; the ball entering, as he said, at his back, when he was facing the enemy.

The general assembly at Massachusetts Bay, upon a suggestion from the governor to some of the members, testified their respect to the memory of lord Howe, by granting a sum of money for a monument, which has been placed in Westminster Abbey.

"In the house of representatives.

"The great and general court, bearing testimony to the sense which the province had, of the services

and military virtues of the late lord viscount Howe, who fell in the last campaign, fighting in the cause of the colonies, and also to express the affection which their officers and soldiers bore to his command,

“Ordered, that the sum of two hundred and fifty pounds be paid out of the public treasury, to the order of the present lord viscount Howe, for erecting a monument to his lordship’s memory, to be built in such manner, and situated in such place, as the present lord viscount Howe shall choose, and that his excellency the governor be desired to acquaint his lordship therewith, in such manner that the testimony be engraved on such monument.

“In council read and concurred

“Consented to by the governor.”

The report of his death caused consternation as well as grief, through the army, which had placed much confidence in him.

The troops returned, the next day, to the place where they landed, much fatigued. Colonel Bradstreet, having been sent with a detachment to take possession of a saw-mill at about two miles distance from the main body of the enemy at Ticonderoga, found it deserted.

The army marched there that evening. The prisoners agreed in their accounts, that the enemy’s force was about 6000 men, of which eight battalions were regular troops, the remainder Canadians and Indians; that they were encamped before the fort, and were enclosing their camp with the best breast-work they could, by felling trees with their branches interwoven, &c.; that 3000 men had been sent off under Monsieur de Levi, mostly Canadians and Indians, to the Mohawk river, but, upon news of the approach of the English army, had been recalled, and were expected every hour.

From this intelligence, the general thought no time ought to be lost, and that an attack should be made without delay.

Early in the morning of the 8th, Mr. Clerk, the chief engineer, was sent to reconnoitre. He judged it practicable to carry the works, if attacked before they were completed. It was, thereupon, resolved to begin immediately.

The whole army, except a guard for the boats, and a provincial regiment at a saw-mill, was in motion. The attack was to be made by the regular forces, who had orders to march up to the breast-work, rush upon the fire of the enemy, but not to fire themselves until they should be within the works.

The provincials in the rear were to support the regulars, who advanced with great bravery, but were surprised to find the intrenchment much stronger than represented.

The enemy were within a breast-work, which had been thrown up eight or nine feet high. The ground before it was covered to a considerable breadth with trees fallen one upon another, and the branches interwoven so thick as to bar the passage of the troops, while they were exposed to the swivel guns and small arms of the enemy incessantly firing upon them. The provincials, generally undisciplined, could not be kept from firing in the rear, and at random; and some of their own officers admitted, that some of the regulars probably fell by that circumstance. Major Proby, lieutenant colonel Bever, and other officers, were killed whilst attempting to mount the breast-work; which but a small part of the army had reached, when they were called off from the attack, which had been several times repeated, the whole action having continued two or three hours.

About 500 regulars were killed upon the spot, and about 1,200 wounded. Of the provincials 100 were killed, and 250 wounded.

The army still consisted of 13 or 14,000.

The enemy was much inferior in number. The retreat, nevertheless, was precipitate. Early in the morning of the 9th the whole army embarked in their boats, and arrived at the other end of the lake, and landed in the evening. Provisions, intrenching tools, and many stores, of various kinds fell into the hands of the enemy. The English arms have rarely suffered greater disgrace.

Before the news of this ill success, the governor of Massachusetts bay had acquainted the general, that the militia were ordered to hold themselves in readiness. After the repulse, the general thanked him for the orders, but hoped he should not want the men. Letters came also to the governor, to be forwarded to General Amherst, at Louisburg, to call him from thence, as soon as the service would admit. These letters never were received by General Amherst, nor was it known how they could miscarry. The failure caused a delay until duplicates came to hand, and he did not arrive in Boston until the 13th of September. He began his march from Boston to Albany, with 4,500 men, on the 16th.

Whether any further attempt would have been made that year, if they had arrived sooner, is doubtful. It is certain that, whatever may have been in contemplation, nothing was done, and General Amherst, in a short time, himself returned to Boston, and went from thence to Halifax.

In the interval between the repulse at Ticonderoga and the arrival of General Amherst, Colonel Bradstreet, with 3,000 of the provincials, and 120 regulars, stole a march upon Montcalm, and before he could send a detachment from his army to lake Ontario, by the way of St. Lawrence, went up the Mohawk river. About the 25th of August, they arrived at fort Frontenac, surprised the garrison, who were made prisoners of war, took and destroyed nine small vessels and much merchandise;—but having intelligence of a large body of the enemy near, they made haste back to Albany. It was an expedition of *éclat*. The men complained of undergoing greater hardship than they had ever undergone before, and many sickened and died by the fatigue of the march.

Louisburg was reduced this year, by the fleet under Admiral Boscawen, and the army under General Amherst. It did not surrender until the 26th of July. Whatever the plan may have been, it was too late to proceed upon an expedition up the river St. Lawrence. They had no knowledge then of Abercrombie’s misfortune. Admiral Boscawen, after taking possession of the island St. John, included in the capitulation of Louisburg, sailed with the fleet for England.

An expedition for dispossessing the French of Fort du Quesne, near the Ohio, had, at first, a very unfavourable prospect. The English forces met with a variety of obstructions and discouragements; and, when they had advanced within thirty or forty miles of the fort, were at a stand, deliberating whether they should go forward, or not. Receiving intelligence that the garrison was in a weak condition, they pushed on. Upon their arrival at the fort, they met with no opposition. The enemy had deserted it some days before, for want of provisions, as was generally believed; and it was added, that the provisions intended to supply that fort were destroyed by Bradstreet at fort Frontenac. Its greatest se-

curity seems to have been the difficulty of coming at it, with an army furnished with artillery, &c.

The Massachusetts forces this year suffered much by mortality while in camp; and great numbers died by sickness upon the road, and after their return; especially of those who were in Bradstreet's expedition.

The commissions of Thomas Hutchinson, Esq. for lieut.-governor, and Andrew Oliver, Esq. for secretary of Massachusetts bay, were published in council, June 1, 1758.

The ill success of General Abercrombie at Ticonderoga caused his recall. He seemed to expect and desire it. He was succeeded by General Amherst.

(1759.) Whatever might be the real intentions of government in 1758, there was no room to doubt of its determination in 1759, to prosecute with vigour an expedition against Canada. Mr. Pitt, in his letter to the governor, pressed with much earnestness, the raising, this year, of as many men as were raised the last; and promised, as he had done before, a recompense in proportion to the active vigour and strenuous efforts wherewith the province should exert itself.

The difficulty of carrying the vote of the assembly, last year, for 7,000 men, into effect, caused a less number to be voted this year. The whole to be raised was 5,000 only; and, of these, 400 were to be employed under the governor, as a guard or defence in building a fort at the mouth of the river Penobscot. This was consented to by the general at the governor's request. As the navy was in great want of seamen, it was also agreed, that as many men as would enlist for the sea service should be accounted part of the number; and provision was made, that if the whole number did not enlist within a time limited, the deficiency should be made good by an impress.

The general was dissatisfied, and repeatedly made demands of additional numbers. At length, it was resolved to increase the bounty, in order to encourage 1,500 more to enlist; but if this encouragement should not effect the enlistment, there was no power to impress. The number, however, was nearly completed.

Notwithstanding the ill success of former attempts for the reduction of Canada, by the co-operation of an army by the river St. Lawrence, and another by lake Champlain, the same plan was laid again.

In two former expeditions, the forces intended by the lakes were of no use; and the whole force of the enemy was at liberty to oppose the army by the river. There was the utmost hazard of failure this year, from the like cause.

It was proposed, with a large body of regulars and provincials, under General Amherst, to remove the French from Ticonderoga and Crown Point, and also from their fort at Niagara. The occupation of the two former by the English would open a way to Canada through lake Champlain.

In the month of July, General Amherst took possession of the enemy's lines at Ticonderoga, which they abandoned, after setting fire to the fort: and, the beginning of August, the fort at Crown Point, having been abandoned also by the French, fell into the possession of the English.

Brigadier Prideaux had been sent with a proper force to besiege the fort at Niagara, and, on the 19th of July, walking in the trenches, was killed by the carelessness of his own gunner in firing a cohorn.

Colonel Gage, upon the intelligence of this loss, was sent from Crown Point by General Amherst to

succeed Brigadier Prideaux. Luckily for Sir William Johnson, who, as the next officer on the spot, took the command upon Prideaux's death, a body of 1,200 men from Detroit, &c., making an attempt, on the 24th of July, to throw themselves into the fort as a reinforcement, were intercepted, and killed, taken, or dispersed; and, the next day, the garrison capitulated. There were great obstructions to the passage of an army from lake Ontario into Canada by the river St. Lawrence. The general recommended to Colonel Gage to take post at La Gallette, but too many difficulties attended such an attempt, and it was laid aside; and no assistance could be afforded to the army before Quebec from this quarter.

About the middle of the month of August, General Amherst received information at Crown Point, that M. Bourlemaque was encamped at Isle aux Noix with 3,500 men, and 100 cannon, and that the French had four vessels on the lake, under the command of the captain of a man of war. It was judged necessary to build a brigantine, a radeau, and a sloop of sixteen guns. There could be no prospect of having such a fleet ready until the beginning of October.

The fleet under Sir Charles Saunders, with the army under General Wolfe, arrived before Quebec the latter part of June. The general, after many unsuccessful attempts to gain the possession of that city, was, on the 2nd of September, in a critical situation, and, to use his own words, met with "such a choice of difficulties, as to be at a loss how to determine."

With an army, of which, he says, "between 4 and 5,000 men were nearly the whole strength," he landed on the 13th of September, and, with the loss of his own life, obtained a victory over the enemy, which was made the more certain by the fall of Montcalm, the French general, about the same time with that of the English general.

General Monckton being shot through the lungs, which happily did not prove mortal, the completing of the victory, and the reduction of the city by capitulation, three days after, was reserved for General Townshend.

No communication could be opened between the two armies: but it is extremely probable, that, if a great part of the French force had not been withdrawn from Quebec to attend the motions of General Amherst, the attempt made by General Wolfe must have failed.

The Massachusetts forces this year were of great service. 2,500 served in garrison at Louisburg and Nova Scotia, in the room of the regular troops, taken from thence to serve under General Wolfe. Several hundred served on board the king's ships as seamen, and the remainder of the 6,500 men, voted in the spring, served under General Amherst. Besides this force, upon application from General Wolfe, 300 more were raised and sent to Quebec by the lieut.-governor, in the absence of the governor at Penobscot. These served as pioneers, and in other capacities, in which the regulars must otherwise have been employed.

The city of Quebec was reduced. Montreal became the seat of the French governor. The inhabitants of Canada, in general, remained subjects of the French king, and a considerable military force was still within the province. General Amherst, on the 11th of October, embarked his army in batteaux, under the convoy of the armed vessels which he had caused to be built, and went from Crown Point part of the way down the lake; but meeting with bad

weather and contrary winds, on the 19th resolved to return to Crown Point, and to desist from any further attempt until the next year.

The fleet returned to England, and General Murray was left in command with a strong garrison at Quebec.

Such of the Massachusetts forces as had been sent to Louisburg and Nova Scotia were held in service, although the term for which they enlisted was expired. The remainder were discharged, and returned home.

(1760.) General Amherst made application to the Massachusetts for the same number of men for the service of the next year, as they had raised the last. The reduction of Canada was still the object. This alone was found to be a sufficient stimulus to the assembly, and they did not need other arguments from the governor. The generous compensations which had been every year made by parliament, not only alleviated the burden of taxes, which otherwise would have been heavy, but, by the importation of such large sums of specie, increased commerce; and it was the opinion of some, that the war added to the wealth of the province, though the compensation did not amount to one-half the charges of government.

The assembly, at the session in January, 1760, first granted a large bounty to the men in garrison at Louisburg and Nova Scotia, to encourage them to continue in service. A vote was then passed for raising 5,000 men more, upon the same encouragement as those of the last year had received. Soon after, the governor received letters from Mr. Pitt, making the like requisition as had been made by him last year, and giving the same assurances of compensation. At the beginning of the year the English interest in Canada was in a precarious state. Quebec had been besieged in the spring, after a battle in which General Murray had lost a considerable part of his garrison. Fortunately, Lord Colville arrived at a critical time, and caused the siege to be raised.

This danger being over, and there being no probability of any French force from Europe, it seemed agreed, that all Canada must fall in the course of the summer. The Massachusetts enlistments went on but slowly. Only 3,300 of the proposed 5,000 men enlisted, and 700 only remained in garrisons at Louisburg and Nova Scotia.

A fire in Boston, the night after the 20th of March, exceeded the great fire, as it had always been styled, in 1711. It began in Cornhill, at a house known by the name of the Brazen Head, south of the town-house. Three or four houses were burnt, and the progress of it seemed to be stopped, when a violent wind at north-west came on suddenly, and it consumed, in that direction, between Cornhill and the harbour, 150 houses great and small. The newspapers made the damage amount to 300,000*l.* sterling. A brief from the governor supposed, that, at a moderate computation, it amounted to at least 100,000*l.* Others, who had observed the increased value of the land upon which the houses stood, estimated the loss at not more than 50,000*l.*, and judged, that if the donations could have been equally distributed, no great loss would have been sustained.

Governor Pownall's administration was short. In November 1759, it was thought proper to nominate him to the government of South Carolina, in the room of Mr. Littleton, appointed governor of Jamaica. Mr. Bernard, governor of New Jersey, was appointed to succeed Mr. Pownall.

The news of Mr. Pownall's recall did not arrive

in Boston until the latter part of February. He continued there until the election of counsellors was past for the year 1760, and sailed for England the 3rd of June.

*From the arrival of Governor Bernard, August 2nd, 1760, to the commencement of the revolution.*

(1760.) Mr. Bernard was detained in New Jersey, waiting for his commission longer than he expected. In this time the business of the assembly, which Mr. Pownall had left sitting, was completed by Mr. Hutchinson, the lieutenant-governor, who made a short prorogation, that the new governor might have the earliest opportunity of meeting them, if he thought fit. The people had conceived a very favourable opinion of him, and evidenced it by public marks of respect, as he travelled through the province, and upon his arrival at the seat of government.

In this session an addition was made of five hundred men to the forces under General Amherst. The county of York was divided, and two new counties erected, Lincoln, and Cumberland, on the eastern side, the western part retaining the name of York.

The Massachusetts forces served this year, in conjunction with other provincials and about 1600 regulars, under Colonel Haviland. They entered Canada from Crown Point by lake Champlain; while General Amherst, with the troops under his immediate command, went from Albany, by the Mohawk river, to lake Ontario, and from thence by the river St. Lawrence; and General Murray, with part of the army which was at Quebec, went from thence up the same river. The three armies met about the same time at Montreal; which facilitated the reduction of that city, and of course of the whole province of Canada.

The news of this event was brought to Boston on the 23d of September, and was no where received with greater joy, no part of the king's dominions being more interested in it.

Governor Bernard, in his speech to the assembly upon this occasion, put them in mind of "the blessings they derive from their *subjection* to Great Britain, without which they could not now have been a free people; for no other nation upon earth could have delivered them from the power they had to contend with."

The council, in their address, acknowledge that; "to their *relation* to Great Britain, they owe their present freedom," and then echo back, in imitation of the pattern they aimed to follow in addresses, that "no other nation upon earth could have delivered them from the power they had to contend with."

The house, without scrupling to make, in express words, the acknowledgment of their subjection, nevertheless explain the nature of it. They "are sensible of the blessings derived to the British colonies from their subjection to Great Britain; and the whole world must be sensible of the blessings derived to Great Britain, from the loyalty of the colonies in general, and from the efforts of this province in particular; which, for more than a century past, has been wading in blood, and laden with the expenses of repelling the common enemy; without which efforts, Great Britain, at this day, might have had no colonies to defend:" and in the same address they observe, that "the connection between the mother country and these provinces is founded on the principles of *filial obedience*, protection, and justice."

These addresses have the appearance of caution, which are not before met with in any public papers

face the revolution. Perhaps it was observed only by the persons who composed them, and not by the council or house in general.

The greatest hopes from the reduction of Canada, as far as could be judged from the public prayers of the clergy, as well as from the conversation of people in general, was, "to sit quiet under their own vines and fig trees, and to have none to make them afraid." All they had ever suffered, as a community, had been from their French and Indian neighbours. In every respect, except the charges which had been occasioned by Indian wars, they had felt less of the burdens of government, than any people besides, who enjoyed so much of the benefit of it. That their civil and religious principles might be transmitted to the latest posterity, was an expression in general use among the clergy.

In Massachusetts bay especially, there was a very general satisfaction with the form of government according to their charter. Although under the first charter, the government had been more popular, the governor himself being annually elected, they were so fully satisfied with the new, that few persons, if any, wished to return to the old. From heats and animosities in popular elections in towns, they judged of the danger from such an election by all the people of the province.

The controversies between governors and their assemblies had been occasioned by different constructions of their respective powers, as derived from the charter; but these were pretty well settled. When a people are in such a state, they are not apt to be disturbed by mere theoretical notions of government, or with ideas of any particular degree of natural liberty which it is not in their power to alienate.

Speculative men had already figured in their minds an American empire, but in such distant ages, that no body then living could expect to see it. Besides, whilst the French remained upon the continent, the English were apprehensive lest, sooner or later, they should be driven from it. But as soon as they were removed, a new scene opened. The prospect was greatly enlarged. There was nothing to obstruct a gradual progress of settlements, through a vast continent, from the Atlantic to the Pacific Ocean.

The two colonies of Massachusetts bay and Connecticut claimed, by charters, the property of this vast territory, at their sole disposal, so far as came within the latitudes to which they were limited; the small territory, possessed by Pennsylvania and New York, only excepted.

Men whose minds were turned to calculations found that the colonies increased so rapidly, as to double the number of inhabitants in a much shorter space of time than had been imagined.

From the number of inhabitants then in the several colonies, and a supposition that, for the time to come, they might increase in the same proportion as in the time past, the colonies would soon exceed the parent state.

These considerations did not, of themselves, immediately occasion any plan, or even a desire, of independency. They produced a higher sense of the grandeur and importance of the colonies.

Advantages in any respect, enjoyed by the subjects in England, which were not enjoyed by the subjects in the colonies, began to be considered in an invidious light, and men were led to inquire, with greater attention than formerly, into the relation in which the colonies stood to the state from which they sprang.

Every argument which would give colour for the removal of this distinction was favourably received: and from various events, men were prepared to think more favourably of independency, before any measures were taken with a professed design of attaining to it.

Governor Bernard had been but a few weeks in the province, when he found himself under the necessity either of making a particular family and its connexions extremely inimical to him, or of doing what would not have been approved of by the greater part of the province.

Upon the death of the chief justice, the first surviving judge, and two other judges, together with several of the principal gentlemen of the bar, signified their desire to the governor that he would appoint the lieutenant-governor to be the successor. When Mr. Shirley was in administration he had encouraged, if not promised, a gentleman at the bar, that, upon a vacancy in the superior court, he should have a seat there. A vacancy happened, and Mr. Shirley, from a prior engagement, or for some other reason, disappointed him. He was at this time speaker of the house of representatives, and he made application to Governor Bernard, that the first surviving judge might be appointed chief justice, and that he might take the place of a judge. His son, Mr. Otis, author of the first political pamphlet upon the rights of Americans; also, with great warmth, engaged in behalf of his father, and, not meeting with that encouragement which he expected, threatened resentment, if he should finally fail of success.

Several weeks elapsed, before any nomination was made, or any thing had passed between the governor and lieutenant-governor, upon the subject. At length it was intimated to the lieutenant-governor, that the governor, when he had been applied to by many persons in his behalf, was at a loss to account for his silence upon the subject. This caused a conversation, in which the lieutenant-governor signified that he had desired no persons to apply in his behalf, and had avoided applying himself, that the governor might the more freely use his own judgment, in appointing such person as should appear to him most fit. And soon after, upon the lieutenant-governor's being informed of the governor's intention to nominate him to the place, he gave his opinion, that a refusal to comply with the solicitations which had been made to the governor by the other person, would cause a strong opposition to his administration, and, at the same time, assured the governor, that he would not take amiss the compliance, but would support his administration with the same zeal as if he had been appointed himself.

The governor declared that, if the lieutenant-governor should finally refuse the place, the other person would not be nominated. The expected opposition ensued. The resentment in the disappointed persons was also as strong against the lieutenant-governor for accepting the place, as if he had sought it, and had opposed their solicitations. Both the gentlemen had been friends to government. From this time they were at the head of every measure in opposition, not merely in those points which concerned the governor in his administration, but in such as concerned the authority of parliament; the opposition to which first began in this colony, and was moved and conducted by one of them, both in the assembly and the town of Boston. From so small a spark a great fire seems to have been kindled.

The news of the demise of King George the Second was received in Boston the 27th of December.

1760. There was no room to doubt the truth of it. The people on board a ship which arrived from an out-port in England, all agreed in it, and the newspapers contained an account of it, and of the accession of King George the Third, as published by authority in the London Gazette. There was no official advice, and upon the governor's consulting the council, some doubted the propriety of proclaiming a new king, until directions should be received from the secretary of state, in his name. Others were of opinion that it was justifiable. It was a season of the year, when it was probable that many weeks would pass before orders arrived, and it would have a strange appearance, if all writs, processes, and public acts of every kind, continued, all that time, in the name of a prince known to be in his grave. Upon consulting precedents, they were in favour of the last opinion, and the king was proclaimed on the 30th of December.

(1761.) On Thursday, January 1st, the governor, council, &c., went into mourning. In the morning a sermon was preached in the meeting-house, by Mr. Cooper, one of the ministers of Boston, when the whole general assembly attended. The governor proposed to the rector of King's chapel to preach there, in the afternoon: and the council and assembly attended with him. This is the only instance of a sermon preached before the general assembly in an episcopal church.

A short time only passed, before Mr. Otis, the son, appeared at the head of a party, not in opposition to any act of the governor, but to the past transactions of officers in the court of admiralty, in whose defence the governor would probably be engaged.

The act of parliament of the 6th of George the Second, which imposed a duty of sixpence per gallon upon all foreign molasses imported into the colonies, gave one-third part of the forfeiture to the king, for the use of the colony where the forfeiture should be made, one-third to the governor, and the other to the informer.

The act, though it had been made near thirty years, and large sums had been forfeited, was always deemed a grievance. The assembly had suffered the share given to the province to lie in the court. It had, besides, been the practice of the court, to allow to the informer what he gave for private information, and to charge it upon the third given to the king for the colony, (which third nobody appeared to demand,) and not upon the whole forfeiture. The like practice had before obtained, in all forfeitures where the crown, for its own use, was entitled to one-third.

Mr. Otis, bred to the law, and at that time a practitioner in the courts, took the advantage of this irregularity. The merchants, some of whom had been affected by these forfeitures, were easily brought by a committee to prefer a petition to the general assembly, praying to be heard by counsel; which was granted, and Mr. Otis was the person employed. It was proposed that actions should be brought, in behalf of the province, against the custom-house officers to whom these illegal charges had been allowed, for the recovery of monies had and received for the use of the province.

The house was easily induced to a compliance with the prayer of the petition. Mr. Otis, when before the council, undertook to support such an action, and was very sanguine that it could not be withstood. Opposition, however, was made in council; and it was plainly shewn, that no such action could lie. The superior court, having all the powers within the province of the court of king's bench

in England, might put a stop to the proceedings of the court of admiralty, whenever it took cognizance of a cause not within its jurisdiction, by a writ of prohibition; but in this case, jurisdiction had been expressly given, by an act of parliament, to the court of admiralty. The province might have appeared by an attorney, and have taken exceptions to the decree, and, if the exceptions had not prevailed, might have brought an appeal to the high court of admiralty in England; but the opportunity was wilfully slipped, and there was now no remedy. It was said, however, that the people were dissatisfied, and that it would not be believed that there was no remedy, unless there was a trial: and a majority of the council concurred with the house.

The governor at first, declined his assent, and, in a message to the house, gave, as the only reason, their appointing the province treasurer to bring the action; whereas, the money sued for being granted to the king, the king's attorney was the person in whose name the action should be brought.

This objection from the governor was really of no weight, because the money was granted to the king for the use of the province; and all money belonging to the province had always been sued for by the treasurer; particularly all arrears of taxes, which had always been granted, in name, to the king, though really for the use of the province. But he hoped to prevent Mr. Otis from carrying on the suit.

The governor, in his message, had intimated, that his consent to the vote in that form would expose him to the displeasure of the king. When he found how unpopular it would be to refuse his assent, he laid the matter before the council, and demanded their advice; and they advised him, "on that occasion, to wave his own opinion, how well soever founded." Thereupon, he gave his assent to the vote. This was esteemed a triumph, as they had compelled the governor to depart from what he had declared to be his judgment. But when the cause came upon trial, it was very feebly supported, by shewing that the charges ought not to have been allowed by the court of admiralty; and by representing that court, as not congenial with the spirit of the English constitution, for which reason no indulgent construction ought to be allowed to their proceedings.

The court summed up the cause to the jury, so as to shew that the action had not been supported; and cautioned them against departing from the rules of law, and consequently from their oaths, in compliance with popular prejudices: and, contrary to the prevailing expectation, they found costs for the defendants.

The authority of acts of parliament had never been called in question as the rule of law, when they plainly extended to the colonies. In a message from the two houses to the governor, upon the subject of this trial, they acknowledge, "that every act of the province, repugnant to an act of parliament extending to the plantations, is, *ipso facto*, null and void." Juries were disposed to receive the law from the court, and could not easily be induced to depart from their oaths.

Whilst this process was depending, Mr. Otis, who carried it on, was equally sedulous in promoting another measure, which tended to raise heats and animosities, and to destroy the powers of government.

The collectors and inferior officers of the customs, merely by the authority derived from their commissions, had forcibly entered warehouses, and even

dwelling-houses, upon information that contraband goods were concealed in them.

The people grew uneasy under the exercise of this assumed authority, and some stood upon their defence against such entries, whilst others were bringing their actions at law against the officers, for past illegal entries, or attempts to enter.

When Mr. Shirley was in administration, he, as the civil magistrate, gave out his warrants to the officers of the customs to enter.

This appears more extraordinary, as Mr. Shirley was a lawyer by education, and was allowed to be a man of good sense. These warrants, however, were in use some years. At length, the surveyor and searcher being one day about to break open a warehouse, upon an information of iron imported from Spain being concealed there, a gentleman, who was brother to the owner of the warehouse, and also a friend to the surveyor and searcher, enquired what authority he had to enter, and, thereupon, he shewed the governor's warrant. The gentleman, who knew the information to be ill-founded, sent for the keys, and caused the warehouse to be opened; and, at the same time, assured the surveyor, that, if he had forced an entry, an action would have been brought against him, his warrant being of no value.

This put the governor upon examining the legality of his warrants, and caused him to direct the officers to apply for warrants from the superior court; and, from that time, writs issued, not exactly in the form, but of the nature, of writs of assistance issued from the court of exchequer in England.

Upon application made to the court by one of the custom-house officers, an exception was taken to the application; and Mr. Otis desired that a time might be assigned for an argument upon it. The motion was the more readily complied with, because it was suggested, that the late chief justice, who was in high esteem, had doubts of the legality of such writs.

It was objected to the writs, that they were of the nature of general warrants; that, although formerly it was the practice to issue general warrants to search for stolen goods, yet, for many years, this practice had been altered, and special warrants only were issued by justices of the peace, to search in places set forth in the warrants; that it was equally reasonable to alter these writs, to which there would be no objection, if the place where the search was to be made should be specifically mentioned, and information given upon oath. The form of a writ of assistance was, it is true, to be found in some registers, which was general, but it was affirmed, without proof, that the late practice in England was otherwise, and that such writs issued upon special information only.

The court was convinced that a writ, or warrant, to be issued only in cases where special information was given upon oath, would rarely, if ever, be applied for, as no informer would expose himself to the rage of the people. The statute of the 14th of Charles II. authorized issuing writs of assistance from the court of exchequer in England. The statutes of the 7th and 8th of William III. required all that aid to be given to the officers of the customs in the plantations, which was required by law to be given in England. Some of the judges, notwithstanding, from a doubt whether such writs were still in use in England, seemed to favour the exception, and, if judgment had been then given, it is uncertain on which side it would have been. The chief justice was, therefore, desired, by the first opportunity in his power, to obtain information of the practice in England, and judgment was suspended. At the

next town, it appeared that such writs issued from the exchequer, of course, when applied for; and this was judged sufficient to warrant the like practice in the province. A form was settled, as agreeable to the form in England as the circumstances of the colony would admit, and the writs were ordered to be issued to custom-house officers, for whom application should be made to the chief justice by the surveyor-general of the customs.

The ill success of these two attempts seemed to have a tendency to check and discourage the spirit of opposition; but it had a contrary effect. The people were taught that innovations, under pretence of law, were now confirmed by judgments of court incompatible with English liberties, and that the authority of courts of admiralty, and the powers of custom-house officers, always deemed grievous because unconstitutional, were now established by judges devoted to the prerogative.

Mr. Otis's zeal in carrying on these causes was deemed meritorious, as it was considered to arise from a sincere concern for the liberties of the people. His resentment against the governor was not charged upon him as the motive. The town of Boston, at their next election, in May, shewed the sense they had of his merit, by choosing him one of their representatives in the general assembly.

The government in England thought it necessary to keep up in America a considerable part of the military force, notwithstanding the reduction of Canada, until peace should be established.

An expedition was determined to be carried on this summer, against the French islands: and great part of the regular troops were to be taken from the continent for that service. Massachusetts bay was called upon to assist in supplying provincial troops in their stead, by raising two-thirds as many men as they raised the last year. 3,000 men were resolved upon; but great opposition was made, and the vote was kept four days on the table of the house; and then a motion was made for reconsidering it; but it did not prevail, and the vote passed the several branches.

Governor Bernard saw a strong party forming, at the head of which, ostensibly, was Mr. Otis, the son; but the father, being speaker of the house, was a great support to it.

The governor flattered himself that he should be able to reconcile to him, both father and son.

By the demise of the king, all civil as well as military commissions must be renewed. This was the only opportunity which a Massachusetts governor could have, of nominating persons to office, at pleasure. When he came to settle the county of Barnstable, where the speaker lived, he made him an offer of taking to himself the principal offices in the county, and of naming many of his relations and friends to other offices; and the whole county was settled to his mind. He took for himself the place of first justice of the county court of common pleas, and also that of judge of probate, which gives much weight and influence in the county.

Mr. Otis, the son, soon after appeared in favour of a grant, made by the assembly to the governor, of the island of Mount Desert; and there was the appearance of reconciliation. It lasted but a short time. Places granted by a Massachusetts governor could not be taken away again at pleasure, except places in the militia, which were not much valued, after the title and rank, derived from them, were once acquired.

(1762.) The successes of the year 1761 gave a

general expectation of peace, which was disappointed by the intermeddling of the Spaniards.

The Massachusetts, therefore, were again called upon for the like number of men as had been in service the last year, to serve upon the continent, while the regulars were to be employed in an important service elsewhere. The assembly determined to raise 3,200 men, which number was satisfactory. They also voted a bounty of 7*l.* per man, to encourage the enlistment of 893 men into the regular troops. This is a singular instance.

Men were raised with greater ease than ever. By habit they became fond of the life of a soldier. The number, now required, being not half what had been required in several former years, there was not room for many who were inclined to serve, and who, thus, were obliged to remain at home.

This provision was made at a session of the assembly, in the winter after 1761.

Another session, for election, in the summer following, passed in quiet, the ordinary business of the province going on without opposition.

Soon after it was finished, the fishing towns were alarmed with the news of a French force which had taken possession of St. John's, Newfoundland, and the inhabitants of Salem and Marblehead petitioned the governor and council, to cause a ship and sloop, then in the service of the province, to be fitted out and employed for the guard and security of the vessels employed in fishing. The council advised an additional number of men for the sloop, and a bounty for the encouragement of men to enlist to make up the complement of the ship. The whole expense did not exceed 3 or 400*l.* sterling.

In September the assembly met again.

The governor, among other things in his speech, took notice of this small expense, which had been incurred in the recess; and afterwards, in a message, recommended to them to make provision for the continuance of pay to the additional number of men on board the sloop.

This exercise of authority, by the governor and council, was to be justified as far as precedents, from the date of the charter, could justify it. In this instance, notwithstanding, as unexceptionable perhaps as any other whatever, the house thought fit to take exception; and, in a remonstrance composed by Mr. Otis, to declare against such a practice, as taking from the house "their most darling privilege, the right of originating all taxes," and as "annihilating one branch of the legislature." They say, "it would be of little consequence to the people, whether they were subject to George or Louis, the king of Great Britain or the French king, if both were as arbitrary as both would be, if both could levy taxes without parliament;" and conclude with praying the governor, "as he regards the peace and welfare of the province, that no measures of this nature be taken for the future, let the advice of council be what it may."

When the remonstrance was delivered to the governor, he sent it back in a private letter to the speaker, and advised him to recommend the house to expunge from it, and from their record, that passage in which the king's name was used with a freedom which was not decent. Mr. Otis resisted the proposal, but was content that some qualifying words should be brought in, as, "with due reverence to his majesty's sacred person," or the like; but the government cried out "erase them,—erase them,"—and they were ordered to be expunged. Mr. Otis justified the remonstrance, and his conduct relative

to it, in a pamphlet which he published soon after the session was over. No further notice was taken of the remonstrance. It was calculated to raise a spirit against the council, of which the lieutenant-governor was president, and whose character was attacked in newspaper publications, to some of which Mr. Otis affixed his name.

The currency of Massachusetts bay had been under as good regulation as possible, from the time that paper had been exchanged for silver, which was made the standard at 6*s* 8*d.* the ounce. Gold was not a lawful tender, but passed current at fixed rates, a guinea at 28*s.*, a moidore at 36*s.*, &c., being nearly the same proportion that gold bore to silver in Europe at the time when the paper-money was exchanged. Silver bullion, for a year or two past, had advanced in price, in England, from 5*s*. 3*d.* to 5*s*. 7*d.* an ounce. A greater proportion of silver than of gold had been exported, and people, who observed the scarcity of silver, were alarmed. A bill was brought into the house of representatives and passed, making gold a lawful tender at the rates at which the several coins had been current for many years past.

The bill was now concurred in council, and a conference ensued between the two houses, the lieutenant-governor being at the head of the managers for the council, and Mr. Otis of those for the house.

The only argument on the part of the house was the danger of oppression towards debtors, by their being obliged to procure silver at disadvantage.

On the part of the council, it was said, that the proportion between silver and gold was different at different times; that one only ought to be the standard, and the other considered as merchandize; that, silver being made the standard in the province, it behoved government rather to reduce the rate at which gold coin should pass, so as to make the proportion between gold and silver the same in the province as in Europe; that, in such case, there would be the same profit upon exporting gold as silver; but as one metal was made the standard, and the only lawful tender, it was not advisable for government to regulate the other, but to leave it to take its chance; and that there was no other way of securing the currency from depreciation.

The house was much engaged to carry the bill through, but the council stood firm, and rejected it. But in a session of the assembly, some time after, this bill passed into an act, and gold as well as silver was made a lawful tender. But, about the same time, the price of silver bullion in England fell to 5*s*. 3*d.* or 5*s*. 2*d.* the ounce, and there was no longer any profit by the exportation of silver rather than gold.

There seems to have been no reason for men engaging more on one side the question than the other, in this dispute, only as one side might appear to them more just and reasonable than the other; but the lieutenant-governor having taken one side of the question, Mr. Otis took the other; and the court and country parties took one side and the other with much of the same spirit, as if it had been a controversy between privilege and prerogative.

(1763.) The conquest of the Havannah, soon after that of Martinico and Guadaloupe, brought on a treaty between the contending powers in Europe; and the news of preliminaries being signed reached Boston in January, 1763, and of the definite treaty, in May following.

It was well known in America, that the people of England, as well as the administration, were divided

upon the expediency of retaining Canada rather than the islands; and it was also known that the objection to Canada proceeded from an opinion, that the cession of it by France would cause, in time, a separation of the British colonies from the mother country. This jealousy in England being known, it was of itself sufficient to set enterprising men upon considering how far such a separation was expedient and practicable. But the general joy in America upon the news of this cession was not caused by such views. And we may well infer from the addresses of the two houses upon this occasion, that they could have no such thoughts. The governor, in his speech, congratulated them upon so joyful an event. In their address to him, they acknowledge, that the evident design of the French to surround the colonies was the immediate and just cause of the war; that, without the protection afforded them during the war, they must have been a prey to the power of France; that without the compensation made them by parliament, the burden of the expense of the war must have been insupportable.

In their address to the king they make the like acknowledgments, and, at the conclusion, promise to evidence their gratitude by every expression of duty and loyalty in their power.

Mr. Otis, at the first town meeting of Boston after the peace, having been chosen moderator, addressed himself to the inhabitants, in a speech which he caused to be printed in the newspapers, in the following words:—"We in America have certainly abundant reasons to rejoice. The heathen are not only driven out, but the Canadians, much more formidable enemies, are conquered and become fellow-subjects. The British dominion and power may now be said, literally, to extend from sea to sea, and from the great river to the ends of the earth. And we may safely conclude from his majesty's wise administration hitherto, that liberty and knowledge, civil and religious, will be co-extended, improved and preserved to the latest posterity. No other constitution of civil government has yet appeared in the world, so admirably adapted to these great purposes, as that of Great Britain. Every British subject in America is of common right, "by acts of parliament," and by the laws of God and nature, entitled to all the essential privileges of Britons. By particular charters there are peculiar privileges granted, as in justice there might and ought, in consideration of the arduous undertaking to begin so glorious an empire as British America is rising to. Those jealousies, that some weak, and wicked minds have endeavoured to infuse with regard to the colonies, had their birth in the blackness of darkness, and it is great pity they had not remained there for ever. The true interests of Great Britain and her plantations are mutual, and what God in his providence has united, let no man dare attempt to pull asunder."

The southern colonies were molested, all the summer after the peace, by inroads from the Indians, and many people were killed, and others carried into captivity from the frontiers. In the autumn, general Gage, who succeeded General Amherst in the command of the British forces, called upon the Massachusetts for assistance, in conjunction with the other New England colonies, in order to form an army early in the spring, to enter the enemy's country by the lakes, whilst another army from the southern colonies should enter it by the Ohio. But this application was coldly received by the assembly. In former wars, the province had defended its own frontiers without aid from the southern colonies.

Before the assembly came to a determination, there was a prospect of a treaty with the Indians, and they gave this treaty as a reason for referring the matter to another session. A general accommodation soon followed.

There does not appear to have been any special cause of dissatisfaction with the administration of government, at this time, in Massachusetts bay. There was no complaint of invasion upon any of the rights and liberties of the people. At all times, there are many out of place, who wish to be in. There were, indeed, great disturbances in England; but nothing had occurred there, which concerned the people of Massachusetts bay. Mr. Wilkes, nevertheless, had his partisans in America, and the sound of "Wilkes and liberty" was heard in Boston, in proportion to the number of inhabitants, as much as in London. Men took sides in New England upon mere speculative points in government, when there was nothing in practice which could give any grounds for forming parties. The officers of the crown, and especially all officers of the customs, were considered as engaged in promoting measures, more restrictive of the natural rights and liberties of the people, "than the ends for which government was instituted made necessary." They had the law, however, on their side. Squibs were thrown at their general characters, in newspapers, hand-bills, &c.

The terms whig and tory had never been much used in America. The Massachusetts people, in general, were of the principles of the ancient whigs; attached to the revolution, and to the succession of the crown in the house of Hanover. A very few, who might have been called tories in England, took the name of jacobites in America.

All of a sudden, the officers of the crown, and such as were for keeping up their authority, were branded with the name of tories, always the term of reproach; their opposers assuming the name of whigs, because the common people, as far as they had been acquainted with the parties in England, all supposed the whigs to have been in the right, and the tories in the wrong.

Whilst the people in the province were thus disposed to engage in parties, the state of the colonies became a matter of more serious consideration in England, than it had ever been before. The amazing increase of the national debt, by a war engaged in at the solicitations, and for the protection of the colonies, seems to have caused this new attention.

The first proof of it towards Massachusetts bay was an order to the governor, to obtain a more exact and certain knowledge, than had ever been obtained, of the number of inhabitants, distinguishing age, sex, &c.

This the governor could not obtain without the aid of the assembly, by a law to compel the several towns and districts to make returns of their numbers. Objections were made to it. Some suspected that it was required for purposes, though they could not discover them, to the disadvantage of the province; others, and not a few, seemed to have religious scruples, and compared it to David's numbering the people. The proposal was referred from one session to another, and, though it was finally agreed to by a majority, yet many remained dissatisfied.

(1764.) As we are now fast advancing to the period when a determination to resist the authority of the British government was becoming universal in all the colonies, we shall close our separate history of Massachusetts, referring the part taken by that colony, in the struggle for emancipation, to the general history of the revolution.

## NEW HAMPSHIRE.

THE History of New Hampshire is so exceedingly slightly touched upon by Robertson, in his account of the Planting of New England, most of his fragment being occupied with the settlement of Massachusetts, that we shall give a more detailed account of its rise and progress.

*The grants to Mason and others—Beginning of the settlements at Portsmouth and Dover—Whelewright's Indian purchase—Neal's adventures—Discouragements—Dissolution of the Council—Causes of the failure of his enterprise.*

A patent was granted by King James, in 1606, limiting the dominion of Virginia from the thirty-fourth to the forty-fourth degree of northern latitude, which extent of territory had been divided into two parts, called North and South Virginia. The latter was assigned to certain noblemen, knights, and gentlemen of London; the former to others in Bristol, Exeter, and Plymouth. Those who were interested in the northern colony, finding that the patent did not secure them from the intrusions of others, petitioned, in 1620, for an enlargement and confirmation of their privileges. After some time, the king, by his sole authority, constituted a council, consisting of forty noblemen, knights, and gentlemen, by the name of "The council established at Plymouth, in the county of Devon, for the planting, ruling, and governing of New England, in America." They were a corporation with a perpetual succession, by election of the majority; and their territories extended from the fortieth to the forty-eighth degree of northern latitude. This patent, or charter, is the foundation of all the grants that were made of the country of New England. But either from the jarring interests of the members, or their indistinct knowledge of the country, or their inattention to business, or some other cause which does not fully appear, their affairs were transacted in a confused manner from the beginning; and the grants which they made were so inaccurately described, and interfered so much with each other, as to occasion difficulties and controversies, some of which are not totally obliterated.

Two of the most active members of this council, were Sir Ferdinando Gorges, and Captain John Mason. Gorges had been an officer in the navy of Queen Elizabeth, intimately connected with Sir Walter Raleigh, of whose adventurous spirit he had a large share. After the peace which King James made in 1604, he was appointed governor of the fort and Island of Plymouth in Devonshire. While he resided there, Captain Weymouth, who had been employed by Lord Arundel in search of a northwest passage, but had fallen short of his course and put in at Pemaquid, brought from thence into the harbour of Plymouth, five natives of America, three of whom were eagerly seized by Gorges, and retained in his service for three years. Finding them of a tractable and communicative disposition, and having won their affections by gentle treatment, he learned

from them many particulars concerning their country its rivers, harbours, islands, fisheries, and other products; and the numbers, force, disposition, and government of the natives; and from this information he conceived sanguine hopes of indulging his genius, and making his fortune, by a thorough discovery of the country. For this purpose he, in conjunction with others, ventured several ships, whereof some met with peculiar misfortunes; and others brought home accounts, which, though discouraging to some of his associates, made him determine upon farther attempts, wherein his resolution and perseverance were more conspicuous than any solid gain. These transactions were previous to the establishment of the council; in soliciting which, Gorges was so extremely active, that he was appointed their president, and had a principal share in all their transactions. Mason was a merchant of London, but became a sea-officer, and, after the peace, governor of Newfoundland, where he acquired a knowledge of America, which led him, on his return to England, into a close attachment to those who were engaged in its discovery; and upon some vacancy in the council, he was elected a member and became their secretary; being also governor of Portsmouth in Hampshire. (1621.) He procured a grant from the council, of all the land from the river of Naumkeag (now Salem), round Cape Anne, to the river Merrimack; and upon each of those rivers to the farthest head thereof; then to cross over from the head of the one to the head of the other; with all the islands lying within three miles of the coast. This district was called Mariana. (1622.) The next year another grant was made to Gorges and Mason jointly, of all the lands between the rivers Merrimack and Sagadahock, extending back to the great lakes and river of Canada, and this was called Laconia.

Under the authority of this grant, Gorges and Mason, in conjunction with several merchants of London, Bristol, Exeter, Plymouth, Shrewsbury, and Dorchester, who styled themselves "The company of Laconia," attempted the establishment of a colony and fishery at the river Pascataqua; and in the spring of the following year, (1623), they sent over David Thompson, a Scotsman, Edward and William Hilton, fishmongers of London, with a number of other people, in two divisions, furnished with all necessaries to carry on their design. One of these companies landed on the southern shore of the river, at its mouth, and called the place Little Harbour: here they erected salt works, and built an house, which was afterward called Mason Hall; but the Hiltons set up their stages eight miles further up the river toward the northwest, on a neck of land which the Indians called Winnichahannat, but they named Northam, and afterwards Dover. Thompson, not being pleased with his situation, removed the next spring (1624), to an island in the bay of Massachusetts; this the general court afterward confirmed to him, and still bears his name.

These settlements went on but slowly for several

years; but the natives being peaceable, and several other small beginnings being made along the coast as far as Plymouth, a neighbourly intercourse was kept up among them, each following their respective employments of fishing, trading, and planting, till the disorderly behaviour (1628), of one Morton's at Mount Wollaston, in the bay of Massachusetts, caused an alarm among the scattered settlements as far as Pascataqua. This man had, in defiance of the king's proclamation, made a practice of selling arms and ammunition to the Indians, whom he employed in hunting and fowling for him; so that the English, seeing the Indians armed in the woods, began to be in terror. They also apprehended danger of another kind; for Morton's plantation was a receptacle for discontented servants, whose desertion weakened the settlements, and who, being there without law, were more formidable than the savages themselves. The principal persons of Pascataqua therefore readily united with their neighbours, in making application to the colony of Plymouth, which was of more force than all the rest, to put a stop to this growing mischief; which they happily effected by seizing Morton, and sending him prisoner to England.

(1629.) Some of the scattered planters in the bay of Massachusetts, being desirous of making a settlement in the neighbourhood of Pascataqua, and following the example of those at Plymouth, who had purchased their lands of the Indians, which they conscientiously thought necessary to give them a just title, procured a general meeting of Indians, at Squamscot falls, where they obtained a deed from Passaconaway, Sagamore of Penacock, Runnawitt of Pantucket, Wahongnonawit of Squamscot, and Rowls of Newichwannock: wherein they express their "desire to have the English come and settle among them as among their countrymen in Massachusetts, whereby they hoped to be strengthened against their enemies the Tarrateens; and accordingly, with the universal consent of their subjects, for what they deemed a valuable consideration in coats, shirts, and kettles, sell to John Whelewright of the Massachusetts bay, late of England, minister of the gospel, Augustine Story [or Storer], Thomas Wight, William Wentworth, and Thomas Leavit, all that part of the main land bounded by the river Pascataqua and the river Merrimack: to begin at Newichannock falls in Pascataqua river aforesaid, and down said river to the sea; and along the sea-shore to Merrimack river; and up said river to the falls at Pantucket; and from thence upon a northwest line, twenty English miles into the woods; and from thence upon a straight line northeast, till it meet with the main rivers that run down to Pantucket falls, and Newichannock falls aforesaid; the said rivers to be the bounds from the thwart or head line to the aforesaid falls, and from thence the main channel of each river to the sea to be the side bounds; together with all the islands within the said bounds; as also the isles of shoals so called." The conditions of this grant were, "that Whelewright should within ten years begin a plantation at Squamscot falls; that other inhabitants should have the same privileges with him; that no plantation should exceed ten miles square; that no lands should be granted but in townships; and that these should be subject to the government of the Massachusetts colony, until they should have a settled government among themselves; that for each township there should be paid an annual acknowledgment of "one coat of truckling cloth," to Passaconaway the chief

Sagamore or his successors, and two bushels of Indian corn to Whelewright and his heirs. The Indians reserve to themselves free liberty of fishing, fowling, hunting, and planting within these limits." The principal persons of Pascataqua and the province of Maine were witnesses to the subscribing of this instrument, and giving possession of the lands.

By this deed the English inhabitants within these limits obtained a right to the soil from the original proprietors, more valuable in a moral view than the grants of any European prince could convey. If we smile at the arrogance of a Roman Pontiff in assuming to divide the whole new world between the Spaniards and Portuguese, with what consistency can we admit the right of a king of England to parcel out America to his subjects, when he had neither purchased nor conquered it, nor could pretend any other title, than that some of his subjects were the first Europeans who discovered it, while it was in possession of its native lords? The only validity which such grants could have in the eye of reason, was, that the grantees had from their prince a permission to negotiate with the possessors for the purchase of the soil, and thereupon a power of jurisdiction subordinate to his crown.

The same year Captain Mason procured a new patent, under the common seal of the council of Plymouth, for the land "from the middle of Pascataqua river and up the same to the farthest head thereof, and from thence northwestward until sixty miles from the mouth of the harbour were finished: also through Merrimack river, to the farthest head thereof, and so forward up into the land westward, until sixty miles were finished; and from thence to cross over land to the end of the sixty miles accounted from Pascataqua river; together with all islands within five leagues of the coast." This tract of land was called New Hampshire: it comprehended the whole of Whelewright's purchase; and unless Mason's intention was to frustrate his title, it is difficult to assign a reason for the procurement of this patent, as the same land, with much more, had been granted to Gorges and Mason jointly, seven years before. If there was an agreement between them to divide the province of Laconia, and take out new patents from the council, in preference to the making a deed of partition; it is not easy to conceive why the western boundary should be contracted to sixty miles from the sea, when the lakes and river of Canada were supposed to be but ninety or an hundred miles from Pascataqua. If this grant was intended as an equivalent for the patent of Mariana, which the council had the preceding year included in their deed to the Massachusetts company; it is impossible to account for the extension of New Hampshire to the river Merrimack, when the grant of Massachusetts reached to "three miles north of that river and of every part of it."

(1630.) The west country adventurers were not less attentive to their interest; for in the following spring they obtained a patent from the council whereby "all that part of the river Pascataqua called or known by the name of Hilton's Point, with the south side of the said river up to the falls of Squamscot, and three miles into the main land for breadth," was granted to Edward Hilton. This patent, sealed with the common seal of the council, and subscribed by the earl of Warwick, sets forth, that Hilton and his associates had at *their own* proper cost and charges transported servants, built houses, and planted corn at Hilton's Point, now

Dover, and intended the further increase and advancement of the plantation. (1631.) William Blackstone, William Jefferies, and Thomas Lewis, or either of them, were impowered to give possession of the premises; which was done by Lewis, and the livery and seizin endorsed. Within these limits are contained the towns of Dover, Durham, and Stretham, with part of Newington and Greenland. It was commonly called Squamscot patent, but sometimes Bloody-point patent, from a quarrel between the agents of the two companies about a point of land in the river which was convenient for both; and there being no government then established, the controversy would have ended in blood, if the contending parties had not been persuaded to refer the decision of it to their employers.

The London adventurers also thought it prudent to have some security for the interest which they had advanced, and accordingly obtained a grant from the council, of "that part of the patent of Laconia, on which the buildings and salt-works were erected, situate on both sides the harbour and river of Pascataqua to the extent of five miles westward by the sea-coast, then to cross over towards the other plantation in the hands of Edward Hilton." The grantees named in this patent were Sir Ferdinando Gorges, Captain John Mason, John Cotton, Henry Gardner, George Griffith, Edwin Gay, Thomas Warnerton, Thomas Eyre and Eliezer Eyre, who, it is said, had already expended 3000*l.* in the undertaking. They were to pay forty-eight pounds per annum by way of acknowledgment to the president and council, if demanded. Captain Comocke, a relation of the Earl of Warwick, with Henry Jocelyn, who were then intending a voyage here, were appointed to put the grantees in possession. Within this patent are comprehended the towns of Portsmouth, Newcastle and Rye, with part of Newington and Greenland.

The whole interest being thus divided into two parts, Captain Thomas Wigen was appointed agent for the upper, and Captain Walter Neal for the lower plantation; with him were associated Ambrose Gibbons, George Vaughan, Thomas Warnerton, Humphrey Chadbourne and one Godfrie, as superintendants of the several businesses of trade, fishery, salt-making, building, and husbandry. Neal resided at Little-Harbour with Godfrie, who had the care of the fishery. Chadbourne built a house at Strawberry-bank, which was called *the great house*, in which Warnerton resided. Gibbons had the care of a saw-mill, and lived in a palisaded house at Newichwannock, where he carried on trade with the Indians. He afterward removed to Sander's-point, where the adventurers gave him a settlement for his faithful services. He was succeeded at Newichwannock by Chadbourne, whose posterity are persons of principal figure and interest there at this day. The proprietors were also careful to provide for the defence of their plantations, and sent over several cannon, which they directed their agents to mount in the most convenient place for a fort. They accordingly placed them on the north-east point of the Great-Island, at the mouth of the harbour, and laid out the ground "about a bow-shot from the water-side to a high rock, on which it was intended in time to build the principal fort."

A great part of Captain Neal's errand was to penetrate the interior part of the province of Laconia, concerning which the adventurers had formed very sanguine expectations. It was described as containing divers lakes, and extending back to a great lake and river in the country of the Iroquois. This river

was said to be fair and large, containing many fruitful islands; the air pure and salubrious; the country pleasant, having some high hills; full of goodly forests, fair valleys, and fertile plains; abounding in corn, vines, chesnuts, walnuts, and many other sorts of fruit; the rivers well stored with fish, and environed with goodly meadows full of timber-trees. In the great lake were said to be four islands, full of pleasant woods and meadows, having great store of stags, fallow-deer, elks, roebucks, beavers, and other game, and these islands were supposed to be commodiously situated for habitation and traffic, in the midst of a fine lake, abounding with the most delicate fish. No one who is acquainted with the interior part of the country in its wilderness state, can forbear smiling at this romantic description, penned in the true style of adventurers: yet such an impression had the charms of Laconia made on the minds of the first settlers, that Neal set out (1632) on foot, in company with Jocelyn and Darby Field, to discover these beautiful lakes, and settle a trade with the Indians by pinnaces, imagining the distance to be short of an hundred miles. In the course of their travels, they visited the white mountains, which they described in the same romantic style, to be a ridge, extending 100 leagues, on which snow lieth all the year, and inaccessible but by the gullics which the dissolved snow hath made: on one of these mountains they reported to have found a plain of a day's journey over, whereon nothing grows but moss; and at the further end of this plain, a rude heap of massy stones, piled upon one another, a mile high—on which one might ascend from stone to stone, like a flight of winding stairs, to the top, where was another level of about an acre, with a pond of clear water. This summit was said to be far above the clouds, and from hence they beheld a vapour like a vast pillar, drawn up by the sunbeams out of a great lake into the air, where it was formed into a cloud. The country beyond these mountains northward, was said to be "daunting terrible," full of rocky hills, as thick as mole-hills in a meadow, and clothed with infinite thick woods. They had great expectation of finding precious stones on these mountains; and something resembling chrystal being picked up, was sufficient to give them the name of the Chrystal Hills. From hence they continued their route in search of the lake; till finding their provision almost spent, and the forests of Laconia yielding no supply, they were obliged to return when they supposed themselves so far advanced, that "the discovery wanted but one day's journey of being finished."

This expedition being ended, was succeeded by one of another kind. The coast was alarmed by the report of a pirate, one Dixy Bull; who, with fifteen others, being employed in the Indian trade at the eastward, had taken several boats and rifled the fort at Pemaquid. Neal, in conjunction with the others, equipped four pinnaces and shallops, manned with forty men, being all the force that both plantations could spare, who being joined by twenty more in a bark from Boston, proceeded to Pemaquid; but contrary winds and bad weather obliged them to return without meeting the pirates, who made their way farther to the eastward, and at length got to England; where Bull met with his deserts. The company, on their return, hanged, at Richmond's Island, an Indian who had been concerned in the murder of an Englishman.

(1633.) The next year Neal and Wigen joined in surveying their respective patents, and laying out the towns of Portsmouth and Northam, and another

which was called Hampton, although no settlement had been made there. They also agreed with Wheelwright, that the plantation which he had undertaken to make at Squamscoot falls, should be called Exeter; and determined the bounds between his land and theirs. This survey was made by order of the company of Laconia, who gave names to the four towns, and the transaction was duly reported to them: soon after which Neal returned to England.

From a number of letters that passed between the adventurers and Gibbons their factor, and which are yet preserved, it appears that their views were chiefly turned toward the discovery of the lakes and of mines; the cultivation of grapes, and the advantages of trade and fishery; and that little regard was had to agriculture, the surest foundation of all other improvements in such a country as this. They often complain of their expenses, as indeed they might with reason; for they had not only to pay wages to their colonists, but to supply them with provisions, clothing, utensils, medicines, articles of trade, implements for building, husbandry and fishing, and to stock their plantations with cattle, swine, and goats. Bread was either brought from England in meal, or from Virginia in grain, and then sent to the wind-mill at Boston, there being none erected here. Very little improvement was made on the lands; the lakes were not explored; the vines were planted, but came to nothing; no mines were found but those of iron, and these were not wrought; three or four houses only were built within the first seven years; the peltry trade with the Indians was of some value, and the fishery served for the support of the inhabitants; but yielded no great profit to the adventurers, who received but inadequate returns in lumber and furs. They saw their interest sinking apace, and grew dispirited; and the major part of them either relinquished the design, or sold their shares to Mason and Gorges, who were more sanguine than the rest, and became (either by purchase or tacit consent of the others) the principal, if not sole proprietors. These gentlemen renewed their exertions with greater vigour, sent over a fresh supply of servants, and materials for carrying on the settlement, and (1634), appointed Francis Williams their governor. He was a gentleman of good sense and discretion; and so very acceptable to the people, that when they combined in a body politic they continued him at their head.

(1635.) The charter by which the council of Plymouth was established, had been from the beginning disrelished by the Virginia company; who spared no pains to get it revoked. Their applications to the king proved fruitless; but when the parliament began to enquire into the grievances of the nation, this patent was complained of as a monopoly. Sir Ferdinando Gorges, being summoned, appeared before them, and both in person and by his counsel defended it in a masterly manner, but in vain; for when the national grievances were presented to the throne, the patent of New England was the first. The council had also got into disrepute with the high church party, for having encouraged the settlement of the Plymouth and Massachusetts colonists, who fled from their persecutions. These prejudices against them, operating as discouragements to their undertaking, induced the council to resign their charter to the king; having previously taken care to secure some portion of the expiring interest to such of themselves as were disposed to accept it. The scheme they had in view was to divide their territory into twelve provinces,

under as many proprietary governors, subject to one general governor; and they went so far as to nominate Gorges, then threescore years of age, for the person, and build a ship of war, which was to bring him over and remain in the service of the country. But the ship fell, and broke in the launching; and their project not being sufficiently attended to by those in power, they were obliged to be content with such grants as they could make of those districts, into which they had divided the country.

That which was now made to Mason comprehended both his former patents, extending from Naumkeag to Pascataqua, and sixty miles northwestward within the land, together with the south half of the Isles of Shoals, and ten thousand acres at Sagadahock; saving to those already settled within these limits, the property of their lawful grants on paying "some small acknowledgement" to the proprietor. This grant was dated the 22nd of April. In June following the council surrendered their charter to the king, and in September Gorges sold to Mason a tract of land on the northeast side of the river Pascataqua, extending three miles in breadth, and following the course of the river from its mouth to its farthest head, including the sawmill which had been built at the falls of Newichwannock.

But death, which puts an end to the fairest prospects, cut off all the hopes which Mason had entertained of aggrandizing his fortune, by the settlement of New Hampshire. By his last will, which he signed a few days before his death, he disposed of his American estate in the following manner, viz. To the corporation of Lynn Regis in Norfolk, the place of his nativity, he gave two thousand acres of land in New Hampshire, subject to the yearly rent of one penny per acre to his heirs, and two-fifths of all mines royal, on condition that five families should within five years be settled thereupon. To his brother-in-law John Wallaston, three thousand acres, subject to the yearly rent of one shilling. To his grandchild Ann Tulton, ten thousand acres at Sagadahock. To Robert Tufton, his grandson, he gave his manor of Mason Hall, on condition that he should take the surname of Mason. He also gave to his brother Wallaston in trust, one thousand acres for the maintenance of "an' honest, godly, and religious preacher of God's word;" and one thousand more for the support of a grammar-school; each of these estates to be conveyed to feoffees in trust, and their successors, paying annually one penny per acre to his heirs. The residue of his estate in New Hampshire he gave to his grandson John Tufton, he taking the surname of Mason, and to his lawful issue; or in want thereof to Robert Tufton and his lawful issue; or in want thereof to Doctor Robert Mason, chancellor of the diocese of Winchester, and his lawful issue; or in want of such issue, to his own other right heirs for ever; provided that it should not go out of the name of Mason. The residuary legatee was required to pay 500*l.* out of his estate to his sister Mary, and all the grandchildren were to relinquish their right to 1,000*l.* due from this estate to their father Joseph Tufton. The estate in America was valued in the inventory at 10,000*l.* sterling.

The Massachusetts planters viewed Mason as their enemy, because he with Gorges had privately encouraged some persons whom they had censured and sent home, to petition against them as disaffected to the government; and had endeavoured to get their charter set aside, to make way for the scheme of a general governor.

But though Mason and Gorges had not the same religious views with the Massachusetts planters, yet their memory deserves respect. They were both heartily engaged in the settlement of the country; they sunk their estates in the undertaking, and reaped no profit to themselves; yet their enterprising spirit excited emulation in others, who had the advantage of improving their plans and avoiding their mistakes. Gorges accounted for the ill success of his adventures in the following manner:—1. He began when there was no hope of anything for the present but loss; as he had first to seek a place; which, being found, was a wilderness, and so gloomy was the prospect, that he could scarce procure any to go, much less to reside in it: and those whom he at length sent, could not subsist but on the provisions with which he supplied them. 2. He sought not barely his own profit, but the thorough discovery of the country; wherein he went so far (with the help of his associates) as to open the way for others to make their gain. 3. He never went in person to oversee the people whom he employed. 4. There was no settled government to punish offenders, or mispenders of their masters' goods. Two other things contributed to the disappointment in as great if not a greater degree than what he has assigned. The one was, that instead of applying themselves chiefly to husbandry, the original source of wealth and independence in such a country as this, he and his associates, being merchants, were rather intent on trade and fishing as their primary objects. These cannot be profitable in a new country, until the foundation is laid in the culture of the lands. If the lumber trade and fishery cannot now be carried on to advantage, without the constant aid of husbandry in their neighbourhood, how could a colony of traders and fishermen make profitable returns to their employers, when the husbandry necessary for their support was at the distance of Virginia or England? The other mistake which these adventurers fell into was the idea of lordship, and the granting of lands not as freeholds, but by leases subject to quit-rents. To settle a colony of tenants in a climate so far northward, where the charges of subsistence and improvement were much greater than the value of the lands, after the improvements were made—especially in the neighbourhood of so respectable and growing a colony as that of Massachusetts—was indeed a chimerical project; and had not the wiser people among them sought an union with the Massachusetts, in all probability the settlements must have been deserted.

*Troubles at Dover—Settlements of Exeter and Hampton—Ruin of Mason's interest—Story of Underhill—Combinations at Portsmouth and Dover—Union of New Hampshire with Massachusetts.*

(1633.) While the lower plantation on the river Pascataqua lay under discouragement by the death of its principal patron, the upper settlement, though carried on with more success, had peculiar difficulties to struggle with. Two thirds of this patent belonged to some merchants of Bristol, the other third to some of Shrewsbury: and there was an agreement that the division should be made by indifferent men. Captain Wiggen, who was sent over to superintend their affairs, after about one year's residence in the country made a voyage to England, to procure more ample means for carrying on the plantation. In the mean time those of Bristol had sold their interest to the Loras Say and Broke, George Willys and William Whiting, who continued Wiggen in the agency,

and procured a considerable number of families in the west of England, some of whom were of good estates, and "of some account for religion," to come over and increase the colony. It appears from ancient records, that Wiggen had a power of granting lands to the settlers; but, as trade was their principal object, they took up small lots, intending to build a compact town on Dover Neck, which lies between two branches of the river, and is a fine, dry, and healthy situation; so high as to command all the neighbouring shores, and afford a very extensive and delightful prospect. On the most inviting part of this eminence they built a meeting house, which was afterward surrounded with an entrenchment and flankarts, the remains of which are still visible. Wiggen also brought over William Leverich, a worthy and able puritan minister; but his allowance from the adventurers proving too small for his support in a new country, where all the necessities of life were scarce and dear, he was obliged to remove to the southward, and settled at Sandwich in the colony of Plymouth. This proved an unhappy event to the people, who, being left destitute of regular instruction, were exposed to the intrusions of artful impostors.

(1634.) The first of these was one Burdet. He had been a minister at Yarmouth in England; but either really or pretendedly taking offence at the extravagancies of the bishops and spiritual courts, came over to New England, and joined with the church in Salem, who employed him for a year or two as a preacher, being a good scholar and plausible in his behaviour. But, disgusted with the strictness of their discipline, he removed to Dover (1636), and continued for some time in good esteem with the people as a preacher; until, by artful insinuations, he raised such a jealousy in their minds against Wiggen their governor, that they deprived him of his office, and elected Burdet in his place.

(1637.) During his residence here, he carried on a correspondence with Archbishop Laud to the disadvantage of the Massachusetts colony, representing them as hypocritical and disaffected, and that under pretence of greater purity and discipline in matters of religion, they were aiming at independent sovereignty; it being accounted perjury and treason by their general court, to speak of appeals to the king. (1638.) The prelate thanked him for his zeal in the king's service, and assured him that care should be taken to redress those disorders when leisure from other concerns would permit. This letter of the archbishop was intercepted, and shewn to the governor of Massachusetts. Burdet's villany was considered as the more atrocious, because he had been admitted a freeman of their corporation, and had taken the oath of fidelity. A copy of his own letter was afterwards found in his closet.

About this time the Antinomian controversy at Boston having occasioned the banishment of the principal persons of that sect, several of them retired to this settlement, being without the jurisdiction of Massachusetts. When this was known, Governor Winthrop wrote to Wiggen, Burdet, and others of this plantation, "that as there had hitherto been a good correspondence between them it would be much resented if they should receive the exiles; and intimating the intention of the general court to survey the utmost limits of their patent, and make use of them." To this Burdet returned a scornful answer refusing to give the governor his title. The governor thought of citing him to court to answer for his contempt; but was dissuaded

from it by Dudley the deputy-governor, who judged it imprudent to exasperate him, lest he should avenge himself by farther accusing them to their enemies in England. The governor contented himself with sending to Hilton an account of Burdet's behaviour, inclosing a copy of his letter, and cautioning the people not to put themselves too far under his power. His true character did not long remain secret; for being detected in some licentious actions, he made a precipitate removal to Agamenticus (now York), in the province of Maine, where he also assumed to rule, and continued a course of injustice and adultery till the arrival of Thomas Gorges, their governor, (1640) who laid a fine on him, and seized his cattle for the payment of it. He appealed to the king, but his appeal not being admitted, he departed for England full of enmity against these plantations. When he arrived, he found all in confusion, and falling in with the royalists was taken and imprisoned by the parliamentary party, which is the last account we have of him.

One of the exiles on account of the Antinomian controversy, was John Wheelwright, brother to the famous Anne Hutchinson. He had been a preacher at Braintree, which was then part of Boston, and was a gentleman of learning, piety, and zeal. Having engaged to make a settlement within ten years, on the lands he had purchased of the Indians at Squamscot falls, he with a number of his adherents began a plantation there, which according to the agreement made with Mason's agents, they called Exeter. Having obtained a dismission from the church in Boston, they formed themselves into a church; and judging themselves without the jurisdiction of Massachusetts, they combined into a separate body politic, and chose rulers and assistants, who were sworn to the due discharge of their office, and the people were as solemnly sworn to obey them. Their rulers were Isaac Grosse, Nicholas Needham, and Thomas Wilson, each of whom continued in office the space of a year, having two assistants. The laws were made in a popular assembly and formally consented to by the rulers. Treason, and rebellion against the king (who is styled "the Lord's anointed"), or the country, were made capital crimes; and sedition was punishable by a fine of ten pounds, or otherwise, at the discretion of the court. This combination subsisted three years.

About the same time a plantation was formed at Winnicomet, which was called Hampton. The principal inducement to the making this settlement was the very extensive salt-marsh, which was extremely valuable, as the uplands were not cultivated so as to produce a sufficiency of hay for the support of cattle. With a view to secure these meadows, the general court of Massachusetts had [in 1636] empowered Mr. Dummer of Newbury, with John Spencer, to build a house there at the expense of the colony, which was to be refunded by those who should settle there. Accordingly a house was built, and commonly called the Bound-house; though it was intended as a mark of possession rather than of limits. The architect was Nicholas Easton, who soon after removed to Rhode-Island, and built the first English house in Newport.

This entrance being made, a petition was presented to the court by a number of persons, chiefly from Norfolk in England, praying for liberty to settle there, which was granted them. They began the settlement by laying out a township in one hundred and forty-seven shares; and having formed a church, chose Stephen Batchelor for their minister,

with whom Timothy Dalton was soon after associated. The number of the first inhabitants was fifty-six.

The authority of Massachusetts having established this settlement, they, from the beginning, considered it as belonging to their colony. Though the agent of Mason's estate made some objection to their proceeding, yet no legal method being taken to controvert this extension of their claim, the way was prepared for one still greater, which many circumstances concurred to establish.

After the death of Captain Mason, his widow and executrix sent over Francis Norton as her "general attorney;" to whom she committed the whole management of the estate. But the expense so far exceeded the income, and the servants grew so impatient for their arrears, that she was obliged to relinquish the charge of the plantation, and tell the servants that they must shift for themselves: upon which they shared the goods and cattle. Norton drove above a hundred oxen to Boston, and there sold them for twenty-five pounds sterling per head, which it is said was the current price of the best cattle in New-England at that time. These were of a large breed, imported from Denmark, from whence Mason had also procured a number of men skilled in sawing planks and making potashes. Having shared the stock and other materials, some of the people quitted the plantation; others of them tarried, keeping possession of the buildings and improvements, which they claimed as their own; the houses at Newichwannock were burned; and thus Mason's estate was ruined. These events happened between 1638 and 1644.

Among the Antinomians who were banished from Boston, and took refuge in these plantations, was Captain John Underhill, in whose story will appear some very strong characteristics of the spirit of these times. He had been a soldier in the Netherlands, and was brought over to New England by Governor Winthrop, to train the people in military discipline. He served the country in the Pequod war, and was in such reputation in the town of Boston, that they had chosen him one of their deputies. Deeply tinctured with Antinomian principles, and possessed of a high degree of enthusiasm, he made a chief figure in the controversy; being one of the subscribers to a petition in which the court was censured, with an indecent severity, for their proceedings against Wheelwright. For this offence he was disfranchised. He then made a voyage to England; and upon his return petitioned the court for 300 acres of land, which had been promised him for his former services, intending to remove after Wheelwright. In his petition he acknowledged his offence in condemning the court, and declared "that the Lord had brought him to a sense of his sin in that respect, so that he had been in great trouble on account thereof." On this occasion the court thought proper to question him concerning an offensive expression, which he had uttered on board the ship in which he came from England, "that the government at Boston were as zealous as the scribes and Pharisees, and as Paul before his conversion." He denied the charge, and it was proved to his face by a woman who was passenger with him, and whom he had endeavoured to seduce to his opinions. He was also questioned for what he had said to her of his receiving assurance of spiritual grace, which was, "that having long lain under a spirit of bondage, he could get no assurance; till at length, as he was taking a pipe of tobacco, the spirit set home upon him an absolute promise of free grace, with such assurance and joy

that he had never since doubted of his good estate, neither should he, whatever sins he might fall into." This he would neither own nor deny; but objected to the sufficiency of a single testimony. The court committed him for abusing them with a pretended retraction, and the next day passed the sentence of banishment upon him. Being allowed the liberty of attending public worship, his enthusiastic zeal broke out in a speech, in which he endeavoured to prove "that as the Lord was pleased to convert Saul while he was persecuting, so he might manifest himself to him while making a moderate use of the good creature tobacco; professing withal that he knew not wherein he had deserved the censure of the court." The elders reproved him for this inconsiderate speech; and Mr. Cotton told him, "that though God often laid a man under a spirit of bondage while walking in sin, as was the case with Paul, yet he never sent a spirit of comfort but in an ordinance, as he did to Paul by the ministry of Ananias; and therefore exhorted him to examine carefully the revelation and joy to which he pretended." The same week he was privately dealt with on suspicion of adultery, which he disregarded; and therefore on the next sabbath was questioned for it before the church; but the evidence not being sufficient to convict him, the church could only admonish him.

These proceedings, civil and ecclesiastical, being finished, he removed out of their jurisdiction; and after a while went to Dover, where he procured the place of governor in the room of Burdet. Governor Winthrop hearing of this, wrote to Hilton and others of this plantation, informing them of his character. Underhill intercepted the letter, and returned a bitter answer to Mr. Cotton; and wrote another letter full of reproaches against the governor to a gentleman of his family, while he addressed the governor himself in a fawning, obsequious strain, begging an obliteration of former miscarriages, and a bearing with human infirmities. These letters were all sent back to Hilton; but too late to prevent his advancement.

Being settled in his government, he procured a church to be gathered at Dover, who chose Hanserd Knollys for their minister. He had come over from England the year before; but being an Anabaptist of the Antinomian cast, was not well received in Massachusetts, and came here while Burdet was in office, who forbade his preaching; but Underhill, agreeing better with him, prevailed to have him chosen their minister. To ingratiate himself with his new patron, Knollys wrote in his favour to the church in Boston, styling him "The right worshipful their honoured governor." Notwithstanding which they cited him again to appear before them; the court granting him safe conduct. At the same time complaint was made to the chief inhabitants on the river, of the breach of friendship in advancing Underhill after his rejection; and a copy of Knollys's letter was returned, wherein he had written, that "Underhill was an instrument of God for their ruin," and it was enquired whether that letter was written by the desire or consent of the people. The principal persons of Portsmouth and Dover disclaimed his miscarriages, and expressed their readiness to call him to account when a proper information should be presented; but begged that no force might be sent against him. By his instigation Knollys had also written to his friends in England a calumnious letter against the Massachusetts planters, representing them as more arbitrary than the high commission court, and that there was no real religion in the

country. A copy of this letter being sent from England to Governor Winthrop, Knollys was so ashamed at the discovery, that obtaining a licence, he went to Boston; and at the public lecture before the governor, magistrates, ministers, and the congregation, made confession of his fault, and wrote a retraction to his friends in England, which he left with the governor to be sent to them.

Underhill was so affected with his friend's humiliation, and the disaffection of the people of Pascataqua to him, that he resolved to retrieve his character in the same way. Having obtained safe conduct, he went to Boston, and in the same public manner acknowledged his adultery, his disrespect to the government, and the justice of their proceedings against him: but his confession was mixed with so many excuses and extenuations, that it gave no satisfaction; and the evidence of his scandalous deportment being now undeniable, the church passed the sentence of excommunication, to which he seemed to submit, and appeared much dejected while he remained there.

Upon his return, to please some disaffected persons, at the mouth of the river, he sent thirteen armed men to Exeter to rescue out of the officers' hands one Fish, who had been taken into custody for speaking against the king. The people of Dover forbade his coming into their court till they had considered his crimes, and he promised to resign his place if they should disapprove of his conduct; but hearing that they were determined to remove him, he rushed into court in a passion, took his seat, ordered one of the magistrates to prison for saying that he would not sit with an adulterer, and refused to receive his dismissal, when they voted it. But they proceeded to choose another governor, Roberts, and sent back the prisoner to Exeter.

(1640.) A new scene of difficulty now arose. Thomas Larkham, a native of Lyme in Dorsetshire, and formerly a minister at Northam near Barnstable, had come over to New England, and not favouring the doctrine, nor willing to submit to the discipline of the churches in Massachusetts, came to Dover; and being a preacher of good talents, eclipsed Knollys, and raised a party who determined to remove him. He therefore gave way to popular prejudice, and suffered Larkham to take his place; who soon discovered his licentious principles, by receiving into the church persons of immoral characters, and assuming, like Burdet, the civil, as well as ecclesiastical, authority. The better sort of the people were displeased, and restored Knollys to his office, who excommunicated Larkham. This bred a riot, in which Larkham laid hands on Knollys, taking away his hat on pretence that he had not paid for it; but he was civil enough afterwards to return it. Some of the magistrates joined with Larkham, and forming a court, summoned Underhill, who was of Knollys's party, to appear before them, and answer to a new crime which they had to allege against him. Underhill collected his adherents; Knollys was armed with a pistol, and another had a bible mounted on a halbert for an ensign. In this ridiculous parade they marched against Larkham and his party, who prudently declined a combat, and sent down the river to Williams the governor, at Portsmouth, for assistance. He came up in a boat with an armed party, beset Knollys's house where Underhill was, guarded it night and day till a court was summoned, and then, Williams sitting as judge, Underhill and his company were found guilty of a riot, and after being fined, were

banished the plantation. The new crime which Larkham's party alleged against Underhill was, that he had been secretly endeavouring to persuade the inhabitants to offer themselves to the government of Massachusetts, whose favour he was desirous to purchase by these means, as he knew that their view was to extend their jurisdiction as far as they imagined their limits reached, whenever they should find a favourable opportunity. The same policy led him, with his party, to send a petition to Boston, praying for the interposition of the government in their case: in consequence of which the governor and assistants commissioned Simon Bradstreet, Esq., with the famous Hugh Peters, then minister of Salem, and Timothy Dalton of Hampton, to enquire into the matter, and effect a reconciliation, or certify the state of things to them. These gentlemen travelled on foot to Dover, and finding both sides in fault, brought the matter to this issue, that the one party revoked the excommunication, and the other the fines and banishment.

In the heat of these disputes, a discovery was made of Knollys' failure in point of chastity. He acknowledged his crime before the church; but they dismissed him, and he returned to England, where he suffered by the severity of the long parliament in 1644; and being forbidden to preach in the churches, opened a separate meeting in Great St. Helen's, from which he was soon dislodged, and his followers dispersed. He also suffered in the cause of non-conformity in the reign of King Charles the second, and at length (as it is said) died "a good man, in a good old age," September 19, 1691, aged ninety-three.

Underhill having finished his career in these parts, obtained leave to return to Boston, and finding honesty to be the best policy, did in a large assembly at the public lecture, and during the sitting of the court, make a full confession of his adultery and hypocrisy, his pride and contempt of authority, justifying the church and court in all that they had done against him, declaring that his pretended assurance had failed him, and that the terror of his mind had at some times been so great, that he had drawn his sword to put an end to his life. The church being now satisfied, restored him to their communion. The court, after waiting six months for evidence of his good behaviour, took off his sentence of banishment, and released him from the punishment of his adultery: the law, which made it capital, having been enacted after the crime was committed, could not touch his life. Some offers being made him by the Dutch at Hudson's river, whose language was familiar to him, the church of Boston hired a vessel to transport him and his family thither, furnishing them with all necessaries for the voyage. The Dutch governor gave him the command of a company of an hundred and twenty men, and he was very serviceable in the wars which that colony had with the Indians, having, it is said, killed one hundred and fifty on Long Island, and three hundred on the Main. He continued in their service till his death.

We find in this relation a striking instance of that species of false religion, which, having its seat in the imagination, instead of making the heart better, and reforming the life, inflames the passions, stupifies reason, and produces the wildest effects in the behaviour. The excesses of enthusiasm have often been observed to lead to sensual gratifications; the same natural fervour being sufficient to produce both. It cannot be strange, that they who deery morality should indulge such gross and scan-

dalous enormities as are sufficient to invalidate all those evidences of their religious character on which they lay so much stress. But it is not so surprising that men should be thus misled, as that such frantic zealots should ever be reduced to an acknowledgment of their offences; which in this instance may be ascribed to the strict discipline then practised in the churches of New England.

The people of Dover and Portsmouth during all this time had no power of government delegated from the crown: but finding the necessity of some more determinate form than they had yet enjoyed, combined themselves each into a body politic after the example of their neighbours at Exeter. The inhabitants of Dover, by a written instrument, signed by forty-one persons, agreed to submit to the laws of England, and such others as should be enacted by a majority of their number, until the royal pleasure should be known. The date of the combination at Portsmouth is uncertain, their first book of records having been destroyed [in 1652], after copying out what they then thought proper to preserve. Williams, who had been sent over by the adventurers, was by annual suffrage continued governor of the place, and with him were associated Ambrose Gibbons and Thomas Warnerton in quality of assistants. During this combination, a grant of fifty acres of land for a glebe was made by the governor and inhabitants to Thomas Walford and Henry Sherburne, churchwardens, and their successors for ever, as feoffees in trust; by virtue of which grant the same land is still held, and being let on long leases, a considerable part of the town of Portsmouth is built upon it. At this time they had a parsonage house and chapel, and had chosen Richard Gibson for their parson, the patronage being vested in the parishioners. Gibson was sent from England as minister to a fishing plantation belonging to one Trelawney. He was "wholly addicted to the hierarchy and discipline of England, and exercised his ministerial function" according to the ritual. He was summoned before the court at Boston for "scandalizing the government there, and denying their title;" but upon his submission, they discharged him without fine or punishment, being a stranger, and about to depart the country. After his departure the people of Portsmouth had James Parker for their minister, who was a scholar, and had been a deputy in the Massachusetts court. After him they had one Browne; and Samuel Dudley, a son of Deputy-governor Dudley; but these were only temporary preachers, and they did not obtain the regular settlement of a minister for many years.

Four distinct governments (including one at Kittery on the north side of the river) were now formed on the several branches of Pascataqua. These combinations being only voluntary agreements, liable to be broken or subdivided on the first popular discontent, there could be no safety in the continuance of them. The distractions in England at this time had cut off all hope of the royal attention, and the people of the several settlements were too much divided in their opinions to form any general plan of government which could afford a prospect of permanent utility. The more considerate persons among them, therefore, thought it best to treat with Massachusetts about taking them under their protection. That government was glad of an opportunity to realize the construction which they had put upon the clause of their charter, wherein their northern limits are defined. For a line drawn from east to

west at the distance of "three miles to the northward of Merrimack river, and of any and every part thereof," will take in the whole province of New Hampshire, and the greater part of the province of Maine, so that both Mason's and Gorges's patents must have been vacated. They had already intimated their intention to run this east and west line, and presuming on the justice of their claim, they readily entered into a negociation with the principal settlers of Pascataqua respecting their incorporation with them. (1641.) The affair was more than a year in agitation, and was at length concluded by an instrument subscribed in the presence of the general court by George Willys, Robert Saltonstall, William Whiting, Edward Holiock, and Thomas Makepeace, in behalf of themselves and the other partners of the two patents; by which instrument they resigned the jurisdiction of the whole to Massachusetts, on condition that the inhabitants should enjoy the same liberties with their own people, and have a court of justice erected among them. The property of the whole patent of Portsmouth, and of one-third part of that of Dover, and of all the improved lands therein, was reserved to the lords and gentlemen proprietors, and their heirs for ever.

The court, on their part, consented that the inhabitants of these towns should enjoy the same privileges with the rest of the colony, and have the same administration of justice as in the courts of Salem and Ipswich; that they should be exempted from all public charges, except what should arise among themselves, or for their own peculiar benefit; that they should enjoy their former liberties of fishing, planting, and felling timber; that they should send two deputies to the general court; and that the same persons who were authorised by their combinations to govern them, should continue in office till the commissioners named in this order should arrive at Pascataqua. These commissioners were invested with the power of the quarter courts of Salem and Ipswich, and at their arrival they constituted Francis Williams, Thomas Warnerton and Ambrose Gibbons of Portsmouth, Edward Hilton, Thomas Wiggen, and William Waldron of Dover, magistrates, who were confirmed by the general court.

(1642.) By a subsequent order a very extraordinary concession was made to these towns, which shews the fondness that government had of retaining them under their jurisdiction. A test had been established by law, but it was dispensed with in their favour; their freemen were allowed to vote in town affairs, and their deputies to sit in the general court though they were not church members.

The people of Dover being left destitute of a minister by the sudden departure of Larkham, who took this method to avoid the shame which would have attended the discovery of a crime similar to that for which Knollys had been dismissed, wrote to the Massachusetts for help. The court took care to send them Daniel Mand, who had been a minister in England. He was an honest man, and of a quiet and peaceable disposition, qualities much wanting in all his predecessors. Larkham returned to England, where he continued to exercise his ministry till ejected by the act of uniformity in 1662, from Tavistock in Devon. He is said to have been "well known there for a man of great piety and sincerity," and died in 1669, aged 68.

The inhabitants of Exeter had hitherto continued their combination; but finding themselves comprehended within the claim of Massachusetts, and being weary of their inefficacious mode of government, they

petitioned the court, and were readily admitted under their jurisdiction. William Wenborne, Robert Smith, and Thomas Wardhall were appointed their magistrates; and they were annexed to the county of Essex. Upon this, Whelewright, who was still under sentence of banishment, with those of his church who were resolved to adhere to him, removed into the province of Maine, and settled at Wells, where his posterity yet remain. He was soon after restored, upon a slight acknowledgment, to the freedom of the colony, and removed to Hampton, of which church he was minister for many years, until he went to England, where he was in favour with Cromwell: but after the restoration, he returned and settled at Salisbury, where he died in 1680.

(1644.) After his departure from Exeter, an attempt was made by the remaining inhabitants to form themselves into a church, and they called the aged Stephen Batchelor to the ministry, who had been dismissed from Hampton for his irregular conduct. But the general court here interposed and sent them a solemn prohibition, importing "that their divisions were such that they could not comfortably, and with approbation, proceed in so weighty and sacred affairs," and therefore directing them "to defer gathering a church, or any other such proceeding, till they or the court at Ipswich, upon further satisfaction of their reconciliation and fitness, should give allowance therefor."

Such a stretch of power which would now be looked upon as an infringement of christian liberty, was agreeable to the principles of the first fathers of New England, who thought that civil government was established for the defence and security of the church against error both doctrinal and moral. In this sentiment they were not singular, it being universally adopted by the reformers, in that and the preceding age, as one of the fundamental principles of their separation from the Romish church, and necessary to curtail the claims of her Pontiff, who assumed a supremacy over "the kings of the earth."

*Observations on the principles and conduct of the first planters of New England.—Causes of their removal.—Their fortitude.—Religious sentiments.—Care of their posterity.—Justice.—Laws.—Theocratic prejudices.—Intolerance and persecutions.*

AN union having been formed between the settlements on Pascataqua and the colony of Massachusetts, their history for the succeeding forty years is in a great measure the same: and as many of the people in New Hampshire had the same principles, views, and interests, with the other people of New England, we shall make such observations, and intersperse such historical facts, as may illustrate the subject.

In the preceding century the holy scriptures, which had long lain hid in the rubbish of monastic libraries, were brought to public view by the happy invention of printing; and as darkness vanishes before the rising sun, so the light of divine truth began to dissipate those errors and superstitions in which Europe had long been involved. At the same time a remarkable concurrence of circumstances gave peculiar advantage to the bold attempt of Luther, to rouse Germany from her inglorious subjection to the Roman Pontiff, and effectuate a reformation, which soon spread into the neighbouring countries. But so intimately were the political interests of kingdoms and states blended with religious prejudices that the work, though happily begun, was greatly blemished and impeded.

Henry the Eighth of England took advantage of this amazing revolution in the minds of men, to throw off the papal yoke, and assert his native claim to independence. But so dazzling was the idea of power, and the example of the first christian princes who had exercised a superintendency in spirituals as well as temporals, that he transferred to himself that spiritual power which had been usurped and exercised by the bishops of Rome, and set up himself as supreme head on earth of the church of England; commanding both clergy and laity in his dominions to swear allegiance to him in this newly assumed character.

This claim was kept up by his son and successor, Edward the Sixth, in whose reign the reformation gained much ground; and a service-book was published by royal authority as the standard of worship and discipline for his subjects. This excellent prince was taken out of the world in his youth; and his sister Mary, who then came to the throne, restored the supremacy to the pope, and raised such fiery persecution against the reformers, that many of them fled into Germany and the Netherlands, where they departed from that uniformity which had been established in England, and became divided in their sentiments and practice respecting ecclesiastical affairs: the native effect of that just liberty of conscience which they enjoyed abroad, pursuing their own enquiries according to their respective measures of light; uninfluenced by secular power, or the hope of acquiring dignities in a national establishment.

The accession of Elizabeth inspired them with new hopes; and they returned home, resolving to attempt the reformation of the church of England, agreeably to the respective opinions which they had embraced in their exile. But they soon found that the queen, who had been educated in the same manner with her brother Edward, was fond of the establishment made in his reign, and was strongly prejudiced in favor of pomp and ceremony in religious worship. She asserted her supremacy in the most absolute terms, and erected a high commission court with jurisdiction in ecclesiastical affairs. Uniformity being rigorously enjoined and no abatement or allowance made for tender consciences (though it was conceded that the ceremonies were indifferent) a separation from the establishment took place. Those who were desirous of a farther reformation from the Romish superstitions, and of a more pure and perfect form of religion, were denominated Puritans; whose principles, as distinguished from those of the other reformers who were in favour with the queen, are thus represented.

"The queen and court reformers held, 1. That every prince had the sole authority to correct all abuses of doctrine and worship within his own territories. 2. That the church of Rome was a true church, though corrupt in some points of doctrine and government; that all her ministrations were valid, and that the pope was a true bishop of Rome, though not of the universal church. 3. That the scriptures were a perfect rule of faith, but not a standard of discipline; and that it was left to the discretion of the christian magistrate, to accommodate the government of the church to the policy of the state. 4. That the practice of the primitive church for the first four or five centuries, was a proper standard of church government and discipline; and in some respects better than that of the apostles, which was only accommodated to the infant state of the church, while it was under persecution; whereas the other was suited to the grandeur of a national

establishment 5. That things indifferent in their own nature, as rites, ceremonies, and habits, might be settled, determined and made necessary, by the command of the civil magistrate, and that in such cases it was the duty of the subject to observe them.

"On the other hand, the Puritans, 1. Disowned all foreign jurisdiction over the church, but could not admit of that extensive power which the crown claimed by the supremacy. However, they took the oath, with the queen's explication, as only restoring her majesty to the ancient and natural rights of sovereign princes over their subjects. 2. They held the pope to be antichrist, the church of Rome a false church, and all her ministrations superstitious and idolatrous. 3. That the scriptures were a standard of discipline as well as doctrine, and if there was need of a discretionary power, it was vested not in the magistrate, but in the officers of the church. 4. That the form of government ordained by the apostles was aristocratical, and designed as a pattern to the church in after ages, not to be departed from in its main principles. 5. That those things which Christ hath left indifferent ought not to be made necessary; and that such rites and ceremonies as had been abused to idolatry and superstition, and had a manifest tendency to lead men back thereto, were no longer indifferent but unlawful.

"Both parties agree too well in asserting the necessity of uniformity in public worship, and of using the sword of the magistrate for the support and defence of their respective principles; which they made an ill use of in their turns, whenever they could grasp it in their hands. The standard of uniformity according to the bishops, was the queen's supremacy and the laws of the land; according to the Puritans, the decrees of national and provincial synods, allowed and enforced by the civil magistrate. Neither party were for admitting that liberty of conscience and freedom of profession which is every man's right, so far as is consistent with the peace of civil government. Upon this fatal rock of *uniformity*, was the peace of the church of England split."

It is melancholy to observe what mischiefs were caused by the want of a just distinction between civil and ecclesiastical power, and by that absurd zeal for uniformity, which kept the nation in a long ferment, and at length burst out into a blaze, the fury of which was never thoroughly quelled till the happy genius of the revolution gave birth to a free and equitable toleration, whereby every man was restored to the natural right of judging and acting for himself in matters of religion. All the celebrated wisdom of Elizabeth's government could not devise an expedient so successful. Though her reign was long and prosperous, yet it was much stained with oppression and cruelty toward many of her best subjects; who, wearied with ineffectual applications, waited the accession of James, from whom they expected more favour, because he had been educated in the presbyterian church of Scotland, and professed a high veneration for that establishment. But they soon found that he had changed his religious principles with his climate, and that nothing was to be expected from a prince of so base a character, but insult and contempt.

In the beginning of his reign a great number of the Puritans removed into Holland, where they formed churches upon their own principles. But not relishing the manners of the Dutch, after twelve years they projected a removal to America, and laid the foundation of the colony of Plymouth. The spirit of uniformity still prevailing in England, and being carried to the greatest extent, in the reign of

Charles the First, by that furious bigot Archbishop Laud, many of the less scrupulous, but conscientious members of the church of England, who had hitherto remained in her communion, seeing no prospect of rest or liberty in their native country, followed their brethren to America, and established the colony of Massachusetts, from which proceeded that of Connecticut.

By such men, influenced by such motives, were the principal settlements in New England effected. The fortitude and perseverance which they exhibited therein will always render their memory dear to their posterity. To prepare for their enterprize, they had to sell their estates, some of which were large and valuable, and turn them into materials for a new plantation, with the nature of which they had no acquaintance, and of which they could derive no knowledge from the experience of others. After traversing a wide ocean they found themselves in a country full of woods, to subdue which required immense labour and patience; at a vast distance from any civilized people; in the neighbourhood of none but ignorant and barbarous savages; and in a climate, where a winter much more severe than they had been accustomed to, reigns for a third part of the year. Their stock of provisions falling short, they had the dreadful apprehension of perishing by famine, one half of their number dying before the first year was completed; the ocean on one side separated them from their friends, and the wilderness on the other presented nothing but scenes of horror, which it was impossible for them to conceive before they endured them.

But under all these difficulties, they maintained a steady and pious resolution; depending on the providence of the Supreme Ruler, and never repenting the business on which they had come into this wilderness. As purity in divine administrations was the professed object of their undertaking, so they immediately set themselves to form churches, on what they judged the gospel plan. To be out of the reach of prelatic tyranny, and at full liberty to pursue their own enquiries, and worship God according to their consciences, (which had been denied them in their own country) was esteemed the greatest of blessings, and sweetened every bitter cup which they were obliged to drink. They always professed that their principal design was to erect churches on the primitive model, and that the consideration of temporal interest and conveniency had but the second place in their views.

In the doctrinal points of religion they were of the same mind with their brethren of the church of England, as expressed in their articles. The Massachusetts planters left behind them, when they sailed, a respectful declaration importing that they did not consider the church of England as antichristian, but only withdrew from the imposition of unscriptural terms of communion. Some of the Plymouth planters had embraced the narrow principles of the Brownists, the first who separated from the church of England; but by the improvements which they made in religious knowledge under the instruction of the renowned John Robinson, their pastor in Holland, they were in great measure cured of that sour leaven. The congregational system of church government was the result of the studies of that truly pious, learned, humble, and benevolent divine, who seems to have had more of the genuine spirit of the reformation, and of freedom from bigotry, than any others in his day. His farewell charge to those of his flock, who were embarking in

Holland for America, deserves to be had in perpetual remembrance. "Brethren (said he), we are now quickly to part from one another, and whether I may ever live to see your face on earth any more, the God of heaven only knows; but whether the Lord hath appointed that or no, I charge you before God and his blessed angels that you follow me no further than you have seen me follow the Lord Jesus Christ. If God reveal any thing to you by any other instrument of his, be as ready to receive it, as ever you were to receive any truth by my ministry; for I am verily persuaded, I am very confident, the Lord has more truth yet to break forth out of his holy word. For my part, I cannot sufficiently bewail the condition of the reformed churches, who are come to a period in religion, and will go at present no farther than the instruments of their reformation. The Lutherans cannot be drawn to go beyond what Luther saw; whatever part of his will our good God has revealed to Calvin, they will rather die than embrace it. And the Calvinists you see stick fast where they were left by that great man of God, who yet saw not all things. This is a misery much to be lamented; for though they were burning and shining lights in their times, yet they penetrated not into the whole counsel of God; but were they now living, would be as willing to embrace farther light, as that which they at first received. I beseech you to remember it as an article of your church covenant, 'That you be ready to receive whatever truth shall be made known to you from the written word of God.' Remember that, and every other article of your sacred covenant. But I must herewithal exhort you to take heed what you receive as truth. Examine, consider, and compare it with other scriptures of truth, before you receive it; for it is not possible the christian world should come so lately out of such thick antichristian darkness, and that perfection of knowledge should break forth at once." It is much to be regretted that this excellent man did not live to reach New England, and to diffuse more generally such truly catholic and apostolic principles.

Many of the first planters of New England were persons of good education, and some of them eminent for their abilities and learning. Such men could not but see the necessity of securing to their posterity the advantages which they had so dearly purchased. One of their first concerns was to have their children considered, from their earliest years, as subjects of ecclesiastical discipline. This became a matter of controversy, and was largely discussed in sermons and pamphlets, and at length determined by the authority of a synod. A regular course of academical learning was a point of equal importance, and admitted of no dispute. They saw that the reputation and happiness of the whole country depended greatly upon it. They therefore took early care for the establishment of schools, and within ten years from their first settlement, founded a college at Cambridge, which from small beginnings, by the munificence of its patrons, has made a distinguished figure in the republic of letters. Many eminent men have there been formed for the service of the church and state: and without this advantage the country could not have arrived, in so short a time, at its present respectable state; nor have been furnished with men capable of filling the various stations of usefulness, and of defending civil and religious liberty.

Though the first planters derived from the royal grants and charters a political right, as subjects of the crown of England, to this territory; yet they

did not think themselves justly entitled to the property of it till they had fairly purchased it of its native lords, and made them full satisfaction. Nor did they content themselves with merely living peaceably among them, but exerted themselves vigorously in endeavouring their conversion to christianity, which was one of the obligations of their patent, and one of the professed designs of their settlement in this country. This duty was strictly performed, and the names of Eliot and Mayhew will always be remembered as unwearied instruments in promoting it. Great care was taken by the government to prevent fraud and injustice toward the Indians in trade, or violence to their persons. The nearest of the natives were so sensible of the justice of their English neighbours, that they lived in a state of peace with them, with but little interruption, for above fifty years.

Slavery was thought so inconsistent with the natural rights of mankind, and detrimental to society, that an express law was made, prohibiting the buying or selling of slaves, except those taken in lawful war, or reduced to servitude for their crimes by a judicial sentence; and these were to have the same privileges as were allowed by the laws of Moses. There was a remarkable instance of justice in the execution of this law, in 1645, when a Negro who had been fraudulently brought from the coast of Africa, and sold in the country, was by the special interposition of the general court taken from his master in order to be sent home to his native land. How long after this the importation of blacks continued to be disallowed is uncertain; but if the same resolute justice had always been observed, it would have been much for the credit and interest of the country; and their own struggles for liberty would not have carried so flagrant an appearance of inconsistency.

Severe laws conformable to the principles of the laws of Moses were enacted against all kinds of immorality. Blasphemy, idolatry, adultery, unnatural lusts, rape, murder, manstealing, false witness, rebellion against parents, and conspiracy against the commonwealth, were made capital crimes; and because some doubted whether the magistrate could punish breaches of the four first commands of the decalogue, this right was asserted in the highest tone, and the denial of it ranked among the most pestilent heresies, and punished with banishment. By the severity and impartiality with which those laws were executed, intemperance and profaneness were so effectually discountenanced that Hugh Peters, who had resided in the country twenty years, declared before the parliament that he had not seen a drunken man, nor heard a profane oath during that period. The report of this extraordinary strictness, while it invited many of the best men in England to come over, kept them clear of those wretches who fly from one country to another to escape the punishment of their crimes.

The professed design of the plantation being the advancement of religion, and men of the strictest morals being appointed to the chief places of government, their zeal for purity of every kind carried them into some refinements in their laws, which are not generally supposed to come within the sphere of the magistracy, and in larger communities could scarcely be attended to in a judicial way. The drinking of healths, and the use of tobacco, were forbidden, the former being considered as an heathenish and idolatrous practice, grounded on the ancient libations; the other as a species of intoxication and waste of

time. Laws were instituted to regulate the intercourse between the sexes, and the advances toward matrimony: they had a ceremony of betrothing, which preceded that of marriage. Pride and levity of behaviour came under the cognizance of the magistrate. Not only the richness but the mode of dress, and cut of the hair, were subject to state regulations. Women were forbidden to expose their arms or bosoms to view; it was ordered that their sleeves should reach down to their wrist, and their gowns be closed round their neck. Men were obliged to cut short their hair, that they might not resemble women. No person not worth two hundred pounds was allowed to wear gold or silver lace, or silk hoods and scarfs. Offences against these laws were presentable by the grand jury; and those who dressed above their rank were to be assessed accordingly. Sumptuary laws might be of use in the beginning of a new plantation; but these pious rulers had more in view than the political good. They were not only concerned for the external appearance of sobriety and good order, but thought themselves obliged, so far as they were able, to promote real religion, and enforce the observance of the divine precepts.

As they were fond of imagining a near resemblance between the circumstances of their settlement in this country, and the redemption of Israel from Egypt or Babylon; it is not strange that they should also look upon their "commonwealth as an institution of God for the preservation of their churches, and the civil rulers as both members and fathers of them." The famous John Cotton, the first minister in Boston, was the chief promoter of this sentiment. When he arrived in 1633, he found the people divided in their opinions. Some had been admitted to the privileges of freemen at the first general court, who were not in communion with the churches; after this an order was passed, that none but members of the churches should be admitted freemen; whereby all other persons were excluded from every office or privilege, civil or military. This great man, by his eloquence, confirmed those who had embraced this opinion, and earnestly pleaded "that the government might be considered as a theocracy, wherein the Lord was judge, lawgiver, and king; that the laws which he gave Israel might be adopted, so far as they were of moral and perpetual equity; that the people might be considered as God's people in covenant with him; that none but persons of approved piety and eminent gifts should be chosen rulers; that the ministers should be consulted in all matters of religion; and that the magistrate should have a superintending and coercive power over the churches." At the desire of the court, he compiled a system of laws, founded chiefly on the laws of Moses, which was considered by the legislative body as the general standard; though they never formally adopted it, and in some instances varied from it.

These principles were fundamentally the same with those on which were grounded all the persecutions which they had endured in England, and naturally led to the same extremes of conduct which they had so bitterly complained of in those civil and ecclesiastical rulers, from whose tyranny they had fled into this wilderness. They had already proceeded a step farther than the hierarchy had ever attempted. No test-law had as yet taken place in England; but they had at one blow cut off all but those of their own communion from the privileges of civil offices, however otherwise qualified. They thought that as they had suffered so much in laying

the foundation of a new state, which was supposed to be "a model of the glorious kingdom of Christ on earth," they had an exclusive right to all the honours and privileges of it; and having the power in their hands, they effectually established their pretensions, and made all dissenters and disturbers feel the weight of their indignation.

In consequence of the union thus formed between the church and state on the plan of the Jewish theocracy, the ministers were called to sit in council, and give their advice in matters of religion and cases of conscience which came before the court, and without them they never proceeded to any act of an ecclesiastical nature. As none were allowed to vote in the election of rulers but freemen, and freemen must be church members; and as none could be admitted into the church but by the elders, who first examined, and then propounded them to the brethren for their vote, the clergy acquired hereby a vast ascendancy over both rulers and people, and had in effect the keys of the state as well as the church in their hands. The magistrates, on the other hand, regulated the gathering of churches, interposed in the settlement and dismissal of ministers, arbitrated in ecclesiastical controversies, and controlled synodical assemblies. This coercive power in the magistrate was deemed absolutely necessary to preserve "the order of the gospel."

The principle on which this power is grounded is expressed in the Cambridge Platform in terms as mild as possible. "The power and authority of magistrates is not for the restraining of churches, or any other good works, but for the helping in and furthering thereof, and therefore the consent and countenance of magistrates, when it may be had, is not to be slighted or lightly esteemed; but, on the contrary, it is a part of the honour due to christian magistrates to desire and crave their consent and approbation therein: which being obtained, the churches may then proceed in their way with much more encouragement and comfort." This article (like many others in that work) is curiously and artfully drawn up, so that there is an appearance of liberty and tenderness, but none in reality: for although the magistrate was not to restrain any good works, yet he was to be the judge of the good or evil of the works to be restrained; and what security could churches have that they should not be restrained in the performance of what they judged to be good works? They might indeed think themselves safe, while their rulers were so zealous for the purity of the churches of which themselves were members, and while their ministers were consulted in all ecclesiastical affairs; but if the civil powers had acted without such consultation, or if the ministers had been induced to yield to the opinion of the magistrates, when contrary to the interest of the churches, what then would have become of religious liberty?

The idea of liberty in matters of religion was in that day strangely understood, and mysteriously expressed. The venerable Higginson of Salem, in his sermon on the day of the election 1663, speaks thus: "The gospel of Christ hath a right paramount all rights in the world; it hath a divine and supreme right to be received in every nation, and the knee of magistracy is to bow at the name of Jesus. This right carries liberty along with it, for all such as profess the gospel, to walk according to the faith and order of the gospel. That which is contrary to the gospel hath no right, and therefore should have no liberty." Here the question arises, who is to be the

judge of what is agreeable or contrary to the gospel? If the magistrate, then there is only a liberty to believe and practice what the magistrate thinks right. A similar sentiment occurs in the sermon of the learned President Oakes on the same occasion in 1673; "The outcry of some is for liberty of conscience. This is the great Diana of the libertines of this age. But remember, that as long as you have liberty to walk in the faith and order of the gospel, and may lead quiet and peaceable lives in all godliness and honesty, you have as much liberty of conscience as Paul desired under any government." Here the question recurs, would Paul have submitted to walk according to the opinion which the magistrate might entertain of the faith and order of the gospel? But this was all the freedom allowed by the spirit of these times. Liberty of conscience and toleration were offensive terms, and they who used them were supposed to be the enemies of religion and government. "I look upon toleration (says the same author) as the first born of all abominations; if it should be born and brought forth among us, you may call it Gad, and give the same reason that Leah did for the name of her son, *Behold a troop cometh, a troop of all manner of abominations.*" In another of these election sermons, (which may generally be accounted the echo of the public voice, or the political pulse by which the popular opinion may be felt) it is shrewdly intimated that toleration had its origin from the devil, and the speech of the demoniac who cried out, "what have we to do with thee, let us alone, thou Jesus of Nazareth," is styled "Sa an's plea for toleration." The following admonition to posterity, written by the Deputy-Governor Dudley, is another specimen:

"Let men of God in courts and churches watch  
O'er such as do a toleration hatch;  
Lest that ill egg bring forth a cockatrice,  
To poison all with heresy and vice.  
If men be left and otherwise combine,  
My epitaph's *I die no libertine.*"

The champion of these sentiments was Cotton, who though eminently meek, placid and charitable, yet was strongly tinctured with the prevailing opinion, that the magistrate had a coercive power against heretics. The banishment of Roger Williams, minister of Salem, occasioned a vehement controversy on this point. Williams having written in favour of liberty of conscience, and styled the opposite principle "the bloody tenet;" was answered by Cotton, who published a treatise in 1647, with this strange title, "The bloody tenet washed, and made white in the blood of the Lamb." In this work he labours to prove the lawfulness of the magistrate's using the civil sword to extirpate heretics, from the commands given to the Jews to put to death all blasphemers and idolaters. To the objection, that persecution serves to make men hypocrites, he says, "better tolerate hypocrites and tares than briars and thorns. In such cases the civil sword doth not so much attend the conversion of seducers, as the preventing the seduction of honest minds by their means." He allows indeed that "the magistrate ought not to draw the sword against seducers till he have used all good means for their conviction: but if after their continuance in obstinate rebellion against the light, he shall still walk toward them in soft and gentle commiseration, his softness and gentleness is excessive large to foxes and wolves; but his bowels are miserably straitened and hardened against the poor sheep and lambs of Christ. Nor is it frustrating the end

of Christ's coming, which was to save souls, but a direct advancing it, to destroy, if need be, the bodies of those wolves, who seek to destroy the souls of those for whom Christ died." In pursuing his argument he refines so far as to deny that any man is to be persecuted on account of conscience "till, being convinced in his conscience of his wickedness, he do stand out therein, not only against the truth, but against the light of his own conscience, that so it may appear he is not persecuted for cause of conscience, but punished for sinning against his own conscience." To which he adds, "sometimes it may be an aggravation of sin both in judgment and practice that a man committeth it in conscience." After having said that it was toleration which made the world antichristian, he concludes his book with this singular ejaculation, "the Lord keep us from being bewitched with the whole's cup, lest while we seem to reject her with open face of profession, we bring her in by a back door of toleration; and so come to drink deeply of the cup of the Lord's wrath, and be filled with her plagues."

But the strangest language that ever was used on this or perhaps on any other subject, is to be found in a book printed in 1645, by the humorous Ward of Ipswich, entitled, "the Simple Cöbler of Agawam." "My heart (says he) hath naturally detested four things; the standing of the Apocrypha in the Bible: foreigners dwelling in my country, to crowd out native subjects into the corners of the earth: alchymized coins: toleration of divers religions or of one religion in segregant shapes. He that willingly assents to the last, if he examines his heart by daylight, his conscience will tell him, he is either an atheist, or an heretic, or an hypocrite, or at best a captive to some lust. Polypietty is the greatest impiety in the world. To authorize an untruth by toleration of the state, is to build a sconce against the walls of heaven, to batter God out of his chair. Persecution of true religion and toleration of false are the Jannes and Jambres to the kingdom of Christ, whereof the last is by far the worst. He that is willing to tolerate any unsound opinion, that his own may be tolerated though never so sound, will for a need, hang God's bible at the devil's girdle. It is said that men ought to have liberty of conscience, and that it is persecution to debar them of it: I can rather stand amazed than reply to this; it is an astonishment that the brains of men should be par-boiled in such impious ignorance."

From these specimens (of which the reader will think he has had enough), it is easy to see how deeply the principle of intölerancy was rooted in the minds of the first settlers. Had it stood only in their books as a subject of speculation, it might have been excused, considering the prejudices of the times; but it was drawn out into fatal practice, and caused severe persecutions, which cannot be justified consistently with christianity or true policy. Whatever may be said in favour of their proceedings against the Antinomians, whose principles had such an effect on the minds of the people as materially affected the foundations of government, in the infancy of the plantation; yet the Anabaptists and Quakers were so inconsiderable for numbers, and the colony was then so well established, that no danger could have been rationally apprehended to the commonwealth from them. Rhode Island was settled by some of the Antinomian exiles on a plan of entire religious liberty: men of every denomination being equally protected and countenanced, and enjoying the honours and offices of government. The

Anabaptists, fined and banished, flocked to that new settlement, and many of the Quakers also took refuge there; so that Rhode Island was in those days looked upon as the drain or sink of New England. and it has been said that "if any man had lost his religion, he might have found it there, among such a general muster of opinionists." Notwithstanding this invective, it is much to the honour of that government, that there never was an instance of persecution for conscience sake countenanced by them. Rhode Island and Pennsylvania afford a strong proof that toleration conduces greatly to the settlement and increase of an infant plantation.

The Quakers at first were banished; but this proving insufficient, a succession of sanguinary laws were enacted against them, of which imprisonment, whipping, cutting off the ears, boring the tongue with an hot iron, and banishment on pain of death, were the terrible punishments. In consequence of these laws four persons were put to death at Boston, bearing their punishment with patience and fortitude; solemnly protesting that their return from banishment was by divine direction, to warn the magistrates of their errors, and intreat them to repeal their cruel laws; denouncing the judgments of God upon them; and foretelling that if they should put them to death, others would rise up in their room to fill their hands with work. After the execution of the fourth person, an order from King Charles the Second, procured by their friends in England, put a stop to capital executions.

Impartiality will not suffer a veil to be drawn over these disgraceful transactions. The utmost that has been pleaded in favour of them, cannot excuse them in the eye of reason and justice. The Quakers, it is said, were heretics; their principles appeared to be subversive of the gospel, and derogatory from the honour of the Redeemer. Argument and scripture were in this case the proper weapons to combat them with; and if these had failed of success, they must have been left to the judgment of an omniscient and merciful God. They were complained of as disturbers of the peace, revilers of magistracy, "malignant and assiduous promoters of doctrines directly tending to subvert both church and state;" and the settlers thought it hard, when they had fled from opposition and persecution in one shape to be again troubled with it in another. But it would have been more to their honour, to have suffered their magistracy and church order to be insulted, than to have stained their hands with the blood of men who deserved pity rather than punishment. The Quakers indeed had no right to disturb them; and some of their conduct was to an high degree indecent and provoking; but they were under the influence of a spirit which is not easily quelled by opposition. Had not the government appeared to be jealous of their principles, and prohibited the reading of their books before any of them appeared in person, there could not have been so plausible a pretext for their reviling government. It was said that the laws by which they were condemned were grounded on the laws in England against Jesuits. But the case was by no means parallel (as the Quakers pleaded), their principles and practices not being equally detrimental to society. It was moreover urged in excuse of the severities exercised against the Quakers, that the magistrates thought themselves "bound in conscience to keep the passage with the point of the sword: this (it was said) could do no harm to him that could be warned by it; their rushing on it was their own

act, and they brought the blood on their own heads. Had they promised to depart the jurisdiction and not return without leave, the country would have been glad to have rid themselves of the trouble of executing the laws upon them; it was their presumptuous returning after banishment that caused them to be put to death." This was the plea which the court used in their address to the king; and in another vindication published by their order, the unhappy sufferers are styled "felones de se," or self-murderers. But this will not justify the putting them to death, unless the original crimes for which they were banished had deserved it. The preamble to the act by which they were condemned, charges them with "altering the received laudable custom of giving respect to equals and reverence to superiors; that their actions tend to undermine the civil government and destroy the order of the churches, by denying all established forms of worship, by withdrawing from orderly church fellowship allowed and approved by all orthodox professors of the truth, and instead thereof, and in opposition thereto, frequently meeting themselves, insinuating themselves into the minds of the simple, whereby divers of our inhabitants have been infected." Did these offences deserve death? Had any government a right to terrify with capital laws persons guilty of no other crimes than these—especially when they professed that they were obliged to go the greatest lengths in maintaining those tenets which they judged sacred, and following the dictates of that spirit which they thought divine? Was not the mere "holding the point of the sword" to them, really inviting them to "rush on it," and seal their testimony with their blood? And was not this the most likely way to strengthen and increase their party? Such punishment for offences which proceeded from a misguided zeal, increased and inflamed by opposition, will never reflect any honour on the policy or moderation of the government; and can be accounted for only by the strong predilection for coercive power in religion, retained by most or all of the reformed churches; a prejudice which time and experience were necessary to remove.

The mistakes on which their conduct was grounded cannot be detected in a more masterly manner, than by transcribing the sentiments of Doctor Increase Mather, who lived in those times, and was a strong advocate for the coercive power of the magistrate in matters of religion; but afterward changed his opinion on this point:—"He became sensible that the example of the Israelitish reformers inflicting penalties on false worshippers, would not legitimate the like proceedings among christian gentiles: for the holy land of old was, by a deed of gift from the glorious God, miraculously and indisputably granted to the Israelitish nation, and the condition on which they had it was their observance of the Mosaic institutions. To violate them was high treason against the king of the theocracy, an iniquity to be punished by the judge. At the same time sojourners in the land were not compelled to the keeping those rites and laws which Moses had given to the people. Nay the Israelites themselves fell, many of them, into the worst of heresies, yet while they kept the laws and rites of Moses, the magistrate would not meddle with them. The heresy of the Sadducees in particular struck at the foundation of all religion; yet we do not find that our Saviour ever blamed the Pharisees for not persecuting them. The christian religion brings us not into a temporal Canaan, it knows no weapons but what are purely spiritual. He

saw that until persecution be utterly banished out of the world, and Cain's club taken out of Abel's hand, 'tis impossible to rescue the world from endless confusions. He that has the power of the sword will always be in the right, and always assume the power of persecuting. In his latter times therefore he looked upon it as one of the most hopeful among the signs of the times, the people began to be ashamed of a practice which had been a mother of abominations, and he came entirely into that golden maxim, *Errantis poena doceri*."

Divers others of the principal actors and abettors of this tragedy lived to see the folly and incompetency of such sanguinary laws, to which the sufferings of their brethren, the nonconformists in England, did not a little contribute. Under the arbitrary government of King James the Second, when he, for a shew of liberty, and as a leading step to the introduction of popery, issued a proclamation of indulgence to tender consciences, the principal men of the country sent him an address of thanks, for granting them what they had formerly denied to others.—It is but justice to add, that all those disgraceful laws were renounced and repealed, and the people of New England are now as candidly disposed toward the Quakers as any other denominations of Christians. To keep alive a spirit of resentment and reproach to the country, on account of those ancient transactions which are now universally condemned, would discover a temper not very consistent with that meekness and forgiveness which ought to be cultivated by all who profess to be influenced by the gospel.

But though the early colonists are justly censurable for those instances of misconduct, yet they are not to be condemned as unworthy the Christian name; since some of the first disciples of our Lord, in a zealous imitation of the prophet Elias, would have called for fire from heaven to consume a village of the Samaritans who refused to receive him. Their zeal was of the same kind; and the answer which the benevolent author of our religion gave to his disciples on that occasion, might, with equal propriety, be addressed to them, and to all persecuting Christians, "Ye know not what spirit ye are of, for the Son of man is not come to destroy men's lives, but to save them."

*Mode of Government under Massachusetts—Mason's efforts to recover the property of his ancestor—Transactions of the King's commissioners—Opposition to them—Political principles—Internal transactions—Mason discouraged.*

(1643.) During the union of these plantations with Massachusetts, they were governed by the general laws of the colony, and the terms of the union were strictly observed. Exeter and Hampton were at first annexed to the jurisdiction of the courts at Ipswich, till the establishment of a new county, which was called Norfolk, and comprehended Salisbury, Haverhill, Hampton, Exeter, Portsmouth, and Dover. These towns were then of such extent as to contain all the lands between the rivers Merrimack and Pascataqua. The shire town was Salisbury; but Dover and Portsmouth had always a distinct jurisdiction, though they were considered as part of this new county; a court being held in one or the other, sometimes once and sometimes twice in the year, consisting of one or more of the magistrates or assistants, and one or more commissioners chosen by the general court out of the principal gentlemen of each town. This was called the court

of Associates; and their power extended to causes of twenty pounds value. From them there was an appeal to the board of assistants, which being found inconvenient, it was in 1670 ordered to be made to the county court of Norfolk. Causes under twenty shillings in value were settled in each town by an inferior court, consisting of three persons. (1647.) After some time they had liberty to choose their associates, which was done by the votes of both towns, opened at a joint meeting of their select men, though sometimes they requested the court to appoint them as before. That mutual confidence between rulers and people, which springs from the genius of a republican government, is observable in all their transactions.

This extension of the colony's jurisdiction over New Hampshire, could not fail of being noticed by the heirs of Mason: but the distractions caused by the civil wars in England were invincible bars to any legal enquiry. The first heir named in Mason's will dying in infancy, the estate descended after the death of the executrix to Robert Tufton, who was not of age till 1650. In two years after this, Joseph Mason came over as agent to the executrix, to look after the interest of her deceased husband. He found the lands at Newichwannock occupied by Richard Leader, against whom he brought actions in the county court of Norfolk; but a dispute arising whether the lands in question were within the jurisdiction of Massachusetts, and the court of Norfolk judging the action not to be within their cognizance, recourse was had to the general court; who, on this occasion, ordered an accurate survey of the northern bounds of their patent to be made; a thing which they had long meditated. A committee of the general court, attended by Jonathan Ince and John Shearman, surveyors, and several Indian guides, went up the river Merrimack to find the most northerly part thereof, which the Indians told them was at Aquedochtan, the outlet of the lake Winnipiseogee. The latitude of this place was observed to be forty-three degrees, forty minutes, and twelve seconds, to which three miles being added, made the line of the patent, according to their construction, fall within the lake, in the latitude of forty-three degrees, forty-three minutes, and twelve seconds. (1653.) Two experienced ship-masters, Jonas Clarke and Samuel Andrews, were then dispatched to the eastern coast, who found the same degrees, minutes, and seconds, on the northern point of an island in Casco bay, called the Upper Clapboard Island. An east and west line, drawn through these points, from the Atlantic to the South sea, was therefore supposed to be the northern boundary of the Massachusetts patent, within which the whole claim of Mason, and the greater part of that of Gorges, were comprehended. When this grand point was determined, the court were of opinion, that "some lands at Newichwannock, with the river, were by agreement of "Sir Ferdinando Gorges and others, apportioned to Captain Mason, and that he also had right by purchase of the Indians as also by possession and improvement;" and they ordered "a quantity of land proportionable to his disbursements, with the privilege of the river, to be laid out to his heirs." The agent made no attempt to recover any other part of the estate; but having tarried long enough in the country to observe the temper of the government, and the management used in the determination of his suit, he returned; and the estate was given up for lost unless the government of England should interpose.

(1660.) During the commonwealth, and the protectorate of Cromwell, there could be no hope of relief, as the family had always been attached to the royal cause, and the colony stood high in the favour of the parliament and of Cromwell. But the restoration of King Charles the Second encouraged Tufton, who now took the surname of Mason, to look up to the throne for favour and assistance. For though the plan of colonization adopted by his grandfather was in itself chimerical, and proved fruitless, yet he had expended a large estate in the prosecution of it, which must have been wholly lost to his heirs, unless they could recover the possession of his American territories. Full of this idea, Mason petitioned the king; setting forth "the encroachment of the Massachusetts colony upon his lands, their making grants and giving titles to the inhabitants, and thereby dispossessing him and keeping him out of his right." The king referred the petition to his attorney-general Sir Geoffrey Palmer, who reported that "Robert Mason, grandson and heir to Captain John Mason, had a good and legal title to the province of New Hampshire." Nothing farther was done at this time, nor was the matter mentioned in the letter which the king soon after sent to the colony, though some offensive things in their conduct were therein reprehended, and divers alterations enjoined. But the directions contained in this letter not being strictly attended to, and complaints being made to the king of disputes which had arisen in divers parts of New England concerning the limits of jurisdiction, and addresses having been presented by several persons, praying for the royal interposition; a commission was issued under the great seal to Colonel Richard Nichols, Sir Robert Carre, Knight, George Carteret, and Samuel Maverick, Esqs., empowering them "to visit the several colonies of New England; to examine and determine all complaints and appeals in matters, civil, military, and criminal; to provide for the peace and security of the country, according to their good and sound discretion, and to such instructions as they should receive from the king, and to certify him of their proceedings."

This commission was highly disrelished by the colony, as inconsistent with the rights and privileges which they enjoyed by their charter, and which the king had sacredly promised to confirm. It is therefore no wonder that the commissioners were treated with much coolness at their arrival; but they severely repaid it in their report to the king.

In their progress through the country they came to Pascataqua, and enquired into the bounds of Mason's patent. They heard the allegation of Wheelwright, who when banished by the colony, was permitted to reside immediately beyond what was called the bound-house, which was three long miles to the northward of the river Merrimack. They took the affidavit of Henry Jocelyn concerning the agreement between Governor Cradock and Captain Mason, that the river should be the boundary of their respective patents. They made no determination of this controversy in their report to the king; but having called together the inhabitants of Portsmouth, Sir Robert Carre, in the name of the rest, told them that "they would release them from the government of Massachusetts, whose jurisdiction should come no farther than the bound-house." They then proceeded to appoint justices of the peace and other officers, with power to act according to the laws of England and such laws of their own as were not repugnant thereto, until the king's pleasure should be further known.

(1665) There had always been a party who were disaffected to the government of Massachusetts. One of the most active among them was Abraham Corbett, of Portsmouth, who, since the arrival of the commissioners at Boston, and probably by authority derived from them, had taken upon him to issue warrants in the king's name on several occasions, which was construed a high misdemeanor, as he had never been commissioned by the authority of the colony. Being called to account by the general court, he was admonished, fined five pounds, and committed till the sentence was performed. Irritated by this severity, he was the fitter instrument for the purpose of the commissioners, who employed him to frame a petition to the king in the name of the four towns, complaining of the usurpation of Massachusetts over them, and praying to be released from their tyranny. Corbett, in a secret manner, procured several persons both in Portsmouth and Dover, to subscribe this petition, but the most of those to whom he offered it refused.

The sensible part of the inhabitants now saw with much concern that they were in danger of being reduced to the same unhappy state which they had been in before their union with Massachusetts. Awed by the supercilious behaviour of the commissioners, they knew not at first how to act; for to oppose the king's authority was construed treason, and it was said that Sir Robert Carre had threatened a poor old man with death for no other crime than forbidding his grandchild to open a door to them. But when the rumour was spread that a petition was drawn, and that Corbett was procuring subscribers, the people, no longer able to bear the abuse, earnestly applied to the general court, praying "that in some orderly way they might have an opportunity to clear themselves of so great and unjust aspersions as were, by this petition drawn in their name, cast upon the government under which they were settled; and also to manifest their sense of such perfidious actions, lest by their silence it should be concluded they were of the same mind with those who framed the petition." In consequence of this petition the court commissioned Thomas Danforth, Eleazar Lusher, and Major General Leverett, to enquire into the matter, and settle the peace in these places according to their best discretion.

These gentlemen came to Portsmouth, and having assembled the inhabitants, and published their commission, they told them that they were informed of a petition subscribed in behalf of that and the neighbouring towns, complaining of the government; and desiring them if they had any just grievances to let them be known, and report should be immediately made to the general court. The next day they assembled the people of Dover and made the same challenge. Both towns respectively protested against the petition, and professed full satisfaction with the government, which they signified in addresses to the court. Dudley, the minister of Exeter, certified under his hand to the committee, that the people of that town had no concern directly nor indirectly with the obnoxious petition. They received also full satisfaction with regard to Hampton; a certificate of which might have been obtained, if they had thought it necessary.

They then proceeded to summon Corbett before them for seditious behaviour; but he eluded the search that was made for him, and they were obliged to leave a warrant with an officer to cite him to the court at Boston. The commissioners had now gone over into the province of Maine, from whence Sir

Robert Carre in their name sent a severe reprimand to this committee, forbidding them to proceed against such persons as had subscribed the petition, and enclosing a copy of a letter which the said commissioners had written to the governor and council on the same subject.

The committee returned and reported their proceedings to the court, and about the same time the commissioners came from their eastern tour to Boston; where the court desired a conference with them, but received such an answer from Sir Robert Carre as determined them not to repeat their request. A warrant was then issued by the secretary, in the name of the whole court, to apprehend Corbett and bring him before the governor and magistrates, "to answer for his tumultuous and seditious practices against the government." (1666.) The next spring he was seized and brought before them; and after a full hearing was adjudged guilty of sedition, and exciting others to discontent with the government and laws, and of keeping a disorderly house of entertainment, for which crimes he was sentenced to give a bond of one hundred pounds, with security for his peaceable behaviour and obedience to the laws; he was prohibited retailing liquors; disabled from bearing any office in the town or commonwealth, during the pleasure of the court; and obliged to pay a fine of twenty pounds, and five pounds for the costs of his prosecution.

This severity in vindication of their charter-rights they thought fit to temper with something that had the appearance of submission to the royal commands. The king's pleasure had been signified to the commissioners, that the harbours should be fortified. This instruction came to hand while they were at Pascataqua, and they immediately issued warrants to the four towns, requiring them to meet at a time and place appointed, to receive his majesty's orders. One of these warrants was sent by express to Boston, from whence two officers were dispatched by the governor and council to forbid the towns on their peril to meet, or obey the commands of the commissioners. But by their own authority they ordered a committee to look out the most convenient place for a fortification, upon whose report "the neck of land on the eastward of the Great Island, where a small fort had been already built, was sequestered for the purpose, taking in the Great Rock, and from thence all the easterly part of the said island." The court of associates being empowered to hear and determine the claims of those who pretended any title to this land, a claim was entered by George Walton, but rejected; and the appropriation confirmed. The customs and imposts on goods imported into the harbour were applied to the maintenance of the fort, and the trained bands of Great Island and Kittery-Point were discharged from all other duty to attend the service of it, under Richard Cutts, esq. who was appointed captain.

The people of Massachusetts have, both in former and latter times, been charged with disloyalty to the king, in their conduct toward these commissioners, and their disregard of authority derived from the same source with their charter. To account for their conduct on this occasion, we must consider the ideas they had of their political connexion with the parent state. They had been forced from thence by persecution; they came at their own charges into a wilderness, claimed indeed by the crown of England, but really in possession of its native lords, from whom they had purchased the soil and sovereignty, which gave them a title, considered in a

moral view superior to the grant of any European prince. For convenience only, they had solicited and accepted a patent from the crown, which in their opinion constituted the only bond of union between them and their prince, by which the nature and extent of their allegiance to him was to be determined. This patent they regarded as a solemn compact, wherein the king had granted them undisturbed possession of the soil, and power of government within certain limits—on condition that they should settle the country, christianize the natives, yield a fifth of all gold and silver mines to the crown, and make no laws repugnant to those of England. They had, on their part, sacredly performed these conditions; and therefore concluded that the grant of title, property and dominion which the crown had made to them was irrevocable. And although they acknowledged themselves subjects of the reigning prince, and owned a dependence on the royal authority; yet they understood it to be only through the medium of their charter.

The appointment of commissioners who were to act within the same limits, independently of this authority, and to receive appeals from it, whose rule of conduct was no established law, but their own "good and sound discretion," was regarded as a dangerous stretch of royal power, militating against and superseding their charter. If the royal authority was destined to flow through the patent, it could not regularly be turned into another channel: if they were to be governed by laws made and executed by officers of their own choosing, they could not at the same time be governed by the "discretion" of men in whose appointment they had no voice, and over whom they had no control. Two ruling powers in the same state was a solecism which they could not digest. The patent was neither forfeited nor revoked, but the king had solemnly promised to confirm it, and it subsisted in full force. The commission therefore was deemed an usurpation and infringement of those chartered rights, which had been solemnly pledged on the one part, dearly purchased and justly paid for on the other. They regarded "a royal donation under the great seal (to use their own words) as the greatest security that could be had in human affairs;" and they had confidence in the justice of the supreme ruler, that if they held what they in their consciences thought to be their rights, and performed the engagements by which they had acquired them, they should enjoy the protection of his providence, though they should be obliged to abandon the country, which they had planted with so much labour and expense, and seek a new settlement in some other part of the globe.

These were the principles which they had imbibed, which they openly avowed, and on which they acted. Policy might have dictated to them the same flexibility of conduct, and softness of expression, by which the other colonies on this occasion gained the royal favour. But they had so long held the sole and uninterrupted sovereignty, in which they had been indulged by the late popular government of England, and were so fully convinced it was their right, that they chose rather to risk the loss of all, than to make any concessions, thereby exposing themselves farther to the malice of their enemies and the vengeance of power.

The commissioners, having finished their business, were recalled by the order of the king, who was much displeased with the ill treatment they had received from the Massachusetts government, which was esteemed the more heinous, as the colonies of Plymouth, Rhode Island, and Connecticut had treated the com-

mission with acknowledged respect. By a letter to the colony he commanded them to send over four or five agents, promising "to hear in person, all the allegations, suggestions, and pretences to right or favour, that could be made on behalf of the colony," intimating that he was far from desiring to invade their charter; and commanding that all things should remain as the commissioners had settled them until his farther order; and that those persons who had been imprisoned for petitioning or applying to them should be released. The court, however, continued to exercise jurisdiction, appoint officers, and execute the laws in these towns as they had done for twenty-five years, to the general satisfaction of the people, who were united to them in principles and affection.

(1669.) This affection was demonstrated by their ready concurrence with the proposal for a general collection, for the purpose of erecting a new brick building at Harvard college, the old wooden one being small and decayed. The town of Portsmouth, which was now become the richest, made a subscription of 60*l.* per annum for seven years; and after five years passed a town vote to carry this engagement into effect. Dover gave 32*l.*, and Exeter 10*l.* for the same laudable purpose.

(1671.) The people of Portsmouth, having for some time employed Joshua Moody as a preacher among them, and erected a new meeting-house, proceeded to settle him in regular order. A church consisting of nine brethren was first gathered; then the general court having been duly informed of it, and having signified their approbation, according to the established practice, Moody was ordained in the presence of Governor Leverett and several of the magistrates.

(1674.) The whole attention of the government in England being at this time taken up with things that more immediately concerned themselves, nothing of moment relating to Mason's interest was transacted. He became discouraged, and joined with the heirs of Gorges in proposing an alienation of their respective rights in the provinces of New Hampshire and Maine to the Crown, to make a government for the Duke of Monmouth. The duke himself was greatly pleased with the scheme, as he had been told that an annual revenue of 5,000*l.* or more might be collected from these provinces. But by the more faithful representations of some persons who were well acquainted with the country, he was induced to lay aside the project. Many complaints were made against the government of Massachusetts, and it was thought to be highly expedient that more severe measures should be used with them; but the Dutch wars, and other foreign transactions, prevented any determination concerning them, till the country was involved in all the horrors of a general war with the natives.

*Remarks on the temper and manners of the Indians. The first general war with them, called Philip's war.*

At the time of the first discovery of the river Pascataqua by Captain Smith, it was found that the native inhabitants of these parts differed not in language, manners, nor government, from their eastern or western neighbours. Though they were divided into several tribes, each of which had a distinct sachem, yet they all owned subjection to a sovereign prince, called Bashaba, whose residence was somewhere about Pemaquid. It was soon after found that the Tarrateens, who lived farther eastward, had invaded his country, surprised and slain him and all the

people in his neighbourhood, and carried off his women—leaving no traces of his authority. Upon which the subordinate sachems, having no head to unite them, and each one striving for the pre-eminence, made war among themselves; whereby many of their people, and much of their provision were destroyed. When Sir Richard Hawkins visited the coast in 1615, this war was at its height; and to this succeeded a pestilence, which carried them off in such numbers, that the living were not able to bury the dead; but their bones remained at the places of their habitations for several years. During this pestilence, Richard Vines and several others, whom Sir Ferdinando Gorges had hired, at a great expense, to tarry in the country through the winter, lived among them, and lodged in their cabins, without receiving the least injury in their health, “not so much as feeling their heads to ache the whole time.” By such singular means did Divine Providence prepare the way for the peaceable entrance of the Europeans into this land.

When the first settlements were made, the remains of two tribes had their habitations on the several branches of the river Pascataqua; one of their sachems lived at the falls of Squamscot, and the other at those of Newichwannock; their headquarters being generally seated in places convenient for fishing. Both these, together with several inland tribes, who resided at Pantucket and Winnipiseogee, acknowledged subjection to Passaconaway, the great sagamore of Pannukog, or (as it is commonly pronounced) Penacook. He excelled the other sachems in sagacity, duplicity, and moderation; but his principal qualification was his skill in some of the secret operations of nature, which gave him the reputation of a sorcerer, and extended his fame and influence among all the neighbouring tribes. They believed that it was in his power to make water burn and trees dance, and to metamorphose himself into flame; that in winter he could raise a green leaf from the ashes of a dry one, and a living serpent from the skin of one that was dead.

An English gentleman, who had been much conversant among the Indians, was invited, in 1660, to a great dance and feast; on which occasion the elderly men, in songs or speeches, recite their histories, and deliver their sentiments and advice to the younger. At this solemnity Passaconaway, being grown old, made his farewell speech to his children and people; in which, as a dying man, he warned them to take heed how they quarrelled with their English neighbours; for though they might do them some damage, yet it would prove the means of their own destruction. He told them he had been a bitter enemy to the English, and by the arts of sorcery had tried his utmost to hinder their settlement and increase; but could by no means succeed. This caution, perhaps often repeated, had such an effect, that upon the breaking out of the Indian war fifteen years afterward, Wonolanset, his son and successor, withdrew himself and his people into some remote place, that they might not be drawn into the quarrel.

While the British nations had been distracted with internal convulsions, and had endured the horrors of a civil war, produced by the same causes which forced the planters of New England to quit the land of their nativity; this wilderness had been to them a quiet habitation. They had struggled with many hardships; but providence had smiled upon their undertaking, their settlements were extended, and their churches multiplied. There had been no remarkable quarrel with the savages, ex-

cept the short war with the Pequods, who dwelt in the south-east part of Connecticut: they being totally subdued in 1637, the dread and terror of the English kept the other nations quiet for near forty years:—during which time the New England colonies being confederated for their mutual defence, and for maintaining the public peace, took great pains to propagate the gospel among the natives, and bring them to a civilized way of living, which with respect to some proved effectual; others refused to receive the missionaries, and remained obstinately prejudiced against the English. Yet the object of their hatred was at the same time the object of their fear, which lead them to forbear acts of hostility, and to preserve an outward shew of friendship, to their mutual interest.

Our historians have generally represented the Indians in a most odious light, especially when recounting the effects of their ferocity. Dogs, caitiffs, miscreants and hell-hounds, are the politest names which have been given them by some writers, who seem to be in a passion at the mentioning their cruelties, and at other times speak of them with contempt. Whatever indulgence may be allowed to those who wrote in times when the mind was vexed with their recent depredations and inhumanities, it ill becomes us to cherish an inveterate hatred of the unhappy natives. Religion teaches a better temper, and providence has now put an end to the controversy, by their almost total extirpation. We should therefore proceed with calmness in recollecting their past injuries, and forming our judgment of their character.

It must be acknowledged that human depravity appeared in these unhappy creatures in a most shocking view. The principles of education and the refinements of civilized life either lay a check upon our vicious propensities, or disguise our crimes; but among them human wickedness was seen in its naked deformity. Yet, bad as they were, it will be difficult to find them guilty of any crime which cannot be paralleled among civilized nations.

They are always described as being remarkably cruel; and it cannot be denied that this disposition, indulged to the greatest excess, strongly marks their character. We are struck with horror, when we hear of their binding the victim to the stake, biting off his nails, tearing out his hair by the roots, pulling out his tongue, boring out his eyes, sticking his skin full of lighted pitch-wood, half roasting him at the fire, and then making him run for their diversion till he faints and dies under the blows which they give him on every part of his body. But is it not as dreadful to read of an unhappy wretch, sewed up in a sack full of serpents, and thrown into the sea; or broiled in a red hot iron chair; or mangled by lions and tigers, after having spent his strength to combat them for the diversion of the spectators in an amphitheatre? and yet these were punishments among the Romans in the politest ages of the empire. What greater cruelty is there in the American tortures, than in confining a man in a trough, and daubing him with honey, that he may be stung to death by wasps and other venomous insects; or flaying him alive, and stretching out his skin before his eyes, which modes of punishment were not inconsistent with the softness and elegance of the ancient court of Persia?—or, to come down to modern times, what greater misery can there be in the Indian executions, than in racking a prisoner on a wheel, and breaking his bones one by one with an iron bar; or placing his legs in a boot, and driving

in wedges one after another; which tortures are still, or have till lately been used in some European kingdoms; we forbear to name the torments of the inquisition, because they seem to be beyond the stretch of human invention. If civilized nations, and those who profess the most merciful religion that ever blessed the world, have practised these cruelties, what could be expected of men who were strangers to every degree of refinement, either civil or mental?

The Indians have been represented as revengeful. When any person was killed, the nearest relative thought himself bound to be the avenger of blood, and never left seeking, till he found an opportunity to execute his purpose. Whether in a state where government is confessedly so feeble as among them, such a conduct is not justifiable, and even countenanced by the Jewish law, may deserve consideration.

The treachery with which these people are justly charged, is exactly the same disposition which operates in the breach of solemn treaties made between nations which call themselves christian. Can it be more criminal in an Indian, than in an European, not to think himself bound by promises and oaths extorted from him when under duress?

Their jealousy and hatred of their English neighbours may easily be accounted for, if we allow them to have the same feelings with ourselves. How natural is it for us to form a disagreeable idea of a whole nation, from the bad conduct of some individuals with whom we are acquainted? and though others of them may be of a different character, yet will not that prudence which is esteemed a virtue, lead us to suspect the fairest appearances, as used to cover the most fraudulent designs, especially if pains are taken by the most politic among us to foment such jealousies, to subserve their own ambitious purposes?

Though the greater part of the English settlers came hither with religious views, and fairly purchased their lands of the Indians, yet it cannot be denied that some, especially in the eastern parts of New England, had lucrative views only; and from the beginning used fraudulent methods in trade with them. Such things were indeed disallowed by the government, and would always have been punished if the Indians had made complaint: but they knew only the law of retaliation, and when an injury was received, it was never forgotten till revenged. Encroachments made on their lands, and fraud committed in trade, afforded sufficient grounds for a quarrel, though at ever so great a length of time; and kept alive a perpetual jealousy of the like treatment again.

(1675.) Such was the temper of the Indians of New England when the first general war began. It was thought by the English in that day, that Philip, sachem of the Wompanoags, a crafty and aspiring man, partly by intrigue, and partly by example, excited them to such a general combination. He was the son of Massassoiet, the nearest sachem to the colony of Plymouth, with whom he had concluded a peace, which he maintained more through fear than good will as long he lived. His son and immediate successor Alexander, preserved the same external shew of friendship; but died with choler on being detected in a plot against them. Philip, it is said, dissembled his hostile purposes; he was ready, on every suspicion of his infidelity, to renew his submission, and testify it even by the delivery of his arms, till he had secretly infused a cruel jealousy into many of the neighbouring Indians; which excited them to attempt the recovering their country

by extirpating the new possessors. The plot, it is said, was discovered before it was ripe for execution; and as he could no longer promise himself security under the mask of friendship, he was constrained to shew himself in his true character, and accordingly began hostilities upon the plantation of Swanzy, in the colony of Plymouth, in the month of June 1675.

Notwithstanding this general opinion, it may admit of some doubt, whether a single sachem, whose authority was limited, could have such an extensive influence over tribes so remote and unconnected with him as the eastern Indians; much more improbable is it, that those in Virginia should have joined in the confederacy, as it has been intimated. The Indians never travelled to any greater distance than their hunting required; and so ignorant were they of the geography of their country, that they imagined New England to be an island, and could tell the name of an inlet or streight by which they supposed it was separated from the main land. But what renders it more improbable that Philip was so active an instrument in exciting this war, is the constant tradition among the posterity of those people who lived near him, and were familiarly conversant with him, and with those of his Indians who survived the war—which is, that he was forced on by the fury of his young men, sorely against his own judgment and that of his chief counsellors; and that as he foresaw that the English would, in time, establish themselves and extirpate the Indians, so he thought that the making war upon them would only hasten the destruction of his own people. It was always a very common, and sometimes a just excuse with the Indians, when charged with breach of faith, that the old men were not able to restrain the younger from signalizing their valour, and gratifying their revenge, though they disapproved their rashness. This want of restraint was owing to the weakness of their government; their sachems having but the shadow of sovereign authority.

The inhabitants of Bristol shew a particular spot where Philip received the news of the first Englishmen that were killed, with so much sorrow as to cause him to weep; a few days before which he had rescued one who had been taken by his Indians, and privately sent him home. Whatever credit may be given to this account, so different from the current opinion, it must be owned, that in such a season of general confusion as the first war occasioned, fear and jealousy might create many suspicions, which would soon be formed into reports of a general confederacy, through Philip's contrivance; and it is to be noted that the principal histories of this war, [Increase Mather's and Hubbard's] were printed in 1676 and 1677, when the strangest reports were easily credited, and the people were ready to believe every thing that was bad of so formidable a neighbour as Philip. But as the fact cannot now be precisely ascertained, we shall detain the reader no longer from the real causes of the war in these eastern parts.

There dwelled near the river Saco, a sachem named Squando, a noted enthusiast, a leader in the devotions of their religion, and one that pretended to a familiar intercourse with the invisible world. These qualifications rendered him a person of the highest dignity, importance, and influence among all the eastern Indians. His squaw passing along the river in a canoe, with her infant child, was met by some rude sailors, who having heard that the Indian children could swim as naturally as the young of the brutal kind, in a thoughtless and unguarded humour overset the canoe. The child sank, and the

mother instantly diving fetched it up alive, but the child dying soon after, its death was imputed to the treatment it had received from the seamen; and Squando was so provoked that he conceived a bitter antipathy to the English, and employed his great art and influence to excite the Indians against them. Some other injuries were alleged as the ground of the quarrel; and, considering the interested views and irregular lives of many of the eastern settlers, their distance from the seat of government, and the want of due subordination among them, it is not improbable that a great part of the blame of the eastern war belonged to them.

The first alarm of the war in Plymouth colony spread great consternation among the distant Indians, and held them awhile in suspense what part to act, for there had been a long external friendship subsisting between them and the English, and they were afraid of provoking such powerful neighbours. But the seeds of jealousy and hatred had been so effectually sown, that the crafty and revengeful, and those who were ambitious of doing some exploits, soon found means to urge them on to an open rupture; so that within twenty days after Philip had begun the war at the southward, the flame broke out in the most north-easterly part of the country, at the distance of 200 miles.

The English inhabitants about the river Kennebeck, hearing of the insurrection in Plymouth colony, determined to make trial of the fidelity of their Indian neighbours, by requesting them to deliver their arms. They made a show of compliance, but in doing it, committed an act of violence on a Frenchman, who lived in an English family, which being judged an offence, both by the English and the elder Indians, the offender was seized; but upon a promise, with security, for his future good behaviour, his life was spared, and some of them consented to remain as hostages, who soon made their escape, and joined with their fellows in robbing the house of Purchas, an ancient planter at Pechypscot.

The quarrel being thus begun, and their natural hatred of the English, and jealousy of their designs, having risen to a great height under the malignant influence of Squando and other leading men, and being encouraged by the example of the western Indians, who were daily making depredations on the colonies of Plymouth and Massachusetts, they took every opportunity to rob and murder the people in the scattered settlements of the province of Maine; and having dispersed themselves into many small parties, that they might be the more extensively mischievous, in the month of September they approached the plantations at Pascataqua, and made their first onset at Oyster river, then a part of the town of Dover, but now Durham. Here they burned two houses belonging to two persons named Chesley, killed two men in a canoe, and carried away two captives; both of whom soon after made their escape. About the same time a party of four laid in ambush near the road between Exeter and Hampton, where they killed one, and took another, who made his escape. Within a few days an assault was made on the house of one Tozer, at Newichwannock, wherein were fifteen women and children, all of whom except two were saved by the intrepidity of a girl of eighteen;—she first seeing the Indians as they advanced to the house, shut the door and stood against it till the others escaped to the next house, which was better secured. The Indians chopped the door to pieces with their hatchets, and then entering, they knocked her down, and leaving her for

dead, went in pursuit of the others, of whom two children, who could not get over the fence, fell into their hands. The adventurous heroine recovered, and was perfectly healed of her wound.

The two following days they made several appearances on both sides of the river, using much insolence, and burning two houses and three barns, with a large quantity of grain. Some shot were exchanged without effect, and a pursuit was made after them into the woods by eight men, but night obliged them to return without success. Five or six houses were burned at Oyster river, and two more men killed. These daily insults could not be borne without indignation and reprisal. About twenty young men, chiefly of Dover, obtained leave of Major Waldron, then commander of the militia, to try their skill and courage with the Indians in their own way. Having scattered themselves in the woods, a small party of them discovered five Indians in a field near a deserted house, some of whom were gathering corn, and others kindling a fire to roast it. The men were at such a distance from their fellows that they could make no signal to them without danger of a discovery; two of them, therefore, crept along silently, near to the house, from whence they suddenly rushed upon those two Indians who were busy at the fire, and knocked them down with the butts of their guns; the other three took the alarm and escaped.

All the plantations at Pascataqua, with the whole eastern country, were now filled with fear and confusion: business was suspended, and every man was obliged to provide for his own and his family's safety. The only way was to desert their habitations, and retire together within the larger and more convenient houses, which they fortified with a timber wall and flankarts, placing a centry-box on the roof. Thus the labour of the field was exchanged for the duty of the garrison, and they who had long lived in peace and security, were upon their guard night and day, subject to continual alarms, and the most fearful apprehensions.

The 7th of October was observed as a day of fasting and prayer; and on the 16th the enemy made an assault upon the inhabitants at Salmon-falls, in Berwick. Lieut. Roger Plaisted, being a man of true courage and of a public spirit, immediately sent out a party of seven from his garrison to make discovery. They fell into an ambush; three were killed, and the rest retreated. The lieutenant then dispatched an express to Major Waldron and Lieut. Coffin at Cochecho, begging most importunately for help, which they were in no capacity to afford, consistently with their own safety. The next day Plaisted ventured out with twenty men, and a cart to fetch the dead bodies of their friends, and unhappily fell into another ambush. The cattle affrighted ran back, and Plaisted being deserted by his men, and disdaining either to yield or fly, was killed on the spot, with his eldest son and one more; his other son died of his wound in a few weeks. Had the heroism of this worthy family been imitated by the rest of the party, and a reinforcement arrived in season, the enemy might have received such a severe check as would have prevented them from appearing in small parties. The gallant behaviour of Plaisted, though fatal to himself and his sons, had this good effect, that the enemy retreated to the woods: and the next day Captain Frost came up with a party from Sturgeon creek, and peaceably buried the dead: but before the month had expired a mill was burned there, and an assault made on Frost's garrison, who though he had only three boys with him,

WASHINGTON ENTERING NEW YORK.

kept up a constant fire, and called aloud as if he were commanding a body of men, to march here and fire there: the stratagem succeeded, and the house was saved. The enemy then proceeded down the river, killing and plundering as they found people off their guard, till they came opposite to Portsmouth; from whence some cannon being fired they dispersed, and were pursued by the help of a light snow which fell in the night, and overtaken by the side of a swamp, into which they threw themselves, leaving their packs and plunder to the pursuers. They soon after did more mischief at Dover, Lamprey river, and Exeter; and with these small, but irritating assaults and skirmishes, the autumn was spent until the end of November; when the number of people killed and taken from Kennebeck to Pascataqua amounted to upwards of fifty.

The Massachusetts government being fully employed in defending the southern and western parts, could not seasonably send succours to the eastward. Major General Denison, who commanded the militia of the colony, had ordered the majors who commanded the regiments on this side of the country, to draw out a sufficient number of men to reduce the enemy, by attacking them at their retreat to their head-quarters at Ossapy and Pigwacket. But the winter setting in early and fiercely, and the men being unprovided with rackets to travel on the snow, which by the 10th of December was four feet deep in the woods, it was impossible to execute the design. This peculiar severity of the season however proved favourable. The Indians were pinched with famine, and having lost by their own confession about ninety of their number, partly by the war, and partly for want of food, they were reduced to the necessity of suing for peace. With this view they came to Major Waldron, expressing great sorrow for what had been done, and promising to be quiet and submissive. By his mediation a peace was concluded with the whole body of eastern Indians, which continued till the next August; and might have continued longer, if the inhabitants of the eastern parts had not been too intent on private gain, and of a disposition too ungovernable to be a barrier against an enemy so irritable and vindictive. The restoration of the captives made the peace more valued: a return from the dead could not be more welcome than a deliverance from Indian captivity.

(1676.) The war at the southward, though renewed in the spring, drew toward a close. Philip's affairs were desperate; many of his dependents and allies forsook him; and in August he was slain by a party under Captain Church. Those western Indians, who had been engaged in the war, now fearing a total extirpation, endeavoured to conceal themselves among their brethren of Penacook, who had not joined in the war, and those of Ossapy and Pigwacket, who had made peace. But they could not so disguise themselves or their behaviour, as to escape the discernment of those who had been conversant with Indians. Several of them were taken at different times, and delivered up to public execution. Three of them, Simon, Andrew, and Peter, who had been concerned in killing Thomas Kimbal of Bradford, and capturing his family, did, within six weeks, voluntarily restore the women and five children. It being doubted whether this act of submission was a sufficient atonement for the murder, they were committed to Dover prison till their case could be considered. Fearing that this confinement was a prelude to farther punishment, they broke out of prison and going to the eastward, joined with

the Indians of Kennebeck and Amorisconsin in those depredations which they renewed on the inhabitants of those parts, in August, and were afterward active in distressing the people of Pascataqua.

This renewal of hostilities occasioned the sending of two companies to the east under Captain Joseph Syll, and Captain William Hawthorne. In the course of their march they came to Cocheco, on the sixth of September, where four hundred mixed Indians were met at the house of Major Waldron, with whom they had made the peace, and whom they considered as their friend and father. The two captains would have fallen upon them at once, having it in their orders to seize all Indians, who had been concerned in the war. The major dissuaded them from that purpose, and contrived the following stratagem. He proposed to the Indians, to have a training the next day, and a sham fight after the English mode; and summoning his own men, with those under Captain Frost of Kittery, they, in conjunction with the two companies, formed one party, and the Indians another. Having diverted them a while in this manner, and caused the Indians to fire the first volley; by a peculiar dexterity, the whole body of them (except two or three) were surrounded, before they could form a suspicion of what was intended. They were immediately seized and disarmed, without the loss of a man on either side. A separation was then made: Wonalanset, with the Penacook Indians, and others who had joined in making peace the winter before, were peaceably dismissed; but the strange Indians (as they were called) who had fled from the southward, and taken refuge among them, were made prisoners, to the number of two hundred; and being sent to Boston, seven or eight of them, who were known to have killed some Englishmen, were condemned and hanged; the rest were sold into slavery in foreign parts.

This action was highly applauded by the general voice of the colony; as it gave them opportunity to deal with their enemies in a judicial way, as rebels, and, as they imagined, to extirpate those troublesome neighbours. The remaining Indians, however, looked upon the conduct of Major Waldron as a breach of faith; inasmuch as they had taken those fugitive Indians under their protection, and had made peace with him, which had been strictly observed with regard to him and his neighbours, though it had been broken elsewhere. The Indians had no idea of the same government being extended very far, and thought they might make peace in one place, and war in another, without any imputation of infidelity; but a breach of hospitality and friendship, as they deemed this to be, merited, according to their principles, a severe revenge, and was never to be forgotten or forgiven. The major's situation on this occasion was indeed extremely critical; and he could not have acted either way without blame. It is said that his own judgment was against any forcible measure, as he knew that many of those Indians were true friends to the colony; and that in case of failure he should expose the country to their resentment; but had he not assisted the forces in the execution of their commission, (which was to seize all Indians who had been concerned with Philip in the war) he must have fallen under censure, and been deemed accessory, by his neglect, to the mischiefs which might afterward have been perpetrated by them. In this dilemma he finally determined to comply with the orders and expectations of government; imagining that he should be able to satisfy those of the Indians whom he intended to

dismiss, and that the others would be removed out of the way of doing any further mischief; but he had no suspicion that he was laying a snare for his own life. It was unhappy for him that he was obliged, in deference to the laws of his country, and the orders of government, to give offence to a people who, having no public judicatories and penal laws among themselves, were unable to distinguish between a legal punishment and private malice.

Two days after this surprisal, the forces proceeded on their route to the eastward, being joined with some of Waldron's and Frost's men; and taking with them Blind Will, a sagamore of the Indians who lived about Cocheco, and eight of his people for pilots. The eastern settlements were all either destroyed or deserted, and no enemy was to be seen; so that the expedition proved fruitless, and the companies returned to Pascataqua.

It was then thought advisable, that they should march up toward the Ossapy ponds; where the Indians had a strong fort of timber fourteen feet high, with flankarts; which they had a few years before hired some English carpenters to build for them, as a defence against the Mohawks, of whom they were always afraid. It was thought that if the Indians could be surprised on their first return to their head quarters, at the beginning of winter, some considerable advantage might be gained against them; or if they had not arrived there, that the provisions, which they had laid in for their winter subsistence, might be destroyed. Accordingly, the companies being well provided for a march at that season, set off on the first of November; and after travelling four days through a rugged, mountainous wilderness, and crossing several rivers, they arrived at the spot; but found the fort and adjacent places entirely deserted, and saw not an Indian in all the way. Thinking it needless for the whole body to go further, the weather being severe, and the snow deep, a select party was detached eighteen or twenty miles above; who discovered nothing but frozen ponds, and snowy mountains; and supposing the Indians had taken up their winter quarters nearer the sea, they returned to Newichwannock, within nine days from their first departure.

They had been prompted to undertake this expedition by the false accounts brought by Mogg, an Indian of Penobscot, who had come to Pascataqua with a proposal of peace; and had reported that an hundred Indians were assembled at Ossapy. This Indian brought with him two men of Portsmouth, Fryer and Kendal, who had been taken on board a vessel at the eastward; he was deputed by the Penobscot tribe to consent to articles of pacification; and being sent to Boston, a treaty was drawn and subscribed by the governor and magistrates on the one part, and by Mogg on the other; in which it was stipulated, that if the Indians of the other tribes did not agree to this transaction, and cease hostilities, they should be deemed and treated as enemies by both parties. This treaty was signed on the sixth of November; Mogg pledging his life for the fulfilment of it. Accordingly, vessels being sent to Penobscot, the peace was ratified by Madokawando the sachem, and two captives were restored. But Mogg, being incautiously permitted to go to a neighbouring tribe, on pretence of persuading them to deliver their captives, though he promised to return in three days, was seen no more. It was at first thought that he had been sacrificed by his countrymen, as he pretended to fear when he left the vessels; but a captive who escaped in January, 1677,

gave an account, that he boasted of having deceived the English, and laughed at their kind entertainment of him. There was also a design talked of among them to break the peace in the spring, and join with the other Indians at the eastward in ruining the fishery. About the same time it was discovered that some of the Narrhaganset Indians were scattered in the eastern parts; three of whom having been decoyed by some of the Cocheco Indians into their wigwams, and scalped, were known by the cut of their hair. This raised a fear in the minds of the people, that more of them might have found their way to the eastward, and would prosecute their revenge against them.

From these circumstances it was suspected, that the truce would be but of short continuance. The treachery of Mogg, who was surety for the performance of the treaty, was deemed a full justification of the renewal of hostilities; and the state of things was, by some gentlemen of Pascataqua, represented to be so dangerous, that the government determined upon a winter expedition. Two hundred men, including sixty Natick Indians, were enlisted and equipped, and sailed from Boston the first week in February, under the command of Major Waldron; a day of prayer having been previously appointed for the success of the enterprize.

At Casco the major had a fruitless conference, and a slight skirmish with a few Indians, of whom some were killed and wounded. At Kennebeck he built a fort, and left a garrison of forty men, under the command of Captain Sylvanus Davis. At Penmaquid he had a conference with a company of Indians, who promised to deliver their captives on the payment of a ransom. Part of it being paid, three captives were delivered, and it was agreed that the conference should be renewed in the afternoon, and all arms be laid aside. Some suspicion of their infidelity had arisen, and when the major went ashore in the afternoon with five men, and the remainder of the ransom, he discovered the point of a lance hid under a board, which he drew out and advanced with it toward them; charging them with treachery in concealing their arms so near. They attempted to take it from him by force; but he threatened them with instant death, and waved his cap for a signal to the vessels. While the rest were coming on shore, the major with his five men secured the goods: some of the Indians snatching up a bundle of guns which they had hid, ran away. Captain Frost, who was one of the five, seized an Indian, who was well known to be a rogue, and with lieutenant Nutter, carried him on board. The major searching about found three guns, with which he armed his remaining three men; and the rest being come on shore by this time, they pursued the Indians, killed several of them before they could recover their canoes, and after they had pushed off, sank one with five men, who were drowned; and took four prisoners, with about a thousand pounds of dried beef, and some other plunder. The whole number of the Indians was twenty-five.

Whether the casual discovery of their arms, which they had agreed to lay aside, was sufficient to justify this severity, may be doubted; since, if their intentions had really been hostile, they had a fine opportunity of ambushing or seizing the major and his five attendants, who came ashore unarmed; and it is not likely that they would have waited for the rest to come ashore before they opened the plot. Possibly, this sudden suspicion might be groundless, and might inflame the prejudice against the major,

which had been already excited by the seizure of their friends at Cochecho some time before.

On the return of the forces, they found some wheat, guns, anchors and boards at Kennebeck, which they took with them. They killed two Indians on Arrowsick island, who, with one of the prisoners taken at Pemaquid, and shot on board, made the number of Indians killed in this expedition thirteen. They returned to Boston on the eleventh of March, without the loss of a man, bringing with them the bones of Captain Lake, which they found entire in the place where he was killed.

There being no prospect of peace at the eastward, it became necessary to maintain great circumspection and resolution, and to make use of every possible advantage against the enemy. A long and inveterate animosity had subsisted between the Mohawks and the eastern Indians, the original of which is not mentioned, and perhaps was not known by any of the historians; nor can the oldest men among the Mohawks at this day give any account of it. These Indians were in a state of friendship with their English neighbours; and being a fierce and formidable race of men, their name carried terror wherever it was known. It was now thought, that if they could be induced to prosecute their ancient quarrel with the eastern Indians, the latter might be awed into peace, or incapacitated for any farther mischief. The propriety of this measure became a subject of debate; some questioning the lawfulness of making use of their help, "as they were heathen;" but it was urged in reply, that Abraham had entered into a confederacy with the Amorites, among whom he dwelt, and made use of their assistance in recovering his kinsman Lot from the hands of their common enemy. With this argument the objectors were satisfied; and two messengers, Major Pyncheon of Springfield, and Richards of Hartford, were dispatched to the country of the Mohawks, who treated them with great civility, expressed the most bitter hatred against the eastern enemy, and promised to pursue the quarrel to the utmost of their power.

Accordingly, some parties of them came down the country about the middle of March, and the first alarm was given at Amuskeeg falls; where the son of Wonolanset being hunting, discovered fifteen Indians on the other side, who called to him in a language which he did not understand; upon which he fled, while they fired near thirty guns at him without effect. Presently after this they were discovered in the woods near Cochecho. Major Waldron sent out eight of his Indians, whereof Blind Will was one, for farther information. They were all surprised together by a company of the Mohawks; two or three escaped, the others were either killed or taken: Will was dragged away by his hair; and being wounded, perished in the woods, on a neck of land, formed by the confluence of Cochecho and Isinglass rivers, which still bears the name of Blind Will's Neck. This fellow was judged to be a secret enemy to the English, though he pretended much friendship and respect; so that it was impossible to have punished him, without provoking the other neighbouring Indians, with whom he lived in amity, and of whose fidelity there was no suspicion. It was at first thought a fortunate circumstance that he was killed in this manner; but the consequence proved it to be otherwise; for two of those who were taken with him escaping, reported that the Mohawks threatened destruction to all the Indians in these parts without distinction: so that those who lived in subjection to the English grew jealous of their sincerity, and

imagined, not without very plausible ground, that the Mohawks had been persuaded or hired to engage in the war, on purpose to destroy them: since they never actually exercised their fury upon those Indians who were in hostility with the English, but only upon those who were in friendship with them; and this only in such a degree as to irritate, rather than to weaken or distress them. It cannot therefore be thought strange that the friendly Indians were alienated from their English neighbours, and disposed to listen to the seducing stratagems of the French; who in a few years after made use of them in conjunction with others, sorely to scourge these unhappy people. The English, in reality, had no such design; but the event proved, that the scheme of engaging the Mohawks in the quarrel, however lawful in itself, and countenanced by the example of Abraham, was a pernicious source of innumerable calamities.

The terror which it was thought this incursion of the Mohawks would strike into the eastern Indians, was too small to prevent their renewing hostilities very early in the spring. Some of the garrison who had been left at Kennebeck were surprised by an ambush, as they were attempting to bury the dead bodies of their friends, who had been killed the summer before, and had lain under the snow all the winter. The remainder of that garrison were then taken off and conveyed to Pascataqua; whither a company of fifty men and ten Natick Indians marched, under Captain Swaine, to succour the inhabitants, who were alarmed by scattered parties of the enemy, killing and taking people, and burning houses in Wells, Kittery, and within the bounds of Portsmouth. A young woman who was taken from Rawling's house, made her escape and came into Cochecho, stating where the enemy lay. Three parties were dispatched to ambush three places, by one of which they must pass. The enemy appearing at one of these places, were seasonably discovered; but by the too great eagerness of the party to fire on them, they avoided the ambush and escaped.

Soon after this the garrisons at Wells and Black Point were beset, and at the latter place the enemy lost their leader Mogg, who had proved so treacherous a negotiator. Upon his death they fled in their canoes, some to the eastward and others toward York, where they also did some mischief. On a sabbath morning, a party of twenty, under the guidance of Simon, surprised six of our Indians, who lay drunk in the woods, at a small distance from Portsmouth; they kept all day hovering about the town, and if they had taken advantage of the people's absence from home, in attending the public worship, they might easily have plundered and burned the outmost houses; but they were providentially restrained. At night they crossed the river at the Long Reach, killed some sheep at Kittery, and then went toward Wells; but, being afraid of the Mohawks, let their prisoners go. Four men were soon after killed at North Hill, one of whom was Edward Colcott, whose death was much regretted.

More mischief being expected, and the eastern settlements needing assistance, the government ordered 200 Indians of Natick, with forty English soldiers, under Captain Benjamin Swett, of Hampton, and Lieutenant Richardson, to march to the falls of Taconick on Kennebeck river; where it was said the Indians had six forts, well furnished with ammunition. The vessels came to an anchor off Black Point, where the captain being informed that some Indians had been seen, went on shore with a party.

and being joined by some of the inhabitants so as to make about ninety in all, marched to seek the enemy, who shewed themselves on a plain in three parties. Swett divided his men accordingly, and went to meet them. The enemy retreated till they had drawn our people two miles from the fort, and then turning suddenly and violently upon them, threw them into confusion, they being mostly young and unexperienced soldiers. Swett, with a few of the more resolute, fought bravely on the retreat, till he came near the fort, when he was killed; sixty more were left dead or wounded, and the rest got into the fort. The victorious savages then surprised about twenty fishing vessels, which put into the eastern harbours by night; the crews, not being apprehensive of danger on the water, fell an easy prey to them. Thus the summer was spent with terror and perplexity by the colonists; while the enemy rioted without control, till they had satiated their vengeance, and greatly reduced the eastern settlements.

At length, in the month of August, Major Androsse, governor of New York, sent a sloop with some forces to take possession of the land which had been granted to the Duke of York, and build a fort at Pemaquid, to defend the country against the encroachment of foreigners. Upon their arrival the Indians appeared friendly: and in evidence of their pacific disposition, restored fifteen prisoners with the fishing vessels. They continued quiet all the succeeding autumn and winter, and lived in harmony with the new garrison.

(1678.) In the spring, Major Shapleigh, of Kittery, Captain Champernoon and Mr. Fryer of Portsmouth, were appointed commissioners to settle a formal treaty of peace with Squando and the other chiefs, which was done at Casco, whither they brought the remainder of the captives. It was stipulated in the treaty, that the inhabitants should return to their deserted settlements, on condition of paying one peck of corn annually for each family, by way of acknowledgment to the Indians for the possession of their lands, and one bushel for Major Pendleton, who was a great proprietor. Thus an end was put to a tedious and distressing war, which had subsisted three years. The terms of peace were disgraceful, but not unjust, considering the former irregular conduct of many of the eastern settlers, and the native property of the Indians of the soil; certainly they were now masters of it, and it was entirely at their option whether the English should return to their habitations or not. It was therefore thought better to live peaceably, though in a sort of subjection, than to leave such commodious settlements and forego the advantages of trade and fishery, which were very considerable, and by which the inhabitants of that part of the country had chiefly subsisted.

It was a matter of great inquiry and speculation, how the Indians were supplied with arms and ammunition to carry on this war. The Dutch at New York were too near the Mohawks for the eastern Indians to adventure thither. The French in Canada were too feeble, and too much in fear of the English, to do any thing which might disturb their tranquillity; and there was peace between the two nations. It was therefore supposed that the Indians had long premeditated the war, and laid in a stock beforehand. There had formerly been severe penalties exacted by the government, on the selling of arms and ammunition to the Indians; but ever since 1657, licences had been granted to particular persons to supply them occasionally for the purpose of hunting, on paying an acknowledgment to the

public treasury. This indulgence, having been much abused by some of the eastern traders, who, far from the seat of government, were impatient of the restraint of law, was supposed to be the source of the mischief. But it was afterward discovered that the Baron de St. Castine, a reduced French officer, who had married a daughter of Madokawando, and kept a trading-house at Penobscot, where he considered himself as independent, being out of the limits of any established government, was the person from whom they had their supplies; which needed not be very great as they always husbanded their ammunition with much care, and never expended it but when they were certain of doing execution.

The whole burden and expense of this war, on the part of the colonists, were borne by themselves. It was indeed thought strange by their friends in England, and resented by those in power, that they made no application to the king for assistance. It was intimated to them by Lord Anglesey, "that his majesty was ready to assist them with ships, troops, ammunition, or money, if they would but ask it;" and their silence was construed to their disadvantage, as if they were proud, and obstinate, and desired to be considered as an independent state. They had indeed no inclination to ask favours from thence; being well aware of the consequence of laying themselves under obligations to those who had been seeking to undermine their establishment; and remembering how they had been neglected in the late Dutch wars, when they stood in much greater need of assistance: the king had then sent ammunition to New York, but had sent word to New England, "that they must shift for themselves, and make the best defence they could." It was therefore highly injurious to blame them for not making application for help. But if they had not been so ill treated, they could not be charged with disrespect, since they really did not need foreign assistance. Ships of war and regular troops must have been altogether useless; and no one that knew the nature of an Indian war could be serious in proposing to send them. Ammunition and money were necessary, but as they had long enjoyed a free trade, and had coined the bullion which they imported, there was no scarcity of money, nor of any stores which money could purchase. The method of fighting with Indians could be learned only from themselves. After a little experience, a few men in scattered parties were of more service than the largest and best equipped armies which Europe could have afforded. It ought ever to be remembered for the honour of New England, that as their first settlement, so their preservation, increase, and defence, even in their weakest infancy, were not owing to any foreign assistance, but to their own magnanimity and perseverance.

The gravest historians have recorded many omens, predictions, and other alarming circumstances, during this and the Pequod war, which in a more philosophical and less credulous age would not be worthy of notice. When men's minds were rendered gloomy by the horrors of a surrounding wilderness, and the continual apprehension of danger from its savage inhabitants; when they were ignorant of the causes of many of the common appearances in nature, and were disposed to resolve every unusual appearance into prodigy and miracle, it is not to be wondered that they should imagine they heard the noise of drums and guns in the air, and saw flaming swords and spears in the heavens, and should even interpret eclipses as ominous. Some old Indians had intimated their apprehensions concerning the

increase of the English, and the diminution of their own people, which any rational observer in a course of forty or fifty years might easily have foretold, without the least pretence to a spirit of prophecy; yet these sayings were recollected and recorded, as so many predictions by force of a supernatural impulse on their minds, and many persons of the greatest distinction were disposed to credit them as such. These things would not have been mentioned, but to give a just idea of the age. If mankind are now better enlightened, superstition is the less excusable in its remaining votaries.

*Mason's renewed efforts—Randolph's mission and transactions—Attempts for the trial of Mason's title—New Hampshire separated from Massachusetts, and made a royal province—Abstract of the commission—Remarks on it.*

(1675.) While the country was labouring under the perplexity and distress arising from the war, measures were taking in England to increase their difficulties, and divide their attention. The scheme of selling the provinces of New Hampshire and Maine to the crown being laid aside, Mason again petitioned the king for the restoration of his property; and the king referred the matter to his Attorney-General, Sir William Jones, and his Solicitor-General Sir Francis Winington, who reported that "John Mason, Esq., grandfather to the petitioner, by virtue of several grants from the council of New England, under their common seal, was instated in fee in sundry great tracts of land in New England, by the name of New Hampshire; and that the petitioner being heir at law to the said John had a good and legal title to the said lands" (1676.) Whereupon a letter was dispatched to the Massachusetts colony, requiring them to send over agents within six months, fully empowered to answer the complaints, which Mason and the heirs of Gorges had made, of their usurping jurisdiction over the territories claimed by them; and to receive the royal determination in that matter. Copies of the complaints were inclosed; and Edward Randolph, a kinsman of Mason, a man of great address and penetration, resolute and indefatigable in business, was charged with the letters, and directed by the lords of trade to make enquiry into the state of the country. When he arrived, he waited on Governor Leverett, who read the king's letter, with the petitions of Mason and Gorges in council, Randolph being present, who could obtain no other answer than that "they would consider it."

He then came into New Hampshire, and as he passed along, freely declared the business on which he was come, and publicly read a letter which Mason had sent to the inhabitants. Some of them he found ready to complain of the government, and desirous of a change; but the body of the people were highly enraged against him; and the inhabitants of Dover, in a public town-meeting, "protested against the claim of Mason; declaring that they had bona fide purchased their lands of the Indians; recognized their subjection to the government of Massachusetts, under whom they had lived long and happily, and by whom they were now assisted in defending their estates and families against the savage enemy." They appointed Major Waldron "to petition the king in their behalf, that he would interpose his royal authority, and afford them his wonted favour; that they might not be disturbed by Mason, or any other person, but continue peaceably in possession of their rights under the government of Massachu-

setts." A similar petition was sent by the inhabitants of Portsmouth, who appointed John Cutts and Richard Martyn, Esqs., Captains Daniel and Stileman, to draught and forward it.

When Randolph returned to Boston, he had a severe reproof from the governor, for publishing his errand, and endeavouring to raise discontent among the people. To which he made no other answer than that "if he had done amiss, they might complain to the king."

After about six weeks stay, he returned to England, and reported to the king, that "he had found the whole country complaining of the usurpation of the magistrates of Boston; earnestly hoping and expecting that his majesty would not permit them any longer to be oppressed; but would give them relief according to the promises of the commissioners in 1665." With the same bitterness of temper, and in the same strain of misrepresentation, he inveighed against the government in a long report to the lords of trade; which farther inflamed the prejudice that had long been conceived against the colony, and prepared the way for the separation which was meditated.

After his departure, a special council being summoned, at which the elders of the churches were present, the question was proposed to them, "whether the best way of making answer to the complaints of Gorges and Mason about the extent of their patent, be by sending agents, or by writing only?" To which they answered, "that it was most expedient to send agents, to answer by way of information, provided they were instructed with much care and caution to negotiate the affair with safety to the country, and loyalty to his majesty, in the preservation of their patent liberties." Accordingly William Stoughton, afterward lieutenant-governor, and Peter Bulkley, then speaker of the house of deputies, were appointed agents, and sailed for England.

(1677.) At their arrival, a hearing was ordered before the lords chief justices of the King's Bench and Common Pleas; when the agents in the name of the colony disclaimed all title to the lands claimed by the petitioner, and to the jurisdiction beyond three miles northward of the river Merrimack, to follow the course of the river, so far as it extended. The judges reported to the king, "that they could give no opinion as to the right of soil, in the provinces of New Hampshire and Maine, not having the proper parties before them; it appearing that not the Massachusetts colony, but the tenants (*ground-tenants*) had the right of soil, and whole benefit thereof, and yet were not summoned to defend their titles. As to Mason's right of government within the soil he claimed, their lordships, and indeed his own counsel, agreed he had none; the great council of Plymouth, under whom he claimed, having no power to transfer government to any. It was determined that the four towns of Portsmouth, Dover, Exeter, and Hampton, were out of the bounds of Massachusetts." This report was accepted, and confirmed by the king in council.

(1679.) After this, at the request of the agents, Sir William Jones, the attorney-general, drew up a complete state of the case to be transmitted to the colony; by which it seems that he had altered his opinion since the report which he gave to the king in 1675, concerning the validity of Mason's title. It was also admitted that the title could be tried only on the spot, there being no court in England that had cognizance of it.

It became necessary then to the establishment of Mason's title, that a new jurisdiction should be erected, in which the king might direct the mode of trial and appeal at his pleasure: this being resolved upon, the colony of Massachusetts was informed, by a letter from the secretary of state, of the king's intention to separate New Hampshire from their government, and required to revoke all commissions which they had granted there, and which were thereby declared to be null and void. To prevent any extravagant demand, the king obliged the claimant to declare, under his hand and seal, that he would require no rents of the inhabitants for the time passed, before the 24th of June, 1679, nor molest any in their possessions for the time to come; but would make out titles to them and their heirs for ever, provided they would pay him sixpence in the pound, according to the yearly value of all houses which they had built, and lands which they had improved.

Things being thus prepared, a commission passed the great seal on the 18th of September for the government of New Hampshire; which 'inhibits and restrains the jurisdiction exercised by the colony of Massachusetts over the towns of Portsmouth, Dover, Exeter, and Hampton, and all other lands extending from three miles to the northward of the river Merrimack, and of any and every part thereof, to the province of Maine; constitutes a president and council to govern the province; appoints John Cutts, esq. president, to continue one year and till another be appointed by the same authority; Richard Martyn, William Vaughan, and Thomas Daniel of Portsmouth, John Gilman of Exeter, Christopher Hussey of Hampton, and Richard Waldron of Dover, esquires, to be of the council, who were authorised to chose three other qualified persons out of the several parts of the province to be added to them. The said president and every succeeding one to appoint a deputy to preside in his absence; the president or his deputy, with any five, to be a quorum. They were to meet at Portsmouth in twenty days after the arrival of the commission and publish it. They were constituted a court of record for the administration of justice, according to the laws of England, so far as circumstances would permit; reserving a right of appeal to the king in council for actions of fifty pounds value. They were empowered to appoint military officers, and take all needful measures for defence against enemies. Liberty of conscience was allowed to all protestants, those of the church of England to be particularly encouraged. For the support of government they were to continue the present taxes, till an assembly could be called; to which end they were within three months to issue writs under the province seal, for calling an assembly, to whom the president should recommend the passing such laws as should establish their allegiance, good order and defence, and the raising taxes in such manner and proportion as they should see fit. All laws to be approved by the president and council, and then to remain in force till the king's pleasure should be known, for which purpose they should be sent to England by the first ships. In case of the president's death, his deputy to succeed, and on the death of a counsellor, the remainder to elect another, and send over his name, with the names of two other meet persons, that the king might appoint one of the three. The king engaged for himself and successors to continue the privilege of an assembly, in the same manner and form, unless by inconvenience arising therefrom he or his heirs

should see cause to alter the same. If any of the inhabitants should refuse to agree with Mason or his agents, on the terms before mentioned, the president and council were directed to reconcile the difference, or send the case stated in writing with their own opinions, to the king, that he with his privy council might determine it according to equity.

The form of government described in this commission, considered abstractedly from the immediate intentions, characters, and connexions of the persons concerned, appears to be of as simple a kind as the nature of a subordinate government and the liberty of the subject can admit. The people, who are the natural and original source of power, had a representation in a body chosen by themselves; and the king was represented by a president and council of his own appointment; each had the right of instructing their representative, and the king had the superior prerogative of disannulling the acts of the whole at his pleasure. The principal blemish in the commission was the right claimed by the king of discontinuing the representation of the people whenever he should find it inconvenient, after he had solemnly engaged to continue this privilege. The clause, indeed, is artfully worded, and might be construed to imply more or less at pleasure. Heroin Charles was consistent with himself, parliaments being his aversion. However, there was in this plan as much of the spirit of the British constitution as there could be any foundation for in such a colony; for here was no third branch to form a balance between the king or his representative, and the people. The institution of an house of peers in Britain was the result of the feudal system: the barons being lords of the soil and enjoying a sovereignty within their own territories and over their own vassals; the constitution was formed by the union of these distinct estates under one common sovereign. But there was nothing similar to this in New England. The settlements began here by an equal division of property among independent freemen. Lordship and vassalage were held in abhorrence. The yeomanry were the proprietors of the soil and the natural defenders of their own rights and property; and they knew no superior but the king. A council, whether appointed by him or chosen by the people, could not form a distinct body, because they could not be independent. Had such a simple form of colony government been more generally adopted, and perseveringly adhered to, and administered only by the most delicate hands, it might have served better than any other, to perpetuate the dependence of the colonies on the British crown.

*The administration of the first Council—Opposition to the acts of trade—Mason's arrival—Opposition to him—His departure—State of trade and navigation.*

(1680.) The commission was brought to Portsmouth on the 1st of January by Edward Randolph, than whom there could not be a more unwelcome messenger. It was received with great reluctance by the gentlemen therein named; who, though they were of the first character, interest and influence, and had sustained the principal offices, civil and military, under the colony government; yet easily saw that their appointment was not from any respect to them or favour to the people; but merely to obtain a more easy introduction to a new form of government, for a particular purpose, which they knew would be a source of perplexity and distress. They would gladly have declined acting in their new capacity; but considering the temper of the govern-

ment in England, the unavoidable necessity of submitting to the change, and the danger (upon their refusal) of others being appointed who would be inimical to the country, they agreed to qualify themselves, determining to do what good, and keep off what harm they were able. They therefore published the commission, and took the oaths on the 22d day of January, which was beyond the utmost time limited in the commission. Agreeably to the royal direction they chose three other gentlemen into the council; Elias Stileman of Great Island, who had been a clerk in the county courts, whom they now appointed secretary, Samuel Dalton of Hampton, and Job Clements of Dover. The president nominated Waldron to be his deputy or vice president, Martyn was appointed treasurer, and John Roberts, marshal.

The president, John Cutts, was a principal merchant, of great probity and esteem in Portsmouth; but now aged and infirm. Richard Martyn, was of good character, and great influence. He had been very active in procuring the settlement of a minister in the town of Portsmouth. William Vaughan, was a wealthy, generous, and public-spirited merchant, and of undaunted resolution. He was of Welch extraction, but was educated in London under Sir Josiah Child, who had a great regard for him, and whose interest he made use of for the good of the province. Thomas Daniel, was a person of such note and importance, that when he died in a time of general sickness and mortality, Mr. Moody preached his funeral sermon from 2 Sam. ii. 30. "There lacked of David's servants nineteen men and Asael." John Gilman, was a man of considerable estimation in Exeter, as was Christopher Hussey, in Hampton. Richard Waldron, was a native of Somersetshire, and one of the first settlers in Dover. He was much respected and eminently useful, having sustained many important offices, civil and military, and approved his courage and fidelity in the most hazardous enterprises.

This change of government gratified the discontented few, but was greatly disrelished by the people in general, as they saw themselves deprived of the privilege of choosing their own rulers, which was still enjoyed by the other colonies in New England, and as they expected an invasion of their property soon to follow.

When writs were issued for calling a general assembly, the persons in each town who were judged qualified to vote were named in the writs; and the oath of allegiance was administered to each voter. The number of qualified voters in each town was, in Portsmouth 71, Dover 61, Hampton 57, Exeter 20, total 209. A public fast was observed, to ask the divine blessing on the approaching assembly, and "the continuance of their precious and pleasant things." The assembly met at Portsmouth on the 16th of March, and was opened with a prayer and a sermon by Mr. Moody.

To express their genuine sentiments of the present change, and invalidate the false reports which had been raised against them, as well as to shew their gratitude and respect to their former protectors, they wrote to the general court at Boston, "acknowledging the kindness of that colony, in taking them under their protection and ruling them well; assuring them, that it was not any dissatisfaction with their government, but merely their submission to divine providence and his majesty's commands, without any seeking of their own, which induced them to comply with the present separation, which they

should have been glad had never taken place; signifying their desire that a mutual correspondence might be continued for defence against the common enemy, and offering their service when it should be necessary."

It may not be uninteresting to give the names of the deputies in this first assembly—which were for Portsmouth, Robert Eliot, Philip Lewis, John Pickering; for Dover, Peter Coffin, Anthony Nutter, Richard Waldron, jun.; for Hampton, Anthony Stanyon, Thomas Marston, Edward Gove; for Exeter, Bartholemew Tippen, Ralph Hall.

Their next care was to frame a code of laws—of which the first, conceived in a style becoming freemen, was "that no act, imposition, law, or ordinance should be made or imposed upon them, but such as should be made by the assembly and approved by the president and council." Idolatry, blasphemy, treason, rebellion, wilful murder, manslaughter, poisoning, witchcraft, sodomy, bestiality, perjury, man stealing, cursing, and rebelling against parents, rape and arson, were made capital crimes. The other penal laws were in their main principles the same that are now in force. To prevent contentions that might arise by reason of the late change of government, all townships and grants of land were confirmed, and ordered to remain as before; and controversies about the titles of land were to be determined by juries chosen by the several towns, according to former custom. The president and council, with the assembly, were a supreme court of judicature, with a jury when desired by the parties; and three inferior courts were constituted at Dover, Hampton, and Portsmouth. The military arrangement was, one foot company in each town, one company of artillery at the fort, and one troop of horse, all under the command of Major Waldron.

During this administration, things went on as nearly as possible in the old channel, and with the same spirit, as before the separation. A jealous watch was kept over their rights and privileges, and every encroachment upon them was withstood to the utmost. The duties and restrictions established by the acts of trade and navigation were universally disgusting, and the more so as Randolph was appointed collector, surveyor and searcher of the customs throughout New England. In the execution of his commission he seized a ketch belonging to Portsmouth, but bound from Maryland to Ireland, which had been put into this port for a few days. The master, Mark Hunking, brought an action against him at a special court before the president and council, and recovered damages and costs to the amount of 13*l*. Randolph behaved on this occasion with such insolence, that the council obliged him publicly to acknowledge his offence and ask their pardon. He appealed from their judgment to the king, but what the issue was does not appear. Having constituted Captain Walter Barefoote his deputy at this port, an advertisement was published requiring that all vessels should be entered and cleared with him. Upon which Barefoote was brought to examination, and afterwards indicted before the president and council, for "having in an high and presumptuous manner set up his majesty's office of customs without leave from the president and council, in contempt of his majesty's authority in this place; for disturbing and obstructing his majesty's subjects in passing from harbour to harbour, and town to town; and for his insolence in making no other answer to any question propounded to him, but 'my name is Walter.'" He was sentenced to

pay a fine of 10*l.* and stand committed till it was paid. But though Randolph's authority was denied, yet they made an order of their own for the observation of the acts of trade, and appointed officers of their own to see them executed. They had been long under the Massachusetts government, and learned their political principles from them; and as they had been used to think that all royal authority flowed in the channel of the charter, so they now thought that no authority derived from the crown could be regularly exercised in the province but through their commission. In this they reasoned agreeably not only to their former principles, but to their fundamental law, to which they steadily adhered, though they had no reason to think it would be allowed by the crown; and though they knew that a rigid adherence to rights, however clear and sacred, was not the way to recommend themselves to royal favour. But they were not singular in these sentiments, nor in their opposition to the laws of trade. Randolph was equally hated, and his commission neglected at Boston, where the notary refused to enter his protest against the proceedings of the court, and he was obliged to post it on the exchange.

In the latter end of the year, Mason arrived from England with a mandamus, requiring the council to admit him to a seat at the board, which was accordingly done. He soon entered on the business he came about, endeavouring to persuade some of the people to take leases of him—threatening others if they did not—forbidding them to cut firewood and timber—asserting his right to the province, and assuming the title of lord-proprietor. His agents, or stewards as they were called, had rendered themselves obnoxious by demanding rents of several persons and threatening to sell their houses for payment.

(1681.) These proceedings raised a general uneasiness, and petitions were sent from each town, as well as from divers individuals, to the council for protection, who taking up the matter judicially, published an order prohibiting Mason or his agents at their peril to repeat such irregular proceedings, and declaring their intention to transmit the grievances and complaints of the people to the king. Upon this Mason would no longer sit in council, though desired, nor appear when sent for; when they threatened to deal with him as an offender, he threatened to appeal to the king, and published a summons to the president and several members of the council, and others, to appear before his majesty in three months. This was deemed “an usurpation over his majesty's authority here established,” and a warrant was issued for apprehending him, but he got out of their reach and went to England.

During these transactions president Cutts died, and Major Waldron succeeded him, appointing Captain Stileman for his deputy, who had quitted his place of secretary upon the appointment of Richard Chamberlayne to that office by royal commission. The vacancy made in the council by the president's death, was filled by Richard Waldron, jun. On the death of Dalton, Anthony Nutter was chosen. Henry Dow was appointed marshal in the room of Roberts, who resigned.

(1682.) During the remainder of the council's administration, the common business went on in the usual manner, and nothing remarkable is mentioned, excepting another prosecution of Barefoote, with his assistants, William Haskins and Thomas Thurton, for seizing a vessel “under pretence of his majesty's name, without the knowledge of the authorities of the province, and without shewing any

breach of statute though demanded.” Barefoote pleaded his deputation from Randolph, but he was amerced 20*l.* to be respited during his good behaviour, and his two assistants 5*l.* each; the complainant being left to the law for his damages. This affair was carried by appeal to the king; but the issue is not mentioned.

It will be proper to close the account of this administration with a view of the state of the province as to its trade, improvements and defence, from the following representation made by the council to the lords of trade, pursuant to their order.

“The trade of the province is in masts, planks, boards, and staves, and all other lumber, which at present is of little value in other plantations, to which they are transported, so that we see no other way for the advantage of the trade, unless his majesty please to make our river a free port.

“Importation by strangers is of little value; ships commonly selling their cargoes in other governments, and if they come here, usually come empty to fill with lumber: but if haply they are at any time loaded with fish, it is brought from other ports, there being none made in our province, nor likely to be, until his majesty please to make the south part of the Isles of Shoals part of this government, they not being at present under any.

“In reference to the improvement of lands by tillage, our soil is generally so barren, and the winters so extreme cold and long, that there is not provision enough raised to supply the inhabitants, many of whom were in the late Indian war so impoverished, their houses and estates being destroyed, and they and others remaining still so incapacitated for the improvement of the land, (several of the youth being killed also) that they even groan under the tax or rate assessed for that service, which is, great part of it, unpaid to this day.

“There is at the Great Island in Portsmouth, at the harbour's mouth, a fort well enough situated, but for the present too weak and insufficient for the defence of the place; the guns being eleven in number, are small, none exceeding a sacre (six-pounder) nor above twenty-one hundred weight, and the people too poor to make defence suitable to the occasion that may happen for the fort.

“These guns were bought, and the fortification erected, at the proper charge of the towns of Dover and Portsmouth, at the beginning of the first Dutch war, about the year 1665, in obedience to his majesty's command in his letter to the government, under which this province then was.

“There are five guns more lying at the upper part of Portsmouth, purchased by private persons, for their security and defence against the Indians in the late war with them, and whereof the owners may dispose at their pleasure. To supply the aforesaid defect and weakness of the guns and fort, we humbly supplicate his majesty to send us such guns as shall be more serviceable, with powder and shot.”

By an account of the entries in the port annexed to the above, it appears, that from the 15th of June 1680, to the 12th of April 1681, were entered, twenty-two ships, eighteen ketches, two barks, three pinks, one shallop and one fly boat: in all forty-seven. “The Isles of shoals,” mentioned in the foregoing report, must have been settled very early, though exactly when is uncertain: as they are most commodiously situated for the fishery, they were a principal object with the first settlers. While New Hampshire was united to Massachusetts, they were under the same jurisdiction, and the town there

erected was called Appledore. They are not named in Cutts' nor Cranfield's commission: but under Dudley's presidency, causes were brought from thence to Portsmouth, which is said to be in the same county. In Allen's and all succeeding commissions, they are particularly mentioned; the south half of them being in New Hampshire.

Taxes were commonly paid in lumber or provisions at stated prices; and whoever paid them in money was abated one-third part. The prices in 1680, were as follows:—merchantable white pine boards per thousand, 30s.; white oak pine staves per thousand, 3l.; red oak ditto per thousand, 30s.; red oak hog-head ditto per thousand, 25s.: Indian corn per bushel, 3s.; wheat per bushel, 5s.; malt per bushel, 4s. Silver was 6s. 8d. per ounce.

*The administration of Cranfield—Violent measures—Insurrection, trial, and imprisonment of Gove—Mason's suits—Vaughan's imprisonment—Prosecution of Moody and his imprisonment—Arbitrary proceedings—Complaints—Tumults—Weare's agency in England—Cranfield's removal—Barefoote's administration.*

(1682.) Experience having now convinced Mason, that the government which he had procured to be erected was not likely to be administered in a manner favourable to his views, he made it his business, on his return to England, to solicit a change; in consequence of which it was determined to commission Edward Cranfield, esq. lieut.-governor and commander in chief of New Hampshire. By a deed enrolled in the court of chancery, Mason surrendered to the king one-fifth part of the quit-rents, which had or should become due: these, with the fines and forfeitures which had accrued to the crown since the establishment of the province, and which should afterward arise, were appropriated to the support of the governor. But this being deemed too precarious a foundation, Mason by another deed mortgaged the whole province to Cranfield, for twenty-one years, as security for the payment of 150l. per annum, for the space of seven years. On this encouragement, Cranfield relinquished a profitable office at home, with the view of bettering his fortune here.

By the commission, which bears date the 9th of May, the governor was empowered to call, adjourn, prorogue and dissolve general courts; to have a negative voice in all acts of government; to suspend any of the council when he should see just cause (and every counsellor so suspended was declared incapable of being elected into the general assembly); to appoint a deputy governor, judges, justices, and other offices, by his sole authority; and to execute the powers of vice-admiral. The case of Mason was recited nearly in the same words as in the former commission, and the same directions were given to the governor to reconcile differences, or send cases fairly stated to the king in council, for his decision. The counsellors named in this commission were Mason, who was styled proprietor, Waldron, Daniel, Vaughan, Martyn, Gilman, Stileman, and Clements: these were of the former council, and to them were added Walter Barefoote, and Richard Chamberlayne.

Cranfield arrived and published his commission on the 4th of October, and within six days Waldron and Martyn were suspended from the council, on certain articles exhibited against them by Mason. This early specimen of the exercise of power must have been intended as a public affront to them, in revenge for their former spirited conduct; otherwise

their names might have been left out of the commission when it was drawn.

The people now plainly saw the dangerous designs formed against them. The negative voice of a governor, his right of suspending counsellors, and appointing officers, by his own authority, were wholly unprecedented in New England; and they had the singular mortification to see the crown not only appointing two branches of their legislature, but claiming a negative on the election of their representatives, in a particular case, which might sometimes be essentially necessary to their own security. They well knew that the sole design of these novel and extraordinary powers was to facilitate the entry of the claimant on the lands which some of them held by virtue of grants from the same authority, and which had all been fairly purchased of the Indians; a right which they believed to be of more validity than any other. Having by their own labour and expense subdued a rough wilderness, defended their families and estates against the savage enemy, without the least assistance from the claimant, and held possession for above fifty years; they now thought it hard and cruel, that when they had just recovered from the horrors of a bloody war, they should have their liberty abridged, and their property demanded, to satisfy a claim which was at best disputable, and in their opinion groundless. On the other hand it was deemed unjust, that grants made under the royal authority should be disregarded; and that so great a sum as had been expended by the ancestor of the claimant, to promote the settlement of the country, should be entirely lost to him; especially as he had foregone some just claims on the estate as a condition of inheritance. Had the inhabitants by any fraudulent means impeded the designs of the original grantee, or embezzled his interest, there might have been a just demand for damages; but the unsuccessfulness of that adventure was to be sought for in its own impracticability, or the negligence, inability, or inexperience of those into whose hands the management of it fell after Captain Mason's death, and during the minority of his successor.

An assembly, being summoned, met on the 14th of November; with whose concurrence a new body of laws was enacted, in some respects different from the former; the fundamental law being omitted, and an alteration made in the appointment of jurors, which was now ordered to be done by the sheriff, after the custom in England.

Cranfield, who made no secret of his intention to enrich himself, by accepting the government, on the first day of the assembly restored Waldron and Martyn to their places in the council; having, as he said, examined the allegations against them, and found them insufficient. In return for this shew of complaisance, and taking advantage of his needy situation, the assembly having ordered an assessment of five hundred pounds, appropriated one half of it as a present to the governor; hoping thereby to detach him from Mason, who they knew could never comply with his engagements to him. Preferring a certainty to an uncertainty, he passed the bill, though it was not presented to him till after he had given orders for adjourning the court, and after Mason, Barefoote, and Chamberlayne, were withdrawn from the council.

(1683.) This appearance of good humour was but short-lived; for at the next session of the assembly, the governor and council having tendered them a bill for the support of government, which they did not approve, and they having offered him several

bills which he said were contrary to law, he dissolved them; having previously suspended Stileman from the council, and dismissed him from the command of the fort, for suffering a vessel under seizure to go out of the harbour. Barefoote was made captain of the fort in his room.

The dissolution of the assembly, a thing before unknown, aggravated the popular discontent, and kindled the resentment of some rash persons in Hampton and Exeter; who, headed by Edward Gove, a member of the dissolved assembly, declared, by sound of trumpet "for liberty and reformation." There had been a town meeting at Hampton, when a new clerk was chosen, and their records secured. Gove went from town to town, proclaiming what had been done at Hampton, carrying his arms, declaring that the governor was a traitor, and had exceeded his commission, and that he would not lay down his arms till matters were set right—and endeavouring to excite the principal men in the province to join in a confederacy to overthrow the government. His project appeared to them so wild and dangerous, that they not only disapproved it, but informed against him, and assisted in apprehending him. Hearing of their design, he collected his company, and appeared in arms; but on the persuasion of some of his friends he surrendered. A special court was immediately commissioned for his trial, of which Major Waldron sat as judge, with William Vaughan and Thomas Daniel assistants. The grand jury presented a bill, in which Edward Gove, John Gove, his son, and William Hely, of Hampton; Joseph, John, and Robert Wadleigh, three brothers, Thomas Rawlins, Mark Baker, and John Sleeper, of Exeter, were charged with high treason. Gove, who behaved with great insolence before the court, and pretended to justify what he had done, was convicted, and received sentence of death in the usual form; and his estate was seized, as forfeited to the crown. The others were convicted of being accomplices, and respited. The king's pleasure being signified to the governor that he should pardon such as he judged objects of mercy; they were all set at liberty but Gove, who was sent to England, and imprisoned in the tower of London about three years. On his repeated petitions to the king, and by the interest of Randolph with the Earl of Clarendon, then lord chamberlain, he obtained his pardon, and returned home in 1686, with an order to the then president and council of New England to restore his estate.

Gove, in his petitions to the king, pleaded "a distemper of mind" as the cause of those actions for which he was prosecuted. He also speaks in some of his private letters of a drinking match at his house, and that he had not slept for twelve days and nights, about that time. When these things are considered, it is not hard to account for his conduct. From a letter which he wrote to the court while in prison, one would suppose him to have been disordered in his mind. His punishment was by much too severe, and his trial was hurried on too fast, it being only six days after the commission of his crime. Had he been indicted only for a riot, there would have been no difficulty in the proof, nor hardship in inflicting the legal penalty. Waldron, it is said, shed tears when pronouncing sentence of death upon him.

On the 14th of February the governor, by advertisement, called upon the inhabitants to take out leases from Mason within one month, otherwise he must, pursuant to his instructions, certify the refusal

to the king, that Mason might be discharged of his obligation to grant them. Upon this summons, and within the time set, Major Waldron, John Wingett, and Thomas Roberts, three of the principal landholders in Dover, waited on the governor to know his pleasure, who directed them to agree with Mason. They then retired into another room where Mason was, and proposed to refer the matter to the governor, that he might, according to his commission, state the matter to the king for his decision. This proposal Mason rejected, saying that unless they would own his title, he would have nothing to do with them. While they were in discourse the governor came in, and desired them to depart.

This piece of conduct is difficult to be accounted for, it being directly in the face of the commission. Had the method therein prescribed, and by these men proposed, been adopted, it was natural to expect that the king, who had all along favoured Mason's pretensions, would have determined the case as much to his wish as upon an appeal from a judicial court; besides, he had now the fairest opportunity to have it decided in the shortest way, to which his antagonists must have submitted, it being their own proposal. His refusal to accede to it was a great mistake, as it left both him and Cranfield exposed to the charge of disobedience. But it afforded a powerful plea in behalf of the people; whose confidence in the royal justice would have induced them to comply with the directions in the commission. It being now impossible to have the controversy thus decided, they determined to hearken to none of his proposals. As he generally met with opposition and contradiction, he was induced to utter many rash sayings in all companies. He threatened to seize the principal estates, beggar their owners, and provoke them to rebellion, by bringing a frigate into the harbour, and procuring soldiers to be quartered on the inhabitants. These threats were so far from intimidating the people, that they served the more firmly to unite them in their determination not to submit; and each party was now warm in their opposition and resentment.

The governor, on some fresh pretence, suspended Waldron, Martyn, and Gilman, from the council. The deaths of Daniels and Clements made two other vacancies. Vaughan held his seat the longest, but was at length thrust out for his non-compliance with some arbitrary measures. So that the governor had it in his power to model the council to his mind, which he did, by appointing at various times Nathaniel Fryer, Robert Eliot, John Hinckes, James Sherlock, Francis Champernoon, and Edward Randolph, Esqs. The judicial courts were also filled with officers proper for the intended business. Barefoote, the deputy-governor, was judge: Mason was chancellor; Chamberlayne was clerk and prothonotary; Randolph was attorney-general, and Sherlock provost marshal and sheriff. Some, who had always been disaffected to the country, and others who had been awed by threats, or flattered by promises, took leases from Mason; and these served for under-sheriffs, jurors, evidences, and other necessary persons.

Things being thus prepared, Mason began his law-suits by a writ against Major Waldron (who had always distinguished himself in opposition to this claim), for holding lands and felling timber to the amount of 4,000 $\text{\textsterling}$ . The major appeared in court, and chagelled every one of the jury as interested persons, some of them having taken leases of Mason, and all of them living upon the lands which he claimed. The judge then caused the oath of *voire*

dire to be administered to each juror, purporting "that he was not concerned in the lands in question, and that he should neither gain nor lose by the cause." Upon which the major said aloud to the people present, "That his was a leading case, and that if he were cast they must all become tenants to Mason; and that all persons in the province being interested, none of them could legally be of the jurv." The case however went on; but he made no defence, asserted no title, and gave no evidence on his part. Judgment was given against him, and at the next court of sessions he was fined 5*l*. for "mutinous and seditious words."

Suits were then instituted against all the principal landholders in the province, who, following Waldron's example, never made any defence. Some, chiefly of Hampton, gave in writing their reasons for not joining issue, which were, the refusal of Mason to comply with the directions in the commission; the impropriety of a jury determining what the king had expressly reserved to himself; and the incompetency of the jury, they being all interested persons, one of whom had said that "he would spend his estate to make Mason's right good." These reasons were irritating rather than convincing to the court. The jury never hesitated in their verdicts. From seven to twelve causes were dispatched in a day, and the costs were multiplied from 5*l*. to 20*l*. Executions were issued, of which two or three only were levied; but Mason could neither keep possession of the premises nor dispose of them by sale, so that the owners still enjoyed them. Several threatened to appeal to the king, but Major Vaughan alone made the experiment.

A suit was also commenced against Martyn, who had been treasurer, for the fines and forfeitures received by him, during the former administration; and judgment was recovered for 7*l*l. with costs. Martyn petitioned Mason as chancellor, setting forth that he had received and disposed of the money according to the orders of the late president and council, and praying that the whole burden might not lie upon him. A decree was then issued for the other surviving members of the late council, and the heirs of those who were dead, to bear their proportion. This decree was afterwards reversed by the king in council.

Cranfield with his council had now assumed the whole legislative power. They prohibited vessels from Massachusetts to enter the port, because the acts of trade were not observed in that colony: they fixed the dimensions of mercantile lumber; altered the value of silver money, which had always passed by weight at 6*s*. 8*d*. per ounce, and ordered that dollars should be received at 6*s*. each, which was then a great hardship, as many of them were greatly deficient in weight: they also changed the bounds of townships; established fees of office; made regulations for the package of fish, and ordered the constables to forbear collecting any town or parish taxes till the province tax was paid, and the accounts settled with the treasurer.

The public grievances having become insupportable, the people were driven to the necessity of making a vigorous stand for their liberties. The only regular way was by complaint to the king. Having privately communicated their sentiments to each other, and raised money by subscription, they appointed Nathaniel Weare, Esq., of Hampton, their agent; and the four towns having drawn and subscribed distinct petitions of the same tenor, Weare privately withdrew to Boston from whence he sailed

for England. Major Vaughan who accompanied him to Boston, and was appointed to procure depositions to send after him, was, upon his return to Portsmouth, brought to an examination, treated with great insolence, and required to find sureties for his good behaviour, which, having broken no law, he refused, and was by the governor's own warrant immediately committed to prison, where he was kept nine months to the great damage of his health, and of his own as well as the people's interest.

(1684.) Amidst these multiplied oppressions, Cranfield was still disappointed of the gains he had expected to reap from his office; and found to his great mortification, that there was no way of supplying his wants, but by application to the people through an assembly. He had already abused them so much that he could hope nothing from their favour, and was therefore obliged to have recourse to artifice. On a vague rumour of a foreign war, he pretended much concern for the preservation of the province from invasion; and presuming that they would shew the same concern for themselves, he called an assembly at Great Island where he resided, to whom he tendered a bill, which in a manner totally unparliamentary, had been drawn and passed by the council, for raising money to defray the expense of repairing the fort, and supplying it with ammunition, and for other necessary charges of government. The house debated awhile, and adjourned for the night, and the tide serving, the members went up to the town. In the morning they returned the bill with their negative, at which the governor was highly enraged, and telling them that they had been to consult with Moody, and other declared enemies of the king and church of England, he dissolved them; and afterward by his influence with the court of sessions, divers of the members were made constables for the following year. Some of them took the oath, and others paid the fine, which was 10*l*. Thus by a mean and execrable revenge, he taxed those whom he could not persuade to tax their constituents for his purposes.

But Moody was marked as an object of peculiar vengeance. He had for some time rendered himself obnoxious by the freedom and plainness of his pulpit discourses, and his strictness in administering the discipline of the church; one instance of which merits particular notice. Randolph having seized a vessel, it was in the night carried out of the harbour. The owner, who was a member of the church, swore that he knew nothing of it, but upon trial there appeared strong suspicions that he had perjured himself: he found means to make up the matter with the governor and collector, but Moody being concerned for the purity of his church, requested of the governor copies of the evidence, that the offender might be called to account in the way of ecclesiastical discipline. Cranfield sternly refused, saying that he had forgiven him, and that neither the church nor minister should meddle with him, and even threatened Moody in case he should. Not intimidated, Moody consulted the church, and preached a sermon against false swearing; then the offender, being called to account, was censured, and at length brought to a public confession. This procedure extremely disgusted the governor, who had no way then in his power to shew his resentment. But malice, ever fruitful in expedients to attain its ends, suggested a method, which, to the scandal of the English nation, has been too often practised. The penal laws against nonconformists were at this time executing with great rigour in England; and Cran-

field, ambitious to ape his royal master, determined to play off the ecclesiastical artillery here, the direction of which he supposed to be deputed to him with his other powers. He had attempted to impose upon the people the observation of the 30th of January as a fast, and restrain them from manual labour at Christmas: but his capital stroke was to issue an order in council "That after the 1st of January, the ministers should admit all persons of suitable years and not vicious, to the lord's supper, and their children to baptism; and that if any person should desire baptism, or the other sacrament to be administered according to the liturgy of the church of England, it should be done in pursuance of the king's command to the colony of Massachusetts; and any minister refusing so to do, should suffer the penalty of the statutes of uniformity."

The same week in which he dissolved the assembly, he signified to Moody in writing, by the hands of the sheriff, that himself, with Mason and Hinckes, intended to partake of the Lord's supper the next Sunday, requiring him to administer it to them according to the liturgy; and, as they justly expected, he at once denied them. The way was now opened for a persecution; and the attorney-general, Joseph Rayn, by the governor's order exhibited an information at the next court of sessions, before Walter Barefoote, judge, Nathaniel Fryer and Henry Greene, assistants, Peter Coffin, Thomas Edgerly and Henry Robie, justices, setting forth, "that Joshua Moody, clerk, being minister of the town of Portsmouth, within the dominions of King Charles, was by the duty of his place and the laws of the realm, viz. the statutes of the fifth and sixth of Edward VI., the first of Elizabeth, and the thirteenth and fourteenth of Charles II., required to administer the Lord's supper in such form as was set forth in the book of Common Prayer, and no other. But that the said Moody, in contempt of the laws, had wilfully and obstinately refused to administer the same to the Honourable Edward Cranfield, Robert Mason, and John Hinckes, and did obstinately use some other form." Moody in his defence pleaded, that he was not episcopally ordained as the statutes required; nor did he receive his maintenance according to them, and therefore was not obliged to the performance of what had been commanded; that the alleged statutes were not intended for these plantations, the known and avowed end of their settlement being the enjoyment of freedom from the imposition of those laws; which freedom was allowed and confirmed by the king, in the liberty of conscience granted to all protestants, in the governor's commission. Four of the justices, viz. Greene, Robie, Edgerly, and Fryer, were at first for acquitting him; but the matter being adjourned till the next day, Cranfield found means before morning to gain Robie and Greene, who then joined with Barefoote and Coffin, in sentencing him to six months imprisonment, without bail or mainprize. The other two persisted in their former opinion, and were soon after removed from all their offices. Moody was immediately ordered into custody, without being permitted first to see his family; and he remained under confinement, in company with Major Vaughan, at the house of Captain Stileman, with liberty of the yard, for thirteen weeks, "his benefice" being declared forfeited to the crown. The next week after Moody's trial, the governor in a profane bravado, sent word to Seaborn Cotton, minister of Hampton, that "when he had prepared his soul, he would come and demand the sacrament of him as he had done at Portsmouth."

Upon which Cotton withdrew to Boston. The minister of Dover, John Pike, was apparently unmolested. Exeter had then no settled minister.

During Moody's imprisonment, Cranfield would neither suffer him to go up to the town to preach, nor the people to assemble at the island to hear, nor the neighbouring ministers to supply his place; only the family where he was confined were permitted to be present with him at Sabbath exercises. But while the governor was absent on a tour to New York, Mason gave leave for opening the meeting-house twice, when they obtained a minister to officiate; he also allowed both Moody and Vaughan to make a short visit to their families. At length, by the interposition of friends, Moody obtained a release, though under a strict charge to preach no more within the province, on penalty of farther imprisonment. He then accepted an invitation from the first church in Boston; where being out of the reach of his persecutors, he was employed as a preacher, and was so highly esteemed, that upon the death of President Rogers he was invited to take the oversight of the college, which he modestly declined, and continued his ministrations at Boston, frequently visiting his destitute church at Portsmouth, at their private meetings, till 1692, when, the government being in other hands, and the eastern country under trouble by the Indians, at the earnest request of his people, and by the advice of an ecclesiastical council, he returned to his charge at Portsmouth, and spent the rest of his days there in usefulness, love, and peace.

Upon a calm review of this prosecution, one can hardly tell which is most detestable, the vindictive temper which gave it birth, or the profaneness and hypocrisy with which it was conducted. The pretended zeal of the prosecutors was totally inconsistent with a due regard to those laws, and the principles of that church, for which they made themselves such contemptible champions. For it had been long before this time, a received opinion in the church of England, that the validity of all the sacramental administrations depends on authority derived from the apostles, by *episcopal* ordination, in an uninterrupted succession; and one of the statutes on which the prosecution was grounded, enacts "that no person shall presume to consecrate and administer the Lord's supper, before he be ordained a priest by episcopal ordination, on pain of forfeiting for every offence, 100*l*." The ministers then in the province, being destitute of the grand pre-requisite, were incapable by the act of doing what was so peremptorily required of them; and had they complied with the governor's order, must have exposed themselves to the penalty, if he had pleased to exact it from them. But the extending these penalties to the king's American subjects, who had fled thither from the rod of prelatie tyranny, was a most unwarrantable stretch of power; since the last of these acts, and the only one which had been made since the settlement of the colonies, was expressly restricted in its operation, to "the realm of England, dominion of Wales, and town of Berwick upon Tweed."

Disappointed in all his schemes for raising money by an assembly, Cranfield next ventured on the project of taxing the people without their consent. The pretext for this was a clause in the commission, empowering him, with the council, "to continue such taxes as had been formerly levied, until a general assembly could be called." This had been done, without offence, at the beginning both of this and the former administration, when the change of

government rendered it necessary. But the council, though too much devoted to him, were not easily persuaded into the measure at this time; till fear at length accomplished what reason could not approve: for, letters being received from the eastward, stating the discovery of a plot among the Indians, who were instigated by Castine the Frenchman to renew the war early in the spring, the council were summoned in haste, and presently agreed to the governor's proposal for continuing such taxes as had been formerly laid, which he told them were necessary for the immediate defence and security of the province. This affair, however, was kept secret for the present: and the people were first to be convinced of the governor's paternal care and kindness in taking the necessary precautions for their safety. It was ordered that the meeting-houses in each town should be fortified, and bye garrisons were established in convenient places: supplies of ammunition were ordered to be provided: circular letters were dispatched to the governors of the neighbouring colonies, informing them of the danger; and, to crown the whole, Cranfield himself, at the request of the council, undertook a tour to New York, to solicit the governor, Dongan, for a number of the Mohawks to come down and destroy the eastern Indians; promising to pay them for their services out of the money which was thus to be raised.

At his return from this excursion, he found himself under some embarrassment in his favourite views, from a letter of the lords of trade, which directed him to make use of an assembly, in raising money on the people. He could not, therefore, avoid calling one, though he immediately dissolved it, because several of the members were those whom he had formerly ordered to be made constables. At the same time, in his letters to the secretary of state, he represented the assembly as persons of such a mutinous and rebellious disposition, that it was not safe to let them convene; that they had never given any thing toward the support of government; that he was obliged to raise money without them; and that it was impossible for him to serve his majesty's interest without a ship of war to enforce his orders; and, finally, he desired leave to go to the West Indies for the recovery of his health. When this business was dispatched, warrants were issued for collecting the taxes; which caused fresh murmurings and discontent among the people.

But however disaffected to the governor and his creatures, they were always ready to testify their obedience to the royal orders; an instance of which occurred at this time. The seas of America and the West Indies being much infested with pirates, the king sent orders to all the governors and colony assemblies, directing acts to be made for the suppressing of piracy and robbery on the high seas. Cranfield, having received this order, summoned an assembly; and though it consisted almost entirely of the same persons who were in the last, he suffered them to pass the act, and then quietly dissolved them: and this was the last assembly that he called.

The tax-bills were first put into the hands of the newly-made constables; who soon returned them, informing the governor that the people were so averse from the method, that it was impossible to collect the money. The provost, Thomas Thurton, was then commanded to do it, with the assistance of his deputies and the constables. The people still refusing compliance, their cattle and goods were taken by distraint, and sold by auction: those who would neither pay nor discover their goods to the

officers, were apprehended and imprisoned; and some of the constables, who refused to assist, suffered the same fate. The more considerate of the people were disposed to bear these grievances, though highly irritating, till they could know the result of their applications to the king. But in a country where the love of liberty had ever been the ruling passion, it could not be expected but that some forward spirits would break the restraints of prudence, and take a summary method to put a stop to their oppressions. Several persons had declared that they would sooner part with their lives, than suffer distraints; and associations were formed for mutual support. At Exeter the sheriff was resisted, and driven off with clubs; the women having prepared hot spits and scalding water to assist in the opposition, as Thurton testified in his deposition on the occasion. At Hampton he was beaten, and his sword was taken from him; then he was seated on a horse, and conveyed out of the province to Salisbury with a rope about his neck, and his feet tied under the horse's belly. Justice Robe attempted to commit some of the rioters; but they were rescued by the way, and both the justice and the sheriff were struck in the execution of their office. The troop of horse, under Mason's command, was then ordered to turn out completely mounted and armed, to assist in suppressing the disorders; but when the day came not one trooper appeared. Cranfield, thus finding his efforts ineffectual, and his authority contemptible, was obliged to desist.

The agent had been a long time in England, waiting for the depositions which were to have been transmitted to him in support of the complaint which he was to exhibit. Cranfield and his creatures here did all they could to retard the business; first, by imprisoning Vaughan, and then by refusing to summon and swear witnesses when applied to by others, who were obliged to go into the neighbouring governments, to get their depositions authenticated; and after all the proof was defective, as they had not access to the public records. The agent, however, exhibited his complaint against Cranfield in general terms, consisting of eight articles. "That he had engrossed the power of erecting courts, and establishing fees exclusive of the assembly; that he had not followed the directions in his commission respecting Mason's controversy, but had caused it to be decided on the spot by courts of his own constitution, consisting wholly of persons devoted to his interest; that exorbitant charges had been exacted, and some, who were unable to satisfy them, had been imprisoned; that others had been obliged to submit, for want of money to carry on the suits; that he had altered the value of silver money; that he had imprisoned sundry persons without just cause; that he, with his council, had assumed legislative authority, without an assembly; and, that he had done his utmost to prevent the people from laying their complaints before the king, and procuring the necessary evidence."

The complaint was referred to the board of trade, who transmitted copies of it, and of the several proofs, to Cranfield, and summoned him to make his defence; directing him to deliver to the adverse party, copies of all the affidavits which should be taken in his favour; to let all persons have free access to the records; and to give all needful assistance to them in collecting their evidence against him.

When he had received this letter he suspended Mason's suits, till the question concerning the legality of the courts should be decided. He also or-

dered the secretary to give copies to those who should apply for them. At the same time it was complained that the people, on their part, had been equally reserved, in secreting the records of the several towns, so that Mason upon enquiry could not find where they were deposited; and the town clerks, when summoned, had solemnly sworn that they knew neither where the books were concealed, nor who had taken them out of their possession.

(1685.) The necessary evidence on both sides being procured, a new complaint was drawn up, consisting of twelve articles, which were, "That at the first session of the assembly, Cranfield had challenged the power of legislation and settlement of the affairs to himself against the words of the commission: That he had by purchase or mortgage from Mason, made himself owner of the province, and so was not likely to act impartially between Mason and the inhabitants: That he had made courts, whereof both judges and jurors had agreed with Mason for their own lands, and some had taken deeds of him for other men's lands, so that they were engaged by their interest to set up Mason's title: That Mason had sued forty persons, and cast all; and that the governor's interposal to state the cases, as by his commission he was directed, had been refused though desired; and that the defendants' pleas grounded on the laws of England were rejected: That they could not reconcile the verdict with the attachment, nor the execution with the verdict, nor their practice under colour of the execution with either; that the verdict found the lands sued for according to the royal commission and instructions, and that the commission only gave power to state the case if Mason and the people could not agree; but the execution took land and all: That the charge of every action was about 6*l.*, though nothing was done in court but reading the commission, and some blank grants without hand or seal; and these were not read for one case in ten: That court charges were exacted in money, which many had not; who though they tendered cattle, were committed to prison for non-payment: That ministers, contrary to his majesty's commission, which granted liberty of conscience to all protestants, had their dues withheld from them, even those that were due before Cranfield came, and were threatened with six months' imprisonment for not administering the sacrament according to the liturgy: That though the general assembly agreed that Spanish money should pass by weight, the governor and council ordered pieces of eight to pass for 6*s.*, though under weight: That men were commonly compelled to enter into bonds of great penalty, to appear and answer to what should be objected against them, when no crime was alleged: That they had few laws but those made by the governor and council, when his commission directed the general assembly to make laws: That the courts were kept in a remote corner of the province; and the sheriff was a stranger and had no visible estate, and so was not responsible for failures."

Upon this complaint a hearing was had before the lords of trade, on Tuesday the 10th of March: and their lordships reported to the king, on three articles only of the complaint, viz. "That Cranfield had not pursued his instructions with regard to Mason's controversy; but instead thereof had caused courts to be held and titles to be decided, with exorbitant costs; and that he had exceeded his power in regulating the value of coins." This report was accepted, and the king's pleasure therein signified to him. At the same time, his request for absence being granted, he,

on receipt of the letters, privately embarked on board a vessel for Jamaica; and from thence went to England, where he obtained the collectorship of Barbadoes. At his departure, Barefoote, the deputy-governor, took the chair, which he held till he was superseded by Dudley's commission, as president of New England.

Cranfield's ill conduct must be ascribed in a great measure to his disappointment of the gains which he expected to acquire by the establishment of Mason's title, which could be his only inducement to accept of the government. This disappointment inflaming his temper, naturally vindictive and imperious, urged him to actions not only illegal, but cruel and unmanly. Had there been the least colour, either of zeal or policy, for the severity exercised in the prosecution of Moody, candour would oblige us to make some allowance for human frailty. His ordering the members of the assembly to be made constables, was a mode of revenge disgraceful to the character of the supreme magistrate. From the same base disposition, he is said to have employed spies and pimps, to find matter of accusation against people in their clubs, and private discourse. And his deceit was equal to his malice; for, being at Boston when the charter of that colony was called in question, and the people were solicitous to ward off the danger, he advised them to make a private offer of two thousand guineas to the king, promising to represent them in a favourable light; but when they, not suspecting his intention, followed his advice, and shewed him the letter which they had wrote to their agents for that purpose, he treacherously represented them as "disloyal rogues;" and made them appear so ridiculous that their agents were ashamed to be seen at court. However, when he had quitted the country, and had time for reflection, he grew ashamed of his misconduct, and while he was collector at Barbadoes, made a point of treating the masters of vessels, and other persons who went thither from Pascataqua, with particular respect.

Although the decision of titles in Cranfield's courts had been represented, in the report of the lords, as extrajudicial, and a royal order had been thereupon issued to suspend any farther proceedings in the case of Mason till the matter should be brought before the king in council, pursuant to the directions in the commission;—yet Barefoote suffered executions which had before been issued to be extended, and persons to be imprisoned at Mason's suit. This occasioned a fresh complaint and petition to the king, which was sent by Weare, who about this time made a second voyage to England, as agent for the province and attorney to Vaughan, to manage an appeal from several verdicts, judgments, decrees and fines, which had been given against him in the courts here, one of which was on the title to his estate. An attempt being made to levy one of the executions in Dover, a number of persons forcibly resisted the officer, and obliged him to relinquish his design. Warrants were then issued against the rioters, and the sheriff with his attendants attempted to seize them while the people were assembled for divine service. This caused an uproar in the congregation in which a young heroine distinguished herself by knocking down one of the officers with her Bible. They were all so roughly handled that they were glad to escape with their lives.

That nothing might be wanting to shew the enmity of the people to these measures, and their hatred and contempt for the authors of them, there are still preserved the original depositions on oath, of Bare-

foote and Mason, relating to an assault made on their persons by Thomas Wigger and Anthony Nutter, who had been members of the assembly. These two men came to Barefoote's house, where Mason lodged, and entered into discourse with him about his proceedings; denying his claim, and using such language as provoked him to take hold of Wigger, with an intention to thrust him out at the door. But Wigger being a stronger man, seized him by his cravat, and threw him into the fire, where his clothes and one of his legs were burned. Barefoote, attempting to help him, met with the same fate, and had two of his ribs broken and one of his teeth beaten out in the struggle. The noise alarmed the servants, who at Mason's command brought his sword, which Nutter took away, making sport of their misery. A farther specimen of the contempt in which these men were held, even by the lower class of people, expressed in their own genuine language, may be seen in the following affidavit: "Mary Rann, aged thirty years or thereabouts, witnesseth, that the 21st day of March 84, being in company with Seabank Hog, I heard her say—it was very hard for the governor of this province to strike Sam. Seavy before he spoke; the said Hog said also, that it was well the said Seavy's mother was not there for the governor, for if she had, there had been bloody work for him. I heard the said Hog say also, that the governor and the rest of the gentlemen were a crew of pitiful curs, and did they want earthly honour? if they did, she would pull off her head clothes, and come in her hair to them, like a parcel of pitiful beggarly curs as they were; come to undo us both body and soul; they could not be contented to take our estates from us, but they have taken away the gospel also, which the devil would have them for it." Sworn in the court of pleas, held at Great Island, the 7th of Nov. 1684.—R. Chamberlain, Prothon."

Nothing else occurred during Barefoote's short administration, except a treaty of friendship between the Indians of Penacook and Saco, on the one part; and the people of New Hampshire and Maine on the other. The foundation of this treaty seems to have been laid in Cranfield's project of bringing down the Mohawks on the eastern Indians; which had once before proved a pernicious measure; as they made no distinction between those tribes which were at peace with the English, and those which were at war. Some of the Penacook Indians, who had been at Albany after Cranfield's journey to New York, reported on their return, that the Mohawks threatened destruction to all the eastern Indians, from Narrhaganset to Pechypscot. Hagkins, a chief of the tribe, had informed Cranfield in the spring of the danger he apprehended, and had implored assistance and protection, but had been treated with neglect. In August the Penacook and Saco Indians gathered their corn, and removed their families; which gave an alarm to their English neighbours, as if they were preparing for war. Messengers being sent to demand the reason of their movement, were informed that it was the fear of the Mohawks, whom they daily expected to destroy them; and being asked why they did not come in among the English for protection, they answered, lest the Mohawks should hurt the English on their account. Upon this they were persuaded to enter into an agreement; and accordingly their chiefs being assembled with the council of New Hampshire, and a deputation from the province of Maine, a treaty was concluded, wherein it was stipulated, that all future personal injuries on either side should,

upon complaint, be immediately redressed; that information should be given of approaching danger from enemies; that the Indians should not remove their families from the neighbourhood of the English without giving timely notice, and if they did that it should be taken for a declaration of war; and, that while these articles were observed the English would assist and protect them against the Mohawks and all other enemies. The danger was but imaginary, and the peace continued for about four years.

(1686.) Though Mason was hitherto disappointed in his views of recovering the inhabited part of the province, he endeavoured to lay a foundation for realising his claim to the waste lands. A purchase having been made from the Indians, by Jonathan Tyng, and nineteen others, of a tract of land on both sides the river Merrimack, six miles in breadth, from Souhegan river to Winnipiscogee lake; Mason, by deed, confirmed the same, reserving to himself and his heirs the yearly rent of ten shillings. This was called the million acre purchase. About the same time he farmed out to Hezekiah Usher and his heirs, the mines, minerals, and ores, within the limits of New Hampshire, for the term of one thousand years; reserving to himself one quarter part of the royal ores and one seventeenth of the baser sorts; and having put his affairs here in the best order that the times would admit, he sailed for England, to attend the hearing of Vaughan's appeal to the king.

*The administration of Dudley as President, and Androsse as Governor of New England—Mason's farther attempt—His disappointment and death—Revolution in England—Sale to Allen—His commission for the government.*

When an arbitrary government is determined to infringe the liberty of the people, it is easy to find pretences to support the most iniquitous claims. King Charles the Second, in the latter part of his reign, was making large strides toward despotism. Charters, which obstructed his pernicious views, were, by a perversion of the law, decreed forfeited. The city of London, and most of the corporations in England, either suffered the execution of these sentences, or tamely surrendered their franchises to the all-grasping hand of power. It could not be expected that in this general wreck of privileges, the colonies of New England could escape. The people of Massachusetts had long been viewed with a jealous eye. Though the king had repeatedly assured them of his protection, and solemnly confirmed their charter privileges; yet their spirit and principles were so totally dissonant to the corrupt views of the court, that intriguing men found easy access to the royal ear, with complaints against them. Of these the most inveterate and indefatigable was Randolph, who made no less than eight voyages in nine years across the Atlantic, on this mischievous business. They were accused of extending their jurisdiction beyond the bounds of their patent; of invading the prerogative by coining money; of not allowing appeals to the king from their courts; and of obstructing the execution of the navigation and trade laws. By the king's command agents were sent over to answer these complaints. They found the prejudice against the colony so strong, that it was in vain to withstand it; and solicited instructions whether to submit to the king's pleasure, or to let the proceedings against them be issued in form of law. A solemn consultation being held, at which

the clergy assisted, it was determined "to die by the hands of others rather than by their own." Upon notice of this, the agents quitted England; and Randolph, as the angel of death, soon followed them, bringing a writ of quo warranto from the King's Bench; but the seire facias which issued from the chancery did not arrive till the time fixed for their appearance was elapsed: this, however, was deemed too trivial an error to stop the proceedings; judgment was entered against them, and the charter declared forfeited.

The king died before a new form of government was settled; but there could be no hope of favour from his successor, who inherited the arbitrary principles of his brother, and was publicly known to be a bigoted papist.

The intended alteration in the government was introduced in the same gradual manner as it had been in New Hampshire. A commission was issued, in which Joseph Dudley, Esq., was appointed president of his majesty's territory and dominion of New England; William Stoughton, deputy president; Simon Bradstreet, Robert Mason, John Fitz Winthrop, John Pynchon, Peter Bulkley, Edward Randolph, Wait Winthrop, Richard Warton, John Usher, Nathaniel Saltonstall, Bartholomew Gedney, Jonathan Tyng, Dudley Bradstreet, John Hinckes, and Edward Tyng, counsellors. Their jurisdiction extended over Massachusetts, New Hampshire, Maine, and the Narrhaganset or King's Province. These gentlemen were mostly natives of the country, some of them had been magistrates, and one of them governor under the charter. No house of deputies was mentioned in the commission.

The new form of government took place on the 25th day of May, 1686; and on the 10th of June, an order of council was issued for settling the county courts, which consisted of such members of the council as resided in each county, and any others of them who might be present, with such justices as were commissioned for the purpose. These courts had the power of trying and issuing all civil causes, and all criminal matters under life or limb; from them an appeal was allowed to a superior court, held three times in the year at Boston for the whole territory; and from thence appeals, in certain cases, might be had to the king in council. Juries were pricked by the marshal and one justice of each county, in a list given them by the select men of the towns. A probate court was held at Boston by the president, and "in the other provinces and remote counties" by a judge and clerk appointed by the president. The territory was divided into four counties, viz., Suffolk, Middlesex, Essex, and Hampshire; and three provinces, viz., New Hampshire, Maine, and King's province. By another order of the same date, town taxes could not be assessed but by allowance of two justices; and the members of the council were exempted from paying any part thereof.

Things were conducted with tolerable decency, and the innovations were rendered as little grievous as possible; that the people might be induced more readily to submit to the long meditated introduction of a governor-general.

In December following, Sir Edmund Androsse, who had been governor of New York, arrived at Boston with a commission, appointing him captain-general and governor in chief of the territory and dominion of New England, in which the colony of Plymouth was now included. By this commission, the governor with his council, five of whom were a quorum, were empowered to make such laws, im-

pose such taxes, and apply them to such purposes, as they should think proper. They were also empowered to grant lands on such terms, and subject to such quit-rents, as should be appointed by the king. Invested with such powers, these men were capable of the most extravagant actions. Though Androsse, like his master, began his administration with the fairest professions, yet like him he soon violated them, and proved himself a fit instrument for accomplishing the most execrable designs. Those of his council who were backward in aiding his rapacious intentions were neglected. Seven being sufficient for a full board, he selected such only as were devoted to him, and with their concurrence did what he pleased. Randolph and Mason were at first among his confidants; but afterward, when New York was annexed to his government, the members from that quarter were most in his favour.

(1687.) To particularize the many instances of tyranny and oppression which the country suffered from these men, is not within the design of this work. Let it suffice to observe, that the press was restrained, liberty of conscience infringed, exorbitant fees and taxes demanded without the voice or consent of the people, who had no privilege of representation. The charter being vacated, it was pretended that all titles to land were annulled; and as to Indian deeds, Androsse declared them no better than "the scratch of a bear's paw." Landholders were obliged to take out patents for their estates which they had possessed forty or fifty years; for these patents extravagant fees were exacted, and those who would not submit to this imposition, had writs of intrusion brought against them, and their land patented to others. To hinder the people from consulting about the redress of their grievances, town meetings were prohibited, except one in the month of May for the choice of town officers: and to prevent complaints being carried to England, no person was permitted to go out of the country without express leave from the governor. But notwithstanding all the vigilance of the governor, his emissaries and his guards, the resolute and indefatigable Increase Mather, minister of the second church in Boston, and president of the college, got on board a ship and sailed for England, with complaints in the name of the people against the governor, which he delivered with his own hand to the king; but finding no hope of redress, he waited the event of the revolution which was then expected.

(1688.) When the people groaned under so many real grievances, it is no wonder that their fears and jealousies suggested some that were imaginary. They believed Androsse to be a papist; that he had hired the Indians, and supplied them with ammunition to destroy their frontier settlements; and that he was preparing to betray the country into the hands of the French. At the same time, the large strides that King James the Second was making toward the establishment of popery and despotism raised the most terrible apprehensions; so that the report of the landing of the Prince of Orange in England was received here with the greatest joy. Androsse was so alarmed at the news, that he imprisoned the man who brought a copy of the prince's declaration, and published a proclamation, commanding all persons to be in readiness to oppose "any invasion from Holland," which met with as much disregard as one he had issued before, appointing a day of thanksgiving for the birth of a Prince of Wales.

(1689.) The people had now borne these innova-

tions and impositions for about three years: their patience was worn out, and their native love of freedom kindled at the prospect of deliverance. The news of a complete revolution in England had not reached them; yet so sanguine were their expectations, so eager were they to prove that they were animated by the same spirit with their brethren at home, that upon the rumour of an intended massacre in the town of Boston by the governor's guards, they were wrought up to a degree of fury. On the morning of the 18th of April the town was in arms, and the country flocking in to their assistance. The governor, and those who had fled with him to the fort, were seized and committed to prison. The gentlemen who had been magistrates under the charter, with Bradstreet, the late governor, at their head, assumed the name of a council of safety, and kept up a form of government, in the exigency of affairs, till orders arrived from England; when Androsse and his accomplices were sent home as prisoners of state, to be disposed of according to the king's pleasure.

The people of New Hampshire had their share of sufferings under this rapacious administration; and Mason himself did not escape. Having attended the hearing of Vaughan's appeal to the king, which was decided in Mason's favour; the judgment obtained here, being affirmed; and having now the fairest prospect of realising his claim, he returned hither in the spring of 1687, but found his views obstructed in a manner which he little expected. The government was in the hands of a set of unprincipled men, who looked with envy on the large share of territory which Mason claimed, and were for parcelling it out among themselves. The new judges delayed issuing executions on the judgments which he had formerly recovered, and the attorney-general, Graham, would not allow that he had power to grant lands by leases. This confirmed the people in their opinion of the invalidity of his claim, and rendered them more averse to him than ever. At length, however, he obtained from Dudley, the chief justice, a writ of certiorari, directed to the late judges of New Hampshire, by which his causes were to be removed to the supreme court of the whole territory, then held at Boston; but before this could be done, death put an end to his hopes, and relieved the people for a time from their fears. Being one of Sir Edmund's council, and attending him on a journey from New York to Albany; he died at Esopus, in the fifty-ninth year of his age; leaving two sons, John and Robert, the heirs of his claim and controversy.

The revolution at Boston, though extremely pleasing to the people of New Hampshire, left then in an unsettled state. They waited the arrival of orders from England; but none arriving, and the people's minds being uneasy, it was proposed by some of the principal gentlemen, that a convention of deputies from each of the towns should consider what was best to be done. The convention-parliament in England was a sufficient precedent to authorize this proceeding. Deputies were accordingly chosen, and instructed to resolve upon some method of government (1690.) At their first meeting they came to no conclusion; but afterward they thought it best to return to their ancient union with Massachusetts. A petition for this purpose being presented, they were readily admitted till the king's pleasure should be known, and members were sent to the general court which met there in this and the two following years. The gentlemen who had formerly been in commission for the peace, the militia and the civil

offices, were by town votes approved by the general court, restored to their places, and ancient laws and customs continued to be observed.

(1691.) Had the inclination of the people been consulted, they would gladly have been annexed to that government. This was well known to Mather and the other agents, who, when soliciting for a new charter, earnestly requested that New Hampshire might be included in it. But it was answered that the people had expressed an aversion from it, and desired to be under a distinct government. This could be founded only on the reports which had been made by the commissioners in 1665, and by Randolph in his narrative. The true reason for denying the request was, that Mason's two heirs had sold their title to the lands in New Hampshire to Samuel Allen of London, merchant, for seven hundred and fifty pounds—the entail having been previously docked by a fine and recovery in the Court of King's Bench; and Allen was now soliciting a recognition of his title from the crown, and a commission for the government of the province. When the inhabitants were informed of what was doing, they again assembled by deputies in convention, and sent (1691) a petition to the king, praying that they might be annexed to the Massachusetts. The petition was presented by Sir Henry Ashurst, and they were amused by some equivocal promises of success by the Earl of Nottingham; but Allen's importunity coinciding with the king's inclination, effectually frustrated their attempt. The claim which Allen had to the lands from Naumkeag, to three miles northward of Merrimack, was noticed in the Massachusetts charter (1692); and he obtained a commission for the government of New Hampshire, in which his son-in-law, John Usher, then in London, was appointed lieutenant-governor, with power to execute the commission in Allen's absence. The counsellors named in the governor's instructions were John Usher, lieutenant-governor, John Hinckes, Nathaniel Fryer, Thomas Graffort, Peter Coffin, Henry Green, Robert Eliot, John Gerrish, John Walford, and John Love. The governor was instructed to send to the secretary of state the names of six other persons suitable for counsellors. Three were a quorum, but the instructions were that nothing should be done unless five were present, except in extraordinary emergencies. Major Vaughan, Nathaniel Weare, and Richard Waldron, were afterward added to the number.

The council was composed of men who, in general, had the confidence of the people; but Usher was very disagreeable, not only as he had an interest in Allen's claim to the lands, but as he had been one of Sir Edmund Androsse's adherents, and an active instrument in the late oppressive government. He arrived with the commission and took upon him the command, on the 13th day of August. The people again submitted, with extreme reluctance, to the unavoidable necessity of being under a government distinct from Massachusetts.

The year 1692 was remarkable for a great mortality in Portsmouth and Greenland by the small pox. The infection was brought in bags of cotton from the West Indies, and there being but few people who were acquainted with it, the patients suffered greatly, and but few recovered.

*The war with the French and Indians, commonly called King William's war.*

It was the misfortune of this country to have enemies of different kinds to contend with at the same time.

While the changes above related were taking place in their government, a fresh war broke out on their frontiers, which, though ascribed to divers causes, was really kindled by the rashness of the same persons who were making havock of their liberties.

The lands from Penobscot to Nova Scotia had been ceded to the French, by the treaty of Breda, in exchange for the island of St. Christopher. On these lands the baron de St. Castine had for many years resided, and carried on a large trade with the Indians, with whom he was intimately connected; having several of their women, beside a daughter of the sachem Madokawando, for his wives. The lands which had been granted by the crown of England to the duke of York (at that time King James the Second) interfered with Castine's plantation, as the duke claimed to the river St. Croix. A fort had been built by his order at Pemaquid, and a garrison stationed there to prevent any intrusion on his property. In 1686 a ship belonging to Pascataqua landed some wines at Penobscot, supposing it to be within the French territory. Palmer and West, the duke's agents at Pemaquid, went and seized the wines; but by the influence of the French ambassador in England, an order was obtained for the restoration of them. Hereupon a new line was run, which took Castine's plantation into the duke's territory. In the spring of 1688, Androsse went in the Rose frigate, and plundered Castine's house and fort, leaving only the ornaments of his chapel to console him for the loss of his arms and goods. This base action provoked Castine to excite the Indians to a new war, pretences for which were not wanting on their part. They complained that the tribute of corn which had been promised by the treaty of 1678, had been withheld; that the fishery of the river Saco had been obstructed by seines; that their standing corn had been devoured by cattle belonging to the English; that their lands at Pemaquid had been patented without their consent; and that they had been fraudulently dealt with in trade. Some of these complaints were doubtless well grounded; but none of them were ever enquired into or redressed.

They began to make reprisals at North Yarmouth by killing cattle. Justice Blackman ordered sixteen of them to be seized and kept under guard at Falmouth; but others continued to rob and capture the inhabitants. Androsse, who pretended to treat the Indians with mildness, commanded those whom Blackman had seized to be set at liberty. But this mildness had not the desired effect; the Indians kept their prisoners, and murdered some of them in their barbarous sports. Androsse then changed his measures, and thought to frighten them with an army of 700 men, which he led into their country in the month of November. The rigor of the season proved fatal to some of his men; but he never saw an Indian in his whole march. The enemy were quiet during the winter.

(1689.) After the revolution, the gentlemen who assumed the government took some precautions to prevent the renewal of hostilities. They sent messengers and presents to several tribes of Indians, who answered them with fair promises; but their prejudice against the English was too inveterate to be allayed by such means as these.

Thirteen years had almost elapsed since the seizure of the 400 Indians, at Cochecho, by Major Waldron; during all which time an inextinguishable thirst of revenge had been cherished among them, which never till now found opportunity for gratification. Wonolanset, one of the sachems of

Penacook, who was dismissed with his people at the time of the seizure, always observed his father's dying charge, not to quarrel with the English; but Hagkins, another sachem, who had been treated with neglect by Cranfield, was more ready to listen to the seducing invitations of Castine's emissaries. Some of those Indians, who were then seized and sold into slavery abroad, had found their way home, and could not rest till they had their revenge. Accordingly a confederacy being formed between the tribes of Penacook and Pigwacket, and the strange Indians (as they were called) who were incorporated with them, it was determined to surprise the major and his neighbours, among whom they had all this time been peaceably conversant.

In that part of the town of Dover which lies about the first falls in the river Cochecho, were five garrisoned houses; three on the north side, called respectively, Waldron, Otis, and Heard; and two on the south side, Peter Coffin and his son's. These houses were surrounded with timber walls, the gates of which, as well as the house doors, were secured with bolts and bars. The neighbouring families retired to these houses by night; but by an unaccountable negligence, no watch was kept. The Indians who were daily passing through the town, visiting and trading with the inhabitants, as usual in time of peace, viewed their situation with an attentive eye. Some hints of a mischievous design had been given out by their squaws; but in such dark and ambiguous terms that no one could comprehend their meaning. Some of the people were uneasy; but Waldron, who, from a long course of experience, was intimately acquainted with the Indians, and on other occasions had been ready enough to suspect them, was now so thoroughly secure, that when some of the people hinted their fears to him, he merrily bad them to go and plant their pumpkins, saying that he would tell them when the Indians would break out. The very evening before the mischief was done, being told by a young man that the town was full of Indians, and the people were much concerned; he answered that he knew the Indians very well, and there was no danger.

The plan which the Indians had preconcerted was, that two squaws should go to each of the garrisoned houses in the evening, and ask leave to lodge by the fire; that in the night when the people were asleep they should open the doors and gates, and give the signal by a whistle, upon which the strange Indians, who were to be within hearing, should rush in, and take their long meditated revenge. This plan being ripe for execution, on the evening of Thursday the 27th of June, two squaws applied to each of the garrisons for lodging, as they frequently did in time of peace. They were admitted into all but the younger Coffin's, and the people, at their request, shewed them how to open the doors, in case they should have occasion to go out in the night. Mesandowit, one of their chiefs, went to Waldron's garrison, and was kindly entertained, as he had often been before. The squaws told the major, that a number of Indians were coming to trade with him the next day, and Mesandowit while at sapper, with his usual familiarity, said, "Brother Waldron, what would you do if the strange Indians should come?" The major carelessly answered, that he could assemble 100 men, by lifting up his finger. In this unsuspecting confidence the family retired to rest.

When all was quiet, the gates were opened and the signal given. The Indians entered, set a guard at the door, and rushed into the major's apartment,

which was an inner room. Awakened by the noise, he jumped out of bed, and though now advanced in life to the age of eighty years, he retained so much vigour as to drive them with his sword through two or three doors, but as he was returning for his other arms, they came behind him, stunned him with a hatchet, drew him into his hall, and seating him in an elbow chair on a long table insultingly asked him, "Who shall judge Indians now?" They then obliged the people in the house to get them some victuals: and when they had done eating, they cut the major across the breast and belly with knives, each one with a stroke saying, "I cross out my account." They then cut off his nose and ears, forcing them into his mouth—and when, spent with the loss of blood, he was falling down from the table, one of them held his own sword under him, which put an end to his misery. They also killed his son in law Abraham Lee; but took his daughter Lee with several others, and having pillaged the house, left it on fire. Otis's garrison, which was next to the major's, met with the same fate; he was killed, with several others, and his wife and child were captured. Heard's was saved by the barking of a dog just as the Indians were entering: Elder Wentworth, who was awakened by the noise, pushed them out, and falling on his back, set his feet against the gate and held it till he had alarmed the people; two balls were fired through it but both missed him. Coffin's house was surprised, but as the Indians had no particular enmity to him, they spared his life, and the lives of his family, and contented themselves with pillaging the house. Finding a bag of money, they made him throw it by handfuls on the floor, while they amused themselves in scrambling for it. They then went to the house of his son who would not admit the squaws in the evening, and summoned him to surrender, promising him quarter: he declined their offer, and determined to defend his house, till they brought out his father and threatened to kill him before his eyes; filial affection then overcame his resolution, and he surrendered. They put both families together into a deserted house, intending to reserve them for prisoners; but while the Indians were busy in plundering, they all escaped.

Twenty-three people were killed in this surprisal, and twenty-nine were captured; five or six houses with the mills were burned; and so expeditious were the Indians in the execution of their plot, that before the people could be collected from the other parts of the town to oppose them, they fled with their prisoners and booty. As they passed by Heard's garrison in their retreat, they fired upon it, but the people being prepared and resolved to defend it, and the enemy being in haste, it was preserved. The preservation of its owner was more remarkable.

Elizabeth Heard, with her three sons and a daughter, and some others, were returning in the night from Portsmouth; they passed up the river in their boat unperceived by the Indians, who were then in possession of the houses; but suspecting danger by the noise which they heard, after they had landed they betook themselves to Waldron's garrison, where they saw lights, which they imagined were set up for direction to those who might be seeking a refuge. They knocked and begged earnestly for admission, but no answer being given, a young man of the company climbed up the wall, and saw, to his inexpressible surprise, an Indian standing in the door of the house with his gun. The woman was so overcome with the fright that she was unable to fly, but begged her children to shift for them-

selves, and they with heavy hearts left her. When she had a little recovered she crawled into some bushes, and lay there till day-light: she then perceived an Indian coming toward her with a pistol in his hand, he looked at her and went away; returning, he looked at her again, and she asked him what he would have. He made no answer, but ran yelling to the house, and she saw him no more. She kept her place till the house was burned and the Indians were gone, and then returning home found her own house safe. Her preservation in these dangerous circumstances was more remarkable, if (as it is supposed) it was an instance of justice and gratitude in the Indians: for at the time when the 400 were seized in 1676, a young Indian escaped and took refuge in her house, where she concealed him; in return for which kindness he promised her that he would never kill her, nor any of her family in any future war, and that he would use his influence with the other Indians to the same purpose. This Indian was one of the party who surprised the place, and she was well known to the most of them.

The same day, after the mischief was done, a letter from Secretary Addington, written by order of the government, directed to Major Waldron, giving him notice of the intention of the Indians to surprise him under pretence of trade, fell into the hands of his son. This design was communicated to Governor Bradstreet by Major Hinchman of Chelmsford, who had learned it of the Indians. The letter was dispatched from Boston, the day before, by Mr. Weare; but some delay which he met with at Newbury ferry prevented its arrival in season.

The prisoners taken at this time were mostly carried to Canada, and sold to the French; and these, so far as can be learned, were the first that ever were carried thither. One of these prisoners was Sarah Gerrish, a remarkably fine child, of seven years old, and grand-daughter of Major Waldron, in whose house she lodged that fatal night. Some circumstances attending her captivity are truly affecting. When she was awakened by the noise of the Indians in the house, she crept into another bed, and hid herself under the clothes to escape their search. She remained in their hands till the next winter, and was sold from one to another several times. An Indian girl once pushed her into a river; but, catching by the bushes, she escaped drowning, yet durst not tell how she came to be wet. Once she was so weary with travelling, that she did not awake in the morning till the Indians were gone, and then found herself alone in the woods, covered with snow, and without any food; having found their tracks, she went crying after them till they heard her and took her with them. At another time they kindled a great fire, and the young Indians told her she was to be roasted. She burst into tears, threw her arms round her master's neck, and begged him to save her, which he promised to do if she would behave well. Being arrived in Canada, she was bought by the Intendant's lady, who treated her courteously, and sent her to a nunnery for education. But when Sir William Phips was at Quebec she was exchanged, and returned to her friends, with whom she lived till she was sixteen years old.

The wife of Richard Otis was taken at the same time, with an infant daughter of three months old. The French priests took this child under their care, baptised her by the name of Christina, and educated her in the Romish religion. She passed some time in a nunnery, but declined taking the veil, and was married to a Frenchman, by whom she had two

children. But her desire to see New England was so strong, that upon an exchange of prisoners in 1714, being then a widow, she left both her children, who were not permitted to come with her, and returned home, where she abjured the Romish faith. M. Siguenot, her former confessor, wrote her a flattering letter, warning her of her danger, inviting her to return to the bosom of the catholic church, and repeating many gross calumnies which had formerly been vented against Luther and the other reformers. This letter being shewn to Governor Burnet, he wrote her a sensible and masterly answer, refuting the arguments, and detecting the falsehoods it contained: both these letters were printed. She was married afterwards to Captain Thomas Baker, who had been taken at Deerfield in 1704, and lived in Dover, where she was born, till the year 1773. The Indians had been seduced to the French interest by popish emissaries, who had begun to fascinate them with their religious and national prejudices. They had now learned to call the English heretics, and that to extirpate them as such was meritorious in the sight of heaven. When their minds were filled with religious frenzy, they became more bitter and implacable enemies than before; and finding the sale of scalps and prisoners turn to good account in Canada, they had still farther incitement to continue their depredations, and prosecute their vengeance.

The necessity of vigorous measures was now so pressing, that parties were immediately dispatched, one under Captain Noyes to Penacook, where they destroyed the corn, but the Indians escaped; another from Pascataqua, under Captain Wincal, to Winnipiseogee, whither the Indians had retired, as John Church, who had been taken at Cocheco, and escaped from them, reported: one or two Indians were killed there, and their corn cut down. But these excursions proved of small service, as the Indians had little to lose, and could find a home wherever they could find game and fish.

In the month of August Major Swaine, with seven or eight companies raised by the Massachusetts government, marched to the eastward; and Major Church, with another party, consisting of English and Indians, from the colony of Plymouth, soon followed them. While these forces were on their march, the Indians, who lay in the woods about Oyster river, observed how many men belonged to Hucking's garrison; and seeing them all go out one morning to work, nimbly ran between them and the house, and killed them all, being in number eighteen, except one who had passed the brook. They then attacked the house, in which were only two boys, one of whom was lame, with some women and children. The boys kept them off for some time, and wounded several of them. At length the Indians set the house on fire, and even then the boys would not surrender till they had promised them to spare their lives. They perfidiously murdered three or four of the children; one of them was set on a sharp stake, in the view of its distressed mother, who, with the other women and the boys, were carried captive. One of the boys escaped the next day. Captain Garner, with his company, pursued the enemy, but did not come up with them.

The Massachusetts and Plymouth companies proceeded to the eastward, settled garrisons in convenient places, and had some skirmishes with the enemy at Casco and Blue Point. On their return, Major Swaine sent a party of the Indian auxiliaries under Lieutenant Flagg toward Winnipiseogee to

make discoveries. These Indians held a consultation in their own language; and having persuaded their lieutenant, with two men, to return, nineteen of them tarried out eleven days longer; in which time they found the enemy, staid with them two nights, and informed them of every thing which they desired to know; upon which the enemy retired to their inaccessible deserts, and the forces returned without finding them, and in November were disbanded.

Nothing was more welcome to the distressed inhabitants of the frontiers than the approach of winter, as they then expected a respite from their sufferings. The deep snows and cold weather were commonly a good security against an attack from the Indians; but when resolutely set on mischief, and instigated by popish enthusiasm, no obstacles could prevent the execution of their purposes.

(1690.) The Count de Frontenac, now governor of Canada, was fond of distinguishing himself by enterprises against the American subjects of King William, with whom his master was at war in Europe. For this purpose he detached three parties of French and Indians from Canada in the winter, who were to take three different routes into the English territories. One of these parties marched from Montreal, and destroyed Schenectada, a Dutch village on the Mohawk river, in the province of New York. This action, which happened at an unusual time of the year, in the month of February, alarmed the whole country; and the eastern settlements were ordered to be on their guard. On the 18th day of March, another party, which came from Trois Rivières, under the command of the Sieur Hertel, an officer of great repute in Canada, found their way to Salmon falls, a settlement on the river which divides New Hampshire from the province of Maine. This party consisted of fifty-two men, of whom twenty-five were Indians under Hoophood, a noted warrior. They began the attack at day-break, in three different places. The people were surprised; but flew to arms, and defended themselves in the garrisoned houses, with a bravery which the enemy themselves applauded. But as in all such onsets the assailants have the greatest advantage, so they here proved too strong for the defendants; about thirty of the bravest were killed, and the rest surrendered at discretion, to the number of fifty-four, of whom the greater part were women and children. After plundering, the enemy burned the houses, mills and barns, with the cattle, which were within doors, and then retreated into the woods, whither they were pursued by about one hundred and forty men, suddenly collected from the neighbouring towns, who came up with them in the afternoon, at a narrow bridge on Wooster's river. Hertel, expecting a pursuit, had posted his men advantageously on the opposite bank. The pursuers advanced with great intrepidity, and a warm engagement ensued, which lasted till night, when they retired with the loss of four or five killed; the enemy, by their own account, lost two, one of whom was Hertel's nephew; his son was wounded in the knee; another Frenchman was taken prisoner, who was so tenderly treated that he embraced the protestant faith, and remained in the country. Hertel, on his way homeward, met with a third party who had marched from Quebec, and joining his company to them, attacked and destroyed the fort and settlement at Casco, the next May. Thus the three expeditions planned by Count Frontenac proved successful; but the glory of them was much tarnished

by acts of cruelty, which christians should be ashamed to countenance, though perpetrated by savages.

The following instances of cruelty, exercised towards the prisoners taken at Salmon falls, are mentioned by Dr. Mather. Robert Rogers, a corpulent man, being unable to carry the burden which the Indians imposed upon him, threw it in the path and went aside in the woods to conceal himself. They found him by his track, stripped, beat, and pricked him with their swords; then tied him to a tree and danced round him till they had kindled a fire. They gave him time to pray, and take leave of his fellow prisoners, who were placed round the fire to see his death. They pushed the fire toward him, and when he was almost stifled, took it away to give him time to breathe, and thus prolong his misery; they drowned his dying groans with their hideous singing and yelling, all the while dancing round the fire, cutting off pieces of his flesh and throwing them in his face. When he was dead they left his body broiling on the coals, in which state it was found by his friends and buried. Mehetabel Goodwin was taken with a child of five months old; when it cried they threatened to kill it, which made the mother go aside and sit for hours together in the snow to lull it to sleep; her master seeing that this hindered her from travelling; took the child, struck its head against a tree, and hung it on one of the branches; she would have buried it but he would not let her, telling her that if she came again that way she might have the pleasure of seeing it. She was carried to Canada, and after five years returned home. Mary Plaisted was taken out of her bed, having lain in but three weeks: they made her travel with them through the snow, and "to ease her of her burden," as they said, struck the child's head against a tree, and threw it into a river. An anecdote of another kind may relieve the reader after these tragical accounts. Thomas Toogood was pursued by three Indians and overtaken by one of them, who having enquired his name, was preparing strings to bind him, holding his gun under his arm, which Toogood seized and went backward, keeping the gun presented at him, and protesting that he would shoot him if he alarmed the others who had stopped on the opposite side of the hill. By this dexterity he escaped and got safe into Cochecho; while his adversary had no recompense in his power but to call after him by the name of Nogood.

After the destruction of Casco the eastern settlements were all deserted, and the people retired to the fort at Wells. The Indians then came up westward, and a party of them under Hoophood some time in May made an assault on Fox Point, in Newington, where they burned several houses, killed about fourteen people, and carried away six. They were pursued by the Captains Floyd and Greenleaf, who came up with them and recovered some of the captives and spoil, after a skirmish in which Hoophood was wounded and lost his gun. This fellow was soon after killed by a party of Canada Indians, who mistook him for one of the Iroquois, with whom they were at war. On the 4th day of July, eight persons were killed as they were mowing in a field near Lamprey river, and a lad was captured. The next day they attacked Captain Hilton's garrison at Exeter, which was relieved by Lieutenant Bancroft with the loss of a few of his men; one of them, Simon Stone, received nine wounds with shot, and two strokes of a hatchet; when his friends came to bury him, they perceived life in him, and by the application of cordials he revived, to the amazement of all.

Two companies under the Captains Floyd and Wiswal were now scouting, and on the 6th day of July discovered an Indian track, which they pursued till they came up with the enemy at Wheelwright's Pond, [in Lee] where a bloody engagement ensued for some hours, in which Wiswal, his lieutenant, Flagg, and serjeant Walker, with twelve more, were killed, and several wounded. It was not known how many of the enemy fell, as they always carried off their dead. Floyd maintained the fight after Wiswal's death, till his men, fatigued and wounded, drew off, which obliged him to follow. The enemy retreated at the same time; for when Captain Convers went to look after the wounded, he found seven alive, whom he brought in by sunrise the next morning, and then returned to bury the dead. The enemy then went westward, and in the course of one week killed, between Lamprey river and Almsbury, not less than forty people.

The cruelties exercised upon the captives in this war exceeded, both in number and degree, any in former times. The most healthy and vigorous of them were sold in Canada, the weaker were sacrificed and scalped; and for every scalp they had a premium. Two instances only are remembered of their releasing any without a ransom; one was a woman taken from Fox Point, who obtained her liberty by procuring them some of the necessaries of life: the other was at York, where, after they had taken many of the people, they restored two aged women and five children, in return for a generous action of Major Church, who had spared the lives of as many women and children when they fell into his hands at Amariscogin.

The people of New England now looked on Canada as the source of their troubles, and formed a design to reduce it to subjection to the crown of England. The enterprise was bold and hazardous; but had their ability been equal to the ardour of their patriotism, it might probably have been accomplished. Straining every nerve, they equipped an armament in some degree equal to the service. What was wanting in military and naval discipline was made up in resolution; and the command was given to Sir William Phips, an honest man, and a friend to his country, but by no means qualified for such an enterprise. Unavoidable accidents retarded the expedition, so that the fleet did not arrive before Quebec till October, when it was more than time to return. It being impossible to continue there to any purpose, and the troops growing sickly and discouraged, after some ineffectual parade, they abandoned the enterprise.

This disappointment was severely felt. The equipment of the fleet and army required a supply of money which could not readily be collected, and occasioned a paper currency, which has often been drawn into precedent on like occasions, and has proved a fatal source of the most complicated and extensive mischief. The people were almost dispirited with the prospect of poverty and ruin. In this melancholy state of the country, it was a happy circumstance that the Indians voluntarily came in with a flag of truce, and desired a cessation of hostilities. (1691.) A conference being held at Sagadahock, they brought in ten captives, and settled a truce till the 1st day of May, which they observed till the 9th of June, when they attacked Storer's garrison at Wells, but were bravely repulsed. About the same time they killed two men at Exeter, and on the 29th of September, a party of them came from the eastward in canoes to Sandy Beach, Rye, where

they killed and captured twenty-one persons. Captain Sherburne of Portsmouth, a worthy officer, was this year killed at Marquoit.

(1692.) The next winter, the country being alarmed with the destruction of York, some new regulations were made for the general defence. Major Elisha Hutchinson was appointed commander in chief of the militia, by whose prudent conduct the frontiers were well guarded, and so constant a communication was kept up, by ranging parties, from one post to another, that it became impossible for the enemy to attack in their usual way by surprise. The good effect of this regulation was presently seen. A young man being in the woods near Cochecho, was fired at by some Indians. Lieutenant Wilson immediately went out with eighteen men; and finding the Indians, killed or wounded the whole party excepting one. This struck them with terror, and kept them quiet the remainder of the winter and spring. But on the 10th day of June, an army of French and Indians made a furious attack on Storer's garrison at Wells, where Captain Convers commanded; who after a brave and resolute defence, was so happy as to drive them off with great loss.

Sir William Phips, being now governor of Massachusetts, continued the same method of defence, keeping out continual scouts under brave and experienced officers. This kept the Indians so quiet, that except one poor family which they took at Oyster river, and some small mischief at Quaboag, there is no mention of any destruction made by them during the year 1693. Their animosity against New England was not quelled; but they needed time to recruit; some of their principal men were in captivity, and they could not hope to redeem them without a peace. To obtain it, they came into the fort at Pemaquid; and there entered into a solemn covenant, wherein they acknowledged subjection to the crown of England; engaged to abandon the French interest; promised perpetual peace; to forbear private revenge; to restore all captives, and even went so far as to deliver hostages for the due performance of their engagements. This peace, or rather truce, gave both sides a respite, which both earnestly desired.

The people of New Hampshire were much reduced, their lumber trade and husbandry being greatly impeded by the war. Frequent complaints were made of the burden of the war, the scarcity of provisions, and the dispiritedness of the people. Once it is said in the council minutes that they were even ready to quit the province. The governor was obliged to impress men to guard the outposts: they were sometimes dismissed for want of provisions, and then the garrison officers called to account and severely punished: yet all this time the public debt did not exceed 400*l*. In this situation they were obliged to apply to their neighbours for assistance; but this was granted with a sparing hand. The people of Massachusetts were much divided and at variance among themselves, both on account of the new charter which they had received from King William, and the pretended witchcrafts which have made so loud a noise in the world.

(1694.) The engagements made by the Indians in the treaty of Pemaquid, might have been performed if they had been left to their own choice. But the French missionaries had been for some years very assiduous in propagating their tenets among them, one of which was, "that to break faith with heretics was no sin." The Sieur de Villieu, who had distinguished himself in the defence of Quebec

when Phips was before it, and had contracted a strong antipathy to the New Englanders, being now in command at Penobscot, he, with M. Thury, the missionary, diverted Madokawando and the other sachems from complying with their engagements; so that pretences were found for detaining the English captives, who were more in number, and of more consequence, than the hostages whom the Indians had given. Influenced by the same pernicious councils, they kept a watchful eye on the frontier towns, to see what place was most secure and might be attacked to the greatest advantage. The settlement at Oyster river, within the town of Dover, was pitched upon as the most likely place; and it is said that the design of surprising it was publicly talked of at Quebec two months before it was put in execution. Rumours of Indians lurking in the woods thereabout, made some of the people apprehend danger: but no mischief being attempted, they imagined them to be hunting parties, and returned to their security. At length, the necessary preparations being made, Villieu, with a body of 250 Indians, collected from the tribes of St. John, Penobscot, and Norridgewog, attended by a French priest marched for the devoted place.

Oyster river is a stream which runs into the western branch of Pascataqua: the settlements were on both sides of it, and the houses chiefly near the water. Here were twelve garrisoned houses sufficient for the defence of the inhabitants; but apprehending no danger, some families remained at their own unfortified houses, and those who were in the garrisons were but indifferently provided for defence, some being even destitute of powder. The enemy approached the place undiscovered, and halted near the falls on Tuesday evening, the 17th of July. Here they formed into two divisions, one of which was to go on each side of the river and plant themselves in ambush, in small parties, near every house, so as to be ready for the attack at the rising of the sun, the first gun to be the signal. John Dean, whose house stood by the saw-mill at the falls, intending to go from home very early, arose before the dawn of day, and was shot as he came out of his door. This disconcerted their plan: several parties who had some distance to go, had not then arrived at their stations: the people in general were immediately alarmed: some of them had time to make their escape, and others to prepare for their defence. The signal being given, the attack began in all parts where the enemy was ready.

Of the twelve garrisoned houses five were destroyed, viz. Adams's, Drews's, Edgerly's, Medar's, and Beard's. They entered Adams's without resistance, where they killed fourteen persons; one of them, being a woman with child, they ripped open. The grave is still to be seen in which they were all buried. Drew surrendered his garrison on the promise of security, but was murdered when he fell into their hands; one of his children, a boy of nine years old, was made to run through a lane of Indians as a mark for them to throw their hatchets at, till they had dispatched him. Edgerly's was evacuated; the people took to their boat, and one of them was mortally wounded before they got out of reach of the enemy's shot. Beard's and Medar's were also evacuated, and the people escaped. The defenceless houses were nearly all set on fire, the inhabitants being either killed or taken in them, or else in endeavouring to fly to the garrisons. Some escaped by hiding in the bushes and other secret places. Thomas Edgerly, by concealing himself in his

cellar, preserved his house, though twice set on fire. The house of John Buss, the minister, was destroyed with a valuable library. He was absent, his wife and family fled to the woods and escaped. The wife of John Dean, at whom the first gun was fired, was taken with her daughter, and carried about two miles up the river, where they were left under the care of an old Indian while the others returned to their bloody work. The Indian complained of a pain in his head, and asked the woman what would be a proper remedy. She answered, Occapee, which is the Indian word for rum, of which she knew he had taken a bottle from her house. The remedy being agreeable, he took a large dose and fell asleep; and she took that opportunity to make her escape, with her child, into the woods, and kept concealed till they were gone.

The other seven garrisons, viz. Burnham's, Bickford's, Smith's, Bunker's, Davis's, Jones and Woodman's, were resolutely and successfully defended. At Burnham's the gate was left open: the Indians, ten in number, who were appointed to surprise it, were asleep under the bank of the river, at the time that the alarm was given. A man within, who had been kept awake by the toothache, hearing the first gun, roused the people and secured the gate, just as the Indians who were awakened by the same noise were entering. Finding themselves disappointed, they ran to Pitman's defenceless house, and forced the door at the moment that he had burst a way through that end of the house which was next to the garrison, to which he with his family, taking advantage of the shade of some trees, it being moonlight, happily escaped. Still defeated, they attacked the house of John Davis, which after some resistance he surrendered on terms; but the terms were violated, and the whole family either killed or made captives. Thomas Bickford preserved his house in a singular manner. It was situated near the river, and surrounded with a palisade. Being alarmed before the enemy had reached the house, he sent off his family in a boat, and then shutting his gate, betook himself alone to the defence of his fortress. Despising alike the promises and threats by which the Indians would have persuaded him to surrender, he kept up a constant fire at them, changing his dress as often as he could, shewing himself with a different cap, hat or coat, and sometimes without either, and giving directions aloud as if he had a number of men with him. Finding their attempt vain the enemy withdrew, and left him sole master of the house which he had defended with such admirable address. Smith's, Bunker's, and Davis's garrisons, being seasonably apprised of the danger, were resolutely defended—one Indian was supposed to be killed and another wounded by a shot from Davis's. Jones's garrison was beset before day; Captain Jones hearing his dogs bark, and imagining wolves might be near, went out to secure some swine and returned unmolested. He then went up into the flankart and sat on the wall. Discerning the flash of a gun he dropped backward; the ball entered the place from whence he had withdrawn his legs. The enemy from behind a rock kept firing on the house for some time and then quitted it. During these transactions the French priest took possession of the meeting-house, and employed himself in writing on the pulpit with chalk, but the house received no damage.

Those parties of the enemy who were on the south side of the river, having completed their destructive work, collected in a field adjoining Burnham's garrison, where they insultingly shewed their prisoners,

and derided the people, thinking themselves out of reach of their shot. A young man from the centry-box fired at one who was making some indecent signs of defiance, and wounded him in the heel. Both divisions then met at the falls, where they had parted the evening before, and proceeded together to Captain Woodman's garrison. The ground being uneven, they approached without danger, and from behind a hill kept up a long and severe fire at the hats and caps which the people within held up on sticks above the walls, without any other damage than galling the roof of the house. At length, apprehending it was time for the people in the neighbouring settlements to be collected in pursuit of them, they finally withdrew; having killed and captured between ninety and a hundred persons, and burned about twenty houses, of which five were garrisons. The main body of them retreated over Winnipiseogee lake, where they divided their prisoners, separating those in particular who were most intimately connected, in which they often took a pleasure suited to their savage nature.

Among these prisoners were Thomas Drew and his wife, who were newly married: he was carried to Canada, where he continued two years and was redeemed; she to Norridgewog, and was gone four years, in which she endured every thing but death. She was delivered of a child in the winter, in the open air, and in a violent snow storm; being unable to suckle her child, or provide it any food, the Indians killed it. She lived fourteen days on a decoction of the bark of trees. Once they set her to draw a sled up a river against a piercing north-west wind, and left her. She was so overcome with the cold that she grew sleepy, laid down, and was nearly dead when they returned: they carried her senseless to a wigwam, and poured warm water down her throat, which recovered her. After her return to her husband she had fourteen children; they lived together till he was ninety-three and she eighty-nine years of age; they died within two days of each other and were buried in one grave.

About forty of the enemy under Toxus, a Norridgewog chief, resolving on farther mischief, went westward and did execution as far as Groton. A smaller party having crossed the river Pascataqua, came to a farm where Ursula Cutts, widow of the deceased president, resided, who imagining the enemy had done what mischief they intended for that time, could not be persuaded to remove into town till her haymaking should be finished. As she was in the field with her labourers, the enemy fired from an ambush and killed her, with three others. Colonel Richard Waldron and his wife with her infant son (afterward secretary) had almost shared the same fate; they were taking boat to go and dine with this lady, when they were stopped by the arrival of some friends at their house; while at dinner they were informed of her death. She lived about two miles above the town of Portsmouth, and had laid out her farm with much elegance. The scalps taken in this whole expedition were carried to Canada by Madokawando, and presented to Count Frontenac, from whom he received the reward of his treacherous adventure.

There is no mention of any more mischief by the Indians within this province till the next year (1695), when, in the month of July, two men were killed at Exeter. The following year (1696), on the 7th of May, John Church, who had been taken and escaped from them seven years before, was killed and scalped at Cocheco, near his own house. On the 26th of June, an attack was made at Portsmouth plain

about two miles from the town. The enemy came from York-nubble to Sandy-beach in canoes, which they hid there among the bushes near the shore. Some suspicion was formed the day before by reason of the cattle running out of the woods at Little-harbour; but false alarms were frequent, and this was not much regarded. Early in the morning the attack was made on five houses at once; fourteen persons were killed on the spot, one was scalped and left for dead, but recovered, and four were taken. The enemy having plundered the houses of what they could carry, set them on fire, and made a precipitate retreat through the great swamp. A company of militia under Captain Shackford and Lieutenant Libbey pursued, and discovered them cooking their breakfast, at a place ever since called Breakfast-hill. The Indians were on the farther side, having placed their captives between themselves and the top of the hill, that in case of an attack they might first receive the fire. The lieutenant urged to go round the hill, and come upon them below to cut off their retreat; but the captain fearing in that case, that they would, according to their custom, kill the prisoners, rushed upon them from the top of the hill, by which means they retook the captives and plunder, but the Indians rolling down the hill escaped into the swamp and got to their canoes. Another party, under another commander, was then sent out in shallops to intercept them as they should cross over to the eastward by night. The captain ranged his boats in a line, and ordered his men to reserve their fire till he gave the watch-word. It being a calm night the Indians were heard as they advanced; but the captain, unhappily giving the word before they had come within gun-shot, they tacked about to the southward, and going round the Isles of Shoals, by the favour of their light canoes escaped. The watch-word was Crambo, which the captain ever after bore as an appendage to his title. On the 26th day of July, the people of Dover were waylaid as they were returning from the public worship, when three were killed, three wounded, and three carried to Penobscot, from whence they soon found their way home.

(1697.) The next year, on the 10th of June, the town of Exeter was remarkably preserved from destruction. A body of the enemy had placed themselves near the town, intending to make an assault in the morning of the next day. A number of women and children, contrary to the advice of their friends, went into the fields, without a guard, to gather strawberries. When they were gone, some persons, to frighten them, fired an alarm; which quickly spread through the town, and brought the people together in arms. The Indians, supposing that they were discovered, and quickened by fear, after killing one, wounding another, and taking a child, made a hasty retreat, and were seen no more there. But on the fourth day of July they waylaid and killed the worthy Major Frost at Kittery, to whom they had owed revenge ever since the seizure of the four hundred at Cocheco, in which he was concerned.

The same year an invasion of the country was projected by the French. A fleet was to sail from France to Newfoundland, and thence to Penobscot, where, being joined by an army from Canada, an attempt was to be made on Boston, and the sea coast ravaged from thence to Pascataqua. The plan was too extensive and complicated to be executed in one summer. The fleet came no further than Newfoundland; when the advanced season, and scanti-

ness of provisions obliged them to give over the design. The people of New England were apprised of the danger, and made the best preparations in their power. They strengthened their fortifications on the coast, and raised a body of men to defend the frontiers against the Indians, who were expected to co-operate with the French. Some mischief was done by lurking parties at the eastward; but New Hampshire was unmolested by them during the remainder of this and the whole of the following year.

(1698.) After the peace of Ryswick, Count Frontenac informed the Indians that he could not any longer support them in a war with the English, with whom his nation was now at peace. He therefore advised them to bury the hatchet, and restore their captives. Having suffered much by famine, and being divided in their opinions about prosecuting the war, after a long time they were brought to a treaty (1699) at Casco, where they ratified their former engagements; acknowledged subjection to the crown of England; lamented their former perfidy, and promised future peace and good behaviour in such terms as the commissioners dictated, and with as much sincerity as could be expected. At the same time they restored those captives who were able to travel from the places of their detention to Casco in that unfavourable season of the year; giving assurance for the return of the others in the spring; but many of the younger sort, both males and females, were detained; who, mingling with the Indians, contributed to a succession of enemies in future wars against their own country.

A general view of an Indian war will give a just idea of those distressing times, and be a proper close to this narration.

The Indians were seldom or never seen before they did execution. They appeared not in the open field, nor gave proofs of a truly masculine courage; but did their exploits by surprise, chiefly in the morning, keeping themselves hid behind logs and bushes, near the paths in the woods, or the fences contiguous to the doors of houses; and their lurking holes could be known only by the report of their guns, which was indeed but feeble, as they were sparing of ammunition, and as near as possible to their object before they fired. They rarely assaulted a house unless they knew there would be but little resistance, and it has been afterwards known that they have lain in ambush for days together, watching the motions of the people at their work, without daring to discover themselves. One of their chiefs, who had got a woman's riding-hood among his plunder, would put it on, in an evening, and walk into the streets of Portsmouth, looking into the windows of houses, and listening to the conversation of the people.

Their cruelty was chiefly exercised upon children, and such aged, infirm, or corpulent persons as could not bear the hardships of a journey through the wilderness. If they took a woman far advanced in pregnancy, their knives were plunged into her bowels. An infant, when it became troublesome, had its brains dashed out against the next tree or stone. Sometimes, to torment the wretched mother, they would whip and beat the child till almost dead, or hold it under water till its breath was just gone, and then throw it to her to comfort and quiet it. If the mother could not readily still its weeping, the hatchet was buried in its skull. A captive, wearied with the burden laid on his shoulders, was often sent to rest in the same way. If any one proved refractory, or was known to be instrumental to the death of an in-

dian, or related to one who had been so, he was tortured with a lingering punishment, generally at the stake, while the other captives were insulted with the sight of his miseries. Sometimes a fire would be kindled and a threatening given out against one or more, though there was no intention of sacrificing them, only to make sport of their terrors. The young Indians often signalized their cruelty in treating captives inhumanly out of sight of the elder, and when inquiry was made into the matter, the insulted captive must either be silent, or put the best face on it, to prevent worse treatment for the future. If a captive appeared sad and dejected, he was sure to meet with insult; but if he could sing and dance and laugh with his masters, he was caressed as a brother. They had a strong aversion to negroes, and generally killed them when they fell into their hands.

Famine was a common attendant on these captivities; the Indians when they caught any game devoured it all at one sitting, and then girding themselves round the waist, travelled without sustenance till chance threw more in their way. The captives, unused to such canine repasts and abstinences, could not support the surfeit of the one nor the cravings of the other. A change of masters, though it sometimes proved a relief from misery, yet rendered the prospect of a return to their home more distant. If an Indian had lost a relative, a prisoner bought for a gun, a hatchet, or a few skins, must supply the place of the deceased, and be the father, brother, or son of the purchaser; and those who could accommodate themselves to such barbarous adoption, were treated with the same kindness as the persons in whose place they were substituted. A sale among the French of Canada was the most happy event to a captive, especially if he became a servant in a family; though sometimes even there a prison was their lot, till an opportunity was presented for their redemption; while the priests employed every seducing art to pervert them to the popish religion, and induce them to abandon their country. These circumstances, joined with the more obvious hardships of travelling half naked and barefoot through pathless deserts, over craggy mountains and deep swamps, through frost, rain and snow, exposed by day and night to the inclemency of the weather, and in summer to the venomous stings of those numberless insects with which the woods abound; the restless anxiety of mind; the retrospect of past scenes of pleasure, the remembrance of distant friends, the bereavements experienced at the beginning or during the progress of the captivity, and the daily apprehension of death either by famine or the savage enemy; these were the horrors of an Indian captivity.

On the other hand, it must be acknowledged that there have been instances of justice, generosity, and tenderness, during these wars, which would have done honour to a civilized people. A kindness shewn to an Indian was remembered as long as an injury, and persons have had their lives spared for acts of humanity done to the ancestors of those Indians into whose hands they have fallen. They would sometimes "carry children on their arms and shoulders, feed their prisoners with the best of their provision, and pinch themselves rather than their captives should want food." When sick or wounded they would afford them proper means for their recovery, which they were very well able to do by their knowledge of simples. In thus preserving the lives and health of their prisoners, they doubtless had a view of gain. But the most remarkably favourable circumstance in an Indian captivity, was their decent

behaviour to women. It has never been found that any woman who fell into their hands was treated with the least immodesty; but testimonies to the contrary are very frequent. Mary Rowlandson, who was captured at Lancaster in 1675, has this passage in her narrative: "I have been in the midst of these roaring lions and savage bears, that feared neither God nor man nor the devil, by day and night, alone and in company; sleeping all sorts together, and yet not one of them ever offered me the least abuse of unchastity in word or action."

Elizabeth Hanson who was taken from Dover in 1724, testifies in her narrative, that "the Indians are very civil toward their captive women, not offering any incivility by any indecent carriage."

William Fleming, who was taken in Pennsylvania, in 1755, says, the Indians told him, "he need not be afraid of their abusing his wife, for they would not do it, for fear of offending their God (pointing their hands toward heaven) for the man that affronts his God will surely be killed when he goes to war." He farther says, that one of them gave his wife a shift and petticoat which he had among his plunder, and though he was alone with her, yet "he turned his back, and went to some distance while she put them on."

Charlevoix in his account of the Indians of Canada, says, "There is no example that any have ever taken the least liberty with the French women, even when they were their prisoners." Whether this negative virtue is to be ascribed to a natural frigidity of constitution, let philosophers enquire. the fact is certain: and it was a most happy circumstance for the female captives, that in the midst of all their distresses, they had no reason to fear from a savage foe the perpetration of a crime, which has too frequently disgraced not only the personal but the national character of those who make large pretences to civilization and humanity.

*The civil affairs of the province during the administrations of Usher, Partridge, Allen, the Earl of Bellamont, and Dudley—comprehending the controversy with Allen and his heirs.*

John Usher was a native of Boston, and by profession a stationer. He was possessed of an handsome fortune, and sustained a fair character in trade. He had been employed by the Massachusetts government, when in England, to negotiate the purchase of the province of Maine from the heirs of Sir Ferdinando Gorges, and had thence got a taste for speculating in landed interest. He was one of the partners in the million purchase, and had sanguine expectations of gain from that quarter. He had rendered himself unpopular among his countrymen, by accepting the office of treasurer under Sir Edmund Andros, and joining with apparent zeal in the measures of that administration, and he continued a friendly connection with that party after they were displaced.

Though not illnatured, but rather of an open and generous disposition, yet he wanted those accomplishments which he might have acquired by a learned and polite education. He was but little of the statesman and less of the courtier. Instead of an engaging affability he affected a severity in his deportment, was loud in conversation, and stern in command. Fond of presiding in government, he frequently journeyed into the province, (though his residence was at Boston, where he carried on his business as usual,) and often summoned the council when he had little or nothing to lay before

them. He gave orders, and found fault like one who felt himself independent, and was determined to be obeyed. He had an high idea of his authority and the dignity of his commission, and when opposed and insulted, as he sometimes was, he treated the offenders with a severity which he would not relax till he had brought them to submission. His public speeches were always incorrect, and sometimes coarse and reproachful.

He seems, however, to have taken as much care for the interest and preservation of the province, as one in his circumstances could have done. He began his administration in the height of a war which greatly distressed and impoverished the country, yet his views from the beginning were mercenary. The people perceived these views, and were aware of the danger. The transfer of the title from Mason to Allen was only a change of names: they expected a repetition of the same difficulties under a new claimant. After the opposition they had hitherto made, it could not be thought strange that men whose pulse beat high for freedom, should refuse to submit to vassalage; nor, while they were on one side defending their possessions against a savage enemy, could it be expected, that on the other, they should tamely suffer the intrusion of a landlord. Usher's interest was united with theirs in providing for the defence of the country, and contending with the enemy; but when the property of the soil was in question, they stood on opposite sides; and as both these controversies were carried on at the same time, the conduct of the people toward him varied according to the exigency of the case; they sometimes voted him thanks for his services, and at other times complained of his abusing and oppressing them.

Some of them would have been content to have held their estates under Allen's title, but the greater part, including the principal men, were resolved to oppose it to the last extremity. They had an aversion not only to the proprietary claim on their lands, but their separation from the Massachusetts government, under which they had formerly enjoyed so much freedom and peace. They had petitioned to be reannexed to them at the time of the revolution of 1688, and they were always very fond of applying to them for help in their difficulties, that it might appear how unable they were to subsist alone. They knew also that the Massachusetts people were as averse as themselves to Allen's claim, which extended to a great part of their lands, and was particularly noticed in their new charter.

Soon after Usher's arrival, he made enquiry for the papers which contained the transactions relative to Mason's suits. During the suspension of government in 1689, Captain John Pickering, a man of a rough and adventurous spirit, and a lawyer, had gone with a company of armed men to the house of Chamberlayne, the late secretary and clerk, and demanded the records and files which were in his possession. Chamberlayne refused to deliver them without some legal warrant or security; but Pickering took them by force, and conveyed them over the river to Kittery. Pickering was summoned before the governor, threatened and imprisoned, but for some time would neither deliver the books, nor discover the place of their concealment, unless by order of the assembly and to some person by them appointed to receive them. At length, however, he was constrained to deliver them, and they were put into the hands of the secretary, by the lieutenant-governor's order.

(1693.) Another favourite point with Usher was to have the boundary between New Hampshire and

Massachusetts ascertained: there were reasons which induced some of the people to fall in with this desire. The general idea was, that New Hampshire began at the end of three miles north of the river Merrimack; which imaginary line was also the boundary of the adjoining townships on each side. The people who lived, and owned lands near these limits, pretended to belong to either province, as best suited their convenience; which caused a difficulty in the collecting taxes and cutting timber. (1695.) The town of Hampton was sensibly affected with these difficulties, and petitioned the council that the line might be run. The council appointed a committee of Hampton men to do it, and gave notice to the Massachusetts of their intention, desiring them to join in the affair. They disliked it and declined to act; upon which the lieutenant-governor and council of New Hampshire, caused the boundary line to be run from the sea-shore three miles northward of Merrimack, and parallel to the river, as far as any settlements had been made, or lands occupied.

The only attempt made to extend the settlement of the lands during these times, was that in the spring of the year 1694, while there was a truce with the Indians. Usher granted a charter for the township of Kingston to about twenty petitioners from Hampton. They were soon discouraged by the dangers and difficulties of the succeeding hostilities, and many of them returned home within two years. After the war they resumed their enterprise; but it was not till the year 1725, that they were able to obtain the settlement of a minister. No alterations took place in the old towns, except the separation (in 1693) of Great Island, Little Harbour, and Sandy Beach, from Portsmouth, and their erection into a town by the name of New Castle; together with the annexation of that part of Squamscot patent which now bears the name of Stretham, to Exeter, it having before been connected with Hampton.

The lieutenant-governor was very forward in these transactions, thinking them circumstances favourable to his views, and being willing to recommend himself to the people by seconding their wishes, so far as was consistent with the interest he meant to serve. The people, however, regarded the settling and dividing of townships, and the running of lines, only as matters of general convenience, and continued to be disgusted with his administration. His repeated calls upon them for money were answered by repeated pleas of poverty, and requests for assistance from the neighbouring province. Usher used all his influence with that government to obtain a supply of men to garrison the frontiers; and when they wanted provisions for the garrisons, and could not readily raise the money, he would advance it out of his own purse and wait till the treasury could reimburse it.

For the two or three first years of his administration the public charges were provided for as they had been before, by an excise on wines and other spirituous liquors, and an impost on merchandize. (1695.) These duties being laid only from year to year, Usher vehemently urged upon the assembly a renewal of the act, and an extension of the duty to articles of export; and that a part of the money so raised might be applied to the support of government. The answer he obtained was, that "considering the exposed state of the province, they were obliged to apply all the money they could raise to their defence; and therefore they were not capable of doing any thing for the support of government, though they were sensible his honour had been at

considerable expense: they begged that he would join with the council in representing to the king, the poverty and danger of the province, that such methods might be taken for their support and preservation as to the royal wisdom should seem meet." Being further pressed upon the subject, they passed a vote to lay the proposed duties for one year, "provided he and the council would join with them in petitioning the king to annex them to the Massachusetts."

He had the mortification of being disappointed in his expectations of gain, not only from the people, but from his employer. Allen had promised him 250*l.* per annum for executing his commission; and when at the end of the third year, Usher drew on him for the payment of this sum, his bill came back protested. This was the more mortifying, as he had assiduously and faithfully attended to Allen's interest, and acquainted him from time to time with the means he had used, the difficulties he had encountered, the pleas he had urged, the time he had spent, and the expense he had incurred in defence and support of his claim. He now desired him to come over and assume the government himself, or get a successor to him appointed in the office of lieutenant-governor. He did not know that the people were beforehand with him in this latter request.

On a pretence of disloyalty he had removed Hinckes, Waldron and Vaughan from their seats in the council. The former of these was a man who could change with the times; the two latter were steady opposers of the proprietary claim. Their suspension irritated the people, who, by their influence, privately agreed to recommend William Partridge, Esq. as a proper person for their lieutenant-governor in Usher's stead. Partridge was a native of Portsmouth, a shipwright, of an extraordinary mechanical genius, of a political turn of mind, and a popular man. He was treasurer of the province, and had been ill used by Usher. Being largely concerned in trade, he was well known in England, having supplied the navy with masts and timber. His sudden departure for England was very surprising to Usher, who could not imagine he had any other business than to settle his accounts. (1697.) But the surprise was greatly increased when he returned with a commission appointing him lieutenant-governor and commander-in-chief in Allen's absence. It was obtained of the lords justices in the king's absence, by the interest of Sir Henry Ashurst, and was dated June 6, 1696.

Immediately on his arrival, his appointment was publicly notified to the people; though, either from the delay of making out his instructions, or for want of the form of an oath necessary to be taken, the commission was not published in the usual manner: but the party in opposition to Usher triumphed. The suspended counsellors resumed their seats, Pickering was made king's attorney, and Hinckes, as president of the council, opened the assembly with a speech. This assembly ordered the records which had been taken from Pickering to be deposited in the hands of Major Vaughan, who was appointed recorder. In consequence of which they have been kept in that office ever since.

Usher being at Boston when this alteration took place, wrote to them, declaring that no commission could supersede his till duly published; and intimated his intention of coming hither, "if he could be safe with his life." He also dispatched his secretary, Charles Story, to England, with an account of this transaction, which in one of his private letters he styles "the Pascataqua rebellion;" adding, that

"the militia were raised, and forty horse sent to seize him;" and intimating that the confusion was so great, that "if but three French ships were to appear, he believed they would surrender on the first summons." The extreme imprudence of sending such a letter across the Atlantic in time of war, was still heightened by an apprehension which then prevailed, that the French were preparing an armament to invade the country, and that "they particularly designed for Pascataqua river."

In answer to his complaint, the lords of trade directed him to continue in the place of lieutenant-governor till Partridge should qualify himself, or till Richard, Earl of Bellamont, should arrive, who was commissioned to the government of New York, Massachusetts Bay, and New Hampshire; but had not yet departed from England. Usher received the letter from the lords, together with the articles of peace which had been concluded at Ryswick, and immediately set off for New Hampshire, (where he had not been for a year) proclaimed the peace, and published the orders he had received, and having proceeded thus far, "thought all well and quiet." But his opposers having held a consultation at night, Partridge's commission was the next day published in form; he took the oaths, and entered on the administration of government, to the complete vexation and disappointment of Usher, who had been so elated with the confirmation of his commission, that as he passed through Hampton, he had forbidden the minister of that place to observe a thanksgiving day, which had been appointed by President Hinckes.

(1698.) An assembly being called, one of their first acts was to write to the lords of trade, "acknowledging the favour of the king in appointing one of their own inhabitants to the command of the province, complaining of Usher, and alleging that there had been no disturbances but what he himself had made; declaring that those counsellors whom he had suspended were loyal subjects, and capable of serving the king; and informing their lordships that Partridge had now qualified himself, and that they were waiting the arrival of the earl of Bellamont."

They also deputed Ichabod Plaisted to wait on the earl at New York, and compliment him on his arrival. "If he should find his lordship high, and reserved, and not easy of access, he was instructed to employ some gentleman who was in his confidence to manage the business; but if easy and free, he was to wait on him in person: to tell him how joyfully they received the news of his appointment, and that they daily expected Governor Allen, whose commission would be accounted good till his lordship's should be published, and to ask his advice how they should behave in such a case." The principal design of this message was to make their court to the earl, and get the start of Usher or any of his friends who might prepossess him with an opinion to their disadvantage. But if this should have happened, Plaisted was directed "to observe what reception they met with. If his lordship was ready to come this way, he was to beg leave to attend him as far as Boston, and then ask his permission to return home;" and he was furnished with a letter of credit to defray his expenses. This message, which shews the contrivers to be no mean politicians, had the desired effect.

The earl continued at New York for the first year after his arrival in America; during which time Governor Allen came over, as it was expected, and his commission being still in force, he took the oaths and assumed the command. Upon which Usher again made his appearance in council, where he

produced the letter from the lords of trade, claimed his place as lieutenant-governor, and declared that the suspended counsellors had no right to sit till restored by the king's order. This brought on an altercation, wherein Elliot affirmed that Partridge was duly qualified and in office, that Waldron and Vaughan had been suspended without cause, and that if they were not allowed to sit, the rest were determined to resign. The governor declared Usher to be of the council; upon which Elliot withdrew.

(1699.) At the succeeding assembly two new counsellors appeared—Joseph Smith, and Kingsly Hall. The first day passed quietly. The governor approved Pickering as speaker of the house; told them he had assumed the government because the Earl of Bellamont had not arrived; recommended a continuance of the excise and powder money, and advised them to send a congratulatory message to the earl at New York. The next day the house answered, that they had continued the customs and excise till November, that they had already congratulated the earl, and received a kind answer, and were waiting his arrival; *when* they should enter further on business. They complained that Allen's conduct had been grievous in forbidding the collecting of the last tax, whereby the public debts were not paid; in displacing sundry fit persons, and appointing others less fit, and admitting Usher to be of the council, though superseded by Partridge's commission. These things they told him had obliged some members of the council and assembly to apply to his lordship for relief, and "unless he should manage with a *"more moderate hand,"* they threatened him with a second application.

The same day Coffin and Weare moved a question in council, whether Usher was one of that body. He asserted his privilege, and obtained a majority. They then entered their dissent, and desired a dismissal. The governor forbade their departure. Weare answered that he would not, by sitting there, put contempt on the king's commission, meaning Partridge's, and withdrew. The next day the assembly ordered the money arising from the impost and excise to be kept in the treasury, till the earl of Bellamont's arrival; and the governor dissolved them.

These violences on his part were supposed to originate from Usher's resentment, and his overbearing influence upon Allen, who is said to have been rather of a pacific disposition. The same ill temper continued during the remainder of this short administration. The old counsellors, excepting Fryer, refused to sit. Sampson, Sheaffe, and Peter Weare, made up the quorum. Sheaffe was also secretary, Smith treasurer, and William Ardell sheriff. The constables refused to collect the taxes of the preceding year, and the governor was obliged to revoke his orders, and commission the former constables to do the duty which he had forbidden.

In the spring the Earl of Bellamont set out for the eastern governments. The council voted an address, and sent a committee, of which Usher was one, to present it to him at Boston; and preparations were made for his reception in New Hampshire; where he at length came and published his commission to the great joy of the people, who now saw at the head of the government a nobleman of distinguished figure and polite manners, a firm friend to the revolution, a favourite of King William, and one who had no interest in oppressing them.

During the controversy with Allen, Partridge had withdrawn; but upon this change he took his

seat as lieutenant-governor, and the displaced counsellors were again called to the board. A petition was presented against the judges of the superior court, and a proclamation was issued for justices of the peace and constables only to continue in office, whereby the judges' commissions determined. Richard Jose was made sheriff in the room of Ardell, and Charles Story secretary in the room of Sheaffe.

The government was now modelled in favour of the people, and they rejoiced in the change as they imagined the way was opened for an effectual settlement of their long-continued difficulties and disputes. Both parties laid their complaints before the governor, who wisely avoided censuring either, and advised to a revival of the courts of justice, in which the main controversy might be legally decided. This was agreed to, and the necessary acts being passed by an assembly, (who also presented the earl with 500*l.*, which he obtained the king's leave to accept), after about eighteen days stay he quitted the province, leaving Partridge, now quietly seated in the chair, to appoint the judges of the respective courts. Hinckes was made chief justice of the superior court, with Peter Coffin, John Gerrish, and John Plaisted, for assistants; Waldron, chief justice of the inferior court, with Henry Dow, Theodore Atkinson, and John Woodman, for assistants.

One principal object of the earl's attention was to fortify the harbour, and provide for the defence of the country in case of another war. He had recommended to the assembly in his speech the building a strong fort on Great Island, and afterwards in his letters, assured them that if they would provide materials, he would endeavour to prevail on the king to be at the expense of erecting it. (1700.) Colonel Romer, a Dutch engineer, having viewed the spot, produced to the assembly an estimate of the cost and transportation of materials, amounting to above six thousand pounds. They were amazed at the proposal; and returned for answer to the governor, that in their greatest difficulties, when their lives and estates were in the most imminent hazard, they were never able to raise one thousand pounds in a year; that they had been exceedingly impoverished by a long war, and were now struggling under a heavy debt, besides being engaged in a controversy with a "pretended proprietor;" that they had expended more "blood and money" to secure his majesty's interest and dominion in New England than the intrinsic value of their estates, and that the fortifying the harbour did as much concern the Massachusetts as themselves; but they concluded with assuring his lordship, that if he were "thoroughly acquainted with their miserable, poor, and mean circumstances, they would readily submit to whatever he should think them capable of doing." They were also required to furnish their quota of men to join with the other colonies in defending the frontiers of New York in case of an attack. This they thought extremely hard, not only because they had never received the least assistance from New York in the late wars, but because an opinion prevailed among them that their enemies had received supplies from the Dutch at Albany, and that the plunder taken from their desolated towns had been sold in that place. There was, however, no opportunity for affording this assistance, as the New Yorkists took care to maintain a good understanding with the French and Indians, for the benefit of trade. The quotas of men to be furnished by each government for the defence of New York, if attacked, were as follows; viz. Massachusetts 350, New Hampshire

40, Rhode Island 48, Connecticut 120, New York, 200, East New Jersey 60, West New Jersey 60, Pennsylvania 80, Maryland 160, Virginia 240.

But to return to Allen. He had as little prospect of success in the newly established courts, as the people had when Mason's suits were carried on under Cranfield's government. On examining the records of the superior court, it was found that twenty-four leaves were missing, in which it was supposed the judgments recovered by Mason were recorded. No evidence appeared of his having obtained possession. The work was to begin anew; and Waldron, being one of the principal landholders, and most strenuous opposers of the claim, was singled out to stand foremost in the controversy with Allen, as his father had done with Mason. The cause went through the courts, and was invariably given in favour of the defendant with costs. Allen's only refuge was in an appeal to the king, which the court, following the example of their brethren in the Massachusetts, refused to admit. He then petitioned the king; who, by an order in council, granted him an appeal, allowing him eight months to prepare for its prosecution.

(1701.) The refusal of an appeal could not fail of being highly resented in England. It was severely animadverted on by the lords of trade, who, in a letter to the Earl of Bellamont upon this occasion, say, "This declining to admit appeals to his Majesty in council, is a matter that you ought very carefully to watch against in all your governments. It is an humour that prevails so much in proprietries and charter colonies, and the independency they thirst after is now so notorious, that it has been thought fit those considerations, together with other objections against those colonies, should be laid before the parliament; and a bill has thereupon been brought into the house of lords for reuniting the right of government in their colonies to the crown."

Before this letter was written the earl died at New York, to the great regret of the people in his several governments, among whom he had made himself very popular. A copy of the letter was sent to New York, but the bill mentioned in it was not passed into an act of parliament. For some reasons of state it was rejected by the house of lords.

The assembly of New Hampshire, having now a fair opportunity, endeavoured as much as possible to provide for their own security; and passed two acts, the one for confirming the grants of lands which had been made within their several townships; the other for ascertaining the bounds of them. Partidge gave his consent to these acts; but Allen had the address to get them disallowed and repealed, because there was no reserve made in them of the proprietor's right.

The controversy being brought before the king, both sides prepared to attend the suit. Allen's age, and probably want of money, prevented his going in person; he therefore appointed Usher to act for him, having previously mortgaged one half of the province to him for 1,500*l*. (1702.) Vaughan was appointed agent for the province, and attorney to Waldron. It being a general interest, the assembly bore the expense, and notwithstanding their pleas of poverty on other occasions, provided a fund on which the agent might draw in case of emergency.

In the mean time King William died, and Queen Anne appointed Joseph Dudley, Esq., formerly president of New England, to be governor of Massachusetts and New Hampshire; whose commission being published at Portsmouth, the assembly by a

well-timed present interested him in their favour, and afterwards settled a salary on him during his administration, agreeably to the queen's instructions, who about this time forbade her governors to receive any but settled salaries.

When Allen's appeal came before the queen in council, it was found that his attorney had not brought proof that Mason had ever been legally in possession; for want of this, the judgment recovered by Waldron was affirmed; but the order of council directed that the appellant "should be at liberty to begin *de novo* by a writ of ejectment in the courts of New Hampshire, to try his title to the lands, or to quit-rents payable for the same; and that if any doubt in law should arise, the jury should declare what titles each party did severally make out to the lands in question, and that the points in law should be referred to the court; or if any doubt should arise concerning the evidence, it should be specially stated in writing, that if either party should appeal to her majesty she might be more fully informed, in order to a final determination."

While this appeal was depending, a petition was presented to the queen, praying that Allen might be put in possession of the waste lands. This petition was referred to Sir Edward Northey, attorney general, who was ordered to report on three questions, viz.: 1. Whether Allen had a right to the wastes. 2. What lands ought to be accounted waste. 3. By what method her majesty might put him into possession. At the same time Usher was making interest to be reappointed lieutenant-governor of the province. Upon this Vaughan entered a complaint to the queen, setting forth "that Allen claimed as waste ground not only a large tract of unoccupied land, but much of that which had been long enjoyed by the inhabitants as common pasture, within the bounds of their several townships. That Usher, by his former managements and misdemeanors when in office, had forced some of the principal inhabitants to quit the province, and had greatly harassed and disgusted all the rest, rendering himself quite unacceptable to them. That he was interested in the suits now depending, as on Allen's death he would in right of his wife be entitled to part of the estate. Wherefore it was humbly submitted whether it would be proper to appoint, as lieutenant-governor, one whose interest and endeavour it would be to disseize the people of their ancient estates, and render them uneasy; and it was prayed that no letters might be wrote to put Allen in possession of the wastes till the petitioner should be heard by council."

(1703.) Usher's interest however prevailed. The attorney-general reported, that "Allen's claim to the wastes was valid; that all lands uninclosed and unoccupied were to be reputed waste; that he might enter into and take possession of them, and if disturbed might assert his right and prosecute trespassers in the courts there; but that it would not be proper for her majesty to interpose, unless the question came before her by appeal from those courts; save, that it might be reasonable to direct (if Allen should insist on it at the trials) that matters of fact be found specially by the juries, and that these special matters should be made to appear on an appeal."

Soon after this Usher obtained a second commission as lieutenant-governor; but was expressly restricted from intermeddling "with the appointment of judges or juries, or otherwise, in matters relating to the disputes between Allen and the inhabitants." The people did not relish this reappointment, nor did his

subsequent conduct reconcile them to it. Upon his first appearance in council Partridge took his seat as counsellor; but the next day desired his dismissal on account of a ship in the river which demanded his constant attention. This request was granted, and he soon after removed to Newbury, where he spent the rest of his days in a mercantile department, and in the business of his profession.

It had always been a favourite point with Usher to get the books and files, which had been taken from Chamberlayne, lodged in the secretary's office. Among these files were the original minutes of the suits which Mason had carried on, and the verdicts, judgments, and bills of costs he had recovered. As they were committed to the care of the recorder, who was appointed by the general court, and removable only by them, no use could be made of these papers but by consent of the assembly. When Usher produced to the council an order from Whitehall that these records should be deposited with the secretary, Penhallow, the recorder, (1704), who was a member of the council, refused to deliver them without an act of the general assembly authorising him so to do.

Usher succeeded but little better in his applications for money. He alleged that he had received nothing for his former services, though they had given hundreds to Partridge; and complained that no house was provided for him to reside in, which obliged him to spend most of his time at Boston. The plea of poverty always at hand, was not forgotten in answer to these demands. But at length, upon his repeated importunity and Dudley's earnest recommendation, after the assembly had refused making any provision for him, and the governor had expressly directed him to reside at the New Castle, and exercise a regular command, it being a time of war; the council were prevailed upon to allow him two rooms in any house he could procure "till the next morning of the assembly," and to order thirty-eight shillings to be given him for the expense of his "journey to and from Boston."

When Dudley acquainted the assembly with the royal determination in Allen's suits, they appeared tolerably satisfied with the equitable intention discovered therein; but begged him to represent to her majesty that the province was at least sixty miles long and twenty wide, containing twelve hundred square miles; that the inhabitants claimed only the property of the lands contained within the bounds of their townships, which was less than one-third of the province, and had been possessed by them and their ancestors more than sixty years; that they had nothing to offer as a grievance if the other two-thirds were adjudged to Allen; but should be glad to see the same planted and settled for the better security and defence of the whole; withal desiring it might be considered how much time, blood and treasure had been spent in settling and defending this part of her majesty's dominion, and that the cost and labour bestowed thereon far exceeded the true value of the land, so that they hoped it was not her majesty's intention to deprive them of all the herbage, timber, and fuel, without which they could not subsist, and that the lands comprehended within the bounds of their townships was little enough to afford these necessary articles: it not being usual in these plantations to fence in more of their lands than would serve for tillage, leaving the rest unfenced for the feeding their cattle in common."

Notwithstanding this plea, which was often alleged, Allen, by virtue of the queen's permission, in December, 1703, had entered upon and taken

possession by turf and twig of the common land in each township, as well as of that which was without their bounds, and brought his writ of ejectment, *de novo*, against Waldron, and when the trial was coming on informed Governor Dudley thereof, that he might come into court, and demand a special verdict agreeably to the queen's instructions. Dudley from Boston informed the court of the day when he intended to be at Portsmouth, and directed the judges to adjourn the court to that day. Before it came he heard of a body of Indians above Lancaster, which had put the country in alarm, and ordered the court to be again adjourned. At length he began his journey; but was taken ill at Newbury, with a seasonable fit of the gravel, and proceeded no farther. The jury in the meantime refused to bring in a special verdict; but found for the defendant with costs. Allen again appealed from the judgment.

Perplexed, however, with these repeated disappointments, and at the same time being low in purse, as well as weakened with age, he sought an accommodation with the people, with whom he was desirous to spend the remainder of his days in peace. It has been said that he made very advantageous offers to Vaughan and Waldron if they would purchase his title; but that they utterly refused it. The people were sensible that a door was still open for litigation; and that after Allen's death they might, perhaps, meet with as much or more difficulty from his heirs, among whom Usher would probably have a great influence: they well knew his indefatigable industry in the pursuit of gain, that he was able to harass them in law, and had great interest in England. They therefore thought it best to fall in with Allen's views, and enter into an accommodation with him. (1705.) A general meeting of deputies being held at Portsmouth, the following resolutions and proposals were drawn up, viz. "That they had no claim or challenge to any part of the province without the bounds of the four towns of Portsmouth, Dover, Hampton, and Exeter, with the hamlets of Newcastle and Kingston, which were all comprehended within lines already known and laid out, and which should forthwith be revised; but that Allen and his heirs might peaceably hold and enjoy the said great waste, containing forty miles in length and twenty in breadth, or thereabouts, at the heads of the four towns aforesaid, if it should so please her majesty; and that the inhabitants of the four towns would be so far from interrupting the settlement thereof, that they desired the said waste to be planted and filled with inhabitants, to whom they would give all the encouragement and assistance in their power. That in case Allen would, for himself and heirs, for ever quit claim, to the present inhabitants and their heirs, all that tract of land comprehended within the bounds of the several towns, and warrant and defend the same against all persons, free of mortgage, entailment, and every other incumbrance, and that this agreement should be accepted and confirmed by the queen; then they would lot and lay out to him and his heirs 500 acres within the town of Portsmouth and Newcastle, 1500 in Dover, 1500 in Hampshire and Kingston, and 1500 in Exeter, out of the commonages of the said towns, in such places, not exceeding three divisions in each town, as should best accommodate him and be least detrimental to them; and that they would pay him or his heirs 2000*l.* current money of New England, at two payments, one within a year after receiving the royal confirmation of this agreement, and the other

within a year after the first payment. That all contracts made either by Mason or Allen, with any of the inhabitants, or others, for lands or other privileges in the possession of their tenants in their own just right, beside the claim of Mason and Allen, and no other, should be accounted valid; but that if any of the purchasers, lessees, or tenants, should refuse to pay their just part of the sums agreed on, according to the lands they held, their share should be abated by Allen out of the 2000*l.* payable by this agreement. That upon Allen's acceptance, and underwriting of these articles, they would give personal security for the aforesaid payment; and that all actions and suits depending in law concerning the premises should cease till the queen's pleasure should be known."

These articles were ordered to be presented to Allen for his acceptance: but so desirable an issue of the controversy was prevented by his sudden death, which happened on the next day.

Colonel Allen is represented as a gentleman of no remarkable abilities, and of a solitary rather than a social disposition; but mild, obliging, and charitable. His character, while he was a merchant in London, was fair and upright, and his domestic deportment amiable and exemplary. He was a member of the church of England by profession, but constantly attended divine worship in the congregation at Newcastle, and was a strict observer of the christian sabbath. He died intestate on the 5th of May 1705, in the 70th year of his age, leaving a son and four daughters, and was buried in the fort.

(1706.) After his death his only son, Thomas Allen, Esq. of London, renewed the suit, by petitioning the queen, who allowed him to bring a new writ of ejectment, and ordered a revival of the directions given to the governor in 1703, with respect to the jury's finding a special verdict. Accordingly Allen, having previously conveyed one half of the lands in New Hampshire by deed of sale to Sir Charles Hobby, and appointed his mother, Elizabeth Allen, his attorney, brought his writ of ejectment against Waldron in the inferior court of common pleas, where he was cast. He then removed it by appeal to the superior court, where it had been tried three years before. As this was the last trial, and as all the strength of both parties was fully displayed on the occasion, it will be proper to give as just a view of the case as can now be collected from the papers on file in the office of the superior court.

On Allen's part were produced copies of the charter by which King James I. constituted the council of Plymouth; their grants to Mason in 1629 and 1635; his last will and testament; an inventory of artillery, arms, ammunition, provisions, merchandize, and cattle, left in the care of his agents there at his death; depositions of several ancient persons taken in 1685, who remembered the houses, fields, forts, and other possessions of Captain Mason, at Portsmouth and Newichwannock, and were acquainted with his agents, stewards, factors, and other servants, who divided the cattle and merchandize among them after his death; the opinions of Sir Geoffry Palmer, Sir Francis Winnington and Sir William Jones, in favour of the validity of Mason's title; King Charles's letter to the president and council of New Hampshire in 1680; the paragraph of Cranfield's commission which respects Mason's claim in 1682; the writ, verdict, judgment, and execution against Major Waldron in 1683; the decision of the king in council against Vaughan in 1686; Dudley's writ of certiorari in 1688; the fine

and recovery in Westminster hall, whereby the entail was cut off, and the consequent deed of sale to Allen in 1691; Sir Edward Northey's report in 1703; and evidence of Allen's taking possession of the wastes, and of his enclosing and occupying some land at Great Island. (1707.) On this evidence, it was pleaded that the title derived from Mason, and his possession of the province, of which the lands in question were part, was legal; that the appellee's possession had been interrupted by the appellant, and those from whom he derived his title, more especially by the judgment recovered by Robert Mason against Major Waldron; and a special verdict was moved for, agreeably to the royal directions. The counsel on this side were James Meinzie and John Valentine.

On Waldron's part was produced the deed from four Indian sachems to Whelewright and others in 1629; and depositions taken from several ancient persons who testified that they had lived with Major Waldron, when he began his plantation at Cochecho, about the year 1640, and assisted him in building his houses and mills, and that no person had disturbed him in the possession thereof for above forty years. To invalidate the evidence of the title produced on the opposite side, it was pleaded, That the alleged grant from the council of Plymouth to Mason in 1629, was not signed; that livery of seizin was not endorsed on it as on other of their grants, and as was then the legal form; nor was it ever enrolled according to statute: that the sale of part of the same lands in 1628 to the Massachusetts company, by an instrument signed and executed according to law, renders this subsequent grant suspicious; and that his pretending to procure another grant of part of the same lands in 1635, was an argument that he himself could not rely on the preceding one, nor was it credible that the same council should grant the same lands twice, and to the same person: that the alleged grant in 1635 was equally defective; and that he must relinquish one or the other, it being contrary to the reason and usage of law to rely on two several titles at once. It was urged, that Waldron's possession was grounded on a deed from the native lords of the soil, with whom his father had endeavoured to cultivate a friendly connexion; that he had taken up his land with their consent, when the country was a wilderness; had cultivated it, had defended it in war at a great expense, and at the hazard of his life, which he finally lost in the attempt; that the Indian deed was legally executed in the presence of the factors and agents of the company of Laconia, of which Mason was one; that this was done with the allowance of the council of Plymouth, and in pursuance of the great ends of their incorporation, which were to cultivate the lands, to people the country, and christianize the natives, for the honour and interest of the crown and the trade of England, all which ends had been pursued and attained by the appellee and his ancestor. It was also alleged, that the writ against Major Waldron in 1683, was for "lands and tenements," of which the quantity, situation and bounds were not described, for want of which no legal judgment could be given; that no execution had ever been levied, nor was the possessor ever disturbed or removed by reason thereof; and that the copies produced were not attested, no book of records being to be found. To invalidate the evidence of Mason's possession, it was observed, that he himself was never there in person; that all the settlement made by his agents or successors was only a factory for

trade with the Indians, and principally for the discovery of a country called Laconia; and that this was done in company with several other merchant-adventurers in London, who for the security of their goods erected a fort; but that this could not amount to a legal possession, nor prove a title to the country, especially as, upon the failure of trade, the object of their enterprise, they quitted their factory, after a few years stay in those parts.

As to the motion for a special verdict, it was said that a jury could not find one if they had no doubt of the law or fact, for the reason of a special verdict is a doubt either in point of law or evidence; nor was it consistent with the privileges of Englishmen that a jury should be compelled to find specially. In addition to these pleas, it was further alleged, that by the statute law no action of ejectment can be maintained except the plaintiff, or those under whom he claims, have been in possession within twenty years; and if they have been out of possession sixty years, then not only an ejectment, but a writ of right, and all other real actions are barred in respect of a subject, and that in such cases the right of the crown is also barred: and that by the statute of 32 Hen. 8. ch. 9. it is enacted, that no person shall purchase any lands or tenements, unless the seller, or they by whom he claims, have been in possession of the same, or the reversion, or the remainder thereof, or having taken the rents or profits thereof, by the space of one whole year next before such bargain is made; and that the appellee and his ancestor, and no other person whatever had been in possession of the premises, nor was it ever pretended by the appellant that the Masons, of whom the purchase was made, were in possession within one year, or at any time before the alleged purchase; that all the mischiefs provided against by the above statute have been experienced by the people of New Hampshire from the purchase made by the appellant's father, of the bare title of the propriety of the province. The counsel on this side were John Pickering and Charles Story.

A certificate from the lieut.-governor respecting the queen's directions was delivered to the jury, who returned the following verdict:—"In the cause depending between Thomas Allen, Esq., appellant, and Richard Waldron, Esq., defendant, the jury finds for the defendant a confirmation of the former judgment and costs of courts. Mark Hunking, foreman."

The court then sent out the jury again with this charge, "Gentlemen, you are further to consider this case and observe her majesty's directions to find specially and your oaths." They returned the second time with the same verdict; upon which the court ordered judgment to be entered, and that the defendant recover costs of the appellant. The counsel for the appellant then moved for an appeal to her majesty in council, which was allowed on their giving bond in 200*l.* to prosecute it.

But the loyalty of the people, and the distresses under which they laboured by reason of the war, prevailed on the queen's ministry to suspend a final decision; and before the appeal could be heard, Allen's death, which happened in 1715, put an end to the suit, which his heirs, being minors, did not renew.

*The war with the French and Indians, called Queen Anne's war—Conclusion of Dudley's and Usher's administration.*

The peace which followed the treaty of Ryswick was but of short duration, for the seeds of war were

ready sown both in Europe and America. Louis had proclaimed the pretender king of England, and his governor, Villebon, had orders to extend his province of Acadia to the river Kennebeck, though the English court understood St. Croix to be the boundary between their territories and those of the French. The fishery was interrupted by French men of war, and by the orders of Villebon, who suffered no English vessels to fish on the banks of Nova Scotia. A French mission was established, and a chapel erected at Norridgewog, on the upper part of Kennebeck, which served to extend the influence of the French among the Indians. The governor of Canada, assuming the character of their father and protector, instigated them to prevent the settlement of the English to the east of Kennebeck, and found some among them ready to listen to his advice. The people in those parts were apprehensive of danger and meditating a removal, and those who had entertained thoughts of settling there were restrained.

Things were in this posture when Dudley entered on his government. He had particular orders from England to rebuild the fort at Pemaquid; but could not prevail on the Massachusetts assembly to bear the expense of it. However he determined on a visit to the eastern country, and having notified his intention to the Indians, took with him a number of gentlemen of both provinces, (1703) and held a conference at Casco with delegates from the tribes of Norridgewog, Penobscot, Pigwacket, Penacook and Amariscoggin, who assured him that "as high as the sun was above the earth, so far distant was their design of making the least breach of the peace." They presented him a belt of wampum in token of their sincerity, and both parties went to two heaps of stones which had formerly been pitched, and called the "two brothers," where the friendship was further ratified by the addition of other stones. They also declared, that although the French emissaries among them had been endeavouring to break the union, yet it was "firm as a mountain, and should continue as long as the sun and moon." Notwithstanding these fair appearances, it was observed that when the Indians fired a salute their guns were charged with shot; and it was suspected that they had then formed a design to seize the governor and his attendants, if a party which they expected from Canada, and which arrived two or three days after, had come in proper season to their assistance. However this might be, it is certain that in the space of six weeks, a body of French and Indians, 500 in number, having divided themselves into several parties, attacked all the settlements from Casco to Wells, and killed and took 130 people, burning and destroying all before them.

The next week (August 17) a party of thirty Indians under Capit. Tom killed five people at Hampton village; among whom was a widow Mussy, a noted speaker among the Friends, and much lamented by them; they also plundered two houses, but the people being alarmed, and pursuing them, they fled.

The country was now in terror and confusion. The women and children retired to the garrisons. The men went armed to their work and posted centinels in the fields. Troops of horse were quartered at Portsmouth and in the province of Maine. A scout of 360 men marched toward Pigwacket, and another to the Ossapy Pond, but made no discoveries. Alarms were frequent, and the whole frontier country, from Deerfield on the west to Casco on the east, was kept in continual terror by small parties of the enemy.

In the fall, Col. March of Caseo made a visit to Pigwacket, where he killed six of the enemy and took six more; this encouraged the government to offer a bounty of 40*l.* for scalps.

As the winter came on, the frontier towns were ordered to provide a large number of snow-shoes; and an expedition was planned in New Hampshire against the head-quarters of the Indians. Major Winthrop Hilton and Captain John Gilman of Exeter, Captain Chesley and Captain Davis of Oyster river, marched with their companies on snow shoes into the woods, but returned without success. This is called in the council books, "an honourable service." Hilton received a gratuity of 12*l.*, and each of the captains 5*l.*

(1704.) With the return of spring there was a return of hostilities, for notwithstanding the posting a few southern Indians in the garrison at Berwick, the enemy appeared at Oyster river, and shot Nathaniel Medar near his own field, and the next day killed Edward Taylor near Lamprey river, and captured his wife and son. These instances of mischief gave colour to a false alarm at Cocheco, where it was said they lay in wait for Col. Waldron a whole day, but missing him by reason of his absence from home, took his servant maid as she went to a spring for water; and having examined her as to the state of the garrison, stunned her with an hatchet but did not scalp her.

In May, Col. Church, by Governor Dudley's order, having planned an expedition to the eastern shore, sailed from Boston with a number of transports, furnished with whaleboats for going up rivers. In this way he stopt at Paseataqua, where he was joined by a body of men under Major Hilton, who was of eminent service to him in this expedition, which lasted the whole summer, and in which they destroyed the towns of Minas and Chiegneeto, and did considerable damage to the French and Indians at Penobscot and Passamaquoddy, and even insulted Port Royal. While they were at Mount Desart, Church learned from nine of his prisoners, that a body of 600 Indians were preparing for an attack on Caseo, and the head of Paseataqua river, and sent an express to Portsmouth which obliged the people to be vigilant. No such great force as this appeared, but small parties kept hovering on the outskirts. At Oyster river they wounded William Tasker; and at Dover they laid in ambush for the people on their return from public worship, but happily missed their aim. They afterwards mortally wounded Mark Gyles at that place, and soon after killed several people in a field at Oyster river, whose names are not mentioned.

In the former wars New Hampshire had received much assistance from their brethren of Massachusetts; but these now remonstrated to the governor that his other province did not bear their proportion of the charge for the common defence. The representatives of New Hampshire urged, in reply, the different circumstances of the two provinces, "most of the towns in Massachusetts being out of the reach of the enemy, and no otherwise affected by the war, than in the payment of their part of the expense, while this province was wholly a frontier by sea and land, and in equal danger with the county of York, in which four companies were stationed, and the inhabitants were abated their proportion of the public charges." They begged that twenty of the friendly Indians might be sent to scout on their borders, which request the governor complied with.

(1705.) In the winter, Col. Hilton with 270 men, including the 20 Indians, were sent to Norridgewog

on snow shoes. They had a favourable season for their march, the snow being four feet deep. When they arrived there, finding no enemy to contend with, they burnt the deserted wigwams and the chapel. The officers who went on this expedition complained that they had only the pay of private soldiers.

The late repairs of fort William and Mary at Newcastle were always complained of as burdensome to the people, and a representation thereof had been made to the queen, who instructed Dudley to press the assembly of Massachusetts to contribute to the expense; as the river belonged equally to both provinces. They urged in excuse that the fort was built at first at the sole charge of New Hampshire, to whom it properly belonged; that the whole expense of the repairs did not amount to what several of their towns singly paid towards the support of the war for one year; that all the trade and navigation of the river, on both sides, paid a duty toward maintaining that fortress; and that they had been at a great expense in protecting the frontiers of New Hampshire, and the parties who were employed in getting timber and masts for her majesty's service; while New Hampshire had never contributed any thing to the support of the garrisons, forces, and guards by sea, which were of equal benefit to them as to Massachusetts. One thing, which made New Hampshire more in favour with the queen was, that they had settled a salary on her governor, which the others never could be persuaded to do. The repairs of the fort, however, went on without their assistance, under the direction of Colonel Romer; and when they were completed, a petition was sent home for a supply of cannon, ammunition, and stores.

The next summer was chiefly spent in negotiating an exchange of prisoners; and Dudley had the address to protract the negotiation, under pretence of consulting with the other governments about a neutrality proposed by the governor of Canada, by which means the frontiers in general were kept tolerably quiet, although the enemy appeared once or twice in the town of Kittery. The line of pickets which inclosed the town of Portsmouth was repaired, and a nightly patrol established on the sea-shore, from Rendezvous Point to the bounds of Hampton, to prevent any surprise by sea; the coast being at this time infested by the enemy's privateers.

During this truce, the inhabitants of Kingston, who had left the place, were encouraged to petition for leave to return to their lands; which the court granted, on condition that they should build a fort in the centre of the town, lay out a parsonage, and settle a minister within three years. This last condition was rendered impracticable by the renewal of hostilities.

The governor of Canada had encouraged the Indians who inhabited the borders of New England to remove to Canada, where, being incorporated with the tribe of St. Francis, they have ever since remained. By this policy they became more firmly attached to the interests of the French, and were more easily dispatched on their bloody business to the frontiers of New England, with which they were well acquainted. Dudley, who was generally apprised of their movements, and kept a vigilant eye upon them, apprehended a rupture in the winter; and gave orders, 1706, for a circular scouting march, once a month, round the head of the towns from Kingston to Salmon falls; but the enemy did not appear till April; when a small party of them attacked the house of John Drew at Oyster river, where they killed eight and wounded two. The gar

risson was near, but not a man in it: the women, however, seeing but death before them, fired an alarm, and then putting on hats, and loosening their hair, that they might appear like men, they fired so briskly, that the enemy, apprehending the people were alarmed, fled without burning or even plundering the house which they had attacked. John Wheeler, meeting this party, and mistaking them for friendly Indians, unhappily fell into their hands, and was killed, with his wife and two children. Four of his sons took refuge in a cave by the bank of the Little Bay, and though pursued by the Indians, escaped unhurt.

In July, Colonel Schuyler, from Albany, gave notice to Dudley that 270 of the enemy were on their march toward Pascataqua, of which he immediately informed the people, and ordered them to close garrison, and one half of the militia to be ready at a minute's warning. The first appearance of this body of the enemy was at Dunstable; from whence they proceeded to Amesbury and Kingston, where they killed some cattle. Hilton, with sixty-four men, marched from Exeter; but was obliged to return without meeting the enemy. The reason he gave to the council for returning so soon was the want of provision, there being none in readiness at the garrisons, notwithstanding a law lately enacted, enjoining every town to have stores ready, and deposited in the hands of their captains. For the same reason he had been obliged to discontinue a small scout which he had for some time kept up. Hilton was so brave and active an officer that the enemy had marked him for destruction; and for this purpose a party of them kept lurking about his house, where they observed ten men to go out one morning with their scythes, and lay aside their arms to mow; they then crept between the men and their guns, and suddenly rushing on them, killed four, wounded one, and took three; two only of the whole number escaped. They missed the major for this time, and two of the prisoners escaped; but suffered much in their return, having nothing to subsist on for three weeks but lily roots and rinds of trees. After this they killed William Pearl, and took Nathaniel Tibbets at Dover. It was observed during this war that the enemy did more damage in small bodies than in larger, and by scattering along the frontiers kept the people in continual apprehension and alarm; and so very few of them were taken prisoners, that in computing the expense of the war it was judged that every Indian killed or taken cost the country a thousand pounds.

(1707.) In the following winter Hilton made another excursion to the eastward, and a shallop was sent to Casco with stores and provisions for his party, consisting of two hundred and twenty men. The winter being mild, and the weather unsettled, prevented their marching so far as they intended: cold dry weather, and deep snow, being most favourable to winter expeditions. However, they came on an Indian track near Black Point, and pursuing it, killed four, and took a squaw who conducted them to a party of eighteen, whom they surprised as they lay asleep on a neck of land at break of day, and of whom they killed seventeen, and took the other. This was matter of triumph considering the difficulty of finding their haunts. It is asserted, that on the very morning this affair happened, it was reported, with but little variation from the truth, at Portsmouth, though at the distance of sixty miles.

When Church went to Nova Scotia, he very

earnestly solicited leave to make an attempt on Port Royal; but Dudley would not consent, and the reason he gave was, that he had written to the ministry in England, and expected orders and naval help to reduce the place. His enemies however assigned another reason for his refusal; which was that a clandestine trade was carried on by his connivance, and to his emolument, with the French there. This report gained credit, and occasioned a loud call for justice. Those who were directly concerned in the illegal traffic, were prosecuted and fined; and the governor suffered much in his reputation. To wipe off these aspersions he now determined to make an attack in earnest on Port Royal, even though no assistance should come from England. It was intended that an armament should be sent to America, and the commander was appointed; but the state of affairs in Europe prevented their coming.

Early in the spring the governor applied to the assemblies of both his provinces, and to the colonies of Rhode Island and Connecticut, requesting them to raise one thousand men for the expedition. Connecticut declined; but the other three raised the whole number, who were disposed into two regiments, of which Colonel Wainwright commanded the one, and Colonel Hilton the other. They embarked at Nantasket in twenty-three transports, furnished with whaleboats, under convoy of the Deptford man of war, Captain Stuckley, and the province galley, Captain Southack. The chief command was given to Colonel March, who had behaved well in several scouts and rencounters with the Indians, but had never been tried in such service as this. They arrived before Port Royal in a few days, and after burning some houses, killing some cattle round the fort, and making some ineffectual attempts to bombard it, a jealousy and disagreement among the officers, and a misapprehension of the state of the fort and garrison, caused the army to break up and reembark in a disorderly manner. Some of the officers went to Boston for orders, some of the transports put in at Casco; a sloop, with Captain Chesley's company of sixty men, arrived at Portsmouth: Chesley suffered his men to disperse, but ordered them to return at the beat of the drum: being called to account for this conduct, he alleged that "general orders were given at Port Royal for every man to make the best of his way home." The governor, highly chagrined, and very angry, sent orders from Boston that if any more vessels arrived the men should not be permitted to come on shore "on pain of death." After a while he ordered Chesley's company to be collected and reembarked, offering a pardon to those who voluntarily returned, the rest to be severely punished. By the latter end of July they got on board, and with the rest of the army, returned to the place of action. At the landing, an ambuscade of Indians from among the sedges on the top of a sea-wall, greatly annoyed the troops. Major Walton, and Captain Chesley, being then on shore with the New Hampshire companies, pushed their men up the beach, flanked the enemy, and after an obstinate struggle, put them to flight. The command was now given to Wainwright, and the army put under the direction of three supervisors: but no means could inspire that union, firmness, and skill which were necessary. By the last of August the whole affair was at an end, and the army returned sickly, fatigued, disheartened, and ashamed; but with no greater loss than sixteen killed, and as many wounded.

While this unfortunate expedition was in hand, the frontiers were kept in continual alarm. Two men were taken from Oyster river, and two more killed as they were driving a team between that place and Dover. Captain Summersby pursued with his troop and recovered the contents of the cart. Stephen and Jacob Gilman, brothers, were ambushed between Exeter and Kingston; their horses were killed, but both of them escaped to the garrison. Kingston, being a new plantation, was much exposed, and was this summer weakened by the desertion of eight men. The remaining inhabitants complained to government, who ordered the captains of Exeter and Hampton to take them up as deserters, and oblige them to return to the defence of their settlements, or do duty at the fort during the governor's pleasure. They were afterwards bound over to the sessions for contempt of orders. The state of the country at this time was truly distressing; a large quota of their best men were abroad, the rest harassed by the enemy at home, obliged to continual duty in garrisons and in scouts, and subject to severe discipline for neglects. They earned their bread at the continual hazard of their lives, never daring to stir abroad unarmed; they could till no lands but what were within call of the garrisoned houses into which their families were crowded; their husbandry, lumber-trade and fishery were declining, their taxes increasing, their apprehensions both from the force of the enemy and the failure of the Port Royal expedition were exceedingly dismal, and there was no prospect of an end to the war, in which they were now advanced to the fifth summer. Yet under all these distresses and discouragements, they resolutely kept their ground and maintained their garrisons—not one of which was cut off during the whole of this war, within the limits of New Hampshire.

In September one man was killed at Exeter, and two days after Henry Elkins at Kingston. But the severest blow on the frontiers happened at Oyster river, a place which suffered more than all the rest. A party of French Mohawks, painted red, attacked with a hideous yell a company who were in the woods, some hewing timber and others driving a team, under the direction of Captain Chesley, who was just returned the second time from Port Royal. At the first fire they killed seven and mortally wounded another. Chesley, with the few who were left, fired on the enemy with great vigour, and for some time checked their ardour; but being overpowered, he at length fell. He was much lamented, being a brave officer. Three of the scalps taken at this time were soon after recovered at Berwick.

(1708.) The next year a large army from Canada was destined against the frontiers of New England. Dudley received information of it in the usual route from Albany, and immediately ordered guards in the most exposed places of both his provinces. A troop under Captain Robert Coffin patrolled from Kingston to Cochecho, and scouts were kept out continually. Spy-boats were also kept out at sea between Pascataqua and Winter harbours. Four hundred Massachusetts soldiers were posted in this province. The towns were ordered to provide ammunition, and all things were in as good a state of preparation as could be expected. At length the storm fell on Haverhill; but the enemy's force having been diminished by various accidents, they proceeded no farther, and every part of New Hampshire was quiet. Hilton made another winter march to Pigwacket with 170 men, but made no discovery.

(1709.) The next spring William Moody, Samuel

Stevens, and two sons of Jeremy Gilman, were taken at Pickpocket-mill in Exeter, and soon after Bartholomew Stevenson was killed at Oyster river. Colonel Hilton and Captain Davis performed their usual tour of duty in scouting, and the people this summer kept close in garrison, on a report that two hundred Indians had marched against them from Montreal. But the principal object now in view was a desire of wiping off the disgrace of a former year, by an attempt, not on Port Royal, but on Canada itself. For this purpose solicitations had been made in England by Francis Nicholson, Esq. who had been lieutenant-governor of Virginia, and Captain Samuel Vetch, a trader to Nova Scotia, who was well acquainted with the French settlements there, and made a full representation of the state of things in America to the British ministry. An expedition being determined upon, they came over early in the spring with the queen's command to the governors of the several provinces to raise men for the service. Vetch was appointed a colonel, and Nicholson, by nomination of the governor of New York, and consent of the other governments, was made commander in chief. The people of New Hampshire were so much exhausted, and their men had been so ill paid before, that it was with great difficulty, and not without the dissolution of one assembly and the calling of another, that they could raise money to levy 100 men, and procure two transports for conveying them. After the utmost exertions had been made by the several governments, and Nicholson with part of the troops had marched to Wood creek, and the rest with the transports had lain at Nantasket three months waiting for a fleet, news arrived that the armament promised from England was diverted to another quarter. Upon which the commander of the frigates on the Boston station refused to convoy the troops, the whole army was disbanded, and the expense the colonies had been at was fruitless. A congress of governors and delegates from the assemblies met late in the year at Rhode Island, who recommended the sending home agents to assist Colonel Nicholson in representing the state of the country, and soliciting an expedition against Canada the next spring. The ministry at first seemed to listen to this proposal, but afterward (1710) changed their minds, and resolved only on the reduction of Port Royal. For this purpose Nicholson came over in July with five frigates and a bomb ketch; the colonies then had to raise their quotas; the New Hampshire assembly ordered 100 men, who were not ready as soon as possible, and put under the command of Colonel Shadrach Walton. The whole armament sailed from Boston the 18th of September, and on the 24th arrived at the place. The force now being equal to its reduction, Subcrease, the governor, waited only the compliment of a few shot and shells as a decent pretence for a surrender; which was completed on the 5th of October, and Vetch was appointed governor of the place, which in honour of the queen was called Annapolis.

While this expedition was in hand, and before the appointment of the commanders, New Hampshire sustained a heavy loss in the death of Col. Winthrop Hilton. This worthy officer being concerned in the masting business, and having several large trees felled about fourteen miles from home, went out with a party to peel the bark that the wood might not be injured by worms. While engaged in this business they were ambushed by a party of Indians, who at the first fire killed Hilton with two

more, and took two; the rest being terrified, and their guns being wet, made no opposition but escaped. The next day 100 men marched in pursuit, but discovered only the mangled bodies of the dead. The enemy in their barbarous triumph had struck their hatchets into the colonel's brains, and left a lance in his heart. He was a gentleman "of good temper, courage and conduct, respected and lamented by all that knew him," and was buried with the honours due to his rank and character.

Flushed with this success, they insolently appeared in the open road at Exeter, and took four children who were at their play. They also took John Wedgwood, and killed John Magoon near his brother's barn, a place which for three days he had visited with a melancholy apprehension arising from a dream that he should there be murdered.

The same day that Hilton was killed, a company of Indians who had pretended friendship, and the year before had been peaceably conversant with the inhabitants of Kingston, and seemed to be thirsting after the blood of the enemy, came into the town, and ambushing the road, killed Samuel Winslow and Samuel Huntoon; they also took Philip Huntoon and Jacob Gilman, and carried them to Canada, where, after some time, they purchased their own redemption by building a saw-mill for the governor after the English mode.

The last that fell this summer was Jacob Garland, who was killed at Cochecho on his return from the public worship. As the winter approached, Colonel Walton with 170 men traversed the eastern shores, which the Indians usually visited at this season for the purpose of gathering clams. On an island where the party was encamped, several Indians, decoyed by their smoke, and mistaking them for some of their own tribe, came among them and were made prisoners. One of them was a sachem of Norridgewog, active, bold, and sullen; when he found himself in the hands of enemies he would answer none of their questions, and laughed with scorn at their threatening him with death. His wife, being an eye-witness of the execution of the threatening, was so intimidated as to make the discoveries which the captors had in vain desired of the sachem; in consequence of which, three were taken at the place of which she informed, and two more at Saco river, where also five were killed. This success, inconsiderable as it may appear, kept up the spirits of the people, and added to the loss of the enemy, who were daily diminishing by sickness and famine.

(1711.) In the spring they renewed their ravages on the frontiers in small parties. Thomas Downs, John Church, and three more were killed at Cochecho; and on a sabbath-day several of the people there fell into an ambush as they were returning from public worship. John Horn was wounded, and Humphrey Foss was taken; but by the determined bravery of Lieutenant Heard, he was recovered out of the hands of the enemy. Walton with two companies marched to the ponds about the fishing season, but the Indians had withdrawn, and nothing was to be seen but their deserted wigwams.

After the reduction of Port Royal, Nicholson went to England to solicit an expedition against Canada. The tory ministry of Queen Anne, to the surprise of all the Whigs in England and America, fell in with the proposal; and on the 8th of June, Nicholson came to Boston with orders for the northern colonies to get ready their quotas of men and provision by the arrival of the fleet and army from Europe, which happened within sixteen days, and while the several

governors were holding a consultation on the subject of their orders. A compliance with them in so short a time was impossible, yet every thing that could be done was done; the nature of the service conspiring with the wishes of the people, made the governments exert themselves to the utmost. New Hampshire raised 100 men, which was more than they could well spare; one half of the militia being continually employed in guarding the frontiers. They also voted them subsistence for 126 days, besides providing for them on shore before their embarkation. Two transports were taken up at 8s. per month per ton, and artillery stores were issued from the fort. The colony forces formed two regiments, under the command of Vetch and Walton. The army which came from England were seven veteran regiments of the Duke of Marlborough's army, and a battalion of marines under the command of Brigadier-General Hill, which, joined with the New England troops, made a body of about 6,500 men, provided with a fine train of artillery. The fleet consisted of fifteen ships of war from eighty to thirty-six guns, with forty transports and six storeships under the command of Admiral Walker. A force fully equal to the reduction of Quebec.

The fleet sailed from Boston on the 30th of July; and a fast was ordered by Dudley to be kept on the last Thursday of that, and each succeeding month, till the enterprise should be finished. This was an imitation of the conduct of the long parliament, during the civil wars in the previous century. But the sanguine hopes of success which had been entertained by the nation and the colonies, were all blasted in one fatal night: for, the fleet having advanced ten leagues into the river St. Lawrence, in the night of the 23d of August, the weather being thick and dark, eight transports were wrecked on Egg Island near the north shore, and 1,000 people perished; of whom there was but one man who belonged to New England. The next day the fleet put back, and were eight days beating down the river against an easterly wind, which would in two days have carried them to Quebec. After collecting together at Spanish river in the island of Cape Breton, and holding a fruitless consultation about annoying the French at Placentia, the expedition was broken up; the fleet returned to England, and the New England troops to their homes. Loud complaints and heavy charges were made on this occasion; the ignorance of the pilots—the obstinacy of the admiral—the detention of the fleet at Boston—its late arrival there—the want of seasonable orders—and the secret intentions of the ministry, were all subjects of bitter altercation; but the miscarriage was never regularly enquired into, and the disasters of the voyage were finally completed by the blowing up of the admiral's ship, with most of his papers, and 400 seamen, at Spithead.

(1712.) The failure of this expedition encouraged the Indians to harass the frontiers as soon as the season would permit. In April one Cunningham was killed at Exeter, Ensign Tuttle at Dover, and Jeremy Crommet at Oyster river; on one of the upper branches of this stream the enemy burned a saw-mill with a large quantity of boards. A scouting party who went up the river Merrimack, had the good fortune to surprise and kill eight Indians, and recover a considerable quantity of plunder, without the loss of a man. The frontiers were well guarded; one half of the militia did duty at the garrisons and were ready to march at a minute's warning; a scout of forty men kept ranging on the heads of the towns,

and the like care was taken by sea—spy-boats being employed in coasting from Cape Neddock to the Great Boar's-head. Notwithstanding this vigilance, small parties of the enemy were frequently seen. Stephen Gilman and Ebenezer Stevens were wounded at Kingston—the former was taken and put to death. In July an ambush was discovered at Dover, but the enemy escaped; and while a party was gone in pursuit of them, two children of John Waldron were taken, and for want of time to scalp them, their heads were cut off. There being no man at that time in Heard's garrison, a woman named Esther Jones mounted guard, and with a commanding voice called so loudly and resolutely as made the enemy think there was help at hand, and prevented farther mischief.

In autumn the news of the peace of Utrecht arrived in America; and on the 29th of October the suspension of arms was proclaimed at Portsmouth. The Indians, being informed of this event, came in with a flag of truce to Captain Moody at Casco, and desired a treaty; which the governor, with the council of each province (1713), held at Portsmouth, where the chiefs and deputies of the several belligerent tribes, by a formal writing under hand and seal, acknowledged their perfidy, promised fidelity, renewed their allegiance, submitted to the laws, and begged the queen's pardon for their former miscarriages. The frequent repetition of such engagements, and as frequent violations of them, had by this time much abated the sense of obligation on the one part, and of confidence on the other. But it being for the interest of both parties to be at peace, the event was peculiarly welcome.

To preserve the dependence of the Indians, and to prevent all occasions of complaint, private traffic with them was forbidden, and truck houses established at the public expense; and the next summer (1714), a ship was fitted out by both provinces, and sent to Quebec, where an exchange of prisoners was effected.

During the whole of this long war, Usher behaved as a faithful servant of the crown; frequently coming into the province by Dudley's direction, and sometimes residing in it several months, enquiring into the state of the frontiers and garrisons, visiting them in person, consulting with the officers of militia about the proper methods of defence and protection, and offering his service on all occasions: yet his austere and ungracious manners, and the interest he had in Allen's claim, effectually prevented him from acquiring that popularity which he seems to have deserved. He was solicitous to support the dignity of his commission; but could never prevail with the assembly to settle a salary upon him. The council generally paid his travelling expenses by a draught on the treasury, which never amounted to more than 5*l.* for each journey, until he came from Boston to proclaim the accession of King George; when in a fit of loyalty and good humour they gave him 10*l.*, which served as a precedent for two or three other grants. He often complained, and sometimes in harsh and reproachful terms, of their neglect; and once told them that his "Negro servants were much better accommodated in his house than the queen's governor was in the queen's fort."

Dudley had the good fortune to be more popular. Beside his attention to the general interest of the province and his care for its defence, he had the particular merit of favouring the views of those who were most strongly opposed to Allen's claim; and they made him amends by promoting in the assembly addresses to the queen, defending his cha-

racter when it was attacked, and praying for his continuance in office when petitions were presented for his removal. One of these addresses was in 1706, and another in 1707, in both which they represent him as a "prudent, careful, and faithful governor," and say they "are perfectly satisfied with his disposal of the people, and their arms and the public money." Addresses to the crown were very frequent during this female reign. Scarce a year passed without one or two; they either congratulated her majesty on her victories in Europe, or petitioned for arms and military stores for their defence, or for ships and troops to go against Canada, or represented their own poverty or Dudley's merits, or thanked her majesty for her care and protection, and for interposing in the affair of Allen's suit and not suffering it to be decided against them. A good harmony subsisted between the governor and people, and between the two branches of the legislature, during the whole of this administration.

On the accession of King George (1715), a change was expected in the government, and the assembly did what they could to prevent it by petitioning the king for Dudley's continuance. But it being now a time of peace, and a number of valuable officers who had served with reputation in the late wars, being out of employ; interest was made for their obtaining places of profit under the crown. Colonel Eliseus Burges who had served under General Stanhope was, by his recommendation, commissioned governor of Massachusetts and New Hampshire; and by the same interest George Vaughan, Esq., then in London, was made lieutenant-governor of the latter province; he arrived and published his commission on the thirteenth of October. Usher had some scruples about the validity of it, as he had formerly had of Partridge's, and wrote on the subject to the assembly, who assured him that, on inspection, they had found Vaughan's commission "strong and authentic;" and that his own was "null and void." Upon his dismissal from office he retired to his elegant seat at Medford, where he spent the rest of his days, and died on the 5th of September, 1726, in the 78th year of his age.

Burges wrote a letter to the assembly in July, in which he informed them of his appointment, and of his intention to sail for America in the following month. But Sir William Ashurst, with Jeremy Dummer the Massachusetts agent, and Jonathan Belcher, then in London, apprehending that he would not be an acceptable person to the people of New-England, prevailed with him for the consideration of 1000*l.* sterling, which Dummer and Belcher generously advanced, to resign his commission; and Colonel Samuel Shute was appointed in his stead to the command of both provinces. He arrived in New Hampshire and his commission was published the 17th of October, 1716. Dudley being thus superseded, retired to his family-seat at Roxbury, where he died in 1720, in the 73rd year of his age.

*The administration of Governor Shute, and his Lieutenants, Vaughan and Wentworth.*

(1715.) George Vaughan, Esq. was the son of Major William Vaughan, who had been so ill used by former governors, and had suffered so much in the cause of his country, that the advancement of his son to the office of lieutenant-governor was esteemed a mark of particular favour from the crown to the province, and a singular gratification to the parent, then in the decline of life. The lieutenant-

governor had been employed by the province, as their agent in England, to manage their defence against Allen. There he was taken notice of, by some persons of quality and influence, with whom his father had been connected; and by them he was recommended as a candidate for the honour to which he was now advanced.

After he had arrived, and opened his commission, Dudley, though not actually superseded, yet daily expecting Burges to succeed him, did not think it proper to come into the province, or perform any acts of government; so that, during a year, Vaughan had the sole command. In this time he called an assembly, who granted him the product of the impost and excise for one year, but refused to establish these duties for any longer time; upon which (1716) he dissolved them, and called another; to whom he recommended, in a style too peremptory, the establishment of a perpetual revenue to the crown; a matter in which he had been so much engaged, that while in England, "he presented a memorial to the king and ministry, to bring New England into the land tax of Great Britain; and proposed that a receiver should be appointed by the crown." The assembly was of opinion, that the public charges might be defrayed in the usual manner, by an equal tax on polls and estates; and declined laying an impost, or entering on any but the common business of the year, till the arrival of a governor.

When Governor Shute came to the chair, several of the old counsellors were laid aside, and six new ones appointed, all of whom were inhabitants of Portsmouth. That town, at the same time, was unhappily agitated by a controversy, which had for some years subsisted between the two parishes. This had not only imbibed the minds of the people, but had prejudiced some of the members of the council and assembly, so as to affect the proceedings of the legislature, and break the harmony which had been preserved in that body during the preceding administration. (1717.) The governor, in his first speech to the assembly, took notice of their division, and advised them to unanimity. They thanked him for his advice, but remonstrated against the removal of the old counsellors, and the confining of the new appointments, both in the council and the judicial courts, to residents in one town, as being contrary to former usage, and giving an advantage to the trading above the landed interest. This, they said, was the reason that an impost could not now be obtained, and that the whole burden of taxes was laid on the husbandman and the labourer, who had been greatly impoverished by the late war. The governor wisely avoided an answer to this remonstrance, by putting it on the council, who were a party in the controversy. The council, in their answer, acknowledged that the province had been much distressed by the war, but had in a great measure recovered; that there would have been no opposition to an impost, if the representatives had agreed to an act of export, according to the practice in England; that the king had a right to appoint his counsellors from any part of the province; that it was an affront to the prerogative to find fault with the exercise of this right; and that it was most convenient for the affairs of government, especially upon sudden emergencies, that the council should reside near the seat of government. This answer might have appeared decent enough if they had not added, that they were "gentlemen of the best quality, and greatest ability to serve the government, in that station; and had

as good or better estates in land, and land securities, than any in the house, and not inferior to the gentlemen who were laid aside."

While these altercations were in hand there was a great complaint of the scarcity of money, and some expedient was judged necessary to supply the place of current coin. A proposal was made to issue ten thousand pounds in bills, on loan, for twenty-three years, at five per cent. on land security. In this both houses agreed; but the next day the council proposed to enlarge the sum to 15000*l.*, to which the house would not consent. The governor then ordered the house to attend a conference with the council; they desired to know on what subject; he gave them no answer, but commanded their attendance. Having conferred about the proposed loan to no purpose, the circumstance of asking on what subject they were to confer was deemed an affront, and served as a pretext for dissolving them. The next assembly was more pliant, and issued 15,000*l.* on loan, for eleven years, at ten per cent.

A controversy also arose between the governor and lieutenant-governor about the power of the latter, in the absence of the former. Vaughan contended, that when the governor was present in his other province, he was absent from New Hampshire, and consequently that the administration devolved on him. The position was a metaphysical truth, but the inference was to be measured by political rules. Shute alleged that his commissions being published and recorded in New Hampshire and Massachusetts, he had the power of commander in chief over both provinces, during his residence in either; and thought it an absurdity to suppose, that the king had appointed the governor commander in chief, for five or six weeks only in the year, and the lieutenant-governor during the rest of the time; and that if the lieutenant-governor should happen, in that time, to step over the province line, the senior counsel must take the chair; this he said would make the province "a monster with three heads." The controversy was soon brought to an issue; for Vaughan received an order from Shute, while at Boston, to appoint a fast, which he did not obey; he received another to prorogue the assembly, instead of which he dissolved them, without the advice of council. He required the opinion of the council on the extent of his power, but they declined giving it. Penhallow, the governor's chief friend, was a warm opposer of Vaughan's pretensions, and incurred so much of his displeasure, that he publicly charged him with sowing discord in the government, and suspended him from his seat in council. On hearing this, Shute hastened to Portsmouth, and having summoned the council, ordered the king's instruction to him for suspending counsellors to be read, and demanded of Vaughan whether he had any instruction which superseded it. He answered, no. The governor then asked the council's advice whether the suspension of Penhallow was legal; they answered in the negative. He then restored him to his seat, and suspended Vaughan.

The assembly, which Vaughan had assumed the right to dissolve, met again, and approved the proceedings against him, justifying the construction which the governor had put on his commission, and his opinion of the lieutenant-governor's power; which was "to observe such orders as he should from time to time receive from the king or the governor in chief." The representatives of Hampton presented a remonstrance, in which, admitting the lieutenant-governor's opinion that "when the governor is out of the province, the lieutenant-governor is empowered to

execute the king's commission," and asserting that the governor was not in the province when the lieutenant-governor dissolved the assembly, they declared that they could not act with the house, unless they were re-elected. This remonstrance was deemed a libel, and the governor in council having summoned them before him, laid them under bonds of 400*l.* each, for their good behaviour. He then issued a proclamation, asserting his sole power, as commander in chief; and declaring that the lieutenant-governor had no right to exercise any acts of government without his special order.

To maintain a controversy with a superior officer on the extent of power, equally claimed by both, requires a delicacy and address which does not fall to the lot of every man. An aspiring and precipitate temper may bring on such a contention, but disqualifies the person from managing it with propriety. Had Vaughan proposed to submit the question to the king, he would have acted more in character, and might have preserved his reputation, though he had lost his power; but having offended the governor and disgusted the council and assembly, he could hope for no favour from the crown. When the report of the proceedings was sent to England, Sir William Ashurst, who had great interest at court and was a friend to New England, and who greatly disrelished the memorial which Vaughan had formerly presented to the king, easily found means to displace him; and in his room was appointed John Wentworth, Esq., whose commission was published on the 7th of December. The celebrated Mr. Addison being then secretary of state, this commission is countersigned by a name particularly dear to the friends of liberty and literature.

John Wentworth, Esq., grandson of William Wentworth, formerly mentioned as one of the first settlers of the country, had been in the early part of his life commander of a ship, and had acquired a handsome fortune by mercantile industry. Without any superior abilities or learning, by a steady attention to business, and a prudent, obliging deportment, he had recommended himself to the esteem of the people. Having been five years in the council before his appointment as lieutenant-governor, he had carried the same useful qualities into public life, and preserved or increased that respect which he had acquired in a private station. The rancour of contending parties made moderation a necessary character in a chief magistrate; and the circumstances of the province, at that time, required a person of experience in trade at its head.

It being a time of peace, after a long and distressing war, the improvement of which the province was capable, in regard to its natural productions, lumber and naval stores, rose into view and became objects of close attention, both here and in England. As early as 1668, the government of Massachusetts, under which the province then was, had reserved for the public use all white pine trees of twenty-four inches in diameter, at three feet from the ground. In King William's reign, a surveyor of the woods was appointed by the crown; and an order was sent to the Earl of Bellamont, to cause acts to be passed in his several governments for the preservation of the white pines. In 1708 a law made in New Hampshire prohibited the cutting of such as were twenty-four inches in diameter, at twelve inches from the ground, without leave of the surveyor, who was instructed by the queen to mark with the broad arrow those which were, or might be, fit for the use

of the navy, and to keep a register of them. Whatever severity might be used in executing the law, it was no difficult matter for those who knew the woods and were concerned in lumber to evade it; though sometimes they were detected and fined. Great complaints were frequently made of the destruction of the royal woods; every governor and lieutenant-governor had occasion to declaim on the subject in their speeches and letters; it was a favourite point in England, and recommended them to their superiors as careful guardians of the royal interest. On the other hand, the people made as loud complaints against the surveyor, for prohibiting the cutting of pine trees, and yet neglecting to mark such as were fit for masts; by which means, many trees which never could be used as masts, and might be cut into logs for sawing, were rotting in the woods; or the people who got them were exposed to a vexatious prosecution. When no surveyor was on the spot, the governor and council appointed suitable persons to take care that no waste should be made of the mast trees; and these officers, with a very moderate allowance, performed the duty to much better purpose than those who were sent from England and maintained at a great expense to the crown.

(1718.) As those trees which grew within the limits of the townships were deemed private property, the people were desirous to get other townships laid out, that the trees might be secured for their own use. This was a difficult point. The assembly, in 1704, during the controversy with Allen, had explicitly disclaimed all title to the waste lands, by which they understood all those without the bounds of their towns. The heirs of Allen kept a jealous eye upon them. Usher, who claimed by mortgage from Governor Allen, was still living, and was daily inviting purchasers by advertisements. The heir of Sir Charles Hobby, whose claim was founded on purchase from Thomas Allen, had offered his title to the assembly, but they had refused it. The creditors of Hobby's estate had applied for letters of administration; and though the matter had been by the judge of probate submitted to the general court, and by their advice suspended, yet the letters had been granted. Allen's other heirs were in a state of minority in England; but their guardian was attentive to their interest. The controversy had become more complex than before; and the claimants, however multiplied in number and discordant in their views, yet had an interest separate from that of the public. The royal determination could not be had, but on an appeal from a verdict at law; but no suits were now pending; nor could the lands be granted by royal charter, without seeming to intrench on the property of the claimants. Notwithstanding these difficulties, the necessity of extending the settlements, and improving the natural advantages of the country, was too apparent to be neglected.

(1719.) Great quantities of iron ore were found in many places; and it was in contemplation to erect forges on some of the rivers and to introduce foreign artists and labourers to refine it. A law was made laying a penalty of ten pounds per ton on the transporting of it out of the province; but for the further encouragement of the manufacture, it was deemed necessary that some lands should be appropriated to the purpose of supplying with fuel the iron works which were to be erected on Lamprey river, and of settling the people who were to be employed in that service. On this occasion it was recollected that in 1672, while this province was subject to the Massa

chusetts government, and after the town of Portsmouth had made a liberal contribution for the rebuilding of Havard College, a promise had been made by the general court to grant to that town a quantity of "land for a village, when they should declare to the court the place where they desired it."

Upon this, a petition was presented to the governor and council praying for a fulfilment of this promise; and after some hesitation, a grant was made of a slip of land two miles in breadth above the head line of Dover, for the use of the iron works, which was called the "renewing a grant formerly made." This was known by the name of the two-mile slip, and it was afterwards included in the township of Barrington.

In some parts of the province were many pitch-pine trees, unfit for masts, but capable of yielding tar and turpentine. A monopoly of this manufacture had been attempted by a company of merchants; but when many thousand trees were prepared for use, they were destroyed by unknown hands. Afterwards a law was made providing that tar should be received in lieu of taxes, at twenty shillings per barrel. This encouraged the making of it for some time. Another law laid a penalty on the injuring of trees for drawing turpentine. But private interest was too strong to be counteracted by a sense of public utility. Too many incisions being made in the trees at once, they were soon destroyed; and as those which were near at hand became scarce, the manufacture was gradually discontinued.

Hemp was another object. Some had been sown, and from the specimen of its growth, much advantage was expected. An act was made to encourage it; and it was allowed to be received at the treasury, in lieu of money, at one shilling per pound. But as there was scarcely land enough in cultivation for the production of corn, it was vain to think of raising a less necessary commodity.

The parliament of England was attentive to the advantages which might be derived to the nation from the colonies, to which they were particularly incited by the war which at this time raged between Sweden and Russia—the grand mart for naval stores in Europe. A duty which had been paid on lumber imported from America, was taken off; and this was esteemed so great a favour to New Hampshire that the assembly thanked Shute for the share he had in obtaining it. About the same time an act of parliament was made for the preservation of the white pines. Penalties, in proportion to the size of the trees, were laid on the cutting of those which grew without the bounds of townships; and for the greater terror, these penalties were to be recovered by the oath of one witness, in a court of admiralty; where a single judge, appointed by the crown, and removable at pleasure, determined the cause without a jury. While this bill was pending, Henry Newman, the agent for New Hampshire, petitioned against the severity of it, but without effect.

Great inconveniences had arisen for want of a due settlement of the limits of the province. The people who lived near the supposed line, were sometimes taxed in both provinces, and were liable to arrests by the officers of both; and sometimes the officers themselves were at variance, and imprisoned each other. Several attempts had been made to remove the difficulty, and letters frequently passed between the two courts on the subject, in consequence of petitions and complaints from the borderers. In 1716 commissioners were appointed by both provinces, to settle the line. The New Hampshire commissioners

were furnished by Lieut.-Governor Vaughan, with a copy of the report of the lords chief justices in 1677, and were instructed "to follow the course of the river Merrimack, at the distance of three miles north as far as the river extends." The commissioners on the other side complained that this power was not sufficient. If by sufficient it was meant that they had no power to vary from their instructions, the objection was true, but why this should have been objected it is not so easy to account, since the instructions would have given Massachusetts all which they could claim by virtue of their old charter; or the judgment upon it, on which they always laid much stress. Three years afterward the affair was agitated again, in obedience to an order from the lords of trade; who directed a map to be drawn and sent to them, in which the boundaries of the province should be delineated, and the best accounts and vouchers procured to elucidate it. Commissioners were again appointed to meet at Newbury; and those from New Hampshire were instructed by Lieutenant-Governor Wentworth to confer with the others; and if they could agree in fixing the place where to begin the line, they were to report accordingly; but if not, they were to proceed *ex parte*,—"setting their compass on the north side of the mouth of Merrimack river at high water mark, and from thence measuring three miles on a north line, and from the end of the first three miles on a west line into the country, till they should meet the great river which runs out of Winipisiogee pond." To this idea of a west line the Massachusetts commissioners objected; and desired that the commission of the governor of New Hampshire might be sent to Newbury, which was refused, and the conference ended without any agreement. However, a plan was drawn agreeably to these instructions, and sent to the lords of trade; and Newman, the agent, was instructed to solicit for a confirmation of it. In these instructions, the ideas of the gentlemen in government are more fully expressed. The due west line on the southern side of the province, they supposed, ought to extend as far as Massachusetts extended. The line on the northerly side adjoining to the province of Maine, they supposed ought to be drawn up the middle of the river Pascataqua, as far as the tide flows in the Newichwannock branch; and thence northwestward, but whether two or more points westward of north, was left for further consideration.

While these things were in agitation, the province unexpectedly received an accession of inhabitants from the north of Ireland. A colony of Scots presbyterians had been settled in the Province of Ulster, in the reign of James I.; they had borne a large share in the sufferings which the protestants in that unhappy country underwent, in the reign of Charles I. and James II.; and had thereby conceived an ardent and inextinguishable thirst for civil and religious liberty. Notwithstanding the peace which Ireland had enjoyed, since the subjection of the Popish party by King William, some penal laws were still in force, which, with the inconvenience of rents and tithes, made these people wish for a settlement in America; where they might be free from these burthens and have full scope for their industry. One Holmes, a young man, son of a clergyman, had been here and carried home a favourable report of the country, which induced his father, with three other presbyterian ministers, James Macgregore, William Cornwell, and William Boyd, and a large number of their congregations, to

resolve on an emigration. Having converted their substance into money, they embarked in five ships, and on the 14th of October, 1718, about 100 families of them arrived at Boston. Cornwell, with about twenty families more, arrived at Casco. They immediately petitioned the Assembly of Massachusetts for a tract of land; who gave them leave to look out a settlement of six miles square, in any of the unappropriated lands at the eastward. After a fruitless search along the shore, finding no place that suited them there, sixteen families, hearing of a tract of good land, above Haverhill, called Nutfield (from the great number of chesnut and walnut-trees there), and being informed that it was not appropriated, determined there to take up their grant; the others dispersed themselves into various parts of the country.

As soon as the spring opened, the men went from Haverhill, where they left their families, and built some huts near a brook which falls into Beaver River, and which they named West-running brook. The first evening after their arrival, a sermon was preached to them under a large oak, which is to this day regarded with a degree of veneration. As soon as they could collect their families, they called Macgregore to be their minister, who, since his arrival in the country, had preached at Dracut. At the first sacramental occasion were present, two ministers and 65 communicants. Macgregore continued with them till his death; and his memory is still green among them: he was a wise, affectionate, and faithful guide, both in civil and religious concerns. These people brought with them the necessary materials for the manufacture of linen; and their spinning wheels, turned by the foot, were a novelty in the country. They also introduced the culture of potatoes, which were first planted in the garden of Nathaniel Walker, of Andover. They were an industrious, frugal, and consequently thriving people.

They met with some difficulty in obtaining a title to their lands. If the due west line between the provinces had been established, it would have passed through their settlement and divided it between Massachusetts and New Hampshire; but the curve line, following the course of Merrimack at three miles distance, would leave them unquestionably in New Hampshire. This was the idea of the General Court of Massachusetts, who, upon application to them for a confirmation of their former grant, declared them to be out of their jurisdiction. Among the many claimants to these lands, they were informed that Colonel Whelewright, of Wells, had the best Indian title, derived from his ancestors. Supposing this to be valid in a moral view, they followed the example of the first settlers of New England, and obtained a deed of ten miles square, in virtue of the general license granted by the Indian Sagamores in 1629. To prevent difficulty from Allen's claim, they applied for leave of settlement to Colonel Usher, who told them that the land was in dispute, and that he could not give them leave, but that he supposed they might settle on it, if they would hold it either of the king or of Allen's heirs, as the case might be determined. They also applied to the Lieutenant Governor of New Hampshire, who declined making them a grant in the king's name; but, by advice of council, gave them a protection, and extended the benefit of the law to them; appointing James M'Kean to be a justice of the peace, and Robert Wier a deputy-sheriff.

(1720.) Some persons who claimed these lands,

by virtue of a deed of about twenty years date, from John, an Indian Sagamore, gave them some disturbance; but, having obtained what they judged a superior title, and enjoying the protection of government, they went on with their plantation; receiving frequent additions of their countrymen as well as others, till in 1722, their town was incorporated by the name of Londonderry, from a city in the north of Ireland, in and near to which most of them had resided; and in which some of them had endured the hardships of a memorable siege. John Barr, William Caldwell, and Abraham Blair, with several others who had suffered in this siege, and formerly came to America, were by King William's special order made free of taxes through all the British dominions.

The settlement of these emigrants on the waste lands opened the way for other plantations. Those who had borne the burthens and distresses of war, in defending the country, had long been circumscribed within the limits of the old towns, but were now multiplied, and required room to make settlements for their children. They thought it hard to be excluded from the privilege of cultivating the lands, which they and their fathers had defended; while strangers were admitted to sit down peaceably upon them. These were weighty reasons. At the same time no attempt was making by any of the claimants to determine the long-contested point of property; and, in fact, no person could give a clear and undisputed title to any of the unsettled lands.

In these circumstances a company of about one hundred persons, inhabitants of Portsmouth, Exeter and Haverhill, petitioned for liberty to begin a plantation on the northerly part of the lands called Nutfield. (1721.) These were soon followed by petitioners from the other towns, for the lands which lay contiguous to them. The governor and council kept the petitions suspended for a long time, giving public notice to all persons concerned to make their objections. In this time the lands were surveyed, and the limits of four proposed townships determined; and the people were permitted to build and plant upon the lands, "provided that they did not infringe on, or interfere with, any former grants, possessions, or properties." Some of these lands were well stocked with pine trees, which were felled in great abundance; this occasioned a fresh complaint from the King's surveyor.

(1722.) At length, charters being prepared, were signed by the governor; by which four townships, Chester, Nottingham, Barrington, and Rochester, were granted and incorporated. The grants were made in the name of the king, who was considered as the common guardian, both of the people and the claimants; but with a clause of reservation, "as far as in us lies," that there might be no infringement on the claims.

The signing of these grants was the last act of government performed by Shute in New Hampshire. A violent party in Massachusetts had made such strenuous opposition to him, and caused him so much vexation, as rendered it eligible for him to ask leave to return to England. He is said to have been a man of a humane, obliging, and friendly disposition; but having been used to military command, could not bear with patience the collision of parties, nor keep his temper when provoked. Fond of ease, and now in the decline of life, he would gladly have spent his days in America if he could have avoided controversy. The people of New Hampshire were satisfied with his administration, as

far as it respected them; and though they did not settle a salary on him as on his predecessor, yet they made him a grant twice in the year, generally amounting to a hundred pounds, and paid it out of the excise, which was voted from year to year. This was more, in proportion, than he received from his other government. On his departure for England, (1723), which was very sudden and unexpected, Lieut.-Governor Wentworth took the chief command, in a time of distress and perplexity; the country being then involved in another war with the natives.

*The fourth Indian war, commonly called the three years' war, or Lovewell's war.*

To account for the frequent wars with the eastern Indians, usually called by the French the Abenakis, and their unsteadiness, both in war and peace—we must observe, that they were situated between the colonies of two European nations, who were often at war with each other, and who pursued very different measures with regard to them.

As the lands, on which they lived, were comprehended in the patents granted by the crown of England, the natives were considered by the English as subjects of that crown. In the treaties and conferences held with them, they were styled the king's subjects; when war was declared against them, they were called rebels; and when they were compelled to make peace, they subscribed an acknowledgment of their perfidy, and a declaration of their submission to the government, without any just ideas of the meaning of those terms; and it is a difficult point, to determine what kind of subjects they were.

Beside the patents derived from the crown, the English in general were fond of obtaining from the Indians deeds of sale for those lands on which they were disposed to make settlements. Some of these deeds were executed with legal formality, and a valuable consideration was paid to the natives for the purchase; and others were of obscure and uncertain origin; but the memory of such transactions was soon lost, among a people who had no written records. Lands had been purchased of the Indian chiefs, on the rivers Kennebeck and St. George, at an early period; but the succeeding Indians either had no knowledge of the sales made by their ancestors, or had an idea that such bargains were not binding on posterity; who had as much need of the lands, and could use them to the same purpose as their fathers. At first, the Indians did not know that the European manner of cultivating lands, and erecting mills and dams, would drive away the game and fish, and thereby deprive them of the means of subsistence; afterwards, finding by experience that this was the consequence of admitting foreigners to settle among them, they repented of their hospitality, and were inclined to dispossess their new neighbours, as the only way of restoring the country to its pristine state, and of recovering their usual mode of subsistence.

They were extremely offended by the settlements which the English, after the peace of Utrecht, made on the lands at the eastward, and by their building forts, block houses, and mills; whereby their usual mode of passing the rivers and carrying-places was interrupted; and they could not believe, though they were told with great solemnity, that these fortifications were erected for their defence against invasion. When conferences were in 1717 held with them on this subject, they either denied that the lands had been sold, or pretended that the sachems

had exceeded their power in making the bargains, or had conveyed lands beyond the limits of their tribe; or that the English had taken advantage of their drunkenness to make them sign the deeds; or that no valuable consideration had been given for the purchase. No arguments or evidence which could be adduced would satisfy them, unless the lands were paid for again; and had this been done once, their posterity after a few years would have renewed the demand.

On the other hand, the French did not in a formal manner declare them subjects of the crown of France; but every tribe, however small, was allowed to preserve its independence. Those who were situated in the heart of Canada kept their lands to themselves, which were never solicited from them; those who dwelt on the rivers and shores of the Atlantic, though distant from the French colonies, received annual presents from the king of France; and solitary traders resided with, or occasionally visited them; but no attempt was made by any company to settle on their lands.

It was in the power of the English to supply them with provisions, arms, ammunition, blankets, and other articles which they wanted, cheaper than they could purchase them of the French. (1717.) Governor Shute had promised that trading houses should be established among them, and that a smith should be provided to keep their arms and other instruments in repair; but the unhappy contentions between the governor and assembly of Massachusetts prevented a compliance with this engagement. The Indians were therefore obliged to submit to the impositions of private traders, or to seek supplies from the French; who failed not to join with them in reproaching the English for this breach of promise, and for their avidity in getting away the land.

The inhabitants of the eastern parts of New England were not of the best character for religion, and were ill adapted to engage the affections of the Indians by their example. The frequent hostilities on this quarter, not only kept alive a spirit of jealousy and revenge in individuals, but prevented any endeavours to propagate religious knowledge among the Indians by the government; though it was one of the conditions of their charter, and though many good men wished it might be attempted. At length Governor Shute, in his conference with their Sachems at Arrowsic, introduced this important business by offering them in a formal manner, an Indian bible, and a protestant missionary; but they rejected both, saying, "God hath given us teaching already, and if we should go from it we should displease him." He would have done much better service, and perhaps prevented a war, if he had complied with their earnest desire to fix a boundary, beyond which the English should not extend their settlements.

A gentleman, in conversation with one of their Sachems, asked him why they were so strongly attached to the French, from whom they could not expect to receive so much benefit as from the English; the Sachem gravely answered, "Because the French have taught us to pray to God, which the English never did."

The Jesuits had planted themselves among these tribes. They had one church at Penobscot, and another at Norridgewog, where Sebastian Ralle, a French Jesuit, resided. He was a man of good sense, learning and address, and by a compliance with their mode of life, and a gentle, condescending deportment, had gained their affections so as to manage

them at his pleasure. Knowing the power of superstition over the savage mind, he took advantage of this, and of their prejudice against the English, to promote the cause, and strengthen the interest of the French among them. He even made the offices of devotion serve as incentives to their ferocity, and kept a flag, in which was depicted a cross, surrounded by bows and arrows, which he used to hoist on a pole, at the door of his church, when he gave them absolution, previously to their engaging in any warlike enterprise.

With this Jesuit, the governor of Canada held a close correspondence; and by him was informed of every thing transacted among the Indians. By this means, their discontent with the English, on account of the settlements made at the eastward, was heightened and inflamed; and they received every encouragement, to assert their title to the lands in question, and molest the settlers, by killing their cattle, burning their stacks of hay, robbing and insulting them. These insolencies discouraged the people, and caused many of them to remove. (1720) The garrisons were then reinforced; and scouting parties were ordered into the eastern quarter, under the command of Col Shadrach Walton. By this appearance of force, the Indians, who dreaded the power of the English, were restrained from open hostilities. They had frequent parleys with the commanders of forts, and with commissioners who visited them occasionally; and though at first they seemed to be resolute in demanding the removal of the English, declaring that "they had fought for the land three times, and would fight for it again;" yet when they were told that there was no alternative but perfect peace or open war, and that if they chose peace they must forbear every kind of insult, they seemed to prefer peace; and either pretended ignorance of what had been done, or promised to make inquiry into it; and as an evidence of their good intentions, offered a tribute of skins, and delivered up four of their young men as hostages.

This proceeding was highly disrelished by the governor of Canada, who renewed his efforts to keep up the quarrel, and secretly promised to supply the Indians with arms and ammunition; though as it was a time of peace between the two crowns, he could not openly assist them.

The New England governments, though highly incensed, were not easily persuaded to consent to a war. The dispute was between the Indians and the proprietors of the eastern lands, in which the public were not directly interested. No blood had as yet been shed. Canseau had been surprised and plundered, and some people killed there; but that was in the government of Nova Scotia. Ralle was regarded as the principal instigator of the Indians; and it was thought, that if he could be taken off they would be quiet. It was once proposed to send the sheriff of York county with a posse of 150 men, to seize and bring him to Boston; but this was not agreed to. (1721.) The next summer, Ralle, in company with Castine from Penobscot, and Croisil from Canada, appeared among the Indians, at a conference held on Arrowsic island, with Capt. Penhallow, the commander of the garrison, and brought a letter, written in the name of the several tribes of Indians, directed to Governor Shute; in which it was declared, "that if the English did not remove in three weeks, they would kill them and their cattle and burn their houses." An additional guard was sent down; but the government, loth to come to a rupture and desirous if possible to treat with the

Indians separately from the French emissaries, invited them to another conference, which they treated with neglect.

In the succeeding winter, a party under Col. Thomas Westbrook was ordered to Norridgewog to seize Ralle. They arrived at the village undiscovered, but before they could surround his house, he escaped into the woods, leaving his papers in his strong box, which they brought off without doing any other damage. Among these papers were his letters of correspondence with the governor of Canada, by which it clearly appeared, that he was deeply engaged in exciting the Indians to a rupture, and had promised to assist them.

This attempt to seize their spiritual father, could not long be unrevenged. (1722.) The next summer they took nine families from Merrymeeting bay, and after dismissing some of the prisoners, retained enough to secure the redemption of their hostages, and sent them to Canada. About the same time they made an attempt on the fort of St. George's; but were repulsed with considerable loss. They also surprised some fishing vessels in the eastern harbours; and at length made a furious attack on the town of Brunswick, which they destroyed. This action determined the government to issue a declaration of war against them, which was published in form at Boston and Portsmouth.

New Hampshire being seated in the bosom of Massachusetts, had the same interest to serve, and bore a proportionable share of all these transactions and the expenses attending them. Walton, who first commanded the forces sent into the eastern parts, and Westbrook, who succeeded him, as well as Penhallow, the commander of the fort at Arrowsic, were New Hampshire men; the two former were of the council. A declaration of war being made, the enemy were expected on every part of the frontiers; and the assembly were obliged to concert measures for their security, after an interval of peace for about ten years.

The usual route of the Indians, in their marches to the frontiers of New Hampshire, was by the way of Winipiseogee lake. The distance from Cochecho falls in the town of Dover, to the south-east bay of that lake, is about thirty miles. It was thought that if a road could be opened to that place, and a fort built there, the enemy would be prevented from coming that way. Orders were accordingly issued, and a party of 250 men were employed in cutting down the woods for a road; but the expense so far exceeded the benefit which could be expected from a fort at such a distance, in the wilderness, to be supplied with provisions and ammunition by land carriage, which might easily be interrupted by the enemy, that the design was laid aside, and the old method of defence by scouts and garrisons was adopted. Lieut.-governor Wentworth, being commander in chief in Shute's absence, was particularly careful to supply the garrisons with stores, and visit them in person, to see that the duty was regularly performed; for which, and other prudent and faithful services, he frequently received the acknowledgments of the assembly and grants of money, generally amounting to 100*l.* at every session, and sometimes more. They also took care to enlist men for two years, and to establish the wages of officers and soldiers at the following rates: a captain at seven pounds per month, a lieutenant four pounds, a serjeant fifty-eight shillings, a corporal forty-five shillings, and a private forty shillings. A bounty of one hundred pounds was offered for every Indian

scalp. The difference between the currency and sterling was two and a half for one.

(1723.) The first appearance of the enemy in New Hampshire was at Dover, where they surprised and killed Joseph Ham, and took three of his children; the rest of the family escaped to the garrison. Soon after they waylaid the road, and killed Tristram Heard. Their next onset was at Lamprey river, where they killed Aaron Rawlins and one of his children, taking his wife and two children captive. This Aaron Rawlins (whose wife was a daughter of Edward Taylor, who was killed by the Indians in 1704) lived upon the plantation left by Taylor, about half a mile west from Lamprey river landing, at the lower falls on Piscasick river. The people there at that time commonly retired at night to the garrisoned houses, and returned home in the day time; but that night they neglected to retire as usual. His brother Samuel also lived about half a mile distant on the same river. It seems the Indian scout consisted of eighteen, who probably had been reconnoitring some time, and intended to have destroyed both the families, and for that purpose divided, and nine went to each house; but the party that went to Samuel Rawlins's, beating in the window, and finding the family gone, immediately joined their companions, who were engaged at Aaron's. His wife went out at the door (ignorant of course of the Indians being there), and was immediately seized, and also one or two of her children who followed her. Her husband being alarmed, secured the door before they could enter, and with his eldest daughter, about twelve years old, stood upon his defence, repeatedly firing wherever they attempted to enter, and at the same time calling earnestly to his neighbours for help; but the people in the several garrisoned houses near, apprehending from the noise and incessant firing, the number of the enemy to be greater than they were, and expecting every moment to be attacked themselves, did not venture to come to his assistance. Having for some time bravely withstood such unequal force, he was at last killed by their random shots through the house, which they then broke open, and killed his daughter. They scalped him, and cut off his daughter's head, either through haste or probably being enraged against her, on account of the assistance she had afforded her father in their defence, which evidently appeared by her hands being soiled with powder. His wife and two children (a son and a daughter) they carried to Canada. The woman was redeemed in a few years; the son was adopted by the Indians, and lived with them all his days: he came into Pennycook with the Indians after the peace, and expressed to some people with whom he conversed much resentment against his uncle Samuel Rawlins, supposing he had detained from his mother some property left by his father, but manifested no desire of returning to Newmarket again. The daughter married with a Frenchman, and when she was near sixty years old returned with her husband to her native place, in expectation of recovering the patrimony she conceived was left at the death of her father; but the estate having been sold by her grandfather Taylor's administrator, they were disappointed, and after a year or two went back to Canada.

The next spring (1724), the Indians killed James Nock, one of the elders of the church, as he was returning on horseback from setting his beaver traps in the woods. Soon after they appeared at Kingston, where they took Peter Colcord and

Ephraim Stevens, and two children of Ebenezer Stevens. They were pursued by scouts from Kingston and Londonderry, but in vain. Colcord made his escape in about six months, and received a gratuity of ten pounds from the assembly, for his "courage and ingenuity, and for the account he gave of the proceedings of the enemy."

On a sabbath day they ambushed the road at Oyster river, and killed George Chesley, and mortally wounded Elizabeth Burnham, as they were returning together from public worship. In a few days more, five Indians took Thomas Smith and John Carr, at Chester, and after carrying them about thirty miles, bound them and lay down to sleep; the captives escaped, and in three days arrived safe at a garrison in Londonderry.

The settlements at Oyster river being very much exposed, a company of volunteers under the command of Abraham Benwick, who went out on the encouragement offered by the government for scalps, were about marching to make discoveries. It happened that Moses Davis, and his son of the same name, being at work in their corn field, went to a brook to drink, where they discovered three Indian packs. They immediately gave notice of this discovery to the volunteer company, and went before to guide them to the spot. The Indians had placed themselves in ambush; and the unhappy father and son were both killed. The company then fired, killed one, and wounded two others who made their escape, though they were pursued and tracked by their blood to a considerable distance. The slain Indian was a person of distinction, and wore a kind of coronet of scarlet-dyed fur, with an appendage of four small bells, by the sound of which the others might follow him through the thickets. His hair was remarkably soft and fine, and he had about him a devotional book and muster-roll of 180 Indians; from which circumstances it was supposed that he was a natural son of the Jesuit Ralle, by an Indian woman who had served him as a laundress. His scalp was presented to the lieutenant-governor in council, by Robert Burnham, and the promised bounty was paid to Captain Francis Matthews, in trust for the company.

Within the town of Dover were many families of Quakers; who, scrupling the lawfulness of war, could not be persuaded to use any means for their defence, though equally exposed with their neighbours to an enemy who made no distinction between them. One of these people, Ebenezer Downs, was taken by the Indians, and was grossly insulted and abused by them, because he refused to dance as the other prisoners did, for the diversion of their savage captors. Another of them, John Hanson, who lived on the outside of the town in a remote situation, could not be persuaded to remove to a garrison, though he had a large family of children. A party of thirteen Indians, called French Mohawks, had marked his house for their prey; and lay several days in ambush, waiting for an opportunity to assault it. While Hanson with his eldest daughter and his two eldest sons were at work in a meadow at some distance, the Indians entered the house, killed and scalped two small children, and took his wife, with her infant of fourteen days old, her nurse, two daughters and a son, and after rifling the house carried them off. This was done so suddenly and secretly, that the first person who discovered it was the eldest daughter at her return from the meeting before her father. Seeing the two children dead at

the door, she gave a shriek of distress, which was distinctly heard by her mother, then in the hands of the enemy among the bushes, and by her brothers in the meadow. The people being alarmed, went in pursuit; but the Indians cautiously avoiding all paths, went off with their captives undiscovered. After this disaster had befallen his family, Hanson removed the remainder of them to the house of his brother, who, though of the same religious persuasion, yet had a number of lusty sons, and always kept his fire-arms in good order, for the purpose of shooting game. Hanson's wife, though of a tender constitution, had a firm and vigorous mind, and passed through the various hardships of an Indian captivity with much resolution and patience. When her milk failed she supported her infant with water, which she warmed in her mouth, and dropped on her breast, till the squaws told her to beat the kernel of walnuts and boil it with bruised corn, which proved a nourishing food for her babe. They were all sold to the French in Canada. Hanson went the next spring and redeemed his wife, the three younger children and the nurse, but he could not obtain the elder daughter of seventeen years old, though he saw and conversed with her. He also redeemed Ebenezer Downs. He made a second attempt in 1727, but died at Crown-point on his way to Canada. The girl was married to a Frenchman, and never returned.

These and other insolencies of the enemy being daily perpetrated on the frontiers, caused the governments to resolve on an expedition to Norridgewog. The Captains Moulton and Harman, both of York, each at the head of a company of 100 men, executed their orders with great address. They completely invested and surprised that village—killed the obnoxious Jesuit with about eighty of his Indians—recovered three captives—destroyed the chapel, and brought away the plate and furniture of the altar, and the devotional flag, as trophies of their victory. Ralle was then in the 68th year of his age, and had resided in his mission at Norridgewog 26 years, having before spent 6 years in travelling among the Indian nations, in the interior parts of America.

The parties of Indians who were abroad, continued to ravage the frontiers. Two men being missing from Dunstable, a scout of eleven went in quest of them; they were fired upon by thirty of the enemy, and nine of them were killed: the other two made their escape, though one of them was badly wounded. Afterward another company fell into their ambush and engaged them, but the enemy being superior in number overpowered them, and killed one and wounded four, the rest retreating. At Kingston, Jabez Colman and his son Joseph, were killed as they were at work in their field. The success of the forces at Norridgewog and the large premium offered for scalps, having induced several volunteer companies to go out, they visited one after another of the Indian villages, but found them deserted. The fate of Norridgewog had struck such terror into them, that they did not think themselves safe at any of their former places of abode, and occupied them as resting places only, when they were scouting or hunting.

One of these volunteer companies, under the command of Captain John Lovewell, of Dunstable, was greatly distinguished, first by their success and afterwards by their misfortunes. This company consisted of thirty: at their first excursion to the northward of Winipiseogee lake, they discovered an Indian wigwam in which there were a man and a boy. They

killed and scalped the man and brought the boy alive to Boston, where they received the reward promised by law, and a handsome gratuity besides.

By this success his company was augmented to seventy. They marched again, and visiting the place where they had killed the Indian, found his body as they had left it two months before. (1725.) Their provision falling short, thirty of them were dismissed by lot and returned. The remaining 40 continued their march till they discovered a track, which they followed till they saw a smoke just before sunset, by which they judged that the enemy were encamped for the night. They kept themselves concealed till after midnight, when they silently advanced, and discovered ten Indians asleep round a fire by the side of a frozen pond. Lovewell now determined to make sure work, and, placing his men conveniently, ordered part of them to fire, five at once, as quick after each other as possible, and another part to reserve their fire: he gave the signal by firing his own gun, which killed two of them; the men firing according to order, killed five more on the spot: the other three starting up from their sleep, two of them were immediately shot dead by the reserve; the other, though wounded, attempted to escape by crossing the pond, but was seized by a dog and held fast till they killed him. Thus in a few minutes the whole company was destroyed, and some attempt against the frontiers of New Hampshire prevented; for these Indians were marching from Canada, well furnished with new guns and plenty of ammunition; they had also a number of spare blankets, mockaseens, and snow shoes for the accommodation of the prisoners whom they expected to take, and were within two days march of the frontiers. The pond where this exploit was performed is at the head of a branch of Salmonfall river, in the township of Wakefield, and has ever since borne the name of Lovewell's pond. The action was spoken of by elderly people, at a distance of time, with an air of exultation; and considering the extreme difficulty of finding and attacking Indians in the woods, and the judicious manner in which they were so completely surprised, it was a capital exploit.

The brave company, with the ten scalps stretched on hoops, and elevated on poles, entered Dover in triumph, and proceeded thence to Boston; where they received the bounty of one hundred pounds for each, out of the public treasury.

Encouraged by this success, Lovewell marched a third time; intending to attack the villages of Pigwacket, on the upper part of the river Saco, which had been the residence of a formidable tribe, and which they still occasionally inhabited. His company at this time consisted of forty-six, including a chaplain and surgeon: Two of them proving lame, returned: another falling sick, they halted, and built a stockade fort on the west side of great Ossapoy pond; partly for the accommodation of the sick man, and partly for a place of retreat in case of any misfortune. Here the surgeon was left with the sick man, and eight of the company for a guard. The number was now reduced to thirty-four. Pursuing their march to the northward, they came to a pond, about twenty-two miles distant, in a line from the fort, and encamped by the side of it. Early the next morning, while at their devotions, they heard the report of a gun, and discovered a single Indian, standing on a point of land which runs into the pond, more than a mile distant. They had been alarmed the preceding night by noises round their camp, which they imagined were made by Indians,

and this opinion was now strengthened. They suspected that the Indian was placed there to decoy them, and that a body of the enemy was in their front. A consultation being held, they determined to march forward, and by encompassing the pond, to gain the place where the Indian stood; and that they might be ready for action, they disencumbered themselves of their packs, and left them, without a guard, at the north-east end of the pond, in a pitch pine plain, where the trees were thin and the brakes, at that time of the year, small. It happened that Lovewell's march had crossed a carrying-place, by which two parties of Indians, consisting of forty-one men, commanded by Paugus and Waliwa, who had been scouting down Saco river, were returning to the lower village of Pigwacket, distant about a mile and a half from this pond. Having fallen on Lovewell's track, they followed it till they came to the packs, which they removed; and counting them, found the number of his men to be less than their own: they therefore placed themselves in ambush, to attack them on their return. The Indian, who had stood on the point, and was returning to the village by another path, met our party, and received their fire, which he returned, and wounded Lovewell and another with small shot. Lieutenant Wyman, firing again, killed him, and they took his scalp. Seeing no other enemy, they returned to the place where they had left their packs, and while they were looking for them, the Indians rose, and ran toward them with a horrid yelling. A smart firing commenced on both sides, it being now about ten of the clock. Captain Lovewell and eight more were killed on the spot. Lieutenant Farwell, and two others, were wounded; several of the Indians fell; but, being superior in number, they endeavoured to surround the party, who, perceiving their intention, retreated—hoping to be sheltered by a point of rock which ran into the pond, and a few large pine trees standing on a sandy beach. In this forlorn place they took their station. On their right was the mouth of a brook, at that time unfordable; on their left was the rocky point; their front was partly covered by a deep bog, and partly uncovered, and the pond was in their rear. The enemy galled them in front and flank, and had them so completely in their power, that had they made a prudent use of their advantage, the whole company must either have been killed, or obliged to surrender at discretion—being destitute of a mouthful of sustenance, and an escape being impracticable. Under the conduct of Lieutenant Wyman they kept up their fire, and shewed a resolute countenance, all the remainder of the day; during which their chaplain, Jonathan Frie, Ensign Robbins, and one more, were mortally wounded. The Indians invited them to surrender, by holding up ropes to them, and endeavoured to intimidate them by their hideous yells; but they determined to die rather than yield; and by their well-directed fire, the number of the savages was thinned, and their cries became fainter, till, just before night, they quitted their advantageous ground, carrying off their killed and wounded, and leaving the dead bodies of Lovewell and his men unscalped. The shattered remnant of this brave company, collecting themselves together, found three of their number unable to move from the spot, eleven wounded, but able to march, and nine who had received no hurt. It was melancholy to leave their dying companions behind, but there was no possibility of removing them. One of them, ensign Robbins, desired them to lay his gun by him charged,

that if the Indians should return before his death he might be able to kill one more. After the rising of the moon, they quitted the fatal spot, and directed their march toward the fort where the surgeon and guard had been left. To their great surprise they found it deserted. In the beginning of the action, one man, (whose name has not been thought worthy to be transmitted to posterity) quitted the field, and fled to the fort; where, in the style of Job's messengers, he informed them of Lovewell's death, and the defeat of the whole company; upon which they made the best of their way home; leaving a quantity of bread and pork, which was a seasonable relief to the retreating survivors. From this place they endeavoured to get home. Lieutenant Farwell, the chaplain, (who had the journal of the march in his pocket,) and one more, perished in the woods, for want of dressing for their wounds. The others, after enduring the most severe hardships, came in one after another, and were not only received with joy, but were recompensed for their valour and sufferings; and a generous provision was made for the widows and children of the slain.

A party from the frontiers of New Hampshire were ordered out to bury the dead; but, by some mistake, did not reach the place of action. Colonel Tyng, with a company from Dunstable, went to the spot, and having found the bodies of twelve, buried them, and carved their names on the trees where the battle was fought. At a little distance he found three Indian graves, which he opened; one of the bodies was known to be their warrior Paugus. He also observed tracks of blood on the ground, to a great distance from the scene of action. It was remarked, that a week before this engagement happened, it had been reported in Portsmouth at the distance of eighty miles, with but little variation from the truth. Such incidents were not uncommon, and could scarcely deserve notice, if they did not indicate that a taste for the marvellous was not extinguished in the minds of the most sober and rational.

This was one of the most fierce and obstinate battles which had been fought with the Indians. They had not only the advantage of numbers, but of placing themselves in ambush, and waiting with deliberation the moment of attack. These circumstances gave them a degree of ardour and impetuosity. Lovewell and his men, though disappointed of meeting the enemy in their front, expected, and determined, to fight. The fall of their commander, and more than one quarter of their number, in the first onset, was greatly discouraging; but they knew that the situation to which they were reduced, and their distance from the frontiers, cut off all hope of safety from flight. In these circumstances, prudence as well as valour dictated a continuance of the engagement, and a refusal to surrender, until the enemy, awed by their brave resistance, and weakened by their own loss, yielded them the honour of the field. After this encounter the Indians resided no more at Pigwacket till the peace.

The conduct of the Marquis de Vaudreuil, governor of Canada, was so flagrant a breach of the treaty of peace subsisting between the crowns of England and France, that it was thought a spirited remonstrance might make him ashamed, and produce some beneficial effects. With this view, the general court of Massachusetts proposed to the colonies of New York, Connecticut, Rhode Island, and New Hampshire, to join in sending commissioners to Canada on this errand. New Hampshire was the only one

which consented; and Theodore Atkinson was appointed on their part, to join with William Dudley and Samuel Thaxter on the part of Massachusetts.

The instructions which they received from the Lieut.-governors Dunmer and Wentworth, by advice of the council and assembly of each province, were nearly similar. They were to demand of the French governor, restitution of the captives who had been carried into Canada; to remonstrate to him on his injustice and breach of friendship, in countenancing the Indians in their hostilities against the people of New England; to insist on his withdrawing his assistance for the future; and to observe to him, that if in the farther prosecution of the war, the Indian allies should in their pursuit of the enemy commit hostilities against the French, the blame would be entirely chargeable to himself. If the French governor or the Indians, should make any overtures for peace, they were empowered to give them passports, to come either to Boston or Portsmouth for that purpose, and to return; but they were not to enter into any treaty with them. The commissioners were also furnished with the original letters of Vaudreuil to the governors of New England, and to the Jesuit Ralle, and with copies of the several treaties which had been made with the Indians. The gentlemen went by the way of Albany, and over the lakes, on the ice, to Montreal, where they arrived after a tedious and dangerous journey.

The Marquis, who happened to be at Montreal, received and entertained them with much politeness. Having delivered their letters, and produced their commissions, they presented their remonstrance in writing, and made the several demands agreeably to their instructions; using this among other arguments, "Those Indians dwell either in the dominions of the King of Great Britain, or in the territories of the French king. If in the French king's dominions, the violation of the peace is very flagrant, they then being his subjects; but if they are subjects of the British crown, then much more is it a breach of the peace to excite a rebellion among the subjects of his Majesty of Great Britain."

The governor gave them no written answer, but denied that the Abenakis were under his government, and that he had either encouraged or supplied them for the purpose of war. He said that he considered them as an independent nation, and that the war was undertaken by them, in defence of their lands, which had been invaded by the people of New England. The commissioners, in reply, informed him that the lands for which the Indians had quarrelled were fairly purchased of their ancestors, and had been for many years inhabited by the English. They produced his own letters to the governors of New England in which he had (inconsistently, and perhaps inadvertently) styled these Indians "subjects of the King of France." They also alleged the several treaties held with them as evidence that they had acknowledged themselves subjects of the British crown; and to his great mortification, they also produced his own original letters to the Jesuit Ralle, which had been taken at Norridgewog, in which the evidence of his assisting and encouraging them in the war was too flagrant to admit of palliation. Farther to strengthen this part of their argument, they presented to the governor a Mohawk whom they had met with at Montreal, who, according to his own voluntary acknowledgment, had been supplied by the governor with arms, ammunition, and provision to engage in the war,

and had killed one man, and taken another whom he had sold in Canada.

In addition to what was urged by the commissioners in general, Mr. Atkinson, on the part of New Hampshire, entered into a particular remonstrance, alleging that the Indians had no cause of controversy with that province, the lands in question being out of their claim. To this the governor answered that New Hampshire was a part of the same nation, and the Indians could make no distinction. Atkinson asked him why they did not for the same reason make war on the people of Albany? The governor answered, "The people of Albany have sent a message to pray me to restrain the savages from molesting them; in a manner very different from your demands;" to which Atkinson with equal spirit replied, "Your lordship, then, is the right person for our governments to apply to, if the Indians are subject to your orders."

Finding himself thus closely pressed, he promised to do what lay in his power to bring them to an accommodation, and to restore those captives who were in the hands of the French, on the payment of what they had cost; and he engaged to see that no unreasonable demands should be made by the persons who held them in servitude; as to those who still remained in the hands of the Indians, he said he had no power over them, and could not engage for their redemption. He complained in his turn of the governor of New York, for building a fort on the river Onondago, and said that he should look upon that proceeding as a breach of the treaty of peace; and he boasted that he had the five nations of the Iroquois so much under his influence, that he could at any time cause them to make war upon the subjects of Great Britain.

The commissioners employed themselves very diligently in their inquiries respecting the captives, and in settling the terms of their redemption. They succeeded in effecting the ransom of sixteen, and engaging for ten others. The governor obliged the French, who held them, to abate of their demands; but after all, they were paid for at an exorbitant rate. He was extremely desirous that the gentlemen should have an interview with the Indians, who were at war; and for this purpose sent for a number of them from the village of St. Francis, and kept them concealed in Montreal. The commissioners had repeatedly told him that they had no power to treat with them, and that they would not speak to them unless they should desire peace. At his request, the chiefs of the Nipissins visited the commissioners, and said that they disapproved the war which their children the Abenakis had made, and would persuade them to ask for peace. After a variety of manœuvres, the governor at length promised the commissioners that if they would consent to meet the Indians at his house, they should speak first. This assurance produced an interview; and the Indians asked the commissioners whether they would make proposals of peace?—They answered, no. The Indians then proposed, that "if the English would demolish all their forts, and remove one mile westward of Saco river; if they would rebuild their church at Norridgewog, and restore to them their priest, they would be brothers again. The commissioners told them that they had no warrant to treat with them; but if they were disposed for peace, they should have safe conduct to and from Boston or Portsmouth; and the governor promised to send his son with them to see justice done. They answered, that "this was the only

place to conclude peace, as the nations were near and could readily attend." The governor would have had them recede from their proposals, which he said were unreasonable, and make others; but father Le Chase, a Jesuit, being present, and acting as interpreter for the Indians, embarrassed the matter so much, that nothing more was proposed. It was observed by the commissioners, that when they conversed with the governor alone, they found him more candid and open to conviction than when Le Chase, or any other Jesuit was present; and, through the whole of their negociation, it evidently appeared that the governor himself, as well as the Indians, were subject to the powerful influence of these ecclesiastics, of whom there was a seminary in Canada, under the direction of the Abbé de Belmont.

Having completed their business, and the rivers and lakes being clear of ice, the commissioners took their leave of the governor, and set out on their return, with the redeemed captives, and a guard of soldiers, which the governor ordered to attend them as far as Crown-point. They went down the river St. Lawrence to the mouth of the Sorel, then up that river to Chamblee, and through the lakes to fort Nicholson. After a pleasant passage, of seven days, they arrived at Albany.

Here they found commissioners of Indian affairs for the province of New York, to whom they communicated the observations which they had made in Canada, and what the Marquis de Vaudreuil had said respecting the five nations, and the fort at Onandago. There being a deputation from these nations at Albany, they held a conference with them, and gave them belts; requesting their assistance in establishing a peace with the Abenakis. From this place Mr. Atkinson wrote to M. Cavanille, son of the Marquis, acknowledging the polite reception the commissioners had met with from the family; subjoining a copy of the information which they had given to the commissioners of New York; and promising that a due representation should be made to the kings of England and France on the subject of their negociation.

The report of the commissioners being laid before the Assemblies of Massachusetts and New Hampshire, it was determined to prosecute the war with vigour. Orders were issued for the defence and supply of the frontiers, and for the encouragement of ranging parties, both volunteers and militia. A petition was sent to the king complaining of the French governor, and desiring that orders might be given to the other colonies of New England, and to New York, to furnish their quotas of assistance in the further prosecution of the war; and letters were written to the governor of New York, requesting that such of the hostile Indians as should resort to Albany, might be seized and secured.

The good effects of this mission to Canada were soon visible. One of the Indian hostages who had been detained at Boston through the whole war, together with one who had been taken, were allowed on their parole, to visit their countrymen; and they returned with a request for peace. Commissioners from both provinces went to St. George's, where a conference was held, which ended in a proposal for a farther treaty at Boston. In the mean time, some of the enemy were disposed for further mischief. Those who had been concerned in taking Hanson's family at Dover, in a short time after their redemption and return, came down with a design to take them again, as they had threatened them before they left Canada. When they had come near the

house, they observed some people at work in a neighbouring field, by which it was necessary for them to pass, both in going and returning. This obliged them to alter their purpose, and conceal themselves in a barn, till they were ready to attack them. Two women passed by the barn, while they were in it, and had just reached the garrison as the guns were fired. They shot Benjamin Evans dead on the spot: wounded William Evans and cut his throat; John Evans received a slight wound in the breast, which bleeding plentifully, deceived them, and thinking him dead, they stripped and scalped him: he bore the painful operation without discovering any signs of life, though all the time in his perfect senses, and continued in the feigned appearance of death, till they had turned him over, and struck him several blows with their guns, and left him for dead. After they were gone off he rose and walked, naked and bloody, toward the garrison; but on meeting his friends by the way, dropped, fainting on the ground, and being covered with a blanket, was conveyed to the house. He recovered and lived fifty years. A pursuit was made after the enemy, but they got off undiscovered, carrying with them Benjamin Evans, junior, a lad of thirteen years old, to Canada, whence he was redeemed as usual by a charitable collection.

This was the last effort of the enemy in New Hampshire. In three months, the treaty which they desired was held at Boston, and the next spring ratified at Falmouth. A peace was concluded in the usual form; which was followed by restraining all private traffic with the Indians, and establishing truck-houses in convenient places, where they were supplied with the necessaries of life, on the most advantageous terms. Though the governments on the whole were losers by the trade, yet it was a more honourable way of preserving the peace, than if an acknowledgment had been made to the Indians in any other manner.

None of the other colonies of New England bore any share in the expenses or calamities of this war; and New Hampshire did not suffer so much as in former wars; partly by reason of the more extended frontier of Massachusetts, both on the eastern and western parts, against the former of which the enemy directed their greatest fury; and partly by reason of the success of the ranging parties, who constantly traversed the woods as far northward as the White Mountains. The militia at this time was completely trained for active service; every man of forty years of age having seen more than twenty years of war. They had been used to handle their arms from the age of childhood, and most of them, by long practice, had become excellent marksmen, and good hunters. They were well acquainted with the lurking-places of the enemy; and possessed a degree of hardiness and intrepidity, which can be acquired only by the habitude of those scenes of danger and fatigue, to which they were daily exposed. They had also imbibed from their infancy a strong antipathy to the savage natives; which was strengthened by repeated horrors of blood and desolation, and not obliterated by the intercourse which they had with them in time of peace. As the Indians frequently resorted to the frontier towns in time of scarcity, it was common for them to visit the families whom they had injured in war; to recount the circumstances of death and torture which had been practised on their friends; and when provoked or intoxicated, to threaten a repetition of such insults in future wars. To bear such treatment required more than human patience; and it is not improbable

that secret murders were sometimes the consequence of these harsh provocations. Certain it is, that when any person was arrested, for killing an Indian in time of peace, he was either forcibly rescued from the hands of justice, or if brought to trial, invariably acquitted; it being impossible to impanel a jury some of whom had not suffered by the Indians, either in their persons or families.

*Wentworth's administration continued—Burnet's short administration—Belcher succeeds him—Wentworth's death and character.*

During the war, the lieut.-governor had managed the executive department with much prudence; the people were satisfied with his administration, and entertained an affection for him, which was expressed not only by words, but by frequent grants of money, in the general assembly. When he returned from Boston, (1726) where the treaty of peace was concluded, they presented to him an address of congratulation, and told him that "his absence had seemed long; but the service he had done them filled their hearts with satisfaction." This address was followed by a grant of 100*l.* He had, just before, consented to an issue of 2000*l.* in bills of credit, to be paid, one half in the year 1735, and the other half in 1736. An excise was laid for three years, and was farmed for 300*l.*

The divisional line between the provinces of New Hampshire and Massachusetts was yet unsettled, and in addition to the usual disadvantages occasioned by this long neglect, a new one arose. By the construction which Massachusetts put on their charter, all the lands three miles northward of the river Merrimack were within their limits. On this principle, a grant had formerly been made to Governor Endicott, of some lands at Penacook, which had been the seat of a numerous and powerful tribe of Indians. The quality of the land at that place invited the attention of adventurers from Andover, Bradford and Haverhill; to whom a grant was made of a township, seven miles square; comprehending the lands on both sides of the Merrimack, extending southwardly from the branch called Contoocook. This grant awakened the attention of others; and a motion was made in the Massachusetts assembly, for a line of townships, to extend from Dunstable on Merrimack, to Northfield on Connecticut river; but the motion was not immediately adopted. The assembly of New Hampshire was alarmed. Newman, their agent, had been a long time at the British court, soliciting the settlement of the line, and a supply of military stores for the fort. Fresh instructions were sent to him to expedite the business, and to submit the settlement of the line to the king. A committee was appointed to go to Penacook, to confer with a committee of Massachusetts, then employed in laying out the lands, and to remonstrate against their proceeding. A survey of other lands near Winipiseogee lake, was ordered; that it might be known, what number of townships could be laid out, independently of the Massachusetts claim. On the other hand, the heirs of Allen renewed their endeavours, and one of them, John Hobby, petitioned the assembly to compound with him for his claim to half the province; but the only answer which he could obtain was that "the courts of law were competent to the determination of titles," and his petition was dismissed.

Both provinces became earnestly engaged. Massachusetts proposed to New Hampshire the appointment of commissioners to establish the line. The New Hampshire assembly refused, because they had

submitted the case to the king. The Massachusetts people, foreseeing that the result of this application might prove unfavourable to their claim of jurisdiction, were solicitous to secure to themselves the property of the lands in question. Accordingly, the proposed line of townships being surveyed, "pretences were encouraged and even sought after, to entitle persons to be grantees." The descendants of the officers and soldiers, who had been employed in expeditions against the Narraganset Indians, and against Canada, in the preceding century, were admitted; and the survivors of the late Captain Lovell's company, with the heirs of the deceased, had a select tract granted to them at Suncook. There was an appearance of gratitude in making these grants, and there would have been policy in it, had the grantees been able to comply with the conditions. (1727.) New Hampshire followed the example, and made grants of the townships of Epsom, Chichester, Barnstead, Canterbury, Gilmantown, and Bow. All these, excepting the last, were undoubtedly within their limits; but the grant of Bow interfered with the grants which Massachusetts had made at Penacook and Suncook, and gave rise to a litigation tedious, expensive, and of forty years continuance.

These tracts of land granted by both provinces were too numerous and extensive. It was impracticable to fulfil the conditions, on which the grants were made. Had the same liberal policy prevailed here as in Pennsylvania, and had the importation of emigrants from abroad been encouraged, the country might have been soon filled with inhabitants; but the people of Londonderry were already looked upon with a jealous eye, and a farther intrusion of strangers was feared, lest they should prove a burden and charge to the community. People could not be spared from the old towns. Penacook was almost the only settlement which was effected by emigrants from Massachusetts. A small beginning was made by the New Hampshire proprietors at Bow, on Suncook river; but the most of the intermediate country remained uncultivated for many years. Schemes of settlement were indeed continually forming; meetings of proprietors were frequently held, and an avaricious spirit of speculation in landed property prevailed, but the real wealth and improvement of the country instead of being promoted were retarded.

On the death of King George I., the assembly, which had subsisted five years, was of course dissolved; and writs for the election of another were issued in the name of George II. The long continuance of this assembly was principally owing to the absence of Governor Shute, in whose administration it commenced, and the uncertainty of his return or the appointment of a successor. It had been deemed a grievance, and an attempt had been made in 1724, to limit the duration of assemblies to three years, in conformity to the custom of England. At the meeting of the new assembly, the first business which they took up was to move for a triennial act. The Lieut.-governor was disposed to gratify them. Both houses agreed in framing an act for a triennial assembly, in which the duration of the present assembly was limited to three years (unless sooner dissolved by the commander in chief), writs were to issue fifteen days at least before a new election; the qualification of a representative was declared to be a freehold estate of 300*l.* value. The qualification of an elector was a real estate of 50*l.*, within the town or precinct where the election should be made, but habitancy was not required in either case, the

select men of the town, with the moderator of the meeting, were constituted judges of the qualifications of electors, saving an appeal to the house of representatives. This act having been passed in due form, received the royal approbation, and was the only act which could be called a constitution or form of government, established by the people of New Hampshire; all other parts of their government being founded on royal commissions and instructions. But this act was defective, in not determining by whom the writs should be issued, and in not describing the places from which representatives should be called either by name, extent, or population. This defect gave birth to a long and bitter controversy, as will be seen hereafter.

The triennial act being passed, the house were disposed to make other alterations in the government. An appeal was allowed in all civil cases from the inferior to the superior court; if the matter in controversy exceeded 100*l.*, another appeal was allowed to the governor and council, and if it exceeded 300*l.*, to the king in council. The appeal to the governor in council was first established by Cutt's commission, and continued by subsequent commissions and instructions. In Queen Anne's time, it was complained of as a grievance, that the governor and council received appeals and decided causes, without taking an oath to do justice. An oath was then prescribed and taken. The authority of this court had been recognised by several clauses in the laws, but was disrelished by many of the people, partly because the judges who had before decided cases, were generally members of the council; partly because no injury was admitted in this court of appeal, and partly because no such institution was known in the neighbouring province of Massachusetts. The house moved for a repeal of the several clauses in the laws relative to this obnoxious court; the council non-concurred their vote, and referred them to the royal instructions. The house persisted in their endeavours, and the council in their opposition. Both sides grew warm, and there was no prospect of an accommodation. The lieutenant-governor put an end to the session, and soon after dissolved the assembly by proclamation.

(1728.) A new assembly was called; the same persons, with but two or three exceptions, were re-elected, and the same spirit appeared in all their transactions. They chose for their speaker Nathaniel Weare, who had been speaker of the former assembly, and having as usual presented him to the lieutenant-governor, he negatived the choice. The house desired to know by what authority; he produced his commission; nothing appeared in that which satisfied them; and they adjourned from day to day without doing any business. After nine days they chose another speaker, Andrew Wiggin, and sent up the vote, with a preamble, justifying their former choice. The lieutenant-governor approved of the speaker, but disapproved the preamble; and thus the controversy closed, each side retaining their own opinion. The speeches and messages from the chair, and the answers from the house during this session were filled with reproaches; the public business was conducted with ill humour, and the house carried their opposition so far as to pass a vote for addressing the king to annex the province to Massachusetts: to this vote the council made no answer. But as a new governor was expected, they agreed in appointing a committee of both houses to go to Boston, and compliment him on his arrival.

The expected governor was William Burnet, son

of the celebrated Bishop of Sarum, whose name was dear to the people of New England, as a steady and active friend to civil and religious liberty. Mr. Burnet was a man of good understanding and polite literature; fond of books and of the conversation of literary men; but an enemy to ostentation and parade. He had been governor of New York and New Jersey, and quitted those provinces with reluctance, to make way for another person, for whom the British ministry had to provide. Whilst at New York he was very popular, and his fame having reached New England, the expectations of the people were much raised on the news of his appointment to the government of Massachusetts and New Hampshire. Lieut. Governor Wentworth characterised him in one of his speeches as "a gentleman of known worth, having justly obtained an universal regard from all who have had the honour to be under his government." He was received with much parade at Boston, whither the lieutenant-governor of New Hampshire, with a committee of the council and assembly, went to compliment him on his arrival.

Mr. Burnet had positive instructions from the crown to insist on the establishment of a permanent salary in both his provinces. He began with Massachusetts, and held a long controversy with the general court to no purpose. In New Hampshire a precedent had been established in the administration of Dudley, which was favourable to his views. Though some of the assembly were averse to a permanent salary, yet the lieutenant-governor had so much interest with them—by virtue of having made them proprietors in the lately granted townships—that they were induced to consent; on condition that he should be allowed one third part of the salary, and they should be discharged from all obligations to him. (1729.) This bargain being concluded, the house passed a vote, with which the council concurred, to pay, "Governor Burnet, for the term of three years, or during his administration, the sum of two hundred pounds sterling, or six hundred pounds in bills of credit; which sum was to be in full of all demands from this government for his salary; and all expenses in coming to, tarrying in, or going from this province; and also for any allowance to be made to the lieutenant-governor; and that the excise on liquors should be appropriated to that use." To this vote six of the representatives entered their dissent.

The governor came but once into New Hampshire. His death, which happened after a few months, was supposed to be occasioned by the ill effect which his controversy with Massachusetts, and the disappointment which he suffered, had on his nerves.

(1730.) When the death of governor Burnet was known in England the resentment against the province of Massachusetts was very high, on account of their determined refusal to fix a salary on the king's governor. It was even proposed to reduce them to "a more absolute dependence on the crown;" but a spirit of moderation prevailed; and it was thought that Mr. Jonathan Belcher, then in England, being a native of the province, and well acquainted with the temper of his countrymen, would have more influence than a stranger to carry the favourite point of a fixed salary. His appointment as governor of New Hampshire was merely an appendage to his other commission.

Belcher was a merchant of large fortune and unblemished reputation. He had spent six years in Europe, had been twice at the court of Hanover before the protestant succession took place in the family of Brunswick, and had received from the

Princess Sophia a rich gold medal. He was graceful in his person, elegant and polite in his manners, of a lofty and aspiring disposition, a steady, generous friend, a vindictive but not implacable enemy. Frank and sincere, he was extremely liberal in his censures, both in conversation and letters. Having a high sense of the dignity of his commission, he determined to support it, even at the expense of his private fortune; the emoluments of office in both provinces being inadequate to the style in which he chose to live.

Whilst he was in England, and it was uncertain whether he would be appointed or Shute would return, Wentworth wrote letters of compliment to both. Belcher knew nothing of the letter to Shute till his arrival in America, and after he had made a visit to New Hampshire, and had been entertained at the house of the lieutenant-governor. He was then informed that Wentworth had written a letter to Shute, of the same tenor as that to himself. This he deemed an act of duplicity. How far it was so, cannot now be determined. The persuasion was so strong in the mind of Belcher, that on his next visit to Portsmouth he refused an invitation to Wentworth's house. This was not the only way in which he manifested his displeasure. When the affair of the salary came before the assembly, he not only refused to make such a compromise as Burnet had done; but obliged the lieutenant-governor under his hand "to quit all claim to any part of the salary, and to acknowledge that he had no expectation from, or dependence on, the assembly for any allowance, but that he depended wholly on the governor." The same salary was then voted, and in nearly the same words, as to his predecessor. He allowed the lieutenant-governor the fees and perquisites only which arose from registers, certificates, licenses, and passes, amounting to about fifty pounds sterling. Wentworth and his friends were disappointed and disgusted. He himself did not long survive; being seized with a lethargic disorder, he died December 12th, in the fifty-ninth year of his age; but his family connexions resented the affront, and drew a considerable party into their views. Benning Wentworth, his son, and Theodore Atkinson, who had married his daughter, were at the head of the opposition. The latter was removed from his office of collector of customs, to make room for Richard Wibird; the naval office was taken from him and given to Ellis Huske; and the office of high sheriff, which he had held, was divided between him and Eleazer Russell. Other alterations were made, which greatly offended the friends of the late lieutenant-governor; but Belcher, satisfied that his conduct was agreeable to his commission and instructions, disregarded his opponents, and apprehended no danger from their resentment. Atkinson was a man of humour, and took occasion to express his disgust in a singular manner. The governor, who was fond of parade, had ordered a troop of horse to meet him on the road and escort him to Portsmouth. The officers of the government met him, and joined the cavalcade. Atkinson was tardy; but when he appeared, having broken the sheriff's wand, he held one half in his hand. Being chid by the governor for not appearing sooner, he begged his excellency to excuse him, because he had but half a horse to ride.

In addition to what has been observed respecting lieutenant-governor Wentworth, the following portrait of his character, by some contemporary friend, deserves remembrance.

"He was born at Portsmouth, of worthy parents, from whom he had a religious education. His inclination leading him to the sea, he soon became a commander of note, and gave a laudable example to that order by his sober behaviour and his constant care to uphold the worship of God in his ship. Wherever he came, by his discreet and obliging deportment, he gained the love and esteem of those with whom he conversed.

"On his leaving the sea, he had considerable business as a merchant, and always had the reputation of a fair and generous dealer.

"He has approved himself to the general acceptance of his majesty's good subjects throughout this province, and under his mild administration, we enjoyed great quietness.

"He was a gentleman of good natural abilities, much improved by conversation; remarkably civil and kind to strangers—respectful to the ministers of the gospel—a lover of good men of all denominations—compassionate and bountiful to the poor—courteous and affable to all—having a constant regard to the duties of divine worship, in private and public, and paying a due deference to all the sacred institutions of Christ. He had sixteen children."

*Dunbar's Lieutenantcy and enmity to Belcher—Efforts to settle the boundary lines—Divisions—Riot—Trade—Episcopal Church—Throat distemper.*

(1731.) Mr. Wentworth was succeeded in the lieutenantcy by David Dunbar, Esq., a native of Ireland, and a reduced colonel in the British service; who was also deputed to be surveyor of the king's woods. This appointment was made by the recommendation of the board of trade; of which Colonel Bladen was an active member, who bore no good will to Governor Belcher. Dunbar had been commander of a fort at Pemaquid, which it was in contemplation to annex to Nova Scotia. He had taken upon him to govern the few scattered people in that district, with a degree of rigor to which they could not easily submit. This conduct had already opened a controversy, between him and the province of Massachusetts; and it was very unfortunate for Belcher to have such a person connected with both his governments. What were the merits, which recommended Dunbar to these stations, it is not easy at this time to determine; the only qualifications, which appear to have pleaded in his favour, were poverty and the friendship of men in power. He was an instrument of intrigue and disaffection; and he no sooner made his appearance in New Hampshire, than he joined the party who were in opposition to the governor. Belcher perceived the advantage which his enemies would derive from this alliance, and made all the efforts in his power to displace him. In his letters to the ministry, to the board of trade, and to his friends in England, he continually represented him in the worst light, and solicited his removal. It is not improbable, that his numerous letters of this kind, written in his usual style, with great freedom and without any reserve, might confirm the suspicions raised by the letters of his adversaries, and induced the ministry to keep Dunbar in place, as a check upon Belcher, and to preserve the balance of parties.

Within a few weeks after Dunbar's coming to Portsmouth, a complaint was drawn up against Belcher, and signed by fifteen persons; alleging that his government was grievous, oppressive, and arbitrary, and praying the king for his removal. This

roused the governor's friends, at the head of whom was Richard Waldron, the secretary, who drew up a counter address, and procured a hundred names to be subscribed. Both addresses reached England about the same time. Richard Partridge, Mr. Belcher's brother in law, in conjunction with his son, Jonathan Belcher, then a student in the Temple, applied for a copy of the complaint against him, at the plantation office, and obtained it; but could not get sight of the letters which accompanied it, though, on the foundation of those letters, a representation had been made by the board of trade to the king.

The only effect which Dunbar's letters had at that time, was to procure the appointment of Theodore Atkinson, Benning Wentworth, and Joshua Peirce, to be counsellors of New Hampshire; and though Belcher remonstrated to the secretary of state against these appointments, and recommended other persons in their room, he could not prevail, any farther than to delay the admission of the two former for about two years; during which time they were elected into the house of representatives, and kept up the opposition there. The recommendations, which he made of other persons, were duly attended to when vacancies happened; and thus the council was composed of his friends, and his enemies. The civil officers, whom he appointed, were sometimes superseded by persons recommended and sent from England; and in one instance, a commission for the naval office, in favour of a Mr. Reynolds, son of the Bishop of Lincoln, was filled up in England, and sent over with orders for him to sign it; which he was obliged punctually to obey.

From the confidential letters of the leading men on both sides, the views of each party may plainly be seen; though they endeavoured to conceal them from each other. The governor and his friends had projected an union of New Hampshire with Massachusetts; but were at a loss by what means to bring it into effect. The most desirable method would have been, an unanimity in the people of New Hampshire, in petitioning the crown for it: but as this could not be had, the project was kept out of sight, till some favourable opportunity should present.

The other party contemplated not only the continuance of a separate government, but the appointment of a distinct governor, who should reside in the province, and have no connexion with Massachusetts. The greatest obstacle in their way, was the smallness and poverty of the province, which was not able to support a gentleman in the character of governor. To remove this obstacle, it was necessary to have the limits of territories, not only fixed, but enlarged. They were therefore zealous in their attempts for this purpose; and had the address to persuade a majority of the people, that they would be gainers by the establishment of the lines; that the lands would be granted to them and their children; and that the expense of obtaining the settlement would be so trifling, that each man's share would not exceed the value of a pullet.

The governor's friends were averse to pressing the settlement of the line; and their reasons were these. The controversy is either between the king and the subjects of his charter government of Massachusetts; or else, between the heirs of Mason and Allen, and the people of Massachusetts. If the controversy be settled even in favour of New Hampshire, the lands which fall within the line will be either the king's property, to be granted by his governor and council, according to royal instructions; or else the property of the heirs of Mason or Allen,

to be disposed of by them. On both suppositions the people of New Hampshire can have no property in the lands, and therefore why should they be zealous about the division, or tax themselves to pay the expense of it?

The governor, as obliged by his instructions, frequently urged the settlement of the lines in his speeches, and declared, that the assembly of New Hampshire had done more toward effecting it, than that of Massachusetts. A committee from both provinces met at Newbury in the autumn of 1731, on this long contested affair; but the influence of that party in Massachusetts, of which Elisha Cooke was at the head, prevented an accommodation. Soon after this fruitless conference, the representatives of New Hampshire, of whom a majority was in favour of settling the line, determined no longer to treat with Massachusetts; but to represent the matter to the king, and petition him to decide the controversy. Newman's commission, as agent, having expired, they chose for this purpose John Rindge, merchant, of Portsmouth, then bound on a voyage to London. The appointment of this gentleman was fortunate for them, not only as he had large connexions in England; but as he was capable of advancing money, to carry on the solicitation. The council, a majority of which was in the opposite interest, did neither concur in the appointment, nor consent to the petition.

(1732.) Mr. Rindge, on his arrival in England, petitioned the king in his own name, and in behalf of the representatives of New Hampshire, to establish the boundaries of the province; but his private affairs requiring his return to America, he did, agreeably to his instructions, leave the business in the hands of Captain John Thomlinson, merchant, of London, who was well known in New Hampshire, where he had frequently been in quality of a sea commander. He was a gentleman of great penetration, industry, and address; and having fully entered into the views of Belcher's opponents, prosecuted the affair of the line, "with ardour and diligence;" employing for his solicitor, Ferdinando John Parris; who, being well supplied with money, was indefatigable in his attention. The petition was of course referred to the lords of trade, and Francis Wilks, the agent of Massachusetts, was served with a copy to be sent to his constituents.

Whilst the matter of the line was pending on the British side of the Atlantic, the parties in New Hampshire maintained their opposition, and were on all occasions vilifying and abusing each other, especially in their letters to their friends in England. On the one side, Belcher incessantly represented Dunbar as the fomentor of opposition; as false, perfidious, malicious, and revengeful; that he did no service to the crown, nor to himself, but was "a plague to the governor and a deceiver of the people." He was also very liberal in his reflections, on his other opposers. On the other side, they represented him as unfriendly to the royal interest, as obstructing the settlement of the lines, conniving at the destruction of the king's timber; and partial to his other government, where all his interest lay; and that he had not even a freehold in New Hampshire. (1733.) As an instance of his partiality, they alleged that in almost every session of the Assembly of Massachusetts, he consented to grants of the disputed lands, to the people of that province; by which means their Assembly raised money, to enable their agent to protract the controversy, that they might have opportunities to lay out more townships; while at the same time he rejected a supply bill of the New

Hampshire Assembly, and dissolved them, because that in it, they had made an appropriation for their agent. The truth was, that the council did not consent to the bill, because they had no hand in appointing the agent, and the bill never came before the governor. The frequent dissolution of assemblies was another subject of complaint; and, in fact, this measure never produced the desired effect; for the same persons were generally re-elected, and no reconciling measures were adopted by either party.

(1734.) The governor frequently complained, in his speeches, that the public debts were not paid; nor the fort, prison, and other public buildings kept in repair, because of their failure in supplying the treasury. The true reason of their not supplying it was, that they wanted issues of paper money, to be drawn in at distant periods; to this the governor could not consent, being restrained by a royal instruction, as well as in principle opposed to all such practices. But one issue of paper was made in his administration; and for its redemption, a fund was established in hemp, iron, and other productions of the country. When a number of merchants and others had combined to issue notes, to supply the place of a currency, he issued a proclamation against them; and in his next speech to the assembly, condemned them in very severe terms. The assembly endeavoured to vindicate the character of the bills; but in a few days he dissolved them, with a reprimand, charging them with trifling, with injustice and hypocrisy. It must be remembered that his complaints of an empty treasury were not occasioned by any failure of his own salary, which was regularly paid out of the excise.

Belcher revived the idea of his predecessor Shute, which was also countenanced by his instructions, that he was virtually present in New Hampshire when personally absent and attending his duty in his other province; and therefore that the lieutenant-governor could do nothing but by his orders. Dunbar had no seat in the council, and Shadrach Walton being senior member, by the governor's order summoned them and presided. He also held the command of the fort, by the governor's commission; granted passes for ships, and licenses for marriage; and received and executed military orders, as occasion required. The lieutenant-governor contested this point, but could not prevail; and finding himself reduced to a state of insignificance, he retired in disgust to his fort at Pemaquid, where he resided almost two years. The governor's friends gave out that he had absconded for debt, and affected to triumph over the opposition, as poor and impotent; but their complaints, supported by their agent Thomlinson, and the influence of Bladen at the Board of Trade, made an impression there much to the disadvantage of Mr. Belcher, though he had friends among the ministry and nobility, the principal of whom was Lord Townsend, by whose influence he had obtained his commission.

After Dunbar's return to Portsmouth the governor thought it good policy to relax his severity; and gave him the command of the fort, with the ordinary perquisites of office, amounting to about fifty pounds sterling. Not content with this, he complained that the governor did not allow him one third of his salary. The governor's salary was but 600*l.* currency; and he spent at least one hundred in every journey to New Hampshire, of which he made two in a year. At the same time Dunbar had two hundred pounds sterling, as surveyor general of the woods; which, with the perquisites, amounting to

one hundred more, were divided between him and his deputies. But it must be remembered that he was deeply in debt, both here and in England.

The rigid execution of the office of surveyor general had always been attended with difficulty; and the violent manner in which Dunbar proceeded with trespassers, raised a spirit of opposition on such occasions. The statutes for the preservation of the woods impowered the surveyor to seize all logs cut from white pine trees without license; and it rested on the claimant to prove his property in the court of admiralty. Dunbar went to the saw-mills, where he seized and marked large quantities of lumber; and with an air and manner to which he had been accustomed in his military capacity, abused and threatened the people. That class of men with whom he was disposed to contend are not easily intimidated with high words; and he was not a match for them in that species of controversy which they have denominated swamp law. An instance of this happened at Dover, whither he came with his boat's crew to remove a parcel of boards which he had seized. The owner, Paul Gerrish, warned him of the consequence; Dunbar threatened with death the first man who should obstruct his intentions; the same threat was returned to the first man who should remove the boards. Dunbar's prudence at this time got the better of his courage, and he retired.

With the like spirit, an attempt of the same kind was frustrated at Exeter, whither he sent a company in a boat to remove lumber. Whilst his men were regaling themselves at a public house, in the evening, and boasting of what they intended to do the next day, a number of persons, disguised like Indians, attacked and beat them; whilst others cut the rigging and sails of the boat, and made a hole in her bottom. The party not finding themselves safe in the house, retreated to the boat, and pushed off; but being there in danger of sinking, they with difficulty regained the shore, and hid themselves till morning, when they returned on foot to Portsmouth.

This was deemed a flagrant insult. Dunbar summoned the council, and complained to them of the riotous proceedings at Exeter, where there was "a conspiracy against his life, by evil-minded persons, who had hired Indians to destroy him." He proposed to the council the issuing of a proclamation, offering a reward to apprehend the rioters. The major part of the council were of opinion that no proclamation could be issued but by the governor. Information being sent to the governor, he issued a proclamation; commanding all magistrates to assist in discovering the rioters.

This transaction afforded matter for complaint, and a memorial was drawn up by Thomlinson, grounded on letters which he had received. It was suggested, that the governor's pretence to favour the surveyor was deceitful; that the rioters at Exeter were his greatest friends; that the council, wholly devoted to him, would not advise to a proclamation till they had sent to Boston—that the proclamation was delayed—and when it appeared offered no reward, though Dunbar had proposed to pay the money himself—and that by reason of this delay and omission, the rioters escaped with impunity.

In justice to Mr. Belcher, it must be said that there was no delay on his part—the proclamation being sent from Boston within six days. It also appears, from the secret and confidential letters of the governor, that he disapproved the riot, and even called it rebellion; that he gave particular orders to the magistrates to make inquiry, and take depo-

sitions, and do their utmost to discover the rioters. If he did not advertise a reward, it was because there was no money in the treasury: and if Dunbar had been sincere in his offer to pay it, he might have promised it by advertisement. The true reason that the rioters were not discovered was, that their plan was so artfully conducted, their persons so effectually disguised, and their confidence in each other so well placed, that no proof could be obtained; and the secret remained with themselves, till the danger was over, and the government had passed into other hands.

A law had been made for holding the inferior court of common pleas, alternately in each of the four old towns; and the practice had been continued for several years, much to the convenience and satisfaction of the people; but Dunbar remonstrated against it to the board of trade, and moved for a disallowance of the act, because the people who had obstructed him in his office deserved not so much favour. The act was in consequence disallowed, and the courts were afterward confined to Portsmouth. (1735.) The order for disallowance came to the hands of Dunbar, who called a meeting of the council, that they might advise to its publication. A majority of them would not consent till the original order was sent to Boston, and Governor Belcher directed the publication of it. This transaction served as matter of fresh complaint, and was alleged as an argument for the appointment of a governor who should reside constantly in the province.

To finish what relates to Dunbar. He was caressed by the party in opposition to Belcher, under the idea that he had interest enough in England to obtain a commission for the government of New Hampshire. In 1737 he went to England to prosecute his design; where, by his old creditors he was arrested and thrown into prison. Thomlinson found means to liberate him; but perceived that he had neither steadiness nor ability for the station at which he aimed, nor interest enough to obtain it; though by his presence in England he served to keep up the opposition to Belcher, and was used as a tool for that purpose, till the object was accomplished. After which he was (1743) appointed, by the East India Company, governor of St. Helena.

The trade of the province at this time consisted chiefly in the exportation of lumber and fish to Spain and Portugal, and the Caribbee Islands. The mast trade was wholly confined to Great Britain. In the winter small vessels went to the southern colonies, with English and West India goods, and returned with corn and pork. The manufacture of iron within the province, which had been set up by the late Lieut.-Governor Wentworth, and other gentlemen, lay under discouragement, for want of experienced and industrious workmen. The woollen manufacture was diminished, and sheep were scarcer than formerly—the common lands on which they used to feed, being fenced in by the proprietors. The manufacture of linen was much increased by means of the emigrants from Ireland, who were skilled in that business. No improvements were made in agriculture, and the newly granted townships were not cultivated with spirit or success.

There had not been any settled episcopal church in the province from the beginning, till about the year 1732, when some gentlemen who were fond of the mode of divine worship in the church of England, contributed to the erection of a neat building on a commanding eminence, in Portsmouth, which they called the Queen's chapel. Mr. Thomlinson

was greatly instrumental in procuring them assistance in England, toward completing and furnishing it. It was consecrated in 1734, and in 1736 they obtained Mr. Arthur Brown for their minister, with a salary from the society for propagating the gospel in foreign parts.

About this time, the country was visited with a new epidemic disease, which obtained the name of the throat distemper. The general description of it was a swelled throat, with white or ash-coloured specks, an efflorescence on the skin, great debility of the whole system, and a strong tendency to putridity. Its first appearance was in May 1735, at Kingston in New Hampshire, an inland town, situate on a low plain. The first person seized was a child, who died in three days. About a week after, in another family, at the distance of four miles, three children were successively attacked, who also died on the third day. It continued spreading gradually in that township, through the summer, and of the first forty who had it, none recovered. In August it began to make its appearance at Exeter, six miles north-eastward, and in September at Boston, fifty miles southward, though it was October before it reached Chester, the nearest settlement on the west of Kingston. It continued its ravages through the succeeding winter and spring, and did not disappear till the end of the next summer. In Boston it is calculated that 4,000 had the distemper, of whom 114 died.

The most who died of this pestilence were children, and the distress which it occasioned was heightened to the most poignant degree. From three to six children were lost out of some families, several buried four in a day, and many lost all. In some towns one in three, and in others one in four, of the sick were carried off. In the parish of Hampton Falls it raged most violently. Twenty families buried all their children: twenty-seven persons were lost out of five families, and more than one-sixth part of the inhabitants of that place died within thirteen months. In the whole province not less than 1,000 persons, of whom above 900 were under twenty years of age, fell victims to this raging distemper.

Since the settlement of this country such a mortality had not been known. It was observed that the distemper proved most fatal, when plentiful evacuations, particularly bleeding, were used; a great prostration of strength being an invariable symptom. The summer of 1735, when the sickness began, was unusually wet and cold, and the easterly wind greatly prevailed: but it was acknowledged to be, not “a creature of the seasons,” as it raged through every part of the year. Its extent is said to have been “from Pemaquid to Carolina:” but with what virulence it raged, or in what measure it proved fatal to the southward of New England, does not appear.

The same distemper has made its appearance at various times since. In 1754 and 1755, it produced a great mortality in several parts of New Hampshire, and the neighbouring parts of Massachusetts. Since that time it has either put on a milder form, or physicians have become better acquainted with it. The last time of its general spreading was in 1784, 5, 6, and 7. It was then first seen at Sanford in the county of York, and thence diffused itself very slowly through most of the towns of New England; but its virulence, and the mortality which it caused, were comparatively inconsiderable. “Its remote or predisposing cause, is one of those mysteries in nature which baffle human inquiry.”

The following enumeration shews the amount of

mortality for fourteen months, preceding the 26th of July, 1736:—Died in Portsmouth 99, Dover 88, Hampton 55; Hampton Falls 210, Exeter 127, New-castle 11, Gosport 37, Rye 44, Greenland 18, New-ington 21, Newmarket 22, Stretham 18, Kingston 113, Durham 100, Chester 21—Total 984.

After this account was taken, "several other children" died of the throat distemper; in the town of Hampton thirteen more within the year 1736, so that the whole number must have exceeded 1,000. In the town of Kittery, in the county of York, 122 died.

It appears also, from the church records of Hampton, that from January 1754 to July 1755, fifty-one persons died of the same distemper in that town.

*State of parties—Controversy about lines—Commissioners appointed—Their session and result—Appeals—Complaints.*

We have now come to that part of the History of New Hampshire, in which may be seen, operating in a smaller sphere, the same spirit of intrigue which has frequently influenced the conduct of princes, and determined the fate of nations. Whilst on the one hand, we see Massachusetts stiffly asserting her chartered claims, and looking with contempt on the small province of New Hampshire, over which she had formerly exercised jurisdiction, we shall see, on the other hand, New Hampshire aiming at an equal rank, and contending with her for a large portion of territory; not depending solely on argument, but seeking her refuge in the royal favour, and making interest with the servants of the crown. Had the controversy been decided by a court of law, the claims of Massachusetts would have had as much weight as those of an individual, in a case of private property; but the question being concerning a line of jurisdiction, it was natural to expect a decision agreeable to the rules of policy and convenience; especially where the tribunal itself was a party concerned.

It must be observed, that the party in New Hampshire, who were so earnestly engaged in the establishment of the boundary lines, had another object in view, to which this was subordinate. Their avowed intention was to finish a long controversy which had proved a source of inconvenience to the people who resided on the disputed lands, or those who sought an interest in them; but their secret design was to displace Belcher, and obtain a governor who should have no connexion with Massachusetts. To accomplish the principal, it was necessary that the subordinate object should be vigorously pursued. The government of New Hampshire, with its limited salary, was thought to be not worthy the attention of any gentleman; but if the lines could be extended on both sides, there would be at once an increase of territory and a prospect of speculating in landed property; and in future there would be an increase of cultivation, and consequently of ability to support a governor.

The people were told that the lands would be granted to them; and by this bait they were induced to favour the plan; whilst the ministry in England were flattered with the idea of an increase of crown influence in the plantations.

The leading men in Massachusetts were aware of the views of those in New Hampshire, and determined to guard against them. They presumed, that a line of jurisdiction would not affect property; and therefore endeavoured to secure the lands to themselves, by possession and improvement, as far as it was practicable. The same idea prevailed among

the governor's friends in New Hampshire. They perceived, that a tract of wilderness on the north eastern side of Merrimack river, and the ponds which flow into it, must doubtless fall into New Hampshire. For these lands they petitioned the governor, and a charter was prepared, in which this whole tract, called King's Wood, was granted to them. It contained all the lands not before granted between the bounds of New Hampshire on the south-west and north-east; which, according to the ideas of those concerned, would have been sufficient for about four large townships.

Governor Belcher had a difficult part to act. He was at the head of two rival provinces; he had friends in both, who were seeking their own as well as the public interest: he had enemies in both, who were watching him, eager to lay hold of the most trivial mistake, and magnify it to his disadvantage. His own interest was to preserve his commission, and counteract the machinations of his enemies; but as the settlement of the line, and the removing of him from his office, were carried on at the same time, and by the same persons, it was difficult for him to oppose the latter, without seeming to oppose the former. Besides, Mr. Wilks, the agent of Massachusetts, was well known to be his friend; and when it was found necessary to increase the number, one of them was his brother, Mr. Partridge. On the other hand, Mr. Rindge and Mr. Thomlinson were his avowed enemies. There was also a difference in the mode of appointing these agents. Those of Massachusetts were constituted by the council and representatives, with the governor's consent. Those of New Hampshire were chosen by the representatives only, the council nonconcurring in the choice; which, of course, could not be sanctioned by the governor's signature, nor by the seal of the province.

(1732.) When the petition which Rindge presented to the king, had been referred to the board of trade, and a copy of it given to Wilks, to be sent to his constituents, it became necessary that they should instruct him. Their instructions were designedly expressed in such ambiguous terms, that he was left to guess their meaning, and afterwards blamed for not observing their directions. His embarrassment on this occasion, expressed in his petition and counter-petition, to the board of trade, protracted the business, and gave it a complexion unfavourable to his constituents, but extremely favourable to the design of New Hampshire.

(1733.) To bring forward the controversy, Parris, the solicitor for the agents of New Hampshire, moved a question, 'From what part of Merrimack river the line should begin?' The board of trade referred this question to the attorney and solicitor general, who appointed a day to hear counsel on both sides. The counsel for New Hampshire insisted that the line ought to begin three miles north of the mouth of the Merrimack. The counsel for Massachusetts declared that in their opinion, the solution of this question would not determine the controversy, and therefore declined saying any thing upon it. (1734.) The attorney and solicitor reported, that "whether this were so or not, they could not judge; but as the question had been referred to them, they were of opinion, that according to the charter of William and Mary, the dividing line ought to be taken from three miles north of the mouth of Merrimack, where it runs into the sea." Copies of this opinion were given to each party; and (1735) the lords of trade reported, that the king should appoint commissioners, from the neighbouring provinces, to

mark out the dividing line. This report was approved by the lords of council.

Much time was spent in references, messages, and petitions, concerning the adjustment of various matters; and at length (1737) the principal heads of the commission were determined. The first was, that the commissioners should be appointed from among the counsellors of New York, New Jersey, Rhode Island, and Nova Scotia. These were all royal governments except Rhode Island; and with that colony, as well as New York, Massachusetts had a controversy respecting boundaries. Connecticut, though proposed, was designedly omitted, because it was imagined that they would be partial to Massachusetts, from the similarity of their habits and interests. The other points were, that twenty commissioners should be nominated, of whom five were to be a quorum; that they should meet at Hampton, in New Hampshire, on the 1st of August, 1737; that each province should send to the commissioners, at their first meeting, the names of two public officers, on whom any notice, summons, or final judgment might be served; and at the same time should exhibit, in writing, a plain and full statement of their respective claims, copies of which should be mutually exchanged; and that if either province should neglect to send in the names of their officers, or the full statement of their demands, at the time appointed, then the commissioners should proceed *ex parte*. That when the commissioners should have made and signed their final determination, they should send copies to the public officers of each province; and then should adjourn for six weeks, that either party might enter their appeal.

These points being determined, the board of trade wrote letters to Belcher, enclosing the heads of the proposed commission, and directing him to recommend to the assemblies of each province to choose their public officers and prepare their demands by the time when the commissioners were to meet. These were accompanied with letters to the governors of the several provinces from which the commissioners were elected, informing them of their appointment. The letters were delivered to Parris, and by him to Thomlinson, to be sent by the first ship to America. Those to Massachusetts and New Hampshire were directed, the one to Mr. Belcher, by name, as governor of Massachusetts; the other to the commander in chief, resident in New Hampshire; and it was required that the delivery of the letters should be certified by affidavit. The design of this singular injunction was, that Dunbar, if present, should receive the letter, and call the assembly of New Hampshire immediately; and that if Belcher should forbid or hinder it, the blame of the neglect should fall on him. At the same time, another letter respecting a petition of a borderer on the line, and containing a reprimand to Belcher, was sent in the same manner, to be delivered by Dunbar into Belcher's hands. These intended affronts both failed of their effect; Dunbar having, before the arrival of the letters, taken his passage to England.

The anxiety of Thomlinson to have the earliest notice possible of the intended commission sent to New Hampshire, led him not only to forward the public letters, but to send copies of all the transactions to his friends there. In a letter to Wiggin and Rindge (the committee who corresponded with him) he advised them to make the necessary preparations as soon as possible, to act in conformity to the commission and instructions; and even went so far as to nominate the persons whom they

should appoint to manage their cause before the commissioners.

These papers were communicated to the assembly at their session in March; and at the same time the governor laid before them a copy of the report of the board of trade, in favour of a commission which had been made in the preceding December. In consequence of which the assembly appointed a committee of eight, namely, Shadrack Walton, George Jaffrey, Jotham Odiorne, Theodore Atkinson, who were members of the council; and Andrew Wiggin, John Rindge, Thomas Packer, and James Jaffrey, who were members of the house. They were empowered "to prepare witnesses, pleas and allegations, papers and records, to be laid before the commissioners; to provide for their reception and entertainment, and to draw upon the treasurer for such supplies of money as might be needful." This appointment was made by the united voice of the council and representatives, and consented to by the governor; and though it was made three weeks before the reception of the letters from the lords of trade, directing the appointing of public officers and preparing a statement of claims; yet it was understood to be a full compliance with the orders and expectations of the government in England.

The same day on which this order passed, the governor prorogued the assembly to the 6th of July; and on the 20th of June he prorogued it again to the 4th of August.

The letters respecting the commission were delivered to Mr. Belcher on the 22nd of April, and he acknowledged the receipt of them, in a letter to the board of trade on the 10th of May. The commission itself was issued on the 9th of April, and sent to Mr. Rindge, who kept it till the meeting of the commissioners, and then delivered it to them. The expense of it, amounting to 135*l.* sterling, was paid by the agents of New Hampshire.

At the spring session of the general court in Massachusetts, the governor laid before them the letter from the lords of trade, enclosing an order from the privy council, and recommended to them to stop all processes in law respecting any disputes of the borderers till the boundaries should be determined. During the same session, he reminded them of the order, and desired them to consider it; telling them that he had no advice of the appointment of commissioners. His meaning was, that the commission itself, in which they were named, had not been sent to him; nor was he actually informed that it was in America till after he had prorogued the assemblies of both provinces to the 4th of August. In obedience to the royal order, the assembly of Massachusetts appointed Josiah Willard, secretary, and Edward Winslow, sheriff of Suffolk, to be the two public officers; on whom, or at whose places of abode, any notice, summons, or other process of the commissioners, might be served.

On the day appointed, eight of the commissioners, namely, William Skene Prest, Erasmus James Phillips, Otho Hamilton, from Nova Scotia; and Samuel Vernon, John Gardner, John Potter, Ezekiel Warner, and George Cornel, from Rhode Island; met at Hampton. They published their commission, opened their court, chose William Parker their clerk, and George Mitchel, surveyor. On the same day, the committee of eight, who had been appointed by the assembly of New Hampshire, in April, appeared, and delivered a paper to the court, reciting the order of the king for the appointment of two public officers, alleging that the assembly

had not been convened since the arrival of that order; but, that there should be no failure for want of such officers, they appointed Richard Waldron secretary, and Eleazer Russell sheriff. They also delivered the claim and demand of New Hampshire, in the following words: "That the southern boundary of said province should begin at the end of three miles north from the middle of the channel of Merrimack river, where it runs into the Atlantic Ocean; and from thence should run, on a straight line, west, up into the main land (toward the south sea) until it meets his majesty's other governments. And that the northern boundary of New Hampshire should begin at the entrance of Piscataqua harbour, and so pass up the same into the river of Newichwannock, and through the same into the farthest head thereof, and from thence northwestward (that is, north, less than a quarter of a point westwardly), as far as the British dominion extends; and also the western half of the Isles of Shoals, we say lies within the province of New Hampshire."

The same day, Thomas Berry and Benjamin Lynde, counsellors of Massachusetts, appeared and delivered the vote of their assembly, appointing two public officers, with a letter from the secretary, by order of the governor, purporting that, "at the last rising of the assembly there was no account that any commission had arrived; that the assembly stood prorogued to the 4th of August; that a committee had been appointed to draw up a state of their demands, which would be reported at the next session, and therefore praying that this short delay might not operate to their disadvantage." Upon this, the committee of New Hampshire drew up and presented another paper, charging the government of Massachusetts with "great backwardness, and aversion to any measures, which had a tendency to the settlement of this long subsisting controversy; and also charging their agent, in England, with having used all imaginable artifices, to delay the issue; for which reason, the agent of New Hampshire had petitioned the king to give directions that each party might be fully prepared to give in a state of their demands, at the first meeting of the commissioners; which direction they had faithfully observed, to the utmost of their power; and as the assembly of Massachusetts had made no seasonable preparation, they did, in behalf of New Hampshire, except and protest against any claim or evidence being received from them, and pray the court to proceed *ex parte* agreeably to the commission."

It was alleged in favour of Massachusetts, that, by the first meeting of the commissioners could not be meant the first day, but the first session. The court understood the word in this sense, and resolved that Massachusetts should be allowed time, till the eighth of August, and no longer, to bring in their claims; and that if they should fail, the court would proceed *ex parte*. The court then adjourned to the eighth day.

The assembly of New Hampshire met on the fourth; and the secretary, by the governor's order, prorogued them to the tenth, then to meet at Hampton Falls. On the same day, the assembly of Massachusetts met at Boston, and received the report of the committee, which had drawn up their claim, and dispatched expresses to New York and New Jersey, to expedite the other commissioners. The assembly then appointed another committee to support their claims, consisting of Edmund Quincy, William Dudley, Samuel Welles, Thomas Berry, and Benjamin Lynde, of the council; and Elisha Cooke, Thomas Cushing, Job Almy, Henry

Rolfe, and Nathaniel Peaslee, of the house. Cooke died while the commissioners were sitting; in consequence of which, and of the absence of another member, they on the 13th appointed John Read and Robert Auchmuty. The governor adjourned the assembly to the 10th, then to meet at Salisbury. Thus the assemblies of both provinces were drawn within five miles of each other; and the governor declared, in his speech, that he would "act as a common father to both."

The claim of Massachusetts being prepared, was delivered to the court on the day appointed. After reciting their grant and charters and the judicial determination in 1677, they asserted their "claim and demand, still to hold and possess, by a boundary line on the southerly side of New Hampshire, beginning at the sea, three English miles north from the Black Rocks, so called, at the mouth of the river Merrimack, as it emptied itself into the sea sixty years ago; thence running parallel with the river, as far northward as the crotch or parting of the river; thence due north, as far as a certain tree, commonly known for more than seventy years past by the name of Endicot's tree; standing three miles northward of said crotch or parting of Merrimack river, and thence due west to the South Sea, which (they said) they were able to prove, by ancient and incontestible evidence, were the bounds intended, granted, and adjudged to them; and they insisted on the grant and settlement as above said, to be conclusive and irrefragable."

"On the northerly side of New Hampshire, they claimed a boundary line, beginning at the entrance of Piscataqua harbour, passing up the same to the river Newichwannock, through that to the farthest head thereof, and from thence a due north west line till 120 miles from the mouth of Piscataqua harbour be finished."

The court ordered copies of the claims of each province, to be drawn and exchanged; and having appointed Benjamin Rolfe of Boston, an additional clerk, they adjourned to the tenth day of the month.

On that day both assemblies met at the appointed places. A cavalcade was formed from Boston to Salisbury, and the governor rode in state, attended by a troop of horse. He was met at Newbury-ferry by another troop, who, joined by three more at the supposed divisional line, conducted him to the George tavern, at Hampton Falls, where he held a council, and made a speech to the assembly of New Hampshire. Whilst both assemblies were in session, the governor, with a select company, made an excursion of three days to the Falls of Amuskeag, an account of which was published in the papers, and concluded in the following manner: "His Excellency was much pleased with the fine soil of Chester, the extraordinary improvements at Derry, and the mighty falls at Skeag."

In the speech which the governor made to the assembly of New Hampshire, he recommended to them to appoint two officers, agreeably to his majesty's commission. The assembly appeared to be much surprised at this speech, and in their answer said "that the committee before appointed had already given in the names of two officers, which they approved of; for, had it not been done, at the first meeting of the commissioners they might have proceeded *ex parte*."

Considering the temper and views of Mr. Belcher's opponents, this was rather unfortunate for him so soon after his profession of being "a common father to both provinces." For if the commit-

tee had a right to nominate the two officers, then his recommendation was needless; if they had not, it might justly be asked, why did he not call the assembly together on the 6th of July, to which day they had been prorogued? The excuse was, that he did it to avoid any objection which might be made to the regularity of their appointment; and to give them an opportunity to ratify and confirm it. The truth was, that Mr. Belcher highly resented the conduct of the committee of New Hampshire, who concealed the commission, and never communicated it to him in form. Had he been aware of the use which his enemies might make of his rigid adherence to forms, when he could not but know the contents of the commission, and the time when it must be executed, prudence might have dictated a more flexible conduct. They did not fail to make the utmost advantage of his mistakes, to serve the main cause which they had in view.

The expresses which were sent by Massachusetts, to call the other commissioners, had no other effect than to add to the number Philip Livingstone, from New York; who, being senior in nomination, presided in the court.

To prevent the delay which would unavoidably attend the taking of plans from actual surveys, the commissioners recommended to both assemblies to agree upon a plan by which the pretensions of each province should be understood; but as this could not be done, a plan drawn by Mitchel was accepted, and when their result was made this plan was annexed to it. They then proceeded to hear the answers, which each party made to the demands of the other, and to examine witnesses on both sides. Neither party was willing to admit the evidence produced by the other, and mutual exceptions and protests were entered. The points in debate were, whether Merrimack river at that time emptied itself into the sea, at the same place where it did sixty years before? Whether it bore the same name from the sea up to the crotch; and whether it were possible to draw a parallel line, three miles northward, of every part of a river, the course of which was, in some places, from north to south?

With respect to the boundary line, between New Hampshire and Maine; the controverted points were, whether it should run up the middle of the river, or on its north-eastern shore; and whether the line, from the head of the river, should be due north-west, or only a few degrees westward of north.

The grand point on which the whole controversy respecting the southern line turned, was, whether the charter of William and Mary, granted to Massachusetts, all the lands which were granted by the charter of Charles the First? On this question, the commissioners did not come to any conclusion. Reasons of policy might have some weight, to render them indecisive; but, whether it were really so or not, they made and pronounced their result in the following words. In "pursuance of his majesty's commission, the court took under consideration, the evidences, pleas, and allegations offered and made by each party; and, upon mature advisement on the whole, a doubt arose in point of law; and the court thereupon came to the following resolution. That if the charter of King William and Queen Mary grants to the province of Massachusetts bay all the lands granted by the charter of King Charles the First, lying to the northward of Merrimack river; then the court adjudge and determine, that a line shall run, parallel with the said river, at the distance of three English miles, north from the

mouth of the said river, beginning at the southerly side of the black rocks, so called, at low water mark, and from thence to run to the crotch, where the rivers of Pemigewasset and Winnipiseogee meet, and from thence due north three miles, and from thence due west, toward the south sea, until it meets with his majesty's other governments; which shall be the boundary or dividing line, between the said provinces of Massachusetts and New Hampshire, on that side. But, if otherwise, then the Court adjudge and determine, that a line on the southerly side of New Hampshire, beginning at the distance of three miles north, from the southerly side of the Black Rocks aforesaid, at low water mark, and from thence running due west, up into the main land, toward the south sea, until it meets with his majesty's other governments, shall be the boundary line between the said provinces, on the side aforesaid: which point in doubt the court humbly submit to the wise consideration of his most sacred majesty, in his privy council; to be determined according to his royal will and pleasure.

"As to the northern boundary, between the said provinces, the court resolve and determine; that the dividing line shall pass through the mouth of Piscataqua harbour, and up the middle of the river of Newichwanock, (part of which is now called Salmon Falls) and through the middle of the same, to the farthest head thereof, and from thence north, two degrees westerly, until 120 miles be finished, from the mouth of Piscataqua harbour aforesaid; or until it meets with his majesty's other governments; and that the dividing line shall part the Isles of Shoals, and run through the middle of the harbour, between the islands, to the sea, on the southerly side; and that the south-westerly part of said islands shall lie in, and be accounted part of, the province of New Hampshire; and that the north-easterly part thereof shall lie in, and be accounted part of, the province of Massachusetts bay; and be held and enjoyed by the said provinces respectively, in the same manner as they now do, and have heretofore held and enjoyed the same.

"And the court do further adjudge that the cost and charge arising by taking out the commission, and also of the commissioners and their officers, viz. the two clerks, surveyor, and waiter, for their travelling expenses, and attendance in the execution of the same, be equally borne by the said provinces."

Thus this long depending question, after all the time, expense, and argument which it had occasioned, remained undecided.

When this evasive decree was published the commissioners adjourned to the 14th of October, to receive appeals; and the same day, the governor, at the request of the council only, adjourned the assembly of New Hampshire to the 12th of October. By this sudden adjournment it was impossible for them to obtain a copy of the decree before their dispersion, or to frame an appeal till two days before the time when it must have been presented. The assembly of Massachusetts continued their session at Salisbury five days longer. On the 5th of September they obtained copies of the royal commission, and the decree of the commissioners, which they entered on their journal. On the 6th they agreed upon an appeal; and on the 7th, at the united request of both houses, the governor adjourned them to the 12th of October.

The sudden adjournment of the assembly of New Hampshire, when that of Massachusetts continued their session, was unfortunate for governor Belcher;

and gave his opponents another advantage to pursue their grand design against him. The reasons assigned for it were, that the report of the commissioners being special, the whole matter would of course come before the king, without any appeal from either province. For this reason a majority of the council were against an appeal. That as the committee appointed in April had the same power to act in the recess as in the session of the assembly; and as the council were against appealing, so the appeal could not be made by the whole assembly; and therefore the governor thought that the best service which he could do to the province, was to adjourn the assembly, and leave the whole business in the hands of the committee. With respect to the short time between the 12th and 14th of October, it was observed, that the claim of New Hampshire was contained in a few lines, and their exceptions to the judgment of the commissioners might be prepared in a quarter of an hour.

Both assemblies met again, in the same places, at the appointed time. The representatives of New Hampshire having, by the help of their committee, in the recess of the assembly, obtained the papers, framed their exceptions, and sent a message to know if the council were sitting; but the council being determined against an appeal, had met and adjourned, without doing any business. The house therefore was reduced to the necessity of desiring the commissioners to receive their appeal, without the concurrence of the governor and council. The appeal from the assembly of Massachusetts was presented in due form, authenticated by the speaker, secretary, and governor. Their committee entered a protest against the appeal of New Hampshire, because it was not an act of the whole legislature; nevertheless, the commissioners received it, and entered it on their minutes. Having received these appeals, the commissioners adjourned their court to the 1st of August in the next year, but they never met again.

The assembly of Massachusetts appointed Edmund Quincy and Richard Partridge, agents, to join with Francis Wilks, their former agent, in the prosecution of their appeal before the king; and raised the sum of two thousand pounds sterling, to defray the expense.

When the representatives of New Hampshire proposed the raising of money, to prosecute their appeal, the council nonconcurrent the vote. Their reasons were, that the appeal was not an act of the council; that they had no voice in the appointment of the agent; and, that at the beginning of the affair, the house had declared to the council, that the expense of it would be defrayed by private subscription.

At this session of the Massachusetts assembly Mr. Belcher put them in mind that he had suffered in his interest by the continually sinking value of their bills of credit, in which his salary was paid; a point which he had often before urged them to consider. In answer to this message, they made him a grant of 333*l.* 6*s.* 8*d.* in bills of the new tenor. The same day they made a grant of the like sum to the president of Harvard College. Both of these sums appear to have been justly due: and at any other time no exception could have been made to either. But, because the grant to the governor happened to be made at the same time with the grant of 2000*l.* sterling to the agents, his opponents pretended that he received it as a bribe from the assembly of Massachusetts, for favouring their cause.

The appeal of New Hampshire from the judgment of the commissioners was founded on the following reasons. With respect to the southerly line; because it made the Black Rocks, lying in a bay of Merrimack river, the point from which the three miles were to be measured; which point was three quarters of a mile north of the river's mouth; and because a line parallel with the river was not only impracticable, but founded on the old charter, which had been vacated; and, if practicable, yet ought not to go farther than the river held a westerly course. With respect to the northern boundary, they objected to that part of the judgment only which directed the line to run up the middle of the river; alleging that the grant to Gorges was only of land, between that river and Kennebec; and that New Hampshire had always been in possession of the whole river, and had maintained a fortress which commanded its entrance.

The appeal of Massachusetts was grounded on the following reasons. That by the charter of William and Mary, the old colony of Massachusetts was re-incorporated without any exception; that this charter empowered the governor and general assembly to grant all lands, comprehended in the old colony; that the committee of New Hampshire acknowledged that New Hampshire lay without the late colony of Massachusetts, by declaring that it was between that and the province of Maine; that the west line, claimed by New Hampshire, would cross Merrimack river, thirty miles from its mouth, and exclude forty miles of the said river out of Massachusetts, though declared by both charters to be in it. They objected to extending the line of New Hampshire till it should meet with his majesty's other governments; because according to Mason's grant, New Hampshire could extend no farther than sixty miles from the sea. With respect to the northern boundary, they objected to a line north, two degrees westwardly, alleging that it ought to be on the northwest point; they also excepted to the protraction of this line, till it should meet with his majesty's other governments; alleging that it ought to extend no farther than one hundred and twenty miles, the fixed limits of the province of Maine.

It was unfortunate for Massachusetts that their committee had brought Mason's grant in evidence to the commissioners, and again recited it in their appeal; for a line of sixty miles from the sea would cross Merrimack river long before the similar curve line, for which they contended could be completed: besides, Mason's grant extended to Naumkeag, which was much further southward than they would have been willing to admit.

It may seem curious and unaccountable to most readers, that the commissioners should determine the northern, or rather eastern bounds of the northern part of New Hampshire, to be a line drawn north, two degrees westerly, from the head of Salmon-fall river, when the express words of Gorges' patent are "north-westward." The agents for Massachusetts, when this claim was put in by New Hampshire, could hardly think it was seriously meant, when it was alleged that by northwestward must be understood, north a little westward. The only ostensible reason given for this construction was, that if a north-west line had been intended, then a southeast line, drawn from the mouth of the harbour, would leave all the Isles of Shoals in New Hampshire; whereas, the dividing line runs between them. On the other side, it might have been said, with equal propriety, that a line drawn south, two degrees east, from the

mouth of the harbour, would leave all these islands in Massachusetts. For the point where the islands are divided bears south, twenty-nine degrees east from the middle of the harbour's mouth; the variation of the needle being six degrees west.

When this affair was again agitated in England, the agents of Massachusetts obtained a certificate from the learned Dr. Halley, that a line northward ought to run forty-five degrees westward of the north point. This was demonstratively true, but there were political reasons for dissenting from mathematical demonstration. One of them is thus expressed, in a private letter from a committee of the assembly, to their agent Thomlinson. "We hope that the northern line will be but a few degrees to the westward of north, that his majesty's province may include the greatest number, and best mast trees for the royal navy." Though this thought might never have occurred to a mathematician, yet some of the commissioners were doubtless acquainted with it; and it was too important not to have been communicated to the king's ministers. Another political reason of dissent was, that by enlarging New Hampshire, there would be a better prospect of obtaining a distinct governor, which was the grand object in view.

(1738.) The new agent of Massachusetts, Edmund Quincy, died of the small pox, soon after his arrival in London. The affair was then left in the hands of Wilks and Partridge, neither of whom understood so much of the controversy as Thomlinson, who was also far superior to them in address. In his letters to his friends in New Hampshire, he frequently blames them for their negligence in not sending to him the necessary papers in proper season; and when sent, for the want of correctness and regularity in them: but their deficiency was abundantly compensated by the dexterity of his solicitor Parris, who drew up a long "petition of appeal," in which all the circumstances attending the whole transaction from the beginning were recited and coloured in such a manner as to asperse the governor and assembly of "the vast, opulent, overgrown province of Massachusetts;" while "the poor, little, loyal, distressed province of New Hampshire," was represented as ready to be devoured, and the king's own property and possessions swallowed up, by the boundless rapacity of the charter government. Concerning the manner in which this masterly philippic was framed, and the principal object at which it was directed, there can be no better evidence, than that which is contained in a letter, written by Parris to Thomlinson, and by him sent to New Hampshire. "Two nights ago, I received a heap of papers from you about the lines; and have been four times to the colony office and board of trade, to discover what I could in this imperfect affair, but cannot see the case till after Tuesday next; notwithstanding which, I have as well as I can, without proper materials, drawn up a long petition of appeal to his majesty; and as the Massachusetts have not yet presented theirs, I send you the draught of it, and hope we shall have our appeal, as well as the petition, from the New Hampshire assembly, in, before the Massachusetts get theirs in. Had your principals considered the great consequence of being first, surely in all this time they would have sent you a copy of their proceedings, in order to have enabled us to be first; but, as it is, I am forced to guess at matters, and affirm facts at adventure, or upon dubious passages in letters, which is a sad way of proceeding, and I wish we do not mistake some facts.

They oblige us to make brick without straw. Above all, why did they not send a copy of their own appeal? For want of it, I have been forced to guess what that appeal was, from loose passages in Mr. A's letters. Beg them immediately to order an exact copy to be made of all their votes, from March to October last. Had these votes come over regularly and authentically, his Excellency would have been shaken quite down in a few weeks by them. You'll observe, I have laid it on him pretty handsomely, in my petition to the king."

Thus the petition of appeal became a petition of complaint against the governor and assembly of Massachusetts: copies were delivered to their agents, and the governor was ordered to make answer to the allegations against him; at the same time Thomlinson advised his friends in New Hampshire, to prepare their proofs as silently as possible; and by no means to give any offence to the governor; assuring them of the favourable disposition of several lords of the privy council, as well as the board of trade, toward their cause; and that they had need to be in no pain, about the event.

The death of Mr. Quincy at this critical period, and the length of time necessary to prepare and send over answers to the complaint which Parris had thus artfully drawn up, obliged the agents of Massachusetts to suspend the presenting of their appeal for several months.

*Revival of Mason's claim—Accusations against Belcher, real and forged—Royal censure—Final establishment of the lines—Hutchinson's agency—Spanish war—Belcher's zeal and fidelity—His removal—Examination of his character.*

The spirit of intrigue was not confined to New Hampshire; for the politicians of Massachusetts, by bringing into view the long dormant claim of Mason, had another game to play, besides proving the small extent of New Hampshire. They perceived that the line, whether settled according to their own demand or that of New Hampshire, would cut off a considerable part of several of their townships; and though they had, by their agent, obtained a promise, that private property should not be affected by the line of jurisdiction, yet they thought it best to have some other security.

For what reason the government of Massachusetts did not purchase the province of New Hampshire from Robert Mason, at the same time (1677) that they purchased the province of Maine, from the heirs of Gorges, we are not now able precisely to determine. It is probable that the purchase might then have been easily made, and much controversy prevented. When it was sold, by John and Robert Mason, to Samuel Allen, (1691) the bargain was made in England; and the lands were, by fiction of law, supposed to be there; by which means, the process respecting the fine and recovery was carried on in the court of King's Bench. During the lives of the two Masons, no notice was taken of the supposed flaw; and the sale to Allen was not disputed. The brothers returned to America. John the elder, died without issue. Robert married in New England and had a son; who, after the death of his father, conceived hopes of invalidating Allen's purchase, and regaining his paternal inheritance, which it was supposed could not have been transferred by his father and uncle, for any longer term, than their own lives. It was also said that the fiction, by which the lands were described, to be within the jurisdiction of the courts of Westminster Hall, rendered the

proceedings void; and therefore that the entail was still good. Filled with these ideas, he made strenuous exertions, to acquire money, to assist him in realizing his expectations; but died in 1718, at the Havanna, whither he had made a voyage with this view. His eldest son, John Tufton, was bred to a mechanical employment in Boston; and came of age about the time in which the controversy between the two provinces was in agitation. He inherited the enterprising spirit of his ancestors, and the public controversy called his attention to his interest. On this young man (1738) the politicians cast their eyes; and having consulted counsel on the validity of his claim, and the defect of the transfer, they encouraged him to hope, that this was the most favourable time to assert his pretensions. Had they purchased his claim at once, they might doubtless have obtained it for a trifle, and have greatly embarrassed the views of their antagonists. Instead of such a stroke of liberal policy, they treated with him, concerning the release of all those lands, in Salisbury, Amesbury, Haverhill, Methuen and Dracut, which the line would cut off; and, for 500*l.* currency, obtained a quit-claim of 23,675 acres. They also admitted his memorial to the assembly; in which he represented to them, that his interest might probably be affected, by the final determination of the line, and praying that the province would be at the expense of his voyage to England, to take proper measures for securing it. To this they consented, on condition that he should prove his descent from Capt. John Mason, the original patentee. Depositions were accordingly taken in both provinces, to which the public seals were affixed; and they put him under the direction of their agents, ordering his expenses to be paid, as long as they should judge his presence in England serviceable to their views.

The agents stated his case to their counsel, the king's solicitor, and asked his opinion how they should proceed; but he advised them not to bring him into view, lest the lords should think it an artifice, intended to perplex the main cause. On this consideration, they dismissed him from any farther attendance; and paid his expenses, amounting to above 90*l.* sterling.

Such a transaction, though conducted as privately as the nature of the thing would admit, did not escape the vigilance of Thomlinson; who, on finding Mason detached from the agents of Massachusetts, entered into an agreement with him, for the release of his whole interest, to the assembly of New Hampshire; in consideration of the payment of 1000*l.* currency of New England. This manœuvre served to strengthen the interest of New Hampshire, and Thomlinson was much applauded for his dexterity. He had the strongest inducement to continue his efforts in their favour; for no less than 1,200*l.* sterling had been already expended, in prosecuting the affair of the line; which sum had been advanced by himself and Rindge. There was no prospect of repayment, unless the province could be put under a separate governor; and this point could not be obtained, till the removal of Belcher.

The agents of Massachusetts, after a long delay, presented their appeal; and followed it with a petition, for the benefit of their former protests, against the New Hampshire appeal; objecting also to its regularity, as it contained matters of personal complaint against the governor; which had been no part of the records of the commissioners. Thomlinson, finding this new petition thrown in his way, applied for its being immediately heard; and, at the hear-

ing, it was dismissed but without prejudice to the agents of Massachusetts being permitted to object against the regularity of the New Hampshire appeal, when it should come to a hearing. Such were the complaints against the governor, and the importunity of his adversaries to prosecute them, that it was necessary to hear and dispatch them, before the appeal respecting the lines could be brought forward.

It must be remembered, that Mr. Belcher had enemies, in his government of Massachusetts as well as New Hampshire, who united their efforts to obtain his removal from both; but, as they supposed him more vulnerable in his capacity of governor of New Hampshire, so they joined in strengthening the complaints from that quarter, as a preparatory step, to effect his complete removal. Whilst he was engaged in preparing his defence against the charges, in the petition of appeal, other attacks were meditating, which were conducted with such silence, that it was impossible for him to guard against their effects. (1739.) One of these was a letter, purporting to have been written at Exeter, subscribed by five persons, said to be inhabitants of that town, and directed to Sir Charles Wager, first lord of the Admiralty. In this letter it was said, that "finding his lordship had ordered the Judge Advocate of the Court of Admiralty to inquire into the riot, which had been committed there, (1734), and the assault of the surveyor and his officers; and fearing to be brought into trouble on that account, they would confess the whole truth. That they had been indulged by former surveyors, in cutting all sorts of pine trees, till the appointment of Colonel Dunbar to that office; who had restrained and prosecuted them; but that governor Belcher had privately given them encouragement to go on; by assuring them that they had the best right to the trees; that the laws were iniquitous, and ought not to be regarded; that although he must make a shew of assisting that Irish dog of a surveyor; yet he would so manage it with the council and justices, who were under his influence, that they should not suffer; and further to encourage them, he had made several of them justices of the peace, and officers of militia. That he had also told them not to fear any inquiry into their conduct; for that he would write to the board of admiralty in their favour; and boasted, that he had such an influence over their lordships, that they would believe every thing which he should say. That as they had now confessed the truth, they hoped to be forgiven, and not prosecuted in the admiralty court; and begged that this information might be kept secret till the governor's removal, which they hoped would soon be effected. That whatever might have been said to the contrary, they could assure him that the province of New Hampshire contained the largest number of pine trees, and of the best quality, in all his majesty's American dominions; and, for further information, they referred his lordship to several persons then in London, particularly Mr. Wentworth and Mr. Waldo; the latter of whom was agent to Mr. Gulston, for procuring masts for the royal navy."

On the receipt of this letter, Sir Charles, with the candour of a gentleman, sent a copy of it to Mr. Belcher; who immediately ordered an inquiry; and it was proved to be an entire forgery; four of the persons whose names were subscribed utterly disclaimed it, and the fifth was not to be found; no such person being known in the town of Exeter. The evidence of this forgery was transmitted to England with all possible expedition; but not till it

had made an impression to the disadvantage of the governor.

Another artifice used against him was a memorial of Gulston, the navy agent, and others, complaining of the defenceless state of the province; that the fort lay in ruins, and that the militia were without discipline, notwithstanding the probability of a war. This memorial was so artfully drawn as to throw the blame of the neglect on the governor, without mentioning his name; which was intended to prevent his obtaining a copy, and being allowed time to answer. Another complaint was made, in the form of a letter, respecting the grant of the tract called Kingswood; in which he was represented as partial to his friends, in giving them an exclusive right to the whole of that territory, which they deemed the unappropriated lands of the province. Several parts of his administration were also complained of, and in particular the infrequency of his visits to New Hampshire. This letter was signed by six members of the council and a majority of the representatives.

Gulston's memorial was presented to the lords of council, and by them referred to the board of trade, accompanied by the letter; and though Mr. Belcher's brother and son applied for copies and time to answer, the request was evaded, and a report was framed in favour of putting New Hampshire under a separate governor. When this report came before the privy council, Lord Wilmington, the president, ordered it back again, that the governor might have that justice which his agents had asked. By this means he had an opportunity to answer in his defence, that without money the fort could not be repaired—that it was not in his power to tax the people—that he had frequently applied to the assemblies for money to repair the fort, to which they had constantly answered, that the people were too poor to be taxed, and had solicited him to break through his instructions, and allow them to issue paper money, without any fund for its redemption—that the militia had always been trained according to law—and that he had constantly visited New Hampshire, and held an assembly, twice in the year, unless prevented by sickness, for which he appealed to the journals. To corroborate these pleas, the governor's friends procured five petitions in his favour and praying for his continuance, signed by about 500 people. The petitions, however, did not express the sense of the majority, who had been persuaded into a belief that they should receive much benefit by a separate governor, and accordingly a counter petition being circulated, was signed by about seven hundred of the inhabitants.

Things being thus prepared, the complaints were brought to a hearing before the lords of council, who reported to the king, "that governor Belcher had acted with great partiality by proroguing the assembly of New Hampshire from the 6th of July, 1737, to the 4th of August following, in disobedience to his majesty's order in council, which had been transmitted to him by the lords of trade, and which was proved to have been delivered to him in due time; and also by farther proroguing the said assembly from the 2nd of September, 1737, to the 13th of October; whereby the province were deprived of the time intended by his majesty's said order to be allowed them to make a proper and regular appeal; thereby endeavouring to frustrate the intention of his majesty's commission." This report was approved by the king; and from this time it may be concluded that Mr. Belcher's removal from the

government of New Hampshire was seriously contemplated. The grant of Kingswood was also annulled, and he was prohibited from making any other grants of land till the lines should be determined.

(1740.) This censure being passed on the governor, and the complaints being at an end, the way was prepared for a hearing of the appeals from both provinces respecting the lines. Which being had, the determination of this long controversy was made on a plan entirely new. The special part of the decree of the commissioners was set aside, and no regard was had to their doubt, whether the new charter granted all the lands comprehended in the old. It was said that when the first grant was made, the country was not explored. The course of the river, though unknown, was supposed to be from west to east; therefore it was deemed equitable, that as far as the river flowed in that course, the parallel line at three miles distance should extend. But as on the one hand, if by pursuing the course of the river up into the country it had been found to have a southern bend, it would have been inequitable to have contracted the Massachusetts grant; so, on the other hand, when it appeared to have a northern bend, it was equally inequitable to enlarge it. Therefore it was determined, "that the northern boundary of the province of Massachusetts be a similar curve line, pursuing the course of Merrimack river at three miles distance on the north side thereof, beginning at the Atlantic Ocean, and ending at a point due north of Patucket falls; and a straight line drawn from thence due west, till it meets with his majesty's other governments." The other parts of the decree of the commissioners, respecting the northern line and the payment of expenses, were affirmed.

This determination exceeded the utmost expectation of New Hampshire, as it gave them a tract of country 14 miles in breadth, and above 50 in length, more than they had ever claimed. It cut off from Massachusetts 28 new townships, between Merrimack and Connecticut rivers, besides large tracts of vacant land, which lay intermixed, and districts from six of their old towns, on the north side of the Merrimack; and if, as was then supposed, the due west line were to extend to twenty miles east of Hudson's river, the reputed boundary of New York, a vast tract of fertile country, on the western side of Connecticut river was annexed to New Hampshire, by which an ample scope was given, first for landed speculation, and afterward for cultivation, and wealth.

When this determination was known, the politicians of Massachusetts were chagrined and enraged. They talked loudly of injustice, and some of the more zealous proposed trying the merits of the cause upon the words of the charter, before the judges in Westminster-hall, who it was expected would upon their oath and honour reverse the judgment, and tell the king that he had mistaken the meaning of the royal charter. This would, indeed, have been a bold stroke. But a more moderate and pusillanimous scheme was adopted, which was, to send over a new agent to petition the king that he would re-annex to their government the twenty-eight new townships which had been cut off, and the districts of the six old towns. It was also thought prudent that the whole province should not openly appear in the affair, but that petitions should be drawn by the inhabitants of these towns, and that the agent should be chosen by them. Accordingly town meetings were held, petitions were pre-

pared and subscribed, and Thomas Hutchinson was appointed their agent, and sent over to England, where he formed those connexions which afterwards served to raise him to the chair of government in his native province.

About the same time, Governor Belcher procured petition from his six friends, of the council of New Hampshire, to the king, praying that the whole province might be annexed to the government of Massachusetts. This matter had been long in contemplation with these gentlemen, but was now produced at the most unfortunate time which could have been chosen. Their petition was at once rejected; but that from the towns was kept in suspense a long time, till Thomlinson was prepared to answer all the pleas which Hutchinson could advance, and proved too hard an antagonist for him. It was finally dismissed, because it was thought "that it never could be for his majesty's service to annex any part of his province of New Hampshire, as an increase of territory, to Massachusetts; but rather that it would be for the benefit of his subjects there, to be under a distinct government."

Though Belcher's removal was seriously feared by his best friends, yet he had so much interest with some of the lords in high office, that they could not be prevailed with to give him up. The war which had commenced between Britain and Spain afforded him an opportunity to signalize his zeal for the king's service; and he determined to prove himself a faithful servant to the crown in every instance, in hope that a course of time and fidelity might efface the impressions which had been made to his disadvantage.

It being resolved by the British court to undertake an expedition to the island of Cuba, Governor Belcher, agreeably to the orders which he had received from the Duke of Newcastle, issued a proclamation for the encouragement of men who would enlist in the service; "that they should be supplied with arms and clothing, be in the king's pay, have a share of the booty which should be taken, and be sent home at the expiration of their time of service; and that his majesty would order a number of blank commissions to be filled up by the governor, and given to the officers who should command the troops to be raised in the provinces." He afterwards pressed this matter closely, in his speech to the assembly, and urged them to make provision for one hundred men and a transport, to convey them to Virginia, where all the colony troops were to rendezvous, and thence to proceed, under the command of Colonel Gooch, to the place of their destination.

The assembly voted as much as they judged sufficient for this purpose; and the governor appointed a captain, and gave him beating orders; but the commissions and arms not being sent, according to the royal promise, no men could be enlisted in New Hampshire. The governor received commissions and arms for four companies to be raised in Massachusetts; where he could easily have enlisted ten, had he been furnished according to the engagement. To this failure, and not to any want of exertion on his part, in either of his governments, may be ascribed the paucity of troops raised in them; and yet his enemies failed not of blaming him on this account. The representatives of New Hampshire took this occasion to frame a vote, disapproving his administration; and upon this vote, their agent founded another battery, to attack his character.

(1741.) In conformity to the royal determination of the boundaries, orders were given to Belcher to

apply to both his governments, to join in appointing surveyors, to run out, and mark the lines; and that if either should refuse, the other should proceed *ex parte*. The assembly of Massachusetts delayed giving an answer in season, which was construed a denial. The assembly of New Hampshire appointed three surveyors to execute the service, who were commissioned by the governor. They were directed to allow ten degrees for the westerly variation of the needle; and the work was performed in the months of February and March. George Mitchell surveyed and marked the similar curve line, from the ocean, three miles north of Merrimack river, to a station north of Pantucket falls, in the township of Dracut. Richard Hazen began at that station and marked the west line, across Connecticut river, to the supposed boundary line of New York. Walter Bryant began the line, from the head of Salmon-falls river, and marked it about thirty miles; but was prevented from proceeding farther, partly by the breaking up of the rivers, which rendered travelling impracticable, and partly by meeting a company of Indians who were hunting, and took his men for a scouting party. In their return they found on one of the trees, which they had marked, "the figure of a man's hand grasping a sword;" which they interpreted as a signal of defiance from the Indians.

The report of the completion of these lines was one of the last acts of Mr. Belcher's administration. His enemies in both governments were indefatigable in their endeavours to remove him; and by their incessant applications to the ministry; by taking every advantage of his mistakes; by falsehood and misrepresentation; and finally, by the diabolical arts of forgery and perjury, they accomplished their views. He was succeeded in the government of Massachusetts by William Shirley; and in New Hampshire, by Benning Wentworth.

At this distance of time, when all these parties are extinct, and every reader may be supposed impartial; it may seem rather strange, that Governor Belcher should meet with such treatment from the British court, in the reign of George the Second. That Mr. Belcher was imprudent and unguarded, in some instances, cannot be denied. He was indeed zealous to serve his friends and hearken to their advice; but, by this means, he laid himself open to the attacks of his enemies, to whom he paid no court, but openly treated them with contempt. His language to them was severe and reproachful, and he never spared to tell the world what he thought of them.

This provoked them; but they had the art to conceal their resentment, and carry on their designs in silence, till they were ripe for execution. He had by far too mean an opinion of their abilities, and the interest which they had at court; and when he knew that they had the ear of the lords of trade, he affected to think them, "not very mighty lords, nor able to administer life and death." He had a consciousness of the general integrity of his own intentions; and appears to have been influenced by motives of honour and justice; but he was not aware of the force of his own prejudices. It may admit of doubt, whether, considering the extreme delicacy of his situation, it were within the compass of human policy, to have behaved so as to give offence to neither of his provinces, in the management of such a controversy; but it is certain, that his antagonists could fairly fix but one real stigma on his character; and that, when impartially examined, can amount to no more than an imprudent step, at a

critical time, grounded on an undue resentment of an affront; for to suppose that his intention was to frustrate the commission, is inconsistent with the whole tenor of his public declarations and private correspondence. When his enemies met him on fair and open ground, he was always prepared to answer; but it was impossible to guard against their secret attacks. If the cause which they meant to serve was a good one, why did they employ the basest means to effect it?

The cruelty and hardship of his case may appear from the following considerations. He had been one of the principal merchants of New England, but on his appointment to the chair of government, quitted every other kind of business, that he might attend with punctuality and dignity to the duties of his station. By the royal instructions, he was restrained from giving his assent to any grant of money to himself, unless it should be a permanent salary. What he received from New Hampshire was fixed, and paid out of the excise; but the assembly of Massachusetts could not be persuaded to settle any salary upon him. They made him a grant of money (worth about 700*l.* or 800*l.* sterling) generally once in a year, at their session in May. He was then obliged to solicit leave from the king, to accept the grant and sign the bill; and sometimes could not obtain this leave till the end of the year: once not till five days before the dissolution of the assembly. In the mean time he was obliged to subsist on his own estate, and had he died within the year, the grant would have been wholly lost to his family. He was earnest to obtain a general permission to sign these grants; but in that case the clerks of office in England, through whose hands the permission must have passed, would have lost their fees. He was now in the 60th year of his age: he had a family of children and grandchildren, whose sole dependence was on him; and he thought, with reason, that if his course of faithful service, and the unworthy arts of his enemies had been duly considered, the censure of his superiors would have been less severe, than "to deprive him of his bread and honour."

Whilst he entertained the worst opinion possible of the characters of his enemies, he had a strong confidence in the justice of the government before which he was accused. In one of his letters to his son, he says, "I must expect no favour while Bladen is at the Board of Trade; but where the devil but there should I expect justice, under the British Constitution, corroborated by the Hanover succession?" The event proved, that his confidence was not ill founded. For, on being superseded, he repaired to court, where, though his presence was unwelcome to some, yet he had opportunity to bring the most convincing evidence of his integrity, and of the base designs of his enemies. He was so far restored to the royal favour, that he obtained a promise of the first vacant government in America which would be worthy of his acceptance. This proved to be the province of New Jersey, where he spent the remaining years of his life, and where his memory has been treated with deserved respect.

*The beginning of Benning Wentworth's administration—War opened in Nova Scotia—Expedition to Cape Breton; its plan, conduct, and success, with a description of the island, and of the city of Louisbourg.*

Benning Wentworth, Esq. son of the deceased lieut.-governor, was a merchant of good reputation in Portsmouth, and well beloved by the people. He had represented his native town in the assembly for

several years, where he distinguished himself in the opposition to Belcher. He afterwards obtained a seat in council; where, sensible of the popularity of his family, and feeling the pride of elevation, he continued the opposition, and joined in the measures which were pursued for obtaining a distinct governor, without any apprehension that himself would be the person, till a series of incidents, at first view unfortunate, prepared the way for his advancement to the chair.

In the course of his mercantile dealings, he had entered into a contract with an agent of the court of Spain, and supplied him with a large quantity of the best oak timber, to procure which, he borrowed money in London. When he delivered the timber at Cadiz, the agent with whom he had contracted was out of place, and the new officer declined payment. In returning to America the ship foundered, and he was saved with the crew in a boat. These misfortunes deranged his affairs and reduced him to a state of bankruptcy. Afterwards he went again to Spain, hoping by the interest of Sir Benjamin Keene, the British minister, to obtain his due, but his suit was ineffectual. About that time Thomlinson, despairing of Dunbar's advancement to the government of New Hampshire, turned his thoughts toward Wentworth; and having procured him a letter of license from his creditors in London, invited him thither. Wentworth represented his case to the British court, complained of the injustice of Spain, and petitioned for redress. Many British merchants, who had suffered by the insolence of the Spaniards, were, at the same time, clamorous for reparation. The ministry were studious to avoid a war. A negotiation was begun, and the court of Spain promised restitution, but failed in the performance. War was then determined on, and all negotiation ended. Disappointed in his plea for justice, Wentworth made his suit for favour, and by the aid of Thomlinson, who understood the ways of access to the great, he obtained a promise from the Duke of Newcastle, that when New Hampshire should be put under a distinct governor, he should have the commission. The expense of the solicitation and fees, amounting to 300*l.* sterling, was advanced by his friends in England, and repaid by his friends in New Hampshire.

(1741.) He was received in Portsmouth, after a long absence, with great marks of popular respect. Among the compliments which were paid to him on that occasion, one was, that he had been instrumental to "rescuing New Hampshire from contempt and dependence." In his first speech to the assembly (1742) he reflected on the conduct of his predecessor, not by name, but by implication, for not having taken early measures to raise men for the expedition against the Spanish West Indies; and intimated his apprehension, that the good intention of the province in raising money for that purpose would be frustrated, since the men who were willing to enter into the service had enlisted in the other provinces. He also complimented them on their good faith in regard to the several issues of paper money, all of which were to be called in within the present year. He did not forget to recommend a fixed salary for himself, not subject to depreciation. nor the payment of expenses which had arisen on account of the boundary lines; he informed them of the king's indulgence, in giving him leave to consent to a farther issue of bills of credit, to enable them to discharge their obligations to the crown, provided that no injury should be done to the trade

of the mother country. He also recommended to their attention the faithful services of their agents, one of whom, Rindge, was dead, and the payment of the debt due to his heirs.

The assembly, in their answer, acknowledged the wisdom and justice of the king in determining the long controversy between them and Massachusetts; but as to payment of the expense, they reminded him that one-half ought to be paid by Massachusetts, and desired him to use his influence for that purpose. With respect to the failure of raising men for the expedition, they set him right by ascribing it to the true cause; there being no commissions sent to the province for that service. Concerning the salary, they said that as soon as they could know what number of inhabitants would be added to them by the settlement of the lines, and how the money could be raised, they should make as ample provision for his honourable support as their circumstances would admit. They acknowledged the fidelity and industry of their agents, and professed a good will to reward them; but could not then promise adequate compensation.

The assembly voted a salary of 250*l.* proclamation money to the governor, funded as usual on the excise; and having obtained a royal licence for issuing 25,000*l.* on loan for ten years, they granted the governor 250*l.* more, to be paid annually out of the interest of the loan. When this fund failed, they made annual grants for his "further and more ample support," and generally added something for house-rent. They presented their agent Thomlinson 100*l.* sterling for his faithful services; but what they did for the heirs of Rindge does not appear.

(1743.) After Mr. Wentworth was quietly seated in the chair of government, an opportunity presented to advance his interest still farther. For the sum of 2,000*l.* sterling, Dunbar was prevailed on to resign the surveyorship of the woods, and Thomlinson negotiated an appointment in favour of Wentworth, with a salary of 800*l.* sterling, out of which he was to maintain four deputies. But to obtain this office, he was obliged to "rest his claim on the crown of Spain for 56,000 dollars."

These appointments of Mr. Wentworth gave the opposers of the former administration great cause of triumph; but the spirit of opposition had only changed sides. It was hoped and expected by some, that Mr. Belcher, by going to England, would not only remove the ill impressions which the malice of his enemies had made, but return to his former station. Others, who had no predilection for Belcher, looked with envy on the good fortune of Wentworth, and aimed to undermine him; at the same time courting the friends of the former administration to join in their measures. These things were managed with secrecy, and a few hints only are left as evidence of the existence of designs, which were never brought to maturity.

It was one of the royal instructions to governors, that in any cases of difficulty or sudden emergency, they should communicate with each other. Mr. Wentworth had a high opinion of the abilities of the new governor of Massachusetts, and there being a strict friendship between them, consulted him on all occasions. Shirley was gratified by this deference, and knew how to make his advantage of it. Thus, though New Hampshire was under a governor distinct from that of Massachusetts—a point which had long been contended for—yet the difference was not so great in reality as in appearance. This was a circumstance not much known at that time. The

advice which Shirley gave him was, in general, salutary and judicious.

(1744.) The war which had been kindled between Britain and Spain, extended its flame over a great part of Europe; and when France became involved in it, the American colonies were more nearly interested, because of the proximity of the French, and of the Indians, who were in their interest. War is so natural to savages, that they need but little to excite them to it. An Indian war was a necessary appendage of a war with France. The scene of both was opened in Nova Scotia.

That province had been alternately claimed and possessed by the English and French for more than a century. Ever since the peace of Utrecht it had been subject to the crown of Britain, and the French inhabitants, who were under a kind of patriarchal government of their priests, and devoted to the French interest, were kept in awe, partly by the fear of having their dikes destroyed—which they had erected to prevent the sea from overflowing their fields—and partly by a British garrison at Annapolis, where a governor and council resided. The Indian tribes maintained their native independence, though they were attached to the French by religious as well as interested obligations. Canseau, an island on the north-eastern part of Nova Scotia, was in possession of the English. It was resorted to by the fishermen of New England. It was defended by a block-house and garrisoned by a detachment of troops from Annapolis. The island of Cape Breton was possessed by the French, and lay between the English of Canseau and those of Newfoundland. This was too near a neighbourhood for enemies, especially when both were pursuing one object, the fishery.

The French at Cape Breton having received early intelligence of the declaration of war, immediately resolved on the destruction of the English fishery at Canseau. Duquesnel, the governor, sent Duvivier with a few small armed vessels, and about nine hundred men, who seized and took possession of the island, burned the houses, and made prisoners of the garrison and inhabitants. This was done, before the news of war had arrived in New England. It was followed by an attempt upon Placentia, in Newfoundland, which miscarried. An attack was also made upon Annapolis, the garrison of which was reinforced by several companies of militia and rangers, from Massachusetts, and the enemy were obliged to retire. The Indians of Nova Scotia assisted the French in this attack; which, with some other insolencies committed by them, occasioned a declaration of war by the government of Massachusetts against them, with a premium for scalps and prisoners.

These proceedings of the French were rash and precipitate. They were not prepared for extensive operations; nor had they any orders from their court to undertake them. What they had done, served to irritate and alarm the neighbouring English colonies, and shew them their danger in the most conspicuous manner. Their sea coast, navigation, and fishery lay exposed to continual insults. Their frontier settlements on the western side were but eighty miles distant from the French fort on Lake Champlain. The Indians who lay between them, had not yet taken up the hatchet; but it was expected that encouragement would be given them by the governor of Canada, to insult the frontiers. Several new settlements were wholly broken up; and many of the women and children of other frontier places retired to the old towns for security.

In the autumn, Duquesnel the French governor of Cape Breton, died, and was succeeded in the command by Duchambon, who had not so good a military character. Duvivier went to France to solicit a force to carry on the war in Nova Scotia in the ensuing spring. The store ships, expected from France at Cape Breton, came on the coast so late in the fall, and the winter there set in so early and fierce, as to keep them out of port, and drive them off to the West Indies. The captive garrison of Canseau, with other prisoners, who had been taken at sea and carried into Louisbourg, were sent to Boston. From them, as well as from other informants, Governor Shirley obtained such intelligence of the state of that island and fortress, as induced him to form the project of attacking it. But before we open this romantic and hazardous scene, it is necessary to give some account of the place which was to be the theatre of operations.

The island of Cape Breton, so denominated from one of its capes, lies between the forty-fifth and forty-seventh degrees of north latitude, at the distance of fifteen leagues from Cape Ray, the south-western extremity of Newfoundland. It is separated from the main land of Nova Scotia by a narrow strait six leagues in length, the navigation of which is safe for a ship of forty guns. The greatest length of the island, from north-east to south-west is about fifty leagues, and its greatest breadth thirty-three. It is about eighty-eight leagues in circuit as seamen estimate distances. Its general form is triangular, but it is indented by many deep bays.

The soil of this island is by no means inviting. It is either rocky and mountainous, or else cold and boggy; and much less capable of improvement than Nova Scotia. Its only valuable productions are of the fossil kind, pit-coal and plaster. Its atmosphere in the spring and summer is an almost continual fog, which prevents the rays of the sun from perfecting vegetation. Its winter is severe and of long continuance; and as the island forms an eddy to the current which sets through the gulf of St. Lawrence, its harbours are filled with large quantities of floating ice, with which its shores are environed till late in the spring.

Much has been said by French and English writers on the great importance and advantage of this island, and some political and temporary purposes were doubtless to be answered by such publications; but in fact, the only real importance of Cape Breton was derived from its central situation, and the convenience of its ports. On the north and west sides it is steep and inaccessible; but the south-eastern side is full of fine bays and harbours, capable of receiving and securing ships of any burden; and, being situated between Canada, France, and the West Indies, it was extremely favourable to the French commerce. It was not so good a station for the fishery as several parts of Nova Scotia and Newfoundland. The greater part of the French fishery was prosecuted elsewhere; and they could buy fish at Canseau cheaper than they could cure it at Cape Breton.

Whilst the French held possession of the coasts of Nova Scotia and Newfoundland, this island was neglected; but after they had ceded these places to the crown of England, and the crown of England had ceded this island to them by the treaty of Utrecht, 1713, they began to see its value. Instead of giving so much attention to the fur trade of Canada as they had before done, they contemplated building a fortified town on this island, as a security to their na-

vigation and fishery. For this purpose they chose a fine harbour on the south-east side of the island, formerly called English harbour; where they erected their fortifications, and called the place Louisbourg.

The harbour of Louisbourg lies in latitude  $45^{\circ}55'$ ; its entrance is about four hundred yards wide. The anchorage is uniformly safe, and ships may run ashore on a soft muddy bottom. The depth of water at the entrance is from nine to twelve fathoms. The harbour lies open to the south-east. Upon a neck of land on the south side of the harbour was built the town, two miles and a quarter in circumference; fortified in every accessible part with a rampart of stone, from thirty to thirty-six feet high, and a ditch eighty feet wide. A space of about two hundred yards was left without a rampart, on the side next to the sea; it was enclosed by a simple dike and a line of pickets. The sea was so shallow in this place, that it made only a narrow channel, inaccessible from its numerous reefs to any shipping whatever. The side fire from the bastions secured this spot from an attack. There were six bastions and three batteries, containing embrasures for 148 cannon, of which sixty-five only were mounted, and sixteen mortars. On an island at the entrance of the harbour was planted a battery of thirty cannon, carrying twenty-eight pounds shot; and at the bottom of the harbour, directly opposite to the entrance, was the grand or royal battery of twenty-eight cannon, (forty-two pounders,) and two eighteen pounders. On a high cliff, opposite to the island battery, stood a light-house; and within this point, at the north-east part of the harbour, was a careening wharf secure from all winds, and a magazine of naval stores.

The town was regularly laid out in squares. The streets were broad; the houses mostly of wood, but some of stone. On the west side, near the rampart, was a spacious citadel, and a large parade; on one side of which were the governor's apartments. Under the rampart were casemates to receive the women and children during a siege. The entrance of the town on the land side was at the west gate, over a draw-bridge, near to which was a circular battery, mounting sixteen guns, of twenty-four pounds shot.

These works had been twenty-five years in building; and though not finished, had cost the crown, it is said, nearly 1,000,000*l.* sterling. The place was so strong as to be called "the Dunkirk of America." It was, in peace, a safe retreat for the ships of France bound homeward from the East and West Indies; and in war, a source of distress to the northern English colonies; its situation being extremely favourable for privateers to ruin their fishery, and interrupt their coasting and foreign trade; for which reasons, the reduction of it was an object as desirable to them, as that of Carthage was to the Romans.

In the autumn, Shirley wrote to the British ministry, representing the danger of an attack on Nova Scotia from the French, in the ensuing spring; and praying for some naval assistance. These letters he sent by Captain Ryal, an officer of the garrison which had been taken at Canseau, who "from his particular knowledge of Louisbourg, and of the great consequence of the acquisition of Cape Breton, and the preservation of Nova Scotia, he hoped would be of considerable service to the northern colonies, with the lords of the admiralty." Thus early did Shirley conceive and communicate to Wentworth his great design; and the most prudent step which he took in this whole affair was to solicit help from England. His petition, supported by that worthy officer, was so favourably received by the ministry,

that as early as the beginning of January, orders were dispatched to Commodore Warren, then in the West Indies, to proceed to the northward in the spring, and employ such a force as might be sufficient to protect the northern colonies in their trade and fishery, and distress the enemy; and for this purpose to consult with Governor Shirley. Orders of the same date were written to Shirley, inclosed to Warren, directing him to assist the king's ships with transports, men and provisions. These orders, though extremely favourable to the design, were totally unknown in New England till the middle of April following, before which time the expedition was completely formed.

It has been said, that a plan of this famous enterprise was first suggested by William Vaughan, a son of Lieut.-governor Vaughan, of New Hampshire. Several other persons have claimed the like merit. How far each one's information or advice contributed toward forming the design, cannot now be determined. Vaughan was largely concerned in the fishery on the eastern coast of Massachusetts. He was a man of good understanding, but of a daring, enterprising, and tenacious mind, and one who thought of no obstacles to the accomplishment of his views. An instance of his temerity is still remembered. He had equipped, at Portsmouth, a number of boats to carry on his fishery at Montinicus; on the day appointed for sailing, in the month of March, though the wind was so boisterous that experienced mariners deemed it impossible for such vessels to carry sail, he went on board one, and ordered the others to follow. One was lost at the mouth of the river, the rest arrived with much difficulty, but in a short time, at the place of their destination. Vaughan had not been at Louisbourg; but had learned from fishermen and others, something of the strength and situation of the place, and nothing being in his view impracticable which he had a mind to accomplish, he conceived a design to take the city by surprise; and even proposed going over the walls in the winter on the drifts of snow. This idea of a surprisal forcibly struck the mind of Shirley, and prevailed with him to hasten his preparations, before he could have any answer or orders from England.

(1745.) In the beginning of January he requested of the members of the general court, that they would lay themselves under an oath of secrecy, to receive a proposal from him, of very great importance. This was the first request of the kind which had ever been made to a legislative body in the colonies. They readily took the oath, and he communicated to them the plan which he had formed of attacking Louisbourg. The secret was kept for some days, till an honest member, who performed the family devotion at his lodgings, inadvertently discovered it by praying for a blessing on the attempt. At the first deliberation the proposal was rejected, but by the address of the governor and the invincible perseverance of Vaughan, a petition from the merchants concerned in the fishery, was brought into court, which revived the affair; and it was finally carried in the affirmative by a majority of one voice, in the absence of several members who were known to be against it. Circular letters were immediately dispatched to all the colonies, as far as Pennsylvania, requesting their assistance, and an embargo on their ports.

With one of these letters Vaughan rode express to Portsmouth, where the assembly was sitting. Governor Wentworth immediately laid the matter before them, and proposed a conference of the two houses, to be held on the next day. The house of

representatives having caught the enthusiasm of Vaughan, were impatient of delay, and desired that it might be held immediately. It was accordingly held, and the committee reported in favour of the expedition, estimated the expense at 4,000*l.*, and desired the governor to issue a proclamation for inlisting 250 men, at 25*s.* per month, one month's pay to be advanced; they also recommended that military stores and transports should be provided, and that such preparations should be made that the whole might be ready by the beginning of March. All this was instantly agreed to, on condition that proper methods could be found to pay the charges. This could be done in no other way than by a new issue of bills of credit, contrary to the letter of royal instructions. But, by the help of Shirley, a way was found to surmount this difficulty; for on the same day he wrote to Wentworth, informing him that he had, in answer to repeated solicitations, obtained a relaxation of his instructions relative to bills of credit, so far as to have leave to consent to such issues as the exigencies of war might require; and advising him that, considering the occasion, it was probable his consenting to an issue would rather be approved than censured by his superiors. The next day he wrote again assuring him that he might safely do it, provided that the sum to be issued were solely appropriated to the service of the expedition. He also sent him a copy of the instruction, enjoining him to let no person know that he had sent it. Shirley himself had consented to an issue of 50,000*l.*, to be drawn in by a tax in the years 1747 and 1748.

The house of representatives passed a vote for an issue of 10,000*l.* toward defraying the charge of the expedition and further carrying on the war, and the support of government; to be drawn in by taxes in ten annual payments, to begin in 1755. The council objected and said, that the grant should be wholly appropriated to the expedition, and the payments should begin in 1751. The house adhered to their vote. The governor interposed, and an altercation took place, which continued several days. The governor adjourned the assembly till he could again ask Shirley's advice and receive his answer. At length the house altered their vote, and appointed the year 1751 for drawing in the money, augmenting the sum to 13,000*l.*; and at the governor's express desire, they publicly assured him that they "could not find out any other way to carry on the expedition, or in any degree shorten the period for bringing in the money." This was done to serve as an apology for the governor's consenting to the bill, notwithstanding he had no liberty to recede from his instructions; and thus, the matter being compromised, he gave his consent.

During this tedious interval, a report was spread, that the house had refused to raise men and money for the expedition; and the author of the report was sought out and called to account by the house for his misbehaviour. The next day they altered their terms of enlistment, conformably to those offered in Massachusetts, and by the 17th of February, 250 men were enlisted for the service.

The person appointed to command the expedition was William Pepperrell, Esq. of Kittery, colonel of a regiment of militia, a merchant of unblemished reputation and engaging manners, extensively known both in Massachusetts and New Hampshire, and very popular. These qualities were absolutely necessary in the commander of an army of volunteers, his own countrymen, who were to quit their domestic connexions and employments, and engage in a

hazardous enterprise, which none of them, from the highest to the lowest, knew how to conduct. Professional skill and experience were entirely out of the question; had these qualities been necessary, the expedition must have been laid aside; for there was no person in New England in these respects qualified for the command. Fidelity, resolution and popularity must supply the place of military talents; and Pepperrell was possessed of these. It was necessary that the men should know and love their general, or they would not enlist under him.

After this appointment was made, and while it was uncertain whether the assembly of New Hampshire would agree with the governor in raising money for the expedition, Shirley proposed to Wentworth, the raising of men in New Hampshire, to be in the pay of Massachusetts, and in the letter which he wrote on that occasion paid him the following compliment: "It would have been an infinite satisfaction to me, and done great honour to the expedition, if your limbs would have permitted you to take the chief command." Wentworth was charmed with the idea, and forgetting his gout, made an offer of his personal service, but not till after the assembly had agreed to his terms and the money bill was passed. Shirley was then obliged to answer him thus: "Upon communicating your offer to two or three gentlemen, in whose prudence and judgment I most confide, I found them clearly of opinion, that any alteration of the present command would be attended with great risque, both with respect to the assembly and the soldiers being entirely disgusted."

Before Pepperrell accepted the command, he asked the opinion of the famous George Whitefield, who was then itinerating and preaching in New England. Whitefield told him, that he did not think the scheme very promising; that the eyes of all would be on him; that if it should not succeed, the widows and orphans of the slain would reproach him; and if it should succeed, many would regard him with envy, and endeavour to eclipse his glory; that he ought therefore to go with a "single eye," and then he would find his strength proportioned to his necessity. Henry Sherburne, the commissary of New Hampshire, another of Whitefield's friends, pressed him to favour the expedition and give a motto for the flag; to which, after some hesitation, he consented. The motto was, "*Nil desperandum Christo duce.*" This gave the expedition the air of a crusade, and many of his followers enlisted. One of them, a chaplain, carried on his shoulder a hatchet, with which he intended to destroy the images in the French churches.

There are certain latent sparks in human nature, which, by a collision of causes, are sometimes brought to light; and when once excited, their operations are not easily controlled. In undertaking any thing hazardous, there is a necessity for extraordinary vigor of mind, and a degree of confidence and fortitude, which shall raise us above the dread of danger, and dispose us to run a risk which the cold maxims of prudence would forbid. The people of New England have at various times shewn this enthusiastic ardour, which has been excited by the example of their ancestors and their own exposed situation. It was never more apparent, and perhaps never more necessary, than on occasion of this expedition. Nor ought it to be forgotten, that several circumstances, which did not depend on human foresight, greatly favoured the undertaking.

The winters in this country are often severe, but the winter in which this expedition was planned,

and particularly the month of February, was very mild. The harbours and rivers were open, and the weather was in general so pleasant, that every kind of labour could be done abroad. The fruitfulness of the preceding season had made provisions plenty. The Indians had not yet molested the frontiers; and though some of them had heard that an expedition against Cape Breton was in hand, and carried the news of it to Canada, such an attempt was so improbable, that the French gave no credit to the report, and those in Nova Scotia did not receive the least intelligence of the preparations. Douglas observes, that "some guardian angel preserved the troops from taking the small-pox," which appeared in Boston about the time of their embarkation, and was actually imported in one of the ships which was taken into the service. A concurrence of happy incidents brought together every British ship of war from the ports of the American continent and islands, till they made a formidable naval force, consisting of four ships of the line and six frigates, under the command of an active, judicious and experienced officer. On the other hand, the garrison of Louisbourg was discontented and mutinous; they were in want of provisions and stores; they had no knowledge of the design formed against them; their shores were so environed with ice, that no supplies could arrive early from France, and those which came afterward were intercepted and taken by our cruisers. In short, "if any one circumstance had taken a wrong turn on our side, and if any one circumstance had not taken a wrong turn on the French side, the expedition must have miscarried."

In the undertaking and prosecuting of an enterprise so novel to the people of New England, it is amusing to see how many projects were invented; what a variety of advice was given from all quarters, and what romantic expectations were formed by advisers and adventurers. During the enlistment, one of the officers was heard to say with great sobriety, that he intended to carry with him three shirts, one of which should be ruffled, because he expected that the general would give him the command of the city, when it should be taken. An ingenious and benevolent clergyman presented to the general a plan for the encampment of the army, the opening of trenches, and the placing of batteries before the city. To prevent danger to the troops from subterraneous mines, he proposed, that two confidential persons, attended by a guard, should, during the night, approach the walls; that one should with a beetle strike the ground, while the other should lay his ear to it, and observe whether the sound was hollow, and that a mark should be set on all places suspected. Another gentleman of equal ingenuity, sent the general a model of a flying bridge, to be used in scaling the walls of Louisbourg. It was so light, that twenty men could carry it on their shoulders to the wall, and raise it in one minute. The apparatus for raising it consisted of four blocks, and two hundred fathoms of rope. It was to be floored with boards, wide enough for eight men to march abreast; and to prevent danger from the enemy's fire, it might be covered with raw hides. This bridge, it was said, might be erected against any part of the wall, even where no breach had been made; and it was supposed that 1000 men might pass over it in four minutes.

But the most extraordinary project of all, was Shirley's scheme for taking the city by surprise, in the first night after the arrival of the troops, and before any British naval force could possibly come

to their assistance. It is thus delineated in a confidential letter which he wrote to Wentworth, when he urged him to send the New Hampshire troops to Boston, to proceed thence with the fleet of transports. "The success of our scheme for surprising Louisbourg will entirely depend on the execution of the first night, after the arrival of our forces. For this purpose it is necessary, that the whole fleet should make Chapeau-rouge point just at the shutting in of the day, when they cannot easily be discovered, and from thence push into the bay, so as to have all the men landed before midnight; the landing of whom, it is computed by Capt. Durell and Mr. Bastide, will take up three hours at least. After which, the forming of the four several corps to be employed in attempting to scale the walls of Louisbourg, near the east gate, fronting the sea, and the west gate fronting the harbour, to cover the retreat of the beforementioned parties in case of a repulse, and to attack the grand battery, (which attack must be made at the same time with the two other attacks) will take up two hours more at least. After these four bodies are formed, their march to their respective posts from whence they are to make their attacks and serve as a cover to the retreat, will take up another two hours, which, supposing the transports to arrive in Chapeau-rouge bay at nine o'clock in the evening, and not before, as it will be necessary for them to do in order to land and march under cover of the night, will bring them to four in the morning, being day-break, before they begin the attack, which will be full late for them to begin. Your excellency will from hence perceive how critical an affair the time of the fleet's arrival in Chapeau-rouge bay is, and how necessary it is to the success of our principal scheme, that the fleet should arrive there in a body at that precise hour."

It is easy to perceive that this plan was contrived by a person totally unskilled in the arts of navigation and of war. The coast of Cape Breton was dangerous and inhospitable, the season of the year rough and tempestuous, and the air a continual fog; yet, a fleet of an hundred vessels, after sailing nearly 200 leagues (for by this plan they were not to stop) must make a certain point of land "at a precise hour," and enter an unknown bay, in an evening. The troops were to land in the dark, amidst a violent surf, on a rocky shore—to march through a thicket and bog three miles to the city, and some of them a mile beyond it to the royal battery. Men who had never been in action were to perform services which the most experienced veteran would think of with dread; to pull down pickets with grappling-irons, and scale the walls of a regular fortification with ladders which were afterwards found to be too short by ten feet—all in the space of twelve hours from their first making the land, and nine hours from their debarkation. This part of the plan was prudently concealed from the troops.

The forces which New Hampshire furnished for this expedition were 350 men, including the crew of an armed sloop which convoyed the transports and served as a cruiser. They were formed into a regiment consisting of eight companies, and were under the command of Colonel Samuel Moore. The sloop was commanded by Captain John Fernald; her crew consisted of thirty men. The regiment, sloop, and transports were, by Governor Wentworth's written instructions to the general, put under his command. Besides these, a body of 150 men was enlisted in New Hampshire, and aggregated to the regiment in the pay of Massachusetts. Thus New

Hampshire employed 500 men; about one-eighth part of the whole land force. In these men there was such an ardour for action, and such a dread of delay, that it was impracticable to put them so far out of their course as to join the fleet at Boston. Shirley therefore altered the plan, and appointed a rendezvous at Canseau, where the forces of New Hampshire arrived two days before the general and his other troops from Boston.

The instructions which Pepperrell received from Shirley, were conformed to the plan which he had communicated to Wentworth, but much more particular and circumstantial. He was ordered to proceed to Canseau, there to build a block-house and battery, and leave two companies in garrison, and to deposit the stores which might not immediately be wanted by the army. Thence he was to send a detachment to the village of St. Peters, on the island of Cape Breton, and destroy it, to prevent any intelligence which might be carried to Louisbourg; for which purpose also, the armed vessels were to cruise before the harbour. The whole fleet was to sail from Canseau, so as to arrive in Chapeau-rouge bay about nine o'clock in the evening. The troops were to land in four divisions, and proceed to the assault before morning. If the plan for the surprisal should fail, he had particular directions where and how to land, march, encamp, attack, and defend; to hold councils and keep records, and to send intelligence to Boston by certain vessels retained for the purpose, which vessels were to stop at Castle William, and there receive the governor's orders. Several other vessels were appointed to cruise between Canseau and the camp, to convey orders, transport stores, and catch fish for the army. To close these instructions, after the most minute detail of duty, the general was finally "left to act upon unforeseen emergencies according to his discretion;" which, in the opinion of military gentlemen, is accounted the most rational part of the whole. Such was the plan for the reduction of a regularly constructed fortress, drawn by a lawyer, to be executed by a merchant, at the head of a body of husbandmen and mechanics; animated indeed by ardent patriotism, but destitute of professional skill and experience. After they had embarked, the hearts of many began to fail; some repented that they had voted for the expedition, or promoted it; and the most thoughtful were in the greatest perplexity.

The troops were detained at Canseau three weeks, waiting for the ice, which invironed the island of Cape Breton, to be dissolved. They were all this time within view of St. Peters, but were not discovered. Their provisions became short; but they were supplied by prizes taken by the cruisers. Among others, the New Hampshire sloop took a ship from Martinico, and retook one of the transports, which she had taken the day before. At length, to their great joy, Commodore Warren, in the *Superbe*, of sixty guns, with three other ships of forty guns each, arrived at Canseau, and having held a consultation with the general, proceeded to cruise before Louisbourg. The general having sent the New Hampshire sloop to cover a detachment which destroyed the village of St. Peters, and scattered the inhabitants, sailed with the whole fleet; but instead of making Chapeau-rouge point in the evening, the wind falling short, they made it at the dawn of the next morning; and their appearance in the bay gave the first notice to the French of a design formed against them.

The intended surprisal being thus happily frus-

trated, the next thing after landing the troops was to invest the city. Vaughan, the adventurer from New Hampshire, had the rank and pay of a lieutenant-colonel, but refused to have a regular command. He was appointed one of the council of war, and was ready for any service which the general might think suited to his genius. He conducted the first column through the woods, within sight of the city, and saluted it with three cheers. He headed a detachment, consisting chiefly of the New Hampshire troops, and marched to the north-east part of the harbour, in the night; where they burned the warehouses containing the naval stores, and staved a large quantity of wine and brandy. The smoke of this fire being driven by the wind into the grand battery, so terrified the French, that they abandoned it and retired to the city, after having spiked the guns and cut the halliards of the flag-staff. The next morning, as Vaughan was returning, with thirteen men only, he crept up the hill which overlooked the battery, and observed, that the chimnies of the barrack were without smoke, and the staff without a flag. With a bottle of brandy which he had in his pocket, (though he never drank spirituous liquors), he hired one of his party, a Cape Cod Indian, to crawl in at an embrasure, and open the gate. He then wrote to the general these words, "May it please your honour to be informed, that by the grace of God, and the courage of thirteen men, I entered the royal battery, about nine o'clock, and am waiting for a reinforcement, and a flag." Before either could arrive, one of the men climbed up the staff, with a red coat in his teeth, which he fastened by a nail to the top. This piece of triumphant vanity alarmed the city, and immediately an hundred men were dispatched in boats to retake the battery. But Vaughan, with his small party, on the naked beach, and in the face of a smart fire from the city and the boats, kept them from landing, till the reinforcement arrived. In every duty of fatigue, or sanguine adventure, he was always ready; and the New Hampshire troops, animated by the same enthusiastic ardour, partook of all the labours and dangers of the siege. They were employed for fourteen nights successively, in drawing cannon from the landing place to the camp, through a morass; and their Lieutenant-Colonel Messervé, being a ship carpenter, constructed sledges, on which the cannon were drawn, when it was found that their wheels were buried in the mire. The men, with straps over their shoulders, and sinking to their knees in mud, performed labour beyond the power of oxen; which labour could be done only in the night or in a foggy day; the place being within plain view and random shot of the enemy's walls. They were much disappointed and chagrined, when they found that these meritorious services were not more distinctly acknowledged in the accounts which were sent to England, and afterwards published.

In the unfortunate attempt on the island battery by 400 volunteers from different regiments, the New Hampshire troops were very active. When it was determined to erect a battery on the light-house cliff, two companies of them (Mason's and Fernald's) were employed in that laborious service, under cover of their armed sloop; and when a proposal was made for a general assault by sea and land, Colonel Moore, who had been an experienced sea commander, offered to go on board the *Vigilant* with his whole regiment, and lead the attack, if in case of success he might be confirmed in the command of the ship; but when this was denied, most of the men

who were fit for duty, readily went on board the *Princess Mary*, to act as marines on that occasion.

It has been said, that "this siege was carried on in a tumultuary, random manner, resembling a Cambridge commencement." The remark is in a great measure true. Though the business of the council of war was conducted with all the formality of a legislative assembly; though orders were issued by the general, and returns made by the officers at the several posts; yet the want of discipline was too visible in the camp. Those who were on the spot, frequently laughed at the recital of their own irregularities, and expressed their admiration when they reflected on the almost miraculous preservation of the army from destruction. They indeed presented a formidable front to the enemy; but the rear was a scene of confusion and frolic. While some were on duty at the trenches, others were racing, wrestling, pitching quoits, firing at marks or at birds, or running after shot from the enemy's guns, for which they received a bounty, and the shot were sent back to the city. The ground was so uneven, and the people so scattered, that the French could form no estimate of their numbers; nor could they learn it from the prisoners taken at the island battery, who on their examination, as if by previous agreement, represented the number to be vastly greater than it was. The garrison of *Louisbourg* had been so mutinous before the siege, that the officers could not trust the men to make a sortie, lest they should desert; had they been united, and acted with vigour, the camp might have been surprised, and many of the people destroyed.

Much has been ascribed, and much is justly due, to the activity and vigilance of Commodore Warren, and the ships under his command: much is also due to the vigour and perseverance of the land forces, and the success was doubtless owing to the joint efforts of both. Something of policy, as well as bravery, is generally necessary in such undertakings; and there was one piece of management, which, though not mentioned by any historian, yet greatly contributed to the surrender of the city.

The capture of the *Vigilant*, a French sixty-four gun ship, commanded by the Marquis de la Maisonforte, and richly laden with military stores for the relief of the garrison, was one of the most capital exploits performed by the navy. This ship had been anxiously expected by the French, and it was thought that the news of her capture, if properly communicated to them, might produce a good effect; but how to do it was the question. At length the commodore hit on this expedient, which he proposed to the general, who approved and put it into execution. In a skirmish on the island, with a party of French and Indians, some English prisoners had been taken by them, and used with cruelty. This circumstance was made known to the marquis, and he was requested to go on board of all the ships in the bay where French prisoners were confined, and observe the condition in which they were kept. He did so, and was well satisfied with their fare and accommodations. He was then desired to write to the governor of the city, and inform him how well the French prisoners were treated, and to request the like favour for the English prisoners. The humane marquis readily consented, and the letter was sent the next day by a flag, entrusted to the care of Capt. Macdonald. He was carried before the governor and his chief officers; and by pretending not to understand their language, he had the advantage of listening to their discourse, by which he found, that

they had not before heard of the capture of the *Vigilant*, and that the news of it, under the hand of her late commander, threw them into visible perturbation. This event, with the erection of a battery on the high cliff at the light house, under the direction of Lieut.-colonel Gridley, by which the island battery was much annoyed, and the preparations which were evidently making for a general assault, determined Duchambon to surrender; and accordingly, in a few days he capitulated.

Upon entering the fortress and viewing its strength, and the plenty and variety of its means of defence, the stoutest hearts were appalled, and the impracticability of carrying it by assault was fully demonstrated.

No sooner was the city taken, and the army under shelter, than the weather, which during the siege, excepting eight or nine days after the first landing, had been remarkably dry for that climate, changed for the worse; and an incessant rain of ten days succeeded. Had this happened before the surrender, the troops who had then begun to be sickly, and had none but very thin tents, must have perished in great numbers. Reinforcements of men, stores and provisions arrived, and it was determined in a council of war, to maintain the place and repair the breaches. A total demolition might have been more advantageous to the nation; but in that case, individuals would not have enjoyed the profit of drawing bills on the navy and ordnance establishments. The French flag was kept flying on the ramparts, and several rich prizes were decoyed into the harbour. The army supposed that they had a right to a share of these prizes; but means were found to suppress or evade their claim; nor did any of the colony cruizers (except one) though they were retained in the service, under the direction of the commodore, reap any benefit from the captures.

The news of this important victory filled America with joy, and Europe with astonishment. The enterprising spirit of New England gave a serious alarm to those jealous fears, which had long predicted the independence of the colonies. Great pains were taken in England to ascribe all the glory to the navy, and lessen the merit of the army. However, Pepperell received the title of baronet, as well as Warren. The latter was promoted to be an admiral; the former had a commission as colonel in the British establishment, and was empowered to raise a regiment in America, to be in the pay of the crown. The same emolument was given to Shirley, and both he and Wentworth acquired so much reputation as to be confirmed in their places. Vaughan went to England to seek a reward for his services, and there died of the small-pox. Solicitations were set on foot for a parliamentary reimbursement, which, after much difficulty and delay, was obtained; and the colonies who had expended their substance were in credit at the British treasury. The justice and policy of this measure must appear to every one, who considers, that excepting the suppression of a rebellion within the bowels of the kingdom, this conquest was the only action which could be called a victory, on the part of the British nation, during the whole French war, and afforded them the means of purchasing a peace.

*Projected Expedition to Canada—Alarm by the French fleet—State of the frontiers—Peace.*

Whilst the expedition to Cape Breton was in hand, the active mind of Governor Shirley contemplated nothing less than the conquest of all the French dominions in America; and he consulted with Go-

vernor Wentworth and Mr. Atkinson on the practicability of such a design. After Louisbourg was taken, he made a visit thither, and held a consultation with Sir Peter Warren and Sir William Pepperell; and from that place wrote pressingly to the British ministry on the subject. His solicitations, enforced by the brilliant success at Louisbourg, and the apparent danger in which Nova Scotia and the new conquest were involved, had such an effect, that in the spring of the following year, (1746) a circular letter was sent from the Duke of Newcastle, secretary of state, to all the governors of the American colonies, as far southward as Virginia, requiring them to raise as many men as they could spare, and form them into companies of one hundred, to be ready to unite, and act according to the orders which they should afterwards receive. The plan was, that a squadron of ships of war, and a body of land forces, should be sent from England against Canada; that the troops raised in New England should join the British fleet and army at Louisbourg, and proceed up the river St. Lawrence; that those of New York and the other provinces at the southward, should be collected at Albany, and march against Crown Point and Montreal. The management of this expedition was committed to Sir John St. Clair, in conjunction with Sir Peter Warren and Governor Shirley. St. Clair did not come to America. Warren and Shirley gave the orders, while Warren was here; and afterwards Commodore Knowles, who succeeded him, was joined with Shirley; but as Knowles was part of the time at Louisbourg, most of the concern devolved on Shirley alone.

Beside the danger of losing Nova Scotia and Cape Breton, there were other reasons for undertaking this expedition. The Indians, instigated by the governor of Canada, were ravaging the frontiers, destroying the fields and cattle, burning houses and mills, killing and carrying away the inhabitants. Though scouts and garrisons were maintained by the governments, yet to act altogether on the defensive, was thought to be not only an ineffectual, but a disgraceful mode of carrying on the war, especially after the success which had attended the arms of the colonists in their attempt against Louisbourg. The continuance of such a mode of defence would neither dispirit the enemy, nor secure the frontiers from their depredations.

The design was pleasing, and the colonies readily furnished their quotas of men. In New Hampshire, the same difficulty occurred as on occasion of the Louisbourg expedition. The governor had no authority to consent to the issue of bills of credit, but Shirley removed that obstacle, by suggesting to him, that as the ministry did not disapprove what he had done before, so there was no reason to fear it now; and that the importance of the service, and the necessity of the case, would justify his conduct. The demand at first, was for levy money and victualling. The arms and pay of the troops were to be furnished by the crown; but it was afterwards found necessary that the several governments should provide clothing, transports and stores, and depend on a reimbursement from the British parliament.

The assembly was immediately convened, and voted an encouragement for enlisting 1,000 men, or more, if they could be raised; with a bounty of 30*l.* currency, and a blanket to each man, besides keeping two armed vessels in pay. Col. Atkinson was appointed to the command of the troops; 800 men were enlisted and ready for embarkation by the beginning of July. Transports and provisions were

prepared, and the men waited impatiently all summer for employment. Neither the general nor any orders arrived from England; the fleet, which was said to be destined for the expedition, sailed seven times from Spithead, and as often returned. Two regiments only were sent from Gibraltar, to Louisbourg, to relieve the New England men, who had garrisoned it since the conquest. It is much easier to write the history of an active campaign, than to trace the causes of inaction and disappointment; and it is in vain to supply the place of facts by conjecture.

In this time of suspense, Sir Peter Warren and Sir William Pepperell having arrived at Boston, from Louisbourg, Shirley had an opportunity of consulting them, and such other gentlemen as he thought proper, on the affair of the Canada expedition. The season was so far advanced, that a fleet could hardly be expected from England; or if it should arrive, it would be too late to attempt the navigation of the river St. Lawrence. But as a sufficient body of the troops might be assembled at Albany, it was judged prudent to employ them in an attempt against the French fort at Crown Point. At the same time Clinton, governor of New York, solicited and obtained the friendly assistance of the Six Nations of Indians, on the borders of his province. It was thought, that if this attempt should be made, the alliance with these Indians would be strengthened and secured,—and the frontiers would be relieved from the horrors of desolation and captivity, to which they were continually exposed. In pursuance of this plan, the forces of New Hampshire were ordered to hold themselves in readiness to march to Albany; but, it being discovered that the small-pox was there, the rendezvous was appointed at Saratoga and the adjacent villages.

No sooner was this plan resolved on, and preparations made to carry it into execution, than accounts were received of danger which threatened Annapolis from a body of French and Indians at Minas, and the probable revolt of the Acadians. It was thought that Nova Scotia would be lost if some powerful succour were not sent thither. Orders were accordingly issued for the troops of Massachusetts, Rhode Island, and New Hampshire, to embark for that place, and “drive the enemy out of Nova Scotia.” But, within a few days more, the whole country was alarmed, and thrown into the utmost consternation, by reports of the arrival of a large fleet and army from France, at Nova Scotia, under the command of the Duke d’Anville. It was supposed that their object was to recover Louisbourg—to take Annapolis—to break up the settlements on the eastern coast of Massachusetts—and to distress, if not attempt the conquest of the whole country of New England. On this occasion, the troops destined for Canada found sufficient employment at home, and the militia was collected to join them; the old forts on the sea-coast were repaired, and new ones were erected. A new battery, consisting of sixteen guns of thirty-two and twenty-four pounds shot, was added to fort William and Mary, at the entrance of Pascataqua harbour; and another, of nine thirty-two pounders, was placed at the point of Little harbour. These works were supposed to be sufficient to prevent a surprisal; military guards were appointed; and in this state of fear and anxiety the people were kept for six weeks, when some prisoners who had been released by the French, brought the most affecting accounts of the distress and confusion on board the fleet. It was expected by the people in New England, that an English fleet would have

followed them to America. This expectation was grounded on some letters from England, which Shirley had received and which he forwarded by express to Admiral Townsend, at Louisbourg. The letters were intercepted by a French cruiser, and carried into Chebucto, where the fleet lay. They were opened in a council of war, and caused a division among the officers; which added to the sickly condition of the men, and the damage which the fleet had sustained by storms, and their loss by shipwrecks, dejected their commander to that degree, that he put an end to his life by poison; and the second in command fell on his sword. These melancholy events, disconcerted their first plan. They then resolved to make an attempt on Annapolis; but when they had sailed from Chebucto, they were overtaken by a violent tempest off Cape Sable, and those ships which escaped destruction returned singly to France.

Nova Scotia was not yet out of danger. The French and Indians who, during the stay of the fleet at Chebucto, had appeared before Annapolis, but on their departure retired, were still in the peninsula; and it was thought necessary to dislodge them. For this purpose Shirley sent a body of the Massachusetts forces, and pressed the governors of Rhode Island and New Hampshire to send part of theirs. Those from Rhode Island, and one transport from Boston, were wrecked on the passage. The armed vessels of New Hampshire, with 200 men, went to Annapolis; but the commander of one of them, instead of landing his men, sailed across the bay of Funda into St. John’s river, where meeting with a French snow, and mistaking her for one of the Rhode Island transports, he imprudently sent his boat with eight men on board, who were made prisoners, and the snow escaped. The sloop instead of returning to Annapolis, came back to Portsmouth. These misfortunes and disappointments had very serious ill consequences. (1747.) The Massachusetts forces who were at Nova Scotia, being inferior in number to the French, and deceived by false intelligence, were surprised in the midst of a snow storm at Minas, and after an obstinate resistance were obliged to capitulate. Their commander, Col. Arthur Noble, and about sixty men were killed, and fifty were wounded. The enemy being provided with snowshoes made forced marches, and ours being destitute of them were unable to escape.

When the alarm occasioned by the French fleet had subsided, Atkinson’s regiment marched into the country to cover the lower part of the frontiers, and encamped near the shore of Winipiseogee lake, where they passed the winter and built a slight fort. They were plentifully supplied with provisions, and had but little exercise or discipline. Courts martial were not instituted, nor offences punished. The officers and men were tired of the service, but were not permitted to enter on any other business lest orders should arrive from England. Some were employed in scouting—some in hunting or fishing—and some deserted.

Shirley was so intent on attacking Crown Point, that he even proposed to march thither in the winter, and had the address to draw the assembly of Massachusetts into an approbation of this project. He enlarged his plan, by proposing that the New Hampshire troops should at the same time go by the way of Connecticut river, to the Indian village of St. Francis, at the distance of 200 miles, and destroy it; while the troops from Massachusetts, Connecticut, and New York, should go by the way of the

lakes to Crown Point. The governor of New York would have consented to this wild project, on account of the Indian allies, who were impatient for war, but it was happily frustrated by the prudence of the Connecticut assembly, who deemed the winter an improper season for so great an undertaking, and deferred their assistance till the ensuing spring. At the same time the small pox prevailed in the settlements above Albany, through which the forces must have marched; and that distemper was then an object of much greater dread than the storms of winter, or the face of an enemy.

To finish what relates to the Canada forces, it can only be said, that excepting some who were employed on the frontiers, they were kept in a state of military indolence, till the autumn of the ensuing year, when by order from the Duke of Newcastle they were disbanded, and paid at the same rate as the king's troops. The governors drew bills on the British treasury, which were negotiated among the merchants at 7 and 800*l.* per cent.; and the parliament granted money to reimburse the charges of the equipment and subsistence of these forces.

The state of the frontiers now demands our attention. (1745.) By the extension of the boundaries of the province, several settlements which had been made by the people of Massachusetts, and under the authority of grants from their general court, had fallen within New Hampshire. In one of them stood Fort Dummer, on the west side of Connecticut river, and within the lately extended line of New Hampshire. This fort had been erected and maintained at the expense of Massachusetts; but when it was found to be within New Hampshire, the governor was instructed by the crown to recommend to the assembly the future maintenance of it. In the same assembly, which had so zealously entered upon the expedition against Cape Breton, this matter was introduced; but a considerable majority of the lower house declined making any grant for this purpose, and adduced the following reasons, viz. That the fort was fifty miles distant from any towns which had been settled by the government or people of New Hampshire; that the people had no right to the lands which, by the dividing line, had fallen within New Hampshire; notwithstanding the plausible arguments which had been used to induce them to bear the expense of the line—namely, that the land would be given to them, or else would be sold to pay that expense; that the charge of maintaining that fort, at so great a distance, and to which there was no communication by roads, would exceed what had been the whole expense of government before the line was established; that the great load of debt contracted on that account, and the yearly support of government, with the unavoidable expenses of the war, were as much as the people could bear; that if they should take upon them to maintain this fort, there was another much better and more convenient fort at a place called Number-four, besides several other settlements, which they should also be obliged to defend; and finally, that there was no danger that these forts would want support, since it was the interest of Massachusetts, by whom they were erected, to maintain them as a cover to their frontier.

When these reasons were given, the governor dissolved the assembly and called another, to whom he recommended the same measure in the most pressing terms; telling them, "that it was of the last consequence to the present and future prosperity of the government; that their refusal would lessen them in the esteem of the king and his ministers, and strip

the children yet unborn of their natural right; and deprive their brethren who were then hazarding their lives before the walls of Louisbourg of their just expectations, which were to sit down on that valuable part of the province." But his eloquence had no effect. They thought it unjust to burden their constituents with an expense which could yield them no profit, and afford them no protection.

When it was determined that New Hampshire would make no provision for fort Dummer, the assembly of Massachusetts continued its usual support, and also provided for the other posts on Connecticut river and its branches, which were within the limits of New Hampshire. They afterwards petitioned the king, to deduct that charge out of the reimbursement which the parliament had granted to New Hampshire, for the Canada expedition; but in this they were defeated, by the vigilance and address of Thomlinson, the agent of New Hampshire.

Most of the frontier towns of New Hampshire, at that time, were distinguished by no other than by Indian or temporary names. It may be convenient to compare them with their present names. On Connecticut river, and its eastern branches, were Number-four, Great Meadow, Great Fall, Fort Dummer, Upper Ashuelot, and Lower Ashuelot; now respectively called, Charlestown, Westmoreland, Walpole, Hinsdale, Keene, and Swansey. On Merrimack river and its branches were, Penacook, Suncook, Contoocook, New Hopkinton, Souhegan east, and Souhegan west; now respectively called, Concord, Pembroke, Boscawen, Hopkinton, Merrimack, and Amherst. On Pascataqua river and its branches were, the townships of Nottingham, Barrington and Rochester.

Besides the forts which were maintained at the public expense, there were private houses enclosed with ramparts, or palisades of timber, to which the people who remained on the frontiers retired; these private garrisoned houses were distinguished by the names of the owners. The danger to which these distressed people were constantly exposed did not permit them to cultivate their lands to any advantage. They were frequently alarmed when at labour in their fields, and obliged either to repel an attack, or make a retreat. Their crops were often injured, and sometimes destroyed, either by their cattle getting into the fields where the enemy had broken the fences, or because they were afraid to venture out, to collect and secure the harvest. Their cattle and horses were frequently killed by the enemy, who cut the flesh from the bones, and took out the tongues, which they preserved for food, by drying in smoke. Sometimes they were afraid even to milk their cows, though they kept them in pastures as near as possible to the forts. When they went abroad, they were always armed; but frequently they were shut up for weeks together in a state of inactivity.

The history of a war on the frontiers can be little else than a recital of the exploits, the sufferings, the escapes, and deliverances of individuals, of single families, or small parties. The first appearance of the enemy on the western frontier was at the Great Meadow, sixteen miles above fort Dummer. Two Indians took William Phips, as he was hoeing his corn. When they had carried him half a mile, one of them went down a steep hill to fetch something which had been left. In his absence, Phips, with his own hoe, knocked down the Indian who was with him; then seizing his gun, shot the other as he ascended the hill. Unfortunately, meeting with three others of the same party, they killed him. The In-

dian whom he knocked down died of his wound. The same week they killed Josiah Fisher of upper Ashuelot.

No other damage was done for three months, when a party of twelve Indians approached the fort at Great Meadow, and took Nehemiah How, who was at a little distance from the fort, cutting wood. The fort was alarmed, and one Indian was killed by a shot from the rampart; but no attempt was made to rescue the prisoner. As they were leading him away, by the side of the river, they espied a canoe coming down, with two men, at whom they fired, and killed David Rugg; but Robert Baker got to the opposite shore and escaped. Proceeding farther, they met three other men, who, by skulking under the bank, got safe to the fort. One of them was Caleb How, the prisoner's son. When they came opposite to Number-four, they made their captive write his name on a piece of bark, and left it there. Having travelled seven days westward, they came to a lake, where they found five canoes, with corn, pork, and tobacco. In these canoes they embarked; and having stuck the scalp of David Rugg on a pole, proceeded to the fort at Crown Point, where How received humane treatment from the French. He was then carried down to Quebec, where he died in prison. He was a useful man, greatly lamented by his friends and fellow-captives.

(1746.) The next spring, a party of Indians appeared at Number-four, where they took John Spafford, Isaac Parker, and Stephen Farnsworth, as they were driving a team. Their cattle were found dead, with their tongues cut out. The men were carried to Canada, and, after some time, returned to Boston, in a flag of truce.

Within a few days a large party, consisting of fifty, laid a plan to surprise the fort, at Upper Ashuelot. They hid themselves in a swamp, in the evening, intending to wait till the men had gone out to their work, in the morning, and then rush in. Ephraim Dorman, who was abroad very early, discovered them and gave the alarm. He bravely defended himself against two Indians, and stripped one of his blanket and gun, which he carried into the fort. John Bullard, and the wife of Daniel M'Kenny, were killed. Nathan Blake was taken and carried to Canada, where he remained two years. They burned several houses and barns; and from the human bones found among the ashes, it was thought that some of the enemy fell and were concealed in the flames.

About the same time a party came down to New Hopkinton, where they entered a garrisoned house, and found the people asleep, the door having been left open by one who had risen early and gone out to hunt. Eight persons were thus taken; Samuel Burbank and his two sons, David Woodwell, his wife, two sons, and a daughter. Burbank and the wife of Woodwell died in captivity. Woodwell and three of the children returned in a flag of truce to Boston.

The enemy were scattered in small parties, on all the frontiers. At Number-four, some women went out to milk their cows, with Major Josiah Willard, and several soldiers for their guard: eight Indians, who were concealed in a barn, fired on them, and killed Seth Putnam; as they were scalping him, Willard and two more fired on them, and mortally wounded two, whom their companions carried off.

At Cantocook, five white men and a negro were fired at. Elisha Cook and the negro were killed. Thomas Jones was taken, and died in Canada.

At lower Ashuelot, they took Timothy Brown and Robert Moffat, who were carried to Canada, and returned. At the same time a party lay about the fort at upper Ashuelot. As one of them knocked at the gate in the night, the centinel fired through the gate, and gave him a mortal wound.

The danger thus increasing, a reinforcement was sent by the Massachusetts assembly, to these distressed towns. Captain Paine, with a troop, came to Number-four; and about twenty of his men, going to view the place where Putnam was killed, fell into an ambush. The enemy rose and fired, and then endeavoured to cut off their retreat. Captain Phineas Stevens, with a party, rushed out to their relief: a skirmish ensued, in which five men were killed on each side, and one of ours was taken. The Indians left some of their guns and blankets behind.

In about a month after this, another engagement happened at the same place. As Captain Stevens and Captain Brown were going into the meadow, to look for their horses, the dogs discovered an ambush, which put the men into a posture for action, and gave them the advantage of the first fire. After a sharp encounter, the enemy were driven into a swamp, drawing away several of their dead. In this action only one man was lost. Several blankets, hatchets, spears, guns, and other things, were left on the ground, which were sold for forty pounds old tenor. This was reckoned "a great booty from such beggarly enemies."

At Bridgman's fort near fort Dummer, William Robins and James Baker were killed in a meadow. Daniel How and John Beeman were taken. How killed one of the Indians before he was taken.

When the people wanted bread they were obliged to go to the mills with a guard, every place being full of danger. A party who went to Hinsdale's mill, with Colonel Willard at their head, in searching round the mill, discovered an ambush. The enemy were put to flight with the loss of their packs.

At Number-four, one Phillips was killed; and as some of the people were bringing him into the fort, they were fired upon; but none were hurt. Having burned some buildings, and killed some cattle, the enemy went and ambushed the road near Winchester, where they killed Joseph Rawson.

Whilst the upper settlements were thus suffering, the lower towns did not escape. A party of Indians came down to Rochester, within twenty miles of Portsmouth. Five men were at work in a field, having their arms at hand. The Indians concealed themselves; one of them fired, with a view to induce the men to discharge their pieces, which they did. The enemy then rushed upon them before they could load again. They retreated to a small deserted house, and fastened the door. The Indians tore off the roof, and with their guns and tomahawks dispatched John Wentworth and Gersham Downs. They wounded John Richards; and then crossing over to another road, came upon some men who were at work in a field, all of whom escaped; but they took Jonathan Door, a boy, as he was sitting on a fence. Richards was kindly used, his wounds were healed, and after eighteen months he was sent to Boston in a flag of truce. Door lived with the Indians, and acquired their manners and habits; but, after the conquest of Canada, returned to his native place.

Soon after this, another man was killed at Rochester. Two men were surprised, and taken at Contocook; and a large party of Indians lay in

ambush at Penacook, with an intention to attack the people, while assembled for public worship; but seeing them go armed to their devotions, they waited till the next morning, when they killed five and took two.

In these irritating skirmishes the summer was spent; till a large body of French and Indians attacked Fort Massachusetts, at Hoosuck. This fort was lost for want of ammunition to defend it. After this success, the enemy remained quiet during the rest of the summer.

The prospect of an expedition to Canada had induced many of the soldiers who were posted on the frontiers to enlist into the regiments, because they preferred active service to the dull routine of a garrison. The defence of the western posts was not only hazardous, but ineffectual; and some persons in the north-western part of Massachusetts thought it inexpedient to be at the charge of defending a territory which was out of their jurisdiction. Their petitions prevailed with the assembly, to withdraw their troops from the western parts of New Hampshire. The inhabitants were then obliged to quit their estates. They deposited in the earth such furniture and utensils as could be saved by that means; they carried off on horseback such as were portable; and the remainder, with their buildings, was left as a prey to the enemy, who came and destroyed, or carried away, what they pleased. Four families, who remained in Shattuck's Fort, (Hinsdale), defended it against a party of Indians, who attempted to burn it. Six men only were left in the fort at Number-four, who in the following winter deserted it; and it was wholly destitute for two months. In this time some gentlemen, who understood the true interest of the country, prevailed on the assembly of Massachusetts to resume the protection of those deserted places; and to employ a sufficiency of men, not only to garrison them, but to range the woods, and watch the motions of the enemy.

(1747.) In the latter end of March, Captain Phineas Stevens, who commanded a ranging company of thirty men, came to Number-four; and, finding the fort entire, determined to keep possession of it. He had not been there many days, when he was attacked by a very large party of French and Indians, commanded by M. Debelinè. The dogs, by their barking, discovered that the enemy was near; which caused the gate to be kept shut beyond the usual time. One man went out to make discovery, and was fired on; but returned with a slight wound only. The enemy, finding that they were discovered, arose from their concealment, and fired at the fort on all sides. The wind being high, they set fire to the fences and log-houses, till the fort was surrounded by flames. Captain Stevens took the most prudent measures for his security; keeping every vessel full of water, and digging trenches under the walls in several places; so that a man might creep through, and extinguish any fire which might catch on the outside of the walls. The fire of the fences did not reach the fort; nor did the flaming arrows which they incessantly shot against it take effect. Having continued this mode of attack for two days, accompanied with hideous shouts and yells; they prepared a wheel carriage, loaded with dry faggots, to be pushed before them, that they might set fire to the fort. Before they proceeded to this operation, they demanded a cessation of arms till the sun-rising, which was granted. In the morning, Debelinè came up with fifty men, and a flag of truce, which he stuck in the ground. He demanded a

parley, which was agreed to. A French officer, with a soldier and an Indian, then advanced; and proposed that the garrison should bind up a quantity of provisions with their blankets, and having laid down their arms, should be conducted prisoners to Montreal. Another proposal was, that the two commanders should meet, and that an answer should then be given. Stevens met the French commander, who, without waiting for an answer, began to enforce his proposal, by threatening to storm the fort, and put every man to death, if they should refuse his terms, and kill one of his men. Stevens answered, that he could hearken to no terms till the last extremity; that he was intrusted with the defence of the fort, and was determined to maintain it, till he should be convinced that the Frenchman could perform what he had threatened. He added, that it was poor encouragement to surrender, if they were all to be put to the sword for killing one man, when it was probable they had already killed more. The Frenchman replied, "Go and see if your men dare to fight any longer, and give me a quick answer." Stevens returned, and asked his men whether they would fight or surrender. They unanimously determined to fight. This was immediately made known to the enemy, who renewed their shouting and firing all that day and night. On the morning of the third day they requested another cessation for two hours. Two Indians came with a flag, and proposed, that if Stevens would sell them provisions they would withdraw. He answered, that to sell them provisions for money would be contrary to the law of nations; but that he would pay them five bushels of corn for every captive, for whom they would give a hostage, till the captive could be brought from Canada. After this answer, a few guns were fired, and the enemy were seen no more.

In this furious attack from a starving enemy no lives were lost in the fort, and two men only were wounded. No men could have behaved with more intrepidity in the midst of such threatening danger. An express was immediately dispatched to Boston, and the news was there received with great joy. Commodore Sir Charles Knowles was so highly pleased with the conduct of Capt. Stevens, that he presented him with a valuable and elegant sword, as a reward for his bravery. From this circumstance, the township, when it was incorporated, took the name of Charlestown.

Small parties of the enemy kept hovering, and sometimes discovered themselves. Sergeant Phelps killed one near the fort, and escaped unhurt, though fired upon and pursued by two others.

Other parties went farther down the country; and at Rochester they ambushed a company who were at work in a field. The ambush was discovered by three lads, John and George Place, and Paul Jennens. The Indians fired upon them. John Place returned the fire and wounded an Indian. Jennens presented his gun but did not fire; this prevented the enemy from rushing upon them, till the men from the field came to their relief and put the Indians to flight.

At Penacook, a party of the enemy discovered themselves by firing at some cattle. They were pursued by fifty men, and retreated with such precipitation as to leave their packs and blankets with other things behind. One man had his arm broken in this conflict. About the same time a man was killed there who had just returned from Cape Breton, after an absence of two years. Another was killed at Suncook; and at Nottingham, Robert

Beard, John Folsom, and Elizabeth Simpson suffered the same fate.

In the autumn, Major Willard and Captain Alexander wounded and took a Frenchman, near Winchester, who was conducted to Boston and returned to Canada. Soon after, the enemy burned Bridgman's fort (Hinsdale), and killed several persons, and took others from that place, and from Number-four in the ensuing winter. No pursuit could be made, because the garrison was not provided with snow-shoes, though many hundreds had been paid for by the government.

(1748.) The next spring, Captain Stevens was again appointed to command at Number-four, with a garrison of 100 men; Captain Humphrey Hobbs being second in command. A scouting party of eighteen was sent out under Capt. Eleazer Melvin. They discovered two canoes in Lake Champlain, at which they fired. The fort at Crown Point was alarmed, and a party came out to intercept them. Melvin crossed their track and came back to West River, where as his men were diverting themselves by shooting salmon, the Indians suddenly came upon them and killed six. The others came in at different times to Fort Dummer.

On a Sabbath morning, at Rochester, the wife of Jonathan Hodgdon was taken by the Indians as she was going to milk her cows; she called aloud to her husband; the Indians would have kept her quiet; but as she persisted in calling they killed her, apparently contrary to their intentions. Her husband heard her cries, and came to her assistance at the instant of her death. His gun missed fire and he escaped. The alarm occasioned by this action prevented greater mischief.

The next month, they killed three men belonging to Hinsdale's fort, Nathan French, Joseph Richardson, and John Frost. Seven were taken; one of whom, William Bickford, died of his wounds. Capt. Hobbs and forty men being on a scout near West River, were surprised by a party of Indians, with whom they had a smart encounter of three hours continuance. Hobbs left the ground, having had three men killed and four wounded. The same party of the enemy killed two men and took nine, between fort Hinsdale and fort Dummer.

(1749.) The cessation of arms between the belligerent powers did not wholly put a stop to the incursions of the enemy; for after it was known here, and after the garrison of Number-four was withdrawn, excepting fifteen men, Obadiah Sortwell was killed, and a son of Capt. Stevens was taken and carried to Canada, but he was released and returned.

During this affecting scene of devastation and captivity, there were no instances of deliberate murder nor torture exercised on those who fell into the hands of the Indians; and even the old custom of making them run the gauntlet was in most cases omitted. On the contrary there is an universal testimony from the captives who survived and returned, in favour of the humanity of their captors. When feeble, they assisted them in travelling; and in cases of distress from want of provision, they shared with them an equal proportion. A singular instance of moderation deserves remembrance. An Indian had surprised a man at Ashuelot; the man asked for quarter, and it was granted: whilst the Indian was preparing to bind him, he seized the Indian's gun, and shot him in one arm. The Indian, however, secured him; but took no other revenge than, with a kick, to say "You dog, how could you treat me so?" The gentleman from whom

this information came, had frequently heard the story both from the captive and the captor. The latter related it as an instance of English perfidy the former of Indian lenity.

There was a striking difference between the manner in which this war was managed, on the part of the English, and on the part of the French. The latter kept out small parties continually engaged in killing, scalping, and taking prisoners; who were sold in Canada and redeemed by their friends at a great expense. By this mode of conduct, the French made their enemies pay the whole charge of their predatory excursions, besides reaping a handsome profit to themselves. On the other hand, the English attended only to the defence of the frontiers; and that in such a manner, as to leave them for the most part insecure. No parties were sent to harass the settlements of the French. If the whole country of Canada could not be subdued, nothing less could be attempted. Men were continually kept in pay, and in expectation of service, but spent their time either in garrisons, or camps, or in guarding provisions when sent to the several forts. Though large rewards were promised for scalps and prisoners, scarcely any were obtained unless by accident. A confusion of councils, and a multiplicity of directors, caused frequent changes of measures, and delays in the execution of them. The forts were ill supplied with ammunition, provisions, clothing, and snow-shoes. When an alarm happened, it was necessary either to bake bread, or dress meat, or cast bullets, before a pursuit could be made. The French gave commissions to none but those who had distinguished themselves by some exploit. Among us, persons frequently obtained preferment for themselves or their friends, by making their court to governors, and promoting favourite measures in town meetings, or general assemblies.

A community recovering from a war, like an individual recovering from sickness, is sometimes in danger of a relapse. This war was not decisive, and the causes which kindled it were not removed. One of its effects was, that it produced a class of men, who, having been for a time released from laborious occupations, and devoted to the parade of military life, did not readily listen to the calls of industry. To such men peace was burdensome, and the more so, because they had not the advantage of half pay. The interval between this and the succeeding war was not long. The peace took place in 1749, and in 1754 there was a call to resume the sword.

*Purchase of Mason's claim—Controversy about representation—Plan of extending the settlements—Jealousy and resentment of the savages.*

Whilst the people were contending with an enemy abroad, an attempt was making at home to revive the old claim of Mason, which their fathers had withstood, and which for many years had lain dormant, till recalled to view by the politicians of Massachusetts, as already related. After Thomlinson had engaged with Mason, for the purchase of his title, nothing more was heard of it, till the controversy respecting the lines was finished, and Wentworth was established in the seat of government, and in the office of surveyor of the woods. (1744.) The agreement which Thomlinson had made, was in behalf of the representatives of New Hampshire; and the instrument was lodged in the hands of the governor, who sent it to the house for their perusal

and consideration. It lay on their table a long time, without any formal notice. Quickening messages were sent time after time; but the affairs of the war, and Mason's absence at sea, and in the expedition to Louisbourg, where he had a company, together with a disinclination in the house, which was of a different complexion from that in 1739, prevented any thing from being done.

(1745.) In the mean time Mason suffered a fine and recovery, by which the entail was docked, in the courts of New Hampshire, and he became entitled to the privilege of selling his interest. He also presented a memorial to the assembly, in which he told them that he would wait no longer; and unless they would come to some resolution, he should take their silence as a refusal. (1746.) Intimations were given, that if they should not ratify the agreement, a sale would be made to other persons, who stood ready to purchase. At length the house came to a resolution, "that they would comply with the agreement, and pay the price; and that the waste lands should be granted by the general assembly, to the inhabitants, as they should think proper." A committee was appointed to treat with Mason about fulfilling his agreement, and to draw the proper instruments of conveyance; but he had on the same day, by deed of sale, for the sum of 1500*l.* currency, conveyed his whole interest to twelve persons, in fifteen shares. When the house sent a message to the council to inform them of this resolution, the council objected to that clause of the resolution, "that the lands be granted by the general assembly," as contrary to the royal commission and instructions; but if the house would address the king, for leave to dispose of the lands, they said that they were content.

These transactions raised a great ferment among the people. Angry and menacing words were plentifully thrown out against the purchasers; but they had prudently taken care to file in the recorder's office a deed of quit-claim to all the towns which had been settled and granted within the limits of their purchase. In this quit-claim they inserted a clause in the following words: "excepting and reserving our respective rights, titles, inheritance, and possessions, which we heretofore had, in common or severalty, as inhabitants or proprietors of houses or lands, within any of the towns, precincts, districts, or villages aforesaid." This precaution had not at first its effect. A committee of both houses was appointed to consider the matter, and they reported, that "for quieting the minds of the people, and to prevent future difficulty, it would be best for the province to purchase the claim, for the use and benefit of the inhabitants; provided that the purchasers would sell it for the cost and charges." This report was accepted, concurred, and consented to, by every branch of the legislature. A committee was appointed to consult counsel, and agree on proper instruments of conveyance. The same day, this committee met with the purchasers, and conferred on the question, whether they would sell on the terms proposed? At the conference, the purchasers appeared to be divided, and agreed so far only, as to withdraw their deed from the recorder's office. The committee reported that they could make no terms with the purchasers; in consequence of which the deed was again lodged in the office and recorded.

Much blame was cast on the purchasers, for clandestinely taking a bargain out of the hands of the assembly. They said in their vindication, "that

they saw no prospect of an effectual purchase by the assembly, though those of them who were members voted for it, and did what they could to encourage it; that they would have gladly given Mason as much money for his private quit-claim to their several rights in the townships already granted and settled; that Mason's claim had for many years hung over the province, and that on every turn they had been threatened with a proprietor; that Mason's deed to a committee of Massachusetts, in behalf of that province, for a tract of land adjoining the boundary line, had been entered on the records, and a title under it set up, in opposition to grants made by the governor and council; that it was impossible to say where this evil would stop, and therefore they thought it most prudent to prevent any farther effects of it, by taking up with his offer, especially as they knew that he might have made a more advantageous bargain, with a gentlemen of fortune in the neighbouring province; but that they were still willing to sell their interest to the assembly, for the cost and charges; provided that the land be granted by the governor and council; and that the agreement be made within one month from the date of their letter."

Within that month the alarm caused by the approach of D'Anville's fleet put a stop to the negotiation. After that danger was over, the affair was revived; but the grand difficulty subsisted. The purchasers would not sell, but on condition that the lands should be granted by the governor and council. (1747.) The assembly thought that they could have no security that the land would be granted to the people; because the governor and council might grant it to themselves, or to their dependents, or to strangers, and the people who had paid for it might be excluded from the benefit which they had purchased. A proposal was afterwards made, that the sale should be to feeffees in trust for the people; and a form of a deed for this purpose was drawn. To this proposal, the purchasers raised several objections; and as the assembly had not voted any money to make the purchase, they declined signing the deed; and no farther efforts being made by the assembly, the purchase rested in the hands of the proprietors. In 1749 they took a second deed, comprehending all the Masonian grants, from Naumkeag to Pascataqua; whereas the former deed was confined to the lately established boundaries of New Hampshire. This latter deed was not recorded till 1753.

(1748.) After they had taken their first deed, the Masonians began to grant townships, and continued granting them to petitioners, often without fees, and always without quit-rents. They quieted the proprietors of the towns on the western side of the Merrimack, which had been granted by Massachusetts, before the establishment of the line; so that they went on peaceably with their settlements. The terms of their grants were, that the grantees should, within a limited time, erect mills and meeting-houses, clear out roads, and settle ministers. In every township, they reserved one right for the first settled minister, another for a parsonage, and a third for a school. They also reserved fifteen rights for themselves, and two for their attorneys; all of which were to be free from taxes, till sold or occupied. By virtue of these grants, many townships were settled, and the interest of the people became so united with that of the proprietors, that the prejudice against them gradually abated; and, at length, even some who had been the most violent opposers, acquiesced in the safety and policy of their measures,

though they could not concede to the validity of their claim.

The heirs of Allen menaced them by advertisements, and warned the people against accepting their grants. They depended on the recognition of Allen's purchase, in the charter of Massachusetts, as an argument in favour of its validity; and supposed, that because the ablest lawyers in the kingdom were consulted, and employed in framing that charter, they must have had evidence of the justice of his pretensions, before such a reservation could have been introduced into it. So strong was the impression which this argument had made on the minds of speculators in England, that large sums had been offered to some of Allen's heirs in that kingdom; and Thomlinson himself, the first mover of the purchase from Mason, in behalf of New Hampshire, had his doubts; and would have persuaded the associates to join in buying Allen's title also, even at the price of 2,000*l.* sterling, to prevent a more expensive litigation, the issue of which would be uncertain. But they, being vested with the principal offices of government; being men of large property, which was also increased by this purchase; and having satisfied themselves of the validity of their title, by the opinions of some principal lawyers, both here and in England, contented themselves with the purchase which they had made; and by maintaining their possession, extended the cultivation of the country within their limits.

The words of the original grants to Mason describe an extent of sixty miles from the sea, on each side of the province, and a line to cross over from the end of one line of sixty miles to the end of the other. The Masonian proprietors pleaded, that this cross line should be a curve, because no other line would preserve the distance of sixty miles from the sea, in every part of their western boundary. No person had any right to contest the point with them but the king. It was not for the interest of his governor and council to object; because several of them, and of their connexions, were of the Masonian propriety; and no objection was made by any other persons, in behalf of the crown. Surveyors were employed, at several times, to mark this curve line; but on running, first from the southern, and then from the eastern boundary, to the river Pemigewasset, they could not make the lines meet. Controversies were thus engendered between the grantees of crown lands and those of the Masonians, which subsisted for many years. In some cases, the disputes were compromised, and in others, left open for litigation; till, by the revolution, the government fell into other hands.

This was not the only controversy which, till that period, remained undetermined. When the extension of the boundary lines gave birth to a demand for the maintenance of fort Dummer, the governor had the address to call to that assembly, into which he introduced this demand, six new members, who appeared as representatives for six towns and districts, some of which had been by the southern line cut off from Massachusetts. It was supposed that his design in calling these members was to facilitate the adoption of fort Dummer. Other towns, which ought to have had the same privilege extended to them, were neglected. When the new members appeared in the house, the secretary, by the governor's order, administered to them the usual oaths; after which they were asked, in the name of the house, by what authority they came thither? They answered that they were chosen by virtue of a writ,

in the king's name, delivered to their respective towns and districts by the sheriff. The house remonstrated to the governor, that these places had no right by law, nor by custom, to send persons to represent them, and then debarred them from the privilege of voting in the choice of a speaker: two only dissenting out of nineteen. Several sharp messages passed between the governor and the house on that occasion, but the pressing exigencies of the war, and the proposed expedition to Cape Breton, obliged him for that time to give way, and suffer his new members to be excluded till the king's pleasure could be known.

The house vindicated their proceedings, by appealing to their records; from which it appeared, that all the additions which had been made to the house of representatives were in consequence of their own votes, either issuing a precept themselves, or requesting the governor to do it; from which they argued, that no town or parish ought to have any writ for the choice of a representative but by a vote of the house, or by an act of the assembly. On the other side it was alleged, that the right of sending representatives was originally founded on the royal commission and instructions, and therefore that the privilege might, by the same authority, be lawfully extended to the new towns, as the king, or his governor, by advice of council, might think proper. The precedents on both sides were undisputed, but neither party would admit the conclusion drawn by the other. Had this difficulty been foreseen, it might have been prevented when the triennial act was made in 1727. The defects of that law began now to be severely felt, but could not be remedied.

The dispute having thus subsided, was not revived during the war; but as soon as the peace was made, and the king had gone on a visit to his German dominions, an additional instruction was sent from the lords justices, who presided in the king's absence, directing the governor to dissolve the assembly then subsisting; and when another should be called, to issue the king's writ to the sheriff, commanding him to make out precepts to the towns and districts, whose representatives had been before excluded; and that when they should be chosen, the governor should support their rights.

Had this instruction extended to all the other towns in the province, which had not been before represented, it might have been deemed equitable; but as it respected those only which had been the subject of controversy, it appeared to be grounded on partial information, and intended to strengthen the prerogative of the crown, without a due regard to the privileges of the people at large.

(1749.) The party in opposition to the governor became more acrimonious than ever. Richard Waldron, the former secretary, and the confidential friend of Belcher, appeared in the new assembly and was chosen speaker. The governor negatived him; and ordered the house to admit the new members, and choose another speaker. They denied his power of negativing their speaker and of introducing new members. The style of his messages was peremptory and severe; their answers and remonstrances were calm, but resolute, and in some instances satirical. Neither party would yield; no business was transacted, though the assembly met about once in a month, and was kept alive, by adjournments and prorogations, for three years. Had he dissolved them, before the time for which they were chosen had expired, he knew, that in all probability, the same persons would be re-elected.

The effect of this controversy was injurious to the governor, as well as to the people. The public bills of credit had depreciated since this administration began, in the ratio of thirty to fifty-six; and the value of the governor's salary had declined in the same proportion. The excise could neither be formed nor collected; and that part of the governor's salary, which was funded upon it, failed. The treasurer's accounts were unsettled. The soldiers, who had guarded the frontiers in the preceding war, were not paid; nor were their muster-rolls adjusted. The public records of deeds were shut up; for the recorder's time having expired, and the appointment being by law vested in the assembly, no choice could be made. No authenticated papers could be obtained, though the agent was constantly soliciting for those which related to the controversy about Fort Dummer, at that time before the king and council.

(1750, 1751.) When the situation of the province was known in England, an impression to its disadvantage was made on the minds of its best friends; and they even imagined that the governor's conduct was not blameless. The language at court was totally changed. The people of New Hampshire, who had formerly been in favour, as loyal and obedient subjects, were now said to be in rebellion. Their agent was frequently reproached and mortified on their account, and was under great apprehension that they would suffer, not only in their reputation, but in their interest. The agent of Massachusetts was continually soliciting for repayment of the charges of maintaining fort Dummer, and it was in contemplation, to take off a large district from the western part of New Hampshire, and to annex it to Massachusetts, to satisfy them for that expense. Besides this, the paper money of the colonies was under the consideration of parliament; and the province of Massachusetts was rising into favour for having abolished that system of iniquity. The same justice was expected of New Hampshire, since they had the same means in their power by the reimbursement granted to them by parliament for the Cape Breton and Canada expeditions. This money, amounting to about 30,000*l.* sterling, clear of all fees and commissions, had lain long in the treasury; and when it was paid to the agent, he would have placed it in the funds, where it might have yielded an interest of three per cent.; but having no directions from the assembly, he locked it up in the bank. This was a clear loss to them of 900*l.* per annum. There were some who reflected on the agent, as if he had made an advantage to himself of this money. Had he done it, his own capital was sufficient to have answered any of their demands; but it was also sufficient to put him above the necessity of employing their money, either in trade or speculation.

It had also been suggested, that Thomlinson, at the governor's request, had solicited and procured the instruction, which had occasioned this unhappy stagnation of business. When this suggestion came to his knowledge, he exculpated himself from the charge in a letter which he wrote to a leading member of the assembly, and gave a full account of the matter as far as it had come to his knowledge. He said, that the governor himself had stated the facts in his letters to the ministry; concerning his calling of the new members, in 1745, and their exclusion from the assembly, with the reasons given for it; and had desired to know the king's pleasure, and to have directions how to act. That the ministry, without any exception or hesitation, had pro-

nounced his conduct conformable to his duty. That nevertheless, the Board of Trade had solemnly considered the matter, and consulted counsel, and had summoned him, as agent of the province, to attend their deliberation. Their result was, that as the crown had an indisputable right to incorporate any town in England, and qualify it to send members to parliament, so the same right and power had been legally given to all the governors in America; by means of which, all the assemblies in the king's governments had increased in number, as the colonies had increased in settlements. That any other usage in calling representatives was wrong; although it might have been indulged when the province was under the same governor with Massachusetts. This was all which passed before the additional instruction came out, which was sent through the hands of the agent. As it was founded on a question concerning the rights and prerogatives of the crown, he argued the absurdity of supposing, either that it had been solicited, or that any attempt to have it withdrawn could be effectual. His advice was, that they should submit to it; because, that under it, they would enjoy the same rights and privileges with their fellow-subjects in England, and in the other colonies; assuring them, that the then reigning prince had never discovered the least inclination to infringe the constitutional rights of any of his subjects.

This advice, however salutary, had not the intended effect. Instead of submitting, the party in opposition to the governor framed a complaint against him, and sent it to London, to be presented to the king. If they could have prevailed, their next measure would have been, to recommend a gentleman, Sir William Pepperell, of Massachusetts, for his successor. This manœuvre came to the ears of Thomlinson; but he was under no necessity to exert himself on this occasion, for the person to whose care the address was intrusted, considering the absurdity of complaining to the king against his governor for acting agreeably to his instructions, was advised not to present it. This disappointment vexed the opposition to such a degree, that they would have gladly dissolved the government, and put themselves under the jurisdiction of Massachusetts, had it been in their power. But finding all their efforts ineffectual either to have the instruction withdrawn, or the governor removed, they consoled themselves with this thought, that it was "better to have two privileges taken from them, than voluntarily to give up one."

(1752.) The time for which this assembly was elected, having expired, a new one was called in the same manner. They came together with a spirit of moderation, and a disposition to transact the long neglected business. The members from the new towns quietly took their seats—an unexceptionable speaker, Meshech Weare, was elected—a recorder was appointed—a committee was chosen to settle the treasurer's accounts—and a vote was passed for putting the reimbursement money into the public funds in England. The governor's salary was augmented, and all things went on smoothly. The party which had been opposed to the governor, declined in number and virulence; some had been removed by death, others were softened and relaxed; a liberal distribution of commissions, civil and military, was made; and an era of domestic reconciliation commenced.

The controversy respecting Fort Dummer, and the fear of losing a district in that neighbourhood,

quicken the governor to make grants of several townships in that quarter, on both sides of Connecticut river, chiefly to those persons who claimed the same lands under the Massachusetts title. The war being over, the old inhabitants returned to their plantations, and were strengthened by additions to their number. It was in contemplation, to extend the settlements farther up Connecticut river, to the rich meadows of Cohos. The plan was to cut a road to that place—to lay out two townships, one on each side of the river, and opposite to each other—to erect stockades, with lodgments for 200 men in each township, enclosing a space of fifteen acres, in the centre of which was to be a citadel containing the public buildings and granaries, which were to be large enough to receive all the inhabitants and their moveable effects in case of necessity. As an inducement to people to remove to this new plantation, they were to have courts of judicature and other civil privileges among themselves, and were to be under strict military discipline. A large number of persons engaged in this enterprise, and they were the rather stimulated to undertake it, because it was feared that the French, who had already begun to encroach on the territory claimed by the British crown, would take possession of this valuable tract, if it should be left unoccupied.

In pursuance of this plan, a party was sent up in the spring of 1752 to view the meadows of Cohos, and lay out the proposed townships: the Indians observed them, and suspected their intentions. The land was theirs, and they knew its value. A party of the Arosaguntacook, or St. Francis tribe, was deputed to remonstrate against this proceeding. They came to the fort at Number-four, with a flag of truce, pretending that they had not heard of the treaty of peace which had been made with the several Indian tribes. They complained to Captain Stevens, of the encroachment which was meditating on their land, and said that they could not allow the English to settle at Cohos, when they owned more land already than they could improve; and, that if this settlement were pursued, they should think the English had a mind for war, and would resist them. This threatening being communicated to the governor of Massachusetts, and by him to the governor of New Hampshire, threw such discouragement on the project that it was laid aside.

The Indians did not content themselves with remonstrating and threatening. Two of the same tribe, named Sabatis and Christi, came to Canterbury, where they were entertained in a friendly manner for more than a month; at their departure, they forced away two negroes, one of whom escaped and returned, and the other was carried to Crown Point and sold to a French officer. A party of ten or twelve of the same tribe, commanded by Captain Moses, met with four young men who were hunting on Baker's river. One of these was John Stark. When he found himself surprised and fallen into their hands, he called to his brother William Stark, who being in a canoe, gained the opposite shore and escaped. They fired at the canoe and killed a young man who was in it. John received a severe beating from the Indians for alarming his brother. They carried him, and his companion Eastman, up Connecticut river, through several carrying places, and down the lake Memphrimagog to the head-quarters of their tribe. There they dressed him in their finest robes, and adopted him as a son. This early captivity, from which he was redeemed, qualified him to be an expert partisan in the succeeding war;

from which station, he afterwards rose to the rank of brigadier-general in the armies of the United States.

(1753.) The next year Sabatis, with another Indian named Plausawa, came to Canterbury; where, being reproached with the misconduct respecting the negroes, he and his companion behaved in an insolent manner. Several persons treated them freely with strong liquor. One followed them into the woods, and killed them, and, by the help of another, buried them; but so shallow, that their bodies were devoured by beasts of prey, and their bones lay on the ground. By the treaties of peace, it had been stipulated on the one part, that if any of the Indians should commit an act of hostility against the English, their young men should join with the English in reducing such Indians to submission; and, on the other hand, that if an Englishman should injure any of them, no private revenge should be taken; but application should be made to the government for justice. In the autumn of the same year, a conference being held with the eastern Indians by the government of Massachusetts, a present was made to the Arosaguntacook tribe, expressive of an intention to wipe away the blood. They accepted the present, and ratified the peace which had been made in 1749.

(1754.) The two men who killed Sabatis and Plausawa were apprehended and brought to Portsmouth. A bill was found against them by the grand jury, and they were confined in irons. In the night, before the day appointed for their trial, an armed mob from the country, with axes and crows, forced the prison, and carried them off in triumph. A proclamation was issued, and a reward offered by the governor, for apprehending the rioters; but no discovery was made, and the action was even deemed meritorious. The next summer another conference was held at Falmouth, at which commissioners from New Hampshire assisted. The Arosaguntacooks did not attend, but sent a message, purporting that the blood was not wiped away. The commissioners from New Hampshire made a handsome present to all the Indians who appeared at this conference; which ended as usual, in the promise of peace and friendship.

*The last French and Indian war, which terminated in the conquest of Canada. Controversy concerning the land westward of Connecticut river.*

By the treaty of Aix la Chappelle, in 1748, it was stipulated, that "all things should be restored, on the footing they were before the war." The island of Cape Breton was accordingly restored to France; but the limits of the French and English territories on the continent were undetermined; and it was the policy of both nations to gain possession of important passes, to which each had some pretensions, and to hold them, till the limits should be settled by commissioners mutually chosen. These commissioners met at Paris; but came to no decision. By the construction of charters and grants from the crown of England, her colonies extended indefinitely westward. The French had settlements in Canada and Louisiana, and they meditated to join these distant colonies, by a chain of forts and posts from the St. Lawrence to the Mississippi; and to extend the limits of Canada as far eastward as to command navigation in the winter, when the great river St. Lawrence is impassable. These claims of territory, extending on the one part from east to west, and on the other from north to south, necessarily interfered. The colonies of Nova Scotia, New

York, and Virginia, were principally affected by this interference; and the encroachments made on them by the French, were a subject of complaint, both there and in Europe.

(1754.) It was foreseen that this controversy could not be decided but by the sword; and the English determined to be early in their preparations. The Earl of Holderness, Secretary of State, wrote to the governors of the American colonies, recommending union for their mutual protection and defence. A meeting of commissioners from the colonies, at Albany, having been appointed, for the purpose of holding a conference with the six nations, on the subject of French encroachments within their country—it was proposed by Governor Shirley to the several governors, that the delegates should be instructed on the subject of union.

At the place appointed the congress was held; consisting of delegates from Massachusetts, New Hampshire, Rhode Island, Connecticut, Pennsylvania, and Maryland; with the lieutenant-governor and council of New York. They took their rank in geographical order, beginning at the north. One member from each colony was appointed to draw a plan of union; Hutchinson, of Massachusetts, Atkinson, of New Hampshire, Hopkins, of Rhode Island, Pitkin, of Connecticut, Smith, of New York, Franklin, of Pennsylvania, and Tasker, of Maryland. The substance of the plan was, that application be made for an act of parliament to form a grand council, consisting of delegates from the several legislative assemblies, subject to the control of a president-general (to be appointed by the crown,) with a negative voice. That this council should enact general laws; apportion the quotas of men and money to be raised by each colony; determine the building of forts; regulate the operations of armies; and concert all measures for the common protection and safety. The delegates of Connecticut alone entered their dissent to the plan, because of the negative voice of the president-general. It is worthy of remark, that this plan for the union of the colonies was agreed to on the fourth day of July, exactly twenty-two years before the declaration of American independence, and that the name of Franklin appears in both.

With the plan of union, a representation was made to the king of the danger in which the colonies were involved. Copies of both were laid before the several assemblies. They were fully sensible of their danger from the French; but they apprehended greater danger from the plan of union. Its fate was singular. It was rejected in America because it was supposed to put too much power into the hands of the king; and it was rejected in England, because it was supposed to give too much power to the assemblies of the colonies. The ministry made another proposal; that the governor, with one or two members of the council of each colony, should assemble, and consult for the common defence, and draw on the British treasury for the sums expended; which should be raised by a general tax laid by parliament on the colonies. But this was not a time to push such an alarming innovation; and when it was found impracticable, the ministry determined to employ their own troops to fight their battles in America, rather than to let the colonists feel their strength, and be directed by their own counsels.

To draw some aid however from the colonies was necessary. Their militia might serve as guards, or rangers, or labourers, or do garrison duty, or be employed in other inferior offices; but British troops,

commanded by British officers, must have the honour of reducing the French dominions in North America.

The savage nations in the French interest were always ready, on the first appearance of a rupture, to take up the hatchet. It was the policy of the French government, to encourage their depredations on the frontiers of the English colonies, to which they had a native antipathy. By this means the French could make their enemies pay the whole expense of the war; for all the supplies which they afforded to the Indians, were amply compensated by the ransom of captives. In these later wars, therefore, we find the savages more dextrous in taking captives, and more tender of them when taken than in former wars, which were carried on with circumstances of greater cruelty.

No sooner had the alarm of hostilities, which commenced between the English and French in the western part of Virginia, spread through the continent, than the Indians renewed their attacks on the frontiers of New Hampshire. A party of them made an assault on a family at Baker's-town, on Pemigewasset river, where they killed a woman, and took several captives. Within three days they killed a man and woman at Stevens town in the same neighbourhood, upon which the settlements were broken up, and the people retired to the lower towns for safety, and the government was obliged to post soldiers in the deserted places. After a few days more they broke into the house of James Johnson, at Number-four, early in the morning before any of the family were awake, and took him with his wife and three children, her sister Miriam Willard, and two men, Peter Laboree and Ebenezer Farnsworth. The surprisal was complete and bloodless, and they carried them off undisturbed. The next day Johnson's wife was delivered of a daughter, who from the circumstance of its birth was named Captive. The Indians halted one day, on the woman's account, and the next day resumed their march, carrying her on a litter which they made for the purpose, and afterwards put her on horseback. On their march they were distressed for provision, and killed the horse for food; the infant was nourished by sucking pieces of its flesh. When they arrived at Montreal, Johnson obtained a parole of two months, to return and solicit the means of redemption. He applied to the assembly of New Hampshire, and after some delay obtained 150*l.* sterling. But the season was so far advanced, and the winter proved so severe, that he did not reach Canada till the spring. He was then charged with breaking his parole; a great part of his money was taken from him by violence, and he was shut up with his family in prison, where they took the small-pox, which they happily survived. After eighteen months, the woman with her sister and two daughters were sent in a cartel ship to England, and thence returned to Boston. Johnson was kept in prison three years; and then with his son returned and met his wife in Boston, where he had the singular ill fortune to be suspected of designs unfriendly to his country, and was again imprisoned; but no evidence being produced against him, he was liberated. His eldest daughter was retained in a Canadian nunnery.

The fort and settlement of Number-four, being in an exposed situation, required assistance and support. It had been built by Massachusetts when it was supposed to be within its limits. It was projected by Colonel Stoddard, of Northampton, and was well situated in connection with the other forts on the western frontier, to command all the paths

by which the Indians travelled from Canada to New England. It was now evidently in New Hampshire; and Shirley, by advice of his council, applied to Wentworth recommending the future maintenance of that post to the care of his assembly; but they did not think themselves interested in its preservation, and refused to make any provision for it. The inhabitants made several applications for the same purpose, but were uniformly disappointed. They then made pressing remonstrances to the assembly of Massachusetts, who sent soldiers for the defence of that post, and of Fort Dummer, till 1757, when they supposed that the commander in chief of the king's forces would take them under his care, as royal garrisons. It was also recommended to the assembly of New Hampshire to build a fort at Cohos, but this proposal met the same fate.

(1755.) The next spring, three expeditions were undertaken against the French forts. One against Fort Duquesne, on the Ohio, was conducted by General Braddock, who was defeated and slain. Another against Niagara, by Governor Shirley, which miscarried; and a third against Crown Point, by General Johnson. For this last expedition, New Hampshire raised 500 men, and put them under the command of Colonel Joseph Blanchard. The governor ordered them to Connecticut river, to build a fort at Cohos, supposing it to be in their way to Crown Point. They first marched to Baker's-town, where they began to build batteaux, and consumed time and provisions to no purpose. By Shirley's advice they quitted that futile employment, and made a fatiguing march through the woods, by the way of Number-four to Albany. Whilst Johnson lay encamped at Lake George with his other forces, he posted the New Hampshire regiment at Fort Edward. On the 8th of September, he was attacked in his camp by Baron Dieskau, commanding a body of French regular troops, Canadians and savages. On the morning of that day, a scouting party from Fort Edward discovered waggons burning in the road; upon which Captain Nathaniel Folsom was ordered out with eighty of the New Hampshire regiment, and forty of New York under Capt. McGennis. When they came to the place, they found the waggons and the cattle dead, but no enemy was there. Hearing the report of guns toward the lake, they hastened thither; and having approached within two miles, found the baggage of the French army under the care of a guard, whom they attacked and dispersed. When the retreating army of Dieskau appeared, about four of the clock in the afternoon, Folsom posted his men among the trees, and kept up a well-directed fire till night; the enemy retired with great loss, and he made his way to the camp, carrying his own wounded and several French prisoners, with many of the enemy's packs. This well-timed engagement, in which but six men of Folsom's were lost, deprived the French army of their ammunition and baggage; the remains of which were brought into camp the next day. After this the regiment of New Hampshire joined the army. The men were employed in scouting, which service they performed in a manner so acceptable, that no other duty was required of them. Parties of them frequently went within view of the French fort at Crown Point; and at one time they brought off the scalp of a French soldier, whom they killed near the gate.

After the engagement on the 8th of September, when it was found necessary to reinforce the army; a second regiment, of 300 men, was raised in New

Hampshire, and put under the command of Col. Peter Gilman. These men were as alert and indefatigable as their brethren, though they had not opportunity to give such convincing evidence of it. The expedition was no farther pursued; and late in autumn the forces were disbanded and returned home.

The exertions made for the reduction of Crown Point not only failed of their object, but provoked the Indians to execute their mischievous designs against the frontiers of New Hampshire, which were wholly uncovered, and exposed to their full force. Between the rivers Connecticut and St. Francis, there is a safe and easy communication by short carrying-places, with which they were perfectly acquainted. The Indians of that river, therefore, made frequent incursions, and returned unmolested with their prisoners and booty.

At New Hopkinton, they took a man and a boy; but perceiving the approach of a scouting party, they fled and left their captives. At Keene they took Benjamin Twitchel, and at Walpole they killed Daniel Twitchel, and a man named Flynt. At the same place Colonel Bellows, at the head of twenty men, met with a party of fifty Indians; and having exchanged some shot, and killed several of the enemy, he broke through them and got into the fort, not one man of his company being killed or wounded. After a few days, these Indians, being joined by others to the number of 170, assaulted the garrison of John Kilburne, in which were himself, John Pike, two boys, and several women, who bravely defended the house and obliged the enemy to retire, with considerable loss. Pike was mortally wounded. Some of these Indians joined Dieskau's army, and were in the battle at Lake George. At Number-four, they killed a large number of cattle, and cut off the flesh. At Hinsdale, they attacked a party, who were at work in the woods; killed John Hardiclay and John Alexander, and took Jonathan Colby; the others escaped to the fort. Within a few days afterwards, they ambushed Caleb Howe, Hilkiah Grout, and Benjamin Gaffield, as they were returning from their labour in the fields. Howe was killed; Gaffield was drowned in attempting to cross the river; and Grout made his escape. The Indians went directly to Bridgman's fort, where the families of these unfortunate men resided. They had heard the report of the guns, and were impatient to learn the cause. By the sound of feet without, it being in the dusk of the evening, they concluded that their friends had returned, and too hastily opened the gate to receive them; when to their inexpressible surprise, they admitted the savages—and the three families, consisting of fourteen persons, were made captives.

After the defeat and death of Braddock, the chief command of the operations against the enemy fell into the hands of Shirley, who called another Congress, at New York, and planned another expedition against Crown Point; for which purpose, he called on the several governments to raise men and provide stores. A regiment was raised in New Hampshire, the command of which was given to Col. Nathaniel Messervè. (1756.) They also appointed two commissaries, Peter Gilman and Thomas Westbrook Waldron, who resided at Albany, to take care of the stores, whilst the regiment, with the other troops, assisted in building forts and batteaux. In the midst of this campaign, Shirley was superseded by the Earl of Loudon; but the summer passed away in fruitless labour; whilst the French, by their superior alertness, besieged and took the

English fort at Oswego; and the regiments of Shirley and Pepperrell, who garrisoned it, were sent prisoners to France. During this summer, the Indians killed Lieut. Moses Willard, and wounded his son at Number-four; and took Josiah Foster, with his wife and two children, from Winchester. They also wounded Zebulon Stebbins, of Hinsdale, who, with Reuben Wright, discovered an ambush, and prevented the captivity of several persons for whom the Indians were lying in wait.

The soldiers of New Hampshire were so expert in every service which required agility, and so habituated to fatigue and danger, that, by the express desire of Lord Loudon, three ranging companies were formed of them, who continued in service during the winter as well as the summer. The command of these companies was given to Robert Rogers, John Stark, and William Stark. They were eminently useful in scouring the woods, procuring intelligence, and skirmishing with detached parties of the enemy. These companies were kept during the war in the pay of the crown; and after the peace, the officers were allowed half-pay on the British establishment.

(1757.) The next year, another Crown Point expedition was projected by Lord Loudon. The crown was at the expense of stores and provisions, and required of the colonies, to raise, arm, clothe, and pay their quotas of men. Another regiment was raised in New Hampshire, of which Messervè was commander, who went to Halifax with part of his regiment, a body of 100 carpenters, and the three companies of rangers, to serve under Lord Loudon, whilst the other part of the regiment under Lieut.-Colonel Goffe, was ordered by General Webb, who commanded at the westward in the absence of the Earl of Loudon, to rendezvous at Number-four. Before their arrival, a large party of French and Indians attacked the mills in that place, and took Sampson Colefax, David Farnsworth, and Thomas Adams. The inhabitants, hearing the guns, advanced to the mills; but finding the enemy in force, prudently retreated. The enemy burned the mills; and in their retreat, took two other men, who were coming in from hunting, viz. Thomas Robins and Asa Spafford. Farnsworth and Robins returned; the others died in Canada.

Goffe, with his men, marched through Number-four and joined General Webb at Albany, who posted them at fort William Henry, near lake George, under the command of Col. Munroe, of the 35th British regiment. The French General Montcalm, at the head of a large body of Canadians and Indians, with a train of artillery, invested this fort; and in six days the garrison, after having expended all their ammunition, capitulated, on condition that they should not serve against the French for eighteen months. They were allowed the honours of war, and were to be escorted by the French troops to fort Edward, with their private baggage. The Indians, who served in this expedition on the promise of plunder, were enraged at the terms granted to the garrison; and, as they marched out unarmed, fell upon them, stripped them naked, and murdered all who made any resistance. The New Hampshire regiment happening to be in the rear, felt the chief fury of the enemy. Out of two hundred, eighty were killed and taken.

This melancholy event threw the whole country into the deepest consternation. Webb, who remained at Fort Edward, expecting to be there attacked, sent expresses to all the provinces for rein-

forcements. The French, however, did not pursue their advantage, but returned to Canada. A reinforcement of 250 men was raised in New Hampshire, under the command of Major Thomas Tash; which, by the orders of General Webb, was stationed at Number-four. This was the first time that the troops of New Hampshire occupied that important post.

Hitherto the war had been, on our part, unsuccessful. The great expense, the frequent disappointments, the loss of men, of forts, and of stores, were very discouraging. The enemy's country was filled with prisoners, and scalps, private plunder, and public stores and provisions, which the colonists, as beasts of burden, had conveyed to them. These reflections were the dismal entertainment of the winter. The next spring called for fresh exertions: the British ministry had been changed, and the direction of the war was put into the hands of that decisive statesman, William Pitt.

(1758.) In his circular letter to the American governors, he assured them, that to repair the losses and disappointments of the last inactive campaign, it was determined to send a formidable force, to operate by sea and land against the French in America; and he called upon them to raise "as large bodies of men, within their respective governments, as the number of inhabitants might allow;" leaving it to them, to form the regiments and to appoint officers at their discretion. He informed them that arms, ammunition, tents, provisions, and boats would be furnished by the crown; and he required the colonies to levy, clothe, and pay their men, assuring them that recommendations would be made to parliament "to grant them a compensation."

Notwithstanding their former losses and disappointments, the assembly of New Hampshire, on receiving this requisition, cheerfully voted 800 men for the service of the year. The regiment commanded by Col. John Hart marched to the westward, and served under General Abercrombie. A body of 108 carpenters, under the conduct of Col. Messervè, embarked for Louisbourg, to serve at the second siege of that fortress, under General Amherst. Unhappily the small-pox broke out among them, which disabled them from service; all but sixteen were seized at once, and these attended the sick. Messervè and his eldest son died of this fatal disorder. This year was remarkable for the second surrender of Louisbourg; the unfortunate attack on the lines of Ticonderoga, where Lord Howe was killed; the taking of fort Frontenac by Col. Bradstreet; and the destruction of fort du Quesne on the Ohio, the contention for which began the war.

In the course of this year, the Indians continued to infest the frontiers. At Hinsdale they killed Captain Moore and his son, took his family, and burned his house. At Number-four they killed Asahel Stebbins, and took his wife, with Isaac Parker and a soldier. The cattle of this exposed settlement, which fed chiefly in the woods, at a distance from the fort, often served the enemy for provisions.

(1759.) The next year, a similar requisition being made by Secretary Pitt, New Hampshire raised a thousand men for the service, who were regimented under the command of Colonel Zacheus Lovewell, son of the famous partisan who lost his life at Pig-wacket. This regiment joined the army at the westward, and served under General Amherst, in the actual reduction of Ticonderoga and Crown Point, and in building a new fortress at the last place.

The success of this summer was brilliant, beyond former example. The French Fort at Niagara surrendered to General Johnson; and the strong city of Quebec was taken by the British troops under General Wolfe, who, with the French general, Montcalm, was slain in the decisive battle.

When the British arms had obtained a decided superiority over the French, it was determined to chastise the Indians who had committed so many devastations on the frontiers of New England. Major Robert Rogers was dispatched from Crown Point, by General Amherst, with about 200 rangers, to destroy the Indian village of St. Francis. After a fatiguing march of twenty-one days, he came within sight of the place, which he discovered from the top of a tree, and halted his men at the distance of three miles. In the evening he entered the village in disguise, with two of his officers. The Indians were engaged in a grand dance, and he passed through them undiscovered. Having formed his men into parties, and posted them to advantage, he made a general assault, just before day, whilst the Indians were asleep. They were so completely surprised, that little resistance could be made. Some were killed in their houses; and of those who attempted to flee, many were shot or tomahawked by parties placed at the avenues. The dawn of day disclosed a horrid scene; and an edge was given to the fury of the assailants by the sight of several hundred scalps of their countrymen, elevated on poles, and waving in the air. This village had been enriched with the plunder of the frontiers and the sale of captives. The houses were well furnished, and the church was adorned with plate. The suddenness of the attack, and the fear of a pursuit, did not allow much time for pillage; but the rangers brought off such things as were most convenient for transportation; among which were about two hundred guineas in money, a silver image weighing ten pounds, and a large quantity of wampum and clothing. Having set fire to the village, Rogers made his retreat up the river St. Francis, intending that his men should rendezvous at the upper Cohos, on Connecticut river. They took with them five English prisoners, whom they found at St. Francis, and about twenty Indians; but these last they dismissed. Of the rangers, one man only was killed; and six or seven were wounded. In their retreat they were pursued, and lost seven men. They kept in a body for about ten days, passing on the eastern side of Lake Memfrimagog, and then scattered. Some found their way to Number-four, after having suffered much by hunger and fatigue. Others perished in the woods, and their bones were found near Connecticut river by the people, who after several years began plantations at the Upper Cohos.

After the taking of Quebec, the remainder of the season was too short to complete the reduction of Canada. (1760.) The next summer General Amherst made preparations to approach Montreal by three different routes; intending, with equal prudence and humanity, to finish the conquest without the effusion of blood. For the service of this year, 800 men were raised in New Hampshire, and put under the command of Colonel John Goffe. They marched, as usual, to Number-four; but instead of taking the old route to Albany, they cut a road through the woods, directly toward Crown Point. In this work they made such dispatch, as to join that part of the army which Amherst had left at Crown Point, twelve days before their embarkation. They proceeded down the lake, under the command

of Colonel Haviland. The enemy made some resistance at Isle au Noix, which stopped their progress for some days, and a few men were lost on both sides. But this post being deserted, the forts of St. John and Chamblee became an easy conquest, and finally Montreal capitulated. This event finished the campaign, and crowned Amherst with deserved laurels.

Whilst the New Hampshire regiment was employed in cutting the new road, signs of hovering Indians were frequently discovered, though none were actually seen. But they took the family of Joseph Willard from Number-four, and carried them into Montreal, just before it was invested by the British army.

The conquest of Canada gave peace to the frontiers of New Hampshire, after a turbulent scene of fifteen years—in which, with little intermission, they had been distressed by the enemy. Many captives returned to their homes; and friends who had long been separated, embraced each other in peace. The joy was heightened by this consideration, that the country of Canada, being subdued, could no longer be a source of terror and distress.

The expense of this war was paid by a paper currency. Though an act of parliament was passed in 1751, prohibiting the governors from giving their assent to acts of assembly made for such a purpose; yet, by a proviso, extraordinary emergencies were excepted. Governor Wentworth was slow to take advantage of this proviso, and construed the act in a more rigid sense than others; but his friend Shirley helped him out of his difficulties. In 1755 paper bills were issued, under the denomination of new tenor; of which fifteen shillings were equal in value to one dollar. Of this currency the soldiers were promised thirteen pounds ten shillings per month; but it depreciated so much in the course of the year, that in the muster rolls their pay was made up at fifteen pounds. In 1756 there was another issue from the same plates, and their pay was eighteen pounds. In 1757, it was twenty-five pounds. In 1758, they had twenty-seven shillings sterling. In the three succeeding years they had thirty shillings sterling, besides a bounty at the time of their enlistment, equal to one month's pay. At length sterling money became the standard of all contracts; and though the paper continued passing as a currency, its value was regulated by the price of silver, and the course of exchange.

It ought to be remembered, as a signal favour of Divine Providence, that during this war the seasons were fruitful, and the colonies were able to supply their own troops with provisions, and the British fleets and armies with refreshments of every kind which they needed. No sooner were the operations of the war in the northern colonies closed, than two years of scarcity succeeded (1761 and 1762), in which the drought of summer was so severe, as to cut short the crops, and render supplies from abroad absolutely necessary. Had this calamity attended any of the preceding years of the war, the distress must have been extreme, both at home and in the camp. During the drought of 1761 a fire raged in the woods, in the townships of Barrington and Rochester, and passed over into the county of York, burning with irresistible fury for several weeks, and was not extinguished till a plentiful rain fell, in August. An immense quantity of the best timber was destroyed by this conflagration.

For the succeeding part of the war a smaller body of men was required to garrison the new conquests;

whilst the British troops were employed in the West India islands. The success which attended their operations in that quarter brought the war to a conclusion; and by the treaty of peace, though many of the conquered places were restored, yet the whole continent of North America remained to the British crown, and the colonies received a reimbursement of their expenses.

The war being closed, a large and valuable tract of country, situated between New England, New York, and Canada, was secured to the British dominions; and it became the interest of the governors of both the royal provinces of New Hampshire and New York to vie with each other, in granting this territory, and receiving the emoluments arising from this lucrative branch of their respective offices. The seeds of a controversy on this subject had been already sown. During the short peace which followed the preceding war, (1749,) Governor Wentworth wrote to Governor Clinton, that he had it in command from the king, to grant the unimproved lands within his government; that the war had prevented that progress which he had hoped for in this business; but that the peace had induced many people to apply for grants in the western parts of New Hampshire, which might fall in the neighbourhood of New York. He communicated to him a paragraph of his commission, describing the bounds of New Hampshire, and requested of him a description of the bounds of New York. Before he received any answer to this letter, Wentworth, presuming that New Hampshire ought to extend as far westward as Massachusetts—that is, to the distance of twenty miles east from Hudson's river, granted, (1750,) a township, six miles square, called Bennington; situate twenty-four miles east of Hudson's river, and six miles north of the line of Massachusetts. Clinton having laid Wentworth's letter before the council of New York; by their advice answered him, that the province of New York was bounded easterly by Connecticut river. This claim was founded on a grant of King Charles the Second; in which, "all the land from the west side of Connecticut river, to the east side of Delaware bay," was conveyed to his brother, James, Duke of York; by whose elevation to the throne, the same tract merged in the crown of England, and descended, at the Revolution, to King William and his successors. The province of New York had formerly urged this claim against the colony of Connecticut; but, for prudential reasons, had conceded that the bounds of that colony should extend as far as a line drawn twenty miles east of Hudson's river. The like extent was demanded by Massachusetts; and, though New York affected to call this demand "an intrusion," and strenuously urged their right to extend eastward to Connecticut river, yet the original grant of Massachusetts, being prior to that of the Duke of York, was a barrier which could not easily be broken. These reasons, however, it was said, could be of no avail to the cause of New Hampshire, whose first limits, as described in Mason's patent, did not reach to Connecticut river; and whose late extent, by the settlement of the lines in 1741, was no farther westward than "till it meets with the king's other governments." Though it was agreed, between the two governors, to submit the point in controversy to the king, yet the governor of New Hampshire continued to make grants on the western side of Connecticut river till 1754; when the renewal of hostilities not only put a stop to applications, but prevented any determination of the controversy by the crown.

During the war, the continual passing of troops through those lands caused the value of them to be more generally known; and when, by the conquest of Canada, tranquillity was restored, they were eagerly sought by adventurers and speculators. Wentworth availed himself of this golden opportunity, and by advice of his council, ordered a survey to be made of Connecticut river for sixty miles, and three lines of townships on each side to be laid out. (1761.) As applications increased, the surveys were extended. Townships of six miles square were granted to various petitioners; and so rapidly did this work go on, that during the year 1761, no less than sixty townships were granted on the west, and eighteen on the east side of the river. Besides the fees and presents for these grants, which were undefined, a reservation was made for the governor of 500 acres in each township, and of lots for public purposes. These reservations were clear of all fees and charges. (1763.) The whole number of grants on the western side of the river amounted to 138, and the extent was from Connecticut river to twenty miles east of Hudson, as far as that river extended northerly; and after that, westward to Lake Champlain. The rapid progress of these grants filled the coffers of the governor. Those who had obtained the grants were seeking purchasers in all the neighbouring colonies, whilst the original inhabitants of New Hampshire, to whom these lands had formerly been promised as a reward for their merit in defending the country, were overlooked in the distribution, unless they were disposed to apply in the same manner as persons from abroad; or unless they happened to be in favour. When remonstrances were made to the governor on this subject, his answer was, that the people of the old towns had been formerly complimented with grants in Chichester, Barnsted, and Gilman-town, which they had neglected to improve; and that the new grantees were better husbandmen and would promote the cultivation of the province.

The passion for occupying new lands rose to a great height. These tracts were filled with emigrants from Massachusetts and Connecticut. Population and cultivation began to increase with a rapidity hitherto unknown; and from this time may be dated the flourishing state of New Hampshire, which before had been circumscribed and stinted in its growth by the continual danger of a savage enemy.

The grants on the western side of Connecticut river alarmed the government of New York, who, by their agent, made application to the crown, representing "that it would be greatly to the advantage of the people settled on those lands, to be annexed to New York;" and submitting the cause to the royal decision. In the mean time, a proclamation was issued by Lieut.-Governor Colden, reciting the grant of King Charles to the Duke of York, asserting the jurisdiction of New York as far eastward as Connecticut river, and enjoining the sheriff of the county of Albany to return the names of all persons who, under colour of the New Hampshire grants, held possession of lands westward of that river. (1764.) This was answered by a proclamation of Governor Wentworth, declaring the grant to the Duke of York to be obsolete, and that the western bounds of New Hampshire were co-extensive with those of Massachusetts and Connecticut, encouraging the grantees to maintain their possessions, and cultivate their lands; and commanding civil officers to execute the laws and punish disturbers of the peace.

The application from New York was referred to

the board of trade; and upon their representation, seconded by a report of a committee of the privy council, an order was passed by the king in council, declaring "the western banks of Connecticut river, from where it enters the province of Massachusetts bay, as far north as the forty-fifth degree of latitude, to be the boundary line between the two provinces of New Hampshire and New York."

This decree, like many other judicial determinations, while it closed one controversy, opened another. The jurisdiction of the Governor of New Hampshire, and his power of granting land, were circumscribed by the western bank of Connecticut river: but the grantees of the soil found themselves involved in a dispute with the government of New York. From the words "to be," in the royal declaration, two very opposite conclusions were drawn. The government supposed them to refer to the time past, and construed them as a declaration that the river always had been the eastern limits of New York; conse-

quently that the grants made by the governor of New Hampshire were invalid, and that the lands might be granted again. The grantees understood the words in the future tense, as declaring Connecticut river from that time *to be* the line of jurisdiction only between the two provinces, consequently that their grants, being derived from the crown, through the medium of one of its governors, were valid. To the jurisdiction they would have quietly submitted, had no attempt been made to wrest from them their possessions. These opposite opinions proved a source of litigation for ten succeeding years; but as this controversy belongs to the history of New York, it is dismissed with one remark only:—that though it was carried on with a degree of virulence unfriendly to the progress of civilization and humanity, within the disputed territory, yet it called into action a spirit of vigorous self-defence and hardy enterprise, which prepared the nerves of that people for encountering the dangers of a more extensive revolution.

## NEW YORK.

*From the Discovery of the Colony to the surrender in 1664.*

Henry Hudson, an Englishman, in the year 1608, under a commission from James I., discovered Long Island, New York, and the river which still bears his name; and afterwards sold the country, or rather his right, to the Dutch, whose writers contend, that Hudson was sent out by the East India Company in 1609, to discover a north-west passage to China; and that having first discovered Delaware bay, he came hither, and penetrated up Hudson's river, as far north as the latitude of forty-three degrees. It is said, however, that there was a sale, and that the English objected to it, though they for some time neglected to oppose the Dutch settlement of the country.

In 1610, Hudson sailed again from Holland to that country, called by the Dutch, New Netherland; and four years after, the states general granted a patent to sundry merchants, for an exclusive trade on the north river, who in 1614 built a fort, on the west side, near Albany, which was first commanded by Henry Christiaens. Captain Argal was sent out by Sir Thomas Dale, governor of Virginia, in the same year, to dispossess the French of the two towns of Port Royal and St. Croix, lying on each side of the bay of Fundy in Acadia, then claimed as part of Virginia. In his return, he visited the Dutch on Hudson's river, who being unable to resist him, prudently submitted for the present to the king of England, and under him to the governor of Virginia. The very next year, they erected a fort on the south-west point of the island Manhattans, and two others in 1623; one called Good Hope, on Connecticut river, and the other Nassau, on the east side of Delaware bay. The author of the account of New Netherland asserts, that the Dutch purchased the lands on both sides of that river in 1632, before the English were settled in those parts; and that they discovered a little fresh

river, farther to the east, called Varsche Riviertie, to distinguish it from Connecticut river, known among them by the name of Varsche Rivier, which Vanderdonk also claims for the Dutch.

Determined upon the settlement of a colony, the states general made a grant of the country, in 1621, to the West India company. Wouter Van Twiller arrived at Fort Amsterdam, now New York, and took upon himself the government in June 1629. His style, in the patents granted by him, was thus, "We, director and council, residing in New Netherland on the island Manhattans, under the government of their high mightinesses, the lords states general of the united Netherlands, and the privileged West India company, &c." In his time the New England planters extended their possessions westward as far as Connecticut river. Jacob Van Curlet, the commissary there, protested against it, and in the second year of the succeeding administration, under William Kieft, who appears first in 1638, a prohibition was issued, forbidding the English trade at Fort Good Hope, and shortly after, on complaint of the insolence of the English, an order of council was made for sending more forces there, to maintain the Dutch territories. Dr. Mather confesses, that the New England men first formed their design of settling Connecticut river in 1635, before which time they esteemed that river at least 100 miles from any English settlement; and that they first seated themselves there in 1636, at Hartford, near Fort Good Hope, at Weathersfield, Windsor, and Springfield. Four years after, they seized the Dutch garrison, and drove them from the banks of the river, having first settled New Haven in 1638, regardless of Kieft's protest against it.

The extent of New Netherland was to Delaware, then called South river, and beyond it; for in the Dutch records, there is a copy of a letter from William Kieft, May 6, 1638, directed to Peter Minuit, who seems, by the tenor of it, to be the Swedish

governor of New Sweden, asserting, "that the whole south river of New Netherland had been in the Dutch possession many years above and below, beset with forts, and sealed with their blood." Which Kieft adds, "has happened even during your administration in New Netherland, and is so well known to you."

The Dutch writers are not agreed in the extent of Nova Belgia, or New Netherland; some describe it to be from Virginia to Canada; and others inform us, that the arms of the States General were erected at Cape Cod, Connecticut, and Hudson's river, and on the west side of the entrance into Delaware bay. The author of an anonymous pamphlet gives Canada river for a boundary on the north, and calls the country, north-west from Albany, Terra Incognita.

In 1640, the English, who had overspread the eastern part of Long Island, advanced to Oysterbay. Kieft broke up their settlement in 1642, and fitted out two sloops to drive the English out of Schuylkill, of which the Marylanders had lately possessed themselves. The instructions, dated May 22, to Jan Jansen Alpendam, who commanded in that enterprise, are upon record, and strongly assert the right of the Dutch both to the soil and trade there. The English from the eastward shortly after sent deputies to New Amsterdam, for the accommodation of their disputes about limits, to whom the Dutch offered certain conditions, which it appears were not acceded to.

The English daily extended their possessions, and in 1643 the colonies of Massachusetts bay, Plymouth, Connecticut, and New Haven, entered into a league both against the Dutch and Indians, and grew so powerful as to meet shortly after, upon a design of extirpating the former. Massachusetts bay declined this enterprise, which occasioned a letter to Oliver Cromwell from William Hooke, dated at New Haven, November 3, 1653, in which he complains of the Dutch for supplying the natives with arms and ammunition, begs his assistance with two or three frigates, and that letters might be sent to the eastern colonies, commanding them to join in an expedition against the Dutch colony. Cromwell's affairs would not admit of so distant an attempt, but Richard Cromwell afterwards drew up instructions to his commanders for subduing the Dutch there, and wrote letters to the English American governments for their aid; copies of which are preserved in Thurloe's collection.

Peter Stuyvesant was the last Dutch governor, and though he had a commission in 1646, he did not begin his administration till May 27, 1647. The inroads and claims upon his government kept him constantly employed. New England on the east, and Maryland on the west, alarmed his fears by their daily increase; and about the same time Captain Forrester, a Scotchman, claimed Long Island for the dowager of Stirling. The Swedes too were perpetually incroaching upon Delaware. Through the unskillfulness of the mate of a vessel, one Deswyk, a Swedish captain and super-cargo arrived in Raritan river. The ship was seized, and himself made prisoner at New Amsterdam. Stuyvesant's reasons were that, in 1651, the Dutch built fort Casimir, now called Newcastle on Delaware. The Swedes, indeed claimed the country, and Printz their governor formally protested against the works. Risingh, his successor, under the disguise of friendship, came before the fortress, fired two salutes and landed thirty men, who were entertained by the commandant as friends; but he had no sooner discovered the

weakness of the garrison, than he made himself master of it, seizing also upon all the ammunition, houses, and other effects of the West India company, and compelling several of the people to swear allegiance to Christina queen of Sweden. The Dutch, in 1655, prepared to retake fort Casimir. Stuyvesant commanded the forces in person, and arrived with them in Delaware the 9th of September. A few days after he anchored before the garrison and landed his troops. The fortress was immediately demanded as Dutch property: Suen Scutz, the commandant, desired leave to consult Risingh, which being refused, he surrendered the 16th of September on articles of capitulation. The whole strength of the place consisted of four 14-pounders, five swivels, and a parcel of small arms, which were all delivered to the conquered. Fort Christina was commanded by Risingh. Stuyvesant came before it, and Risingh surrendered it upon terms the 25th of September. The country being thus subdued, the Dutch governor issued a proclamation, in favour of such of the inhabitants as would submit to the new government, and about thirty Swedes swore "fidelity and obedience to the States General, the lords directors of the West India company, their subalterns of the province of New Netherland, and the director general then, or thereafter established." Risingh and one Elswych, a trader of note, were ordered to France, or England, and the rest of the Swedish inhabitants to Holland, and from thence to Gottenberg. The Swedes being thus extirpated, the Dutch became possessed of the west side of Delaware bay, afterwards called "The three lower countries."

This country was subsequently under the command of lieutenant-governors, subject to the controul of, and commissioned by the director general at New Amsterdam. Johan Paul Jaquet was the first vice-director, or lieutenant-governor, of South River. His successors were Alricks, Hinojossa, and William Beekman. These lieutenants had power to grant lands, and their patents make a part of the ancient titles of the present possessors. Alrick's commission of the 12th of April, 1657, shews the extent of the Dutch claim on the west side of Delaware at that time. He was appointed "Director general of the colony of the South River of New Netherland, and the fortress of Casimir, now called Nieuwer Amstel, with all the lands depending thereon, according to the first purchase and deed of release of the natives, dated July 19, 1651, beginning at the west side of the Minquaas, or Christina Kill, in the Indian language named Suspecough, to the mouth of the bay, or river, called Bompt-Hook, in the Indian language Cannaresse; and so far inland as the bounds and limits of the Minquaas land, with all the streams, &c. appurtenances and dependencies." Of the country northward of the Kell, no mention is made. Order in 1658 were given to William Beekman to purchase Cape Hinlopen from the natives, and to settle and fortify it, which, for want of goods, was not done till the succeeding year.

In the year 1659, fresh troubles arose from the Maryland claim to the lands on South River; and in September, Colonel Nathaniel Utie, as commissioner from Fendal, Lord Baltimore's governor, arrived at Nieuwer Amstel from Maryland. The country was ordered to be evacuated, Lord Baltimore claiming all the land between 38 and 40 degrees of latitude from sea to sea. Beekman and his council demanded evidence of his lordship's right, and offered to prove the States General's grant to the West India company, and the grant of the company to

them; and proposed to refer the controversy to the republics of England and Holland, praying at the same time, three weeks to consult Stuyvesant the general. The commissioner notwithstanding, a few days after warned him to draw off, beyond the latitude of 40 degrees; but Beekman disregarded the threat. Col. Utie thereupon returned to Maryland, and an immediate invasion was expected.

Early in the spring of the year 1660, Nicholas Valet and Brian Newton were dispatched from Fort Amsterdam to Virginia, in quality of ambassadors, with full power to open a trade and conclude a league, offensive and defensive, against the barbarians. Sir William Berkely, the governor, gave them a kind reception, and approved their proposal of peace and commerce, which Sir Henry Moody was sent to agree upon and perfect. Four articles to that purpose were drawn up, and sent to the governor for confirmation. Stuyvesant artfully endeavoured, at this treaty, to procure an acknowledgment of the Dutch title to the country, which Berkely as carefully avoided. This was his answer:

"Sir,—I have received the letter you were pleased to send me by Mr. Mills's vessel, and shall be ever ready to comply with you, in all acts of neighbourly friendship and amity. But truly, sir, you desire me to do that, concerning your titles and claims to land in this northern part of America, which I am in no capacity to do; for I am but a servant of the assembly's: neither do they arrogate any power to themselves, farther than the miserable distractions of England desire them to. For when God shall be pleased in his mercy to take away and dissipate the unnatural divisions of their native country, they will immediately return to their own professed obedience. What then they should do in matters of contract, donation, or confession of right, would have little strength or signification; much more presumptive and impertinent would it be in me to do it, without their knowledge or assent. We shall very shortly meet again, and then, if to them you signify your desires, I shall labour all I can to get you a satisfactory answer. "I am, sir,

"*Virginia,* "Your humble servant,  
"August 20, 1660. "WILLIAM BERKELY."

Governor Stuyvesant was a faithful servant of the West India company: this is abundantly proved by his letters to them, exciting their care of the colony. In one, dated April 20, 1660, which is very long and pathetic, representing the desperate situation of affairs on both sides of the New Netherlands, he writes, "Your honours imagine, that the troubles in England will prevent any attempt on these parts: alas! they are ten to one in number to us, and are able, without any assistance, to deprive us of the country when they please." On the 25th of June, the same year, he informs them, that the demands, encroachments, and usurpations of the English, give the people here great concern. "The right to both rivers," he says, "by purchase and possession, is our own, without dispute. We apprehend that they, our more powerful neighbours, lay their claims under a royal patent, which we are unable hitherto to do in your name." Colonel Utie being unsuccessful the last year, in his embassy for the evacuation of the Dutch possessions on Delaware, Lord Baltimore, in autumn, 1660, applied by Captain Neal, his agent to the West India company, in Holland, for an order on the inhabitants of South River to submit to his authority, which they absolutely refused, asserting their right to that part of the colony.

The English, from New England, were every

day encroaching upon the Dutch. The following letter from Stuyvesant to the West India company, dated July 21, 1661, shews the state of the colony at that time on both sides. "We have not yet begun the fort on Long Island, near Oysterbay, because our neighbours lay the boundaries a mile and a half more westerly than we do, and the more as your honours, by your advice of December 24, are not inclined to stand by the treaty of Hartford, and propose to sue for redress on Long Island and the Fresh Water river, by means of the States' Ambassador. Lord Sterling is said to solicit a confirmation of his right to all Long Island, and importunes the present king to confirm the grant made by his royal father, which is affirmed to be already obtained. But more probable, and material, is the advice from Maryland, that Lord Baltimore's patent, which contains the fourth part of South river, is confirmed by the king, and published in print: that Lord Baltimore's natural brother, who is a rigid papist, being made governor there, has received Lord Baltimore's claim and protest to your honours in council, (wherewith he seems but little satisfied) and has now more hopes of success. We have advice from England, that there is an invasion intended against these parts, and the country solicited of the king, the duke, and the parliament, is to be annexed to their dominions; and for that purpose, they desire three or four frigates, persuading the king, that the company possessed and held this country under an unlawful title, having only obtained of King James leave for a watering place on Staten Island, in 1623."

In August 1663, a ship arrived from Holland at South River, with new planters, ammunition, and implements of husbandry. Lord Baltimore's son landed a little after, and was entertained by Beekman at Nieuwer Amstel. This was Charles, the son of Cecil, who in 1661, had procured a grant and confirmation of the patent passed in favour of his father in 1632. The papistical principles of the Baltimore family, the charge of colonizing, the parliamentary war with Charles I., and Cromwell's usurpation, all conspired to impede the settlement of Maryland till the year 1661. And these considerations account for the extension of the Dutch limits, on the west side of Delaware bay.

While the Dutch were contending with their European neighbours, they had the art always to maintain a friendship with the natives, until the war which broke out this year with the Indians at Esopus, now Ulster county. It continued, however, but a short season. The five nations never gave them any disturbance, which was owing to their continual wars with the French, who settled at Canada in 1603. It has been before observed, that Oliver Cromwell was applied to, for his aid in the reduction of this country, and that his son Richard took some steps towards accomplishing the scheme; the work was however reserved for the reign of Charles II., an indolent prince, and entirely given up to pleasure, who was driven to it more perhaps by the differences then subsisting between England and Holland, than by any motive that might reflect honour upon his prudence, activity, and public spirit. Before this expedition, the king granted a patent on the 12th of March, 1664, to his brother, the Duke of York and Albany, for sundry tracts of land in America, the boundaries of which, because they have given rise to much controversy, it may not be improper to transcribe.

"All that part of the main land of New England,

beginning at a certain place, called or known by the name of St. Croix, next adjoining to New Scotland in America, and from thence extending along the sea coast; unto a certain place called Pemaquic or Pemequid, and so up the river thereof, to the furthest head of the same, as it tendeth northward; and extending from thence to the river of Kimbequin, and so upwards, by the shortest course, to the river Canada northward: and also all that island, or islands, commonly called by the several name or names of Meitowacks, or Long Island, situate and being towards the west of Cape Cod, and the narrow Higansetts, abutting upon the main land, between the two rivers, there called or known by the several names of Connecticut and Hudson's river, together also with the said river, called Hudson's river, and all the land from the west side of Connecticut river, to the east side of Delaware bay, and also, all those several islands, called or known by the names of Martin's Vineyard, or Nantuck's, otherwise Nantucket: together, &c."

Part of this tract was conveyed by the duke to John Lord Berkeley, baron of Stratton, and Sir George Carteret, of Saltram in Devon, who were then members of the king's council. The lease was for the consideration of ten shillings, and dated the 23d of June, 1664. The release, dated the next day, mentions no particular sum of money as a consideration for the grant of the lands, which have the following description:

"All that tract of land, adjacent to New England, and lying and being to the westward of Long Island, and bounded on the east part by the main sea, and partly by Hudson's river; and hath upon the west, Delaware bay, or river, and extendeth southward to the main ocean as far as Cape May, at the mouth of Delaware bay; and to the northward, as far as the northermost branch of the said bay or river of Delaware, which is forty-one degrees and forty minutes of latitude; which said tract of land is hereafter to be called by the name or names of Nova Cæsarea, or New Jersey."

Thus the New Netherlands became divided into New Jersey, (so called after the isle of Jersey, in compliment to sir George Carteret, whose family came from thence) and New York, which took its name in honour of the Duke of York.

The Dutch inhabitants, by the vigilance of their governor, were not unapprised of the designs of the English court against them; for their records testify, that on the 8th of July, "The general received intelligence from one Thomas Willett, an Englishman, that an expedition was preparing in England against this place, consisting of two frigates of 40 and 50 guns, and a fly-boat of 40 guns having on board 300 soldiers, and each frigate 150 men, and that they then lay at Portsmouth, waiting for a wind." News arrived also from Boston, that they had already set sail. The burgomasters were thereupon called into council, the fortress ordered to be put into a posture of defence, and spies sent to Milford and West Chester for intelligence. Boston was in the secret of the expedition; for the general court had in May preceding, passed a vote for a supply of provisions, towards refreshing the ships on their arrival. They were four in number, and resolved to rendezvous at Gardener's Island in the Sound, but parted in a fog about the 20th of July. Richard Nicolls and Sir George Carteret, two of the commissioners, who were to take possession of the country and reduce it to the king's obedience, were on board the *Guyny*, and fell in first with Cape Cod.

The winds having blown from the south-west, the other ships, with Sir Robert Car, and Mr. Mavénick, the remaining commissioners, were rightly concluded to be driven to the eastward. After dispatching a letter to Mr. Winthrop, the governor of Connecticut, requesting his assistance, Col. Nicolls proceeded to Nantasket, and thence to Boston. The other ships got into Piscatawa. John Endicot, a very old man, was then governor of Boston and incapable of business. The commissioners, therefore, had a conference with the council, and earnestly implored the assistance of that colony. Colonel Nicolls and Sir George Carteret, in their letter from Boston to Sir H. Bennet, secretary of state, complain much of the backwardness of that province. The reasons urged in their excuse were poverty and the season, it being the time of harvest; but perhaps disaffection to the Stuart family, whose persecuting fury had driven them from their native country, was the true spring of their conduct. The king's success in the reduction of the Dutch evidently opened him a door to come at his enemies in New England, who were far from being few; and whether this consideration might not have given rise to the project itself, must be left to conjecture. T. Dixwel, Esq., one of Charles the First's judges, and excepted out of the general pardon, lived many years at New Haven unknown, in quality of a country merchant: Sir Edmund Andross, in one of his tours through the colony of Connecticut, saw him there at church, and strongly suspected him to be one of the regicides. In his last illness, he revealed himself to the minister of the town, and ordered a small stone to be set at the head of his grave, inscribed, "T. D. Esq." While at New Haven, he went under the name of John Davis.

On the 27th of July, Nicolls and Carteret made a formal request in writing, "That the government of Boston would pass an act to furnish them with armed men, who should begin their march to the Mannhattans, on the 20th of August ensuing; and promised that, if they could get other assistance, they would give them an account of it." The governor and council answered, that they would assemble the general court, and communicate the proposal to them.

From Boston, a second letter was written to Governor Winthrop in Connecticut, dated the 29th of July, in which he was informed, that the other ships were then arrived, and would sail with the first fair wind, and he was desired to meet them at the west end of Long Island.

One of the ships entered the bay of the North River, several days before the rest; and as soon as they were all come up, Stuyvesant sent a letter dated 19—30 (shewing the difference between the old and new style) of August, at Fort Anhill, directed to the commanders of the English frigates, by John Decler, one of the chief council, the Rev. John Megapolensis minister, Paul Lunder Vander Griff mayor, and Mr. Samuel Megapolensis, doctor in physic, with the utmost civility, to desire the reason of their approach and continuing in the harbour of Naijarlij, without giving that notice to the Dutch, which they ought.

Colonel Nicolls answered the next day with a summons.

"To the honourable the governors and chief council at the Mannhattans.

"Right worthy Sirs,—I received a letter bearing date 19—30 of August, desiring to know the intent of the approach of the English frigates; in return of which, I think it fit to let you know, that his majesty of

Great Britain, whose right and title to these parts of America is unquestionable, well knowing how much it derogates from his crown and dignity to suffer any foreigners, how near soever they be allied, to usurp a dominion, and without his majesty's royal consent to inhabit in these, or any other of his majesty's territories, hath commanded me, in his name, to require a surrender of all such forts, towns, or places of strength, which are now possessed by the Dutch, under your commands; and in his majesty's name, I do demand the town situate on the island, commonly known by the name of Manhattoes, with all the forts thereunto belonging, to be rendered unto his majesty's obedience and protection, into my hands. I am further commanded to assure you, and every respective inhabitant of the Dutch nation, that his majesty being tender of the effusion of christian blood, doth by these presents, confirm and secure to every man his estate, life, and liberty, who shall readily submit to his government. And all those who shall oppose his majesty's gracious intention, must expect all the miseries of a war which they bring upon themselves. I shall expect your answer by these gentlemen, Colonel George Carteret, one of his majesty's commissioners in America; Capt. Robert Needham, Captain Edward Groves, and Mr. Thomas Delavall, whom you will entertain with such civility as is due to them, and yourselves and yours shall receive the same, from,

"Worthy Sirs,

"Your very humble Servant,

"Richard Nicolls."

"Dated on board his majesty's ship, the Guyny, riding before Naych, the 20—31 of Aug. 1664."

Mr. Stuyvesant promised an answer to the summons the next morning, and in the mean time convened the council and burgomasters. The Dutch governor was a good soldier, and had lost a leg in the service of the States. He would willingly have made a defence; and refused a sight of the summons, both to the inhabitants and burgomasters, lest the easy terms offered might induce them to capitulate. The latter, however, insisted upon a copy, that they might communicate it to the late magistrates and principal burghers. They called together the inhabitants of the Stadt-house, and acquainted them with the governor's refusal. Governor Winthrop, at the same time, wrote to the director and his council, strongly recommending a surrender. On the 22d of August, the burgomaster came again into council, and desired to know the contents of the English message from Governor Winthrop, which Stuyvesant still refused. They continued their importunity, and he, in a fit of anger, tore it to pieces; upon which, they protested against the act, and all its consequences. Determined upon a defence of the country, Stuyvesant wrote a letter in answer to the summons, which as it declares the Dutch claim, must be given.

"My lords,—Your first letter, unsigned, of the 20—31 of August, together with that of this day, signed according to form, being the 1st of September, have been safely delivered into our hands by your deputies, unto which we shall say, that the rights of his majesty of England unto any part of America here about, among the rest, unto the colonies of Virginia, Maryland, or others in New England, whether disputable or not, is that, which for the present, we have no design to debate upon. But that his majesty hath an indisputable right to all the lands in the north parts of America, is that which the kings of France and Spain will deny, as we absolutely do,

by virtue of a commission given to me by my lords the high and mighty states-general, to be governor-general over New Holland, the isles of Curacoa, Bonaire, Aruba, with their appurtenances and dependences, bearing date the 26th of July, 1646. As also by virtue of a grant and commission, given by my said lords, the high and mighty states-general, to the West India company, in the year 1621, with as much power, and as authentic, as his said majesty of England hath given, or can give, to any colony in America, as more fully appears by the patent and commission of the said lords the states-general, by them signed, registered, and sealed with their great seal, which were shewed to your deputies, Colonel George Carteret, Captain Robert Needham, Captain Edward Groves, and Mr. Thomas Delavall; by which commission and patent, together, (to deal frankly with you), and by divers letters, signed and sealed by our said lords, the states-general, directed to several persons, both English and Dutch, inhabiting the towns and villages on Long Island, (which, without doubt, have been produced before you by those inhabitants,) by which they are declared and acknowledged to be their subjects, with express command that they continue faithful unto them, under penalty of incurring their utmost displeasure, which makes it appear more clear than the sun at noon-day, that your first foundation, viz. (that the right and title of his majesty of Great Britain to these parts of America is unquestionable) is absolutely to be denied. Moreover, it is without dispute, and acknowledged by the world, that our predecessors, by virtue of the commission and patent of the said lords, the states-general have, without controul and peaceably, (the contrary never coming to our knowledge,) enjoyed Fort Orange about forty-eight or fifty years, the Manhattans about forty-one or forty-two years, the South River forty years, and the Fresh Water River about thirty-six years. Touching the second subject of your letter, viz., His majesty hath commanded me, in his name, to require a surrender of all such forts, towns, or places of strength, which are now possessed by the Dutch, under your command. We shall answer, that we are so confident of the discretion and equity of his majesty of Great Britain, that in case his majesty were informed of the truth, which is, that the Dutch came not into these provinces by any violence, but by virtue of commissions from my lords the states-general; first of all, in the years 1614, 1615, and 1616, up the North River, near Fort Orange, where, to hinder the invasions and massacres commonly committed by the savages, they built a little fort; and after, in the year 1622, and even to this present time, by virtue of commissions and grant to the governors of the West India company; and moreover, in the year 1656, a grant to the honourable the burgomasters of Amsterdam, of the South River; insomuch, that by virtue of the abovesaid commissions from the high and mighty states-general, given to the persons interested as aforesaid, and others, these provinces have been governed, and consequently enjoyed, as also in regard of their first discovery, uninterrupted possessions, and purchase of the lands of the princes, natives of the country, and other private persons, (though gentiles,) we say we make no doubt, that if his said majesty of Great Britain were well informed of these passages, he would be too judicious to grant such an order, principally in a time when there is so straight a friendship and confederacy between our said lords and superiors, to trouble us in the

demanding and summons of the places and fortresses, which were put into our hands, with order to maintain them, in the name of the said lords, the states-general, as was made appear to your deputies, under the names and seal of the said high and mighty states-general, dated the 28th of July, 1646. Besides what had been mentioned, there is little probability that his said majesty of England (in regard the articles of peace are printed, and were recommended to us to observe seriously and exactly, by a letter written to us by our said lords, the states-general, and to cause them to be observed religiously in this country), would give order touching so dangerous a design, being also so apparent, that none other than my said lords, the states-general, have any right to these provinces, and consequently ought to command and maintain their subjects; and in their absence, we, the governor-general, are obliged to maintain their rights, and to repel and take revenge of all threatenings, unjust attempts, or any force whatsoever, that shall be committed against their faithful subjects and inhabitants, it being a very considerable thing to affront so mighty a state, although it were not against an ally and confederate. Consequently, if his said majesty (as it is fit) were well informed of all that could be spoken upon this subject, he would not approve of what expressions were mentioned in your letter; which are, that you are commanded by his majesty to demand in his name such places and fortresses as are in possession of the Dutch under my government; which, as it appears by my commission before-mentioned, was given me by my lords, the high and mighty states-general. And there is less ground in the express demand of my government, since all the world knows, that about three years ago, some English frigates being on the coast of Africa upon a pretended commission, they did demand certain places under the government of our said lords, the states-general, as Cape Vert, river of Gambo, and all other places in Guyny to them belonging. Upon which our said lords, the states-general, by virtue of the articles of peace, having made appear the said attempt to his majesty of England, they received a favourable answer, his said majesty disallowing all such acts of hostility as might have been done, and, besides, gave order that restitution should be made to the East India company, of whatsoever had been pillaged in the said river of Gambo; and likewise restored them to their trade, which makes us think it necessary, that a more express order should appear unto us, as a sufficient warrant for us towards my lords, the high and mighty states-general—since by virtue of our said commission we do, in these provinces, represent them, as belonging to them, and not to the king of Great Britain, except his said majesty, upon better grounds, make it appear to our said lords, the states-general, against which they may defend themselves as they shall think fit. To conclude: we cannot but declare unto you, though the governors and commissioners of his majesty have divers times quarrelled with us about the bounds of the jurisdiction of the high and mighty the states-general, in these parts, yet they never questioned their jurisdiction itself; on the contrary, in the year 1650, at Hartford, and the last year at Boston, they treated with us upon this subject, which is a sufficient proof that his majesty hath never been well informed of the equity of our cause, insomuch as we cannot imagine, in regard to the articles of peace between the crown of England and the states-general, (under whom there are so many subjects in

America, as well as Europe), that his said majesty of Great Britain would give a commission to molest and endamage the subjects of my said lords the states-general, especially such as, ever since fifty, forty, and the latest thirty-six years have quietly enjoyed their lands, countries, forts, and inheritances; and less, that his subjects would attempt any acts of hostility or violence against them: and in case you will act by force of arms, we protest and declare, in the name of our said lords, the states-general, before God and men, that you will act an unjust violence, and a breach of the articles of peace, so solemnly sworn, agreed upon, and ratified by his majesty of England and my lords the states-general; and the rather for that to prevent the shedding of blood, in the month of February last we treated with Captain John Scott, (who reported he had a commission from his said majesty), touching the limits of Long Island, and concluded for the space of a year, that in the meantime the business might be treated on between the king of Great Britain and my lords the high and mighty states-general: and again, at present, for the hinderance and prevention of all differences, and the spilling of innocent blood, not only in these parts, but also in Europe, we offer unto you a treaty by our deputies, Mr. Cornelius Van Ruyven, secretary and receiver of New Holland, Cornelius Steenwyck, burgomaster, Mr. Samuel Megapolensis, doctor of physic, and Mr. James Cousseau, heretofore sheriff. As touching the threats in your conclusion we have nothing to answer, only that we fear nothing but what God, (who is as just as merciful) shall lay upon us—all things being in his gracious disposal; and we may as well be preserved by him with small forces as by a great army, which makes us to wish you all happiness and prosperity, and recommend you to his protection. My lords, your thrice humble, and affectionate servant and friend,

“Signed, P. Stuyvesant.

“At the fort at Amsterdam, the 2d of September New Stile, 1664.”

While the Dutch governor and council were contending with the burgomasters and people in the city, the English commissioners published a proclamation in the country, encouraging the inhabitants to submit, and promising them the king's protection, and all the privileges of subjects; and as soon as they discovered by Stuyvesant's letter, that he was averse to surrender, officers were sent to beat up for volunteers in Middleborough, Ulissen, Jamaica, and Hempsted. A warrant was also issued to Hugh Hide, who commanded the squadron, to prosecute the reduction of the fort, and an English ship then trading here, was pressed into the service. These preparations induced Stuyvesant to write another letter, on the 25th of August old style, wherein though he declares that he would stand the storm, yet to prevent the spilling of blood, he had sent John de Decker, counsellor of state, Cornelius Van Ruyven, secretary and receiver, Cornelius Steenwyck major, and James Cousseau sheriff, to consult, if possible, an accommodation. Nicolls, who knew the disposition of the people, answered immediately from Gravesend, that he would treat about nothing but a surrender. The Dutch governor, the next day, agreed to a treaty and surrender, on condition the English and Dutch limits in America were settled by the crown and the states-general. The English deputies were Sir Robert Carr, George Carteret, John Winthrop, governor of Connecticut, Samuel Wyllys, one of the assistants or counsel of

that colony, and Thomas Clarke, and John Pynchon, commissioners from the general court of the Massachusetts bay, who but a little before, brought an aid from that province. What these persons agreed upon, Nicolls promise to ratify. At eight o'clock in the morning, of the 27th of August 1664, the commissioners on both sides met at the governor's farm and there signed the following articles of capitulation:

"These articles following were consented to by the persons hereunder subscribed, at the governor's dower, August the 27th, old style, 1664.

"I. We consent that the States-general, or the West India company, shall freely enjoy all farms and houses (except such as are in the forts), and that within six months, they shall have free liberty to transport all such arms and ammunition, as now does belong to them, or else they shall be paid for them.

"II. All public houses shall continue for the uses which they are for.

"III. All people shall still continue free denizens, and shall enjoy their lands, houses, goods, where-soever they are within this country, and dispose of them as they please.

"IV. If any inhabitant have a mind to remove himself, he shall have a year and six weeks from this day, to remove himself, wife, children, servants, goods, and to dispose of his lands here.

"V. If any officer of state, or public minister of state, have a mind to go for England, they shall be transported freight free, in his majesty's frigates, when these frigates shall return thither.

"VI. It is consented to, that any people may freely come from the Netherlands and plant in this colony, and that Dutch vessels may freely come hither, and any of the Dutch may freely return home, or send any sort of merchandize home in vessels of their own country.

"VII. All ships from the Netherlands, or any other place, and goods therein, shall be received here, and sent hence, after the manner which formerly they were, before our coming hither, for six months next ensuing.

"VIII. The Dutch here shall enjoy the liberty of their consciences in divine worship and church discipline.

"IX. No Dutchman here, or Dutch ship here, shall upon any occasion be pressed to serve in war against any nation whatsoever.

"X. That the townsmen of the Mannhattans shall not have any soldiers quartered upon them, without being satisfied and paid for them by their officers; and at this present, if the fort be not capable of lodging all the soldiers, then the burgomasters, by their officers, shall appoint some houses capable to receive them.

"XI. The Dutch here shall enjoy their own customs concerning their inheritances.

"XII. All public writings and records, which concern the inheritances of any people, or the reglement of the church or poor, or orphans, shall be carefully kept by those in whose hands now they are, and such writings as particularly concern the states general, may at any time be sent to them.

"XIII. No judgment that has passed any judicature here, shall be called in question, but if any conceive that he hath not had justice done him, if he apply himself to the states general, the other party shall be bound to answer the supposed injury.

"XIV. If any Dutch living here, shall at any time desire to travel or traffic into England, or any place or plantation in obedience to his majesty of England, or with the Indians, he shall have (upon

his request to the governor) a certificate that he is a free denizen of this place, and liberty to do so.

"XV. If it do appear that there is a public engagement of debt, by the town of the Manhattoes, and a way agreed on for the satisfying of that engagement, it is agreed, that the same way proposed shall go on, and that the engagement shall be satisfied.

"XVI. All inferior civil officers and magistrates shall continue as now they are (if they please), till the customary time of new elections, and then new ones be chosen by themselves, provided that such new-chosen magistrates shall take the oath of allegiance to his majesty of England, before they enter upon their office.

"XVII. All differences of contracts and bargains made before this day, by any in this country, shall be determined according to the manner of the Dutch.

"XVIII. If it do appear, that the West India company of Amsterdam do really owe any sums of money to any persons here, it is agreed that recognition, and other duties payable by ships going for the Netherlands, be continued for six months longer.

"XIX. The officers, military, and soldiers, shall march out with their arms, drums beating, and colours flying, and lighted matches; and if any of them will plant, they shall have fifty acres of land set out for them; if any of them will serve as servants, they shall continue with all safety, and become free denizens afterwards.

"XX. If at any time hereafter, the king of Great Britain and the States of the Netherlands do agree that this place and country be re-delivered into the hands of the said states, whensoever his Majesty will send his commands to re-deliver it, it shall immediately be done.

"XXI. That the town of Mannhattans shall choose deputies, and those deputies shall have free voices in all public affairs, as much as any other deputies.

"XXII. Those who have any property in any houses in the fort of Aurania, shall (if they please) slight the fortifications there, and then enjoy all their houses, as all people do where there is no fort.

"XXIII. If there be any soldiers that will go into Holland, and if the company of West India in Amsterdam, or any private persons here, will transport them into Holland, then they shall have a safe passport from Colonel Richard Nicolls, deputy governor under his royal highness, and the other commissioners, to defend the ships that shall transport such soldiers, and all the goods in them, from any surprisal or acts of hostility, to be done by any of his majesty's ships or subjects. That the copies of the king's grant to his royal highness, and the copy of his royal highness's commission to Colonel Richard Nicolls, testified by two commissioners more, and Mr. Winthrop, to be true copies, shall be delivered to the honourable Mr. Stuyvesant, the present governor, on Monday next, by eight of the clock in the morning, at the Old Miln, and these articles consented to, and signed by Colonel Richard Nicolls, deputy-governor to his royal highness, and that within two hours after the fort and town called New Amsterdam, upon the isle of Manhattoes, shall be delivered into the hands of the said Colonel Richard Nicolls, by the service of such as shall be by him thereunto deputed, by his hand and seal.— John De Decker, Nich. Verleett, Samuel Megapolensis, Cornelius Steenwyck, Oloff Stevens Van Kortlant, James Cousseau, Robert Carr, George Carteret, John Winthrop, Samuel Willys, Thomas Clarke, John Pynchon.

"I do consent to these articles,

"Richard Nicolls."

These articles, favourable as they were to the inhabitants, were however very disagreeable to the Dutch governor, and he therefore refused to ratify them till two days after they were signed by the commissioners.

The town of New Amsterdam, upon the reduction of the island Mannhattans, took the name of New York. It consisted of several small streets, laid out in the year 1656, and was not inconsiderable for the number of its houses and inhabitants. The easy terms of the capitulation promised their peaceable subjection to the new government; and hence we find that, in two days after the surrender, the Boston aid was dismissed, with the thanks of the commissioners to the general court. Hudson's and the South river were, however, still to be reduced. Sir Robert Carr commanded the expedition on Delaware, and Carteret was commissioned to subdue the Dutch at fort Orange. The garrison capitulated on the 24th of September, and he called it Albany, in honour of the duke. While Carteret was here, he had an interview with the Indians of the five nations, and entered into a league of friendship with them. The Dutch were sensible of the importance of preserving an uninterrupted amity with those Indians, for they were both very numerous and warlike. The French pursued quite different measures, and the eruptions of those tribes, according to their own authors, often reduced Canada to the brink of ruin. Sir Robert Carr was equally successful on South river, for he compelled both the Dutch and the Swedes to capitulate and deliver up their garrisons the 1st of October, 1664; and that was the day in which the whole New Netherland became subject to the English crown. Very few of the inhabitants thought proper to remove out of the country. Governor Stuyvesant himself held his estate and died here. His remains were interred in a chapel which he had erected on his own farm, at a small distance from the city, afterwards possessed by his grandson Gerardus Stuyvesant, a man of probity, who was elected into the magistracy above thirty years successively. For loyalty to the reigning family, and a pure attachment to the protestant religion, the descendants of the Dutch planters were exceeded by none.

*From the surrender in 1664, to the settlement at the English Revolution of 1688.*

Richard Nicolls being now possessed of the country, took the government upon him, under the style of "deputy-governor under his royal highness the Duke of York, of all his territories in America." During his short continuance in it, he passed a vast number of grants and confirmations of the ancient Dutch patents, the profits of which must have been very considerable. Among these, no one has occasioned more animated contention, than that called the Elizabeth Town Grant in New Jersey.

Besides the chief command of this province, Nicolls had, with Sir Robert Carr, Carteret, and Mavericke, a commission from Charles II., dated the 26th of April, 1664, which, after a recital of disputes concerning limits in New England, and stating that addresses had been sent home from the Indian natives, complaining of abuses received from the English subjects, authorised all, or three, or two of them, of which Nicolls was to be one, to visit the New England colonies, and determine all complaints military, civil, and criminal, according to their discretion, and such instructions as they might receive from the crown. Hence we find, three of them had

a conference with several gentlemen from Connecticut, respecting the limits of this and that colony. The result was an adjudication, in these words:

"By virtue of his majesty's commission, we have heard the difference, about the bounds of the patents granted to his royal highness the Duke of York, and his majesty's colony of Connecticut, and having deliberately considered all the reasons alleged by Mr. Allyn, sen., Mr. Gold, Mr. Richards, and Capt. Winthrop, appointed by the assembly held at Hartford, the 13th of October, 1664, to accompany John Winthrop, Esq., the governor of his majesty's colony of Connecticut, to New York, and to agree upon the bounds of the said colony, why the said Long Island should be under the government of Connecticut, which are too long here to be recited, we do declare and order, that the southern bounds of his majesty's colony of Connecticut is the sea, and that Long Island is to be under the government of his royal highness the Duke of York, as is expressed by plain words, in the said patents, respectively, and also by virtue of his majesty's commission, and the consent of both the governors and the gentlemen above-named. We also order and declare, that the creek or river called Mamaroneck, which is reputed to be about thirteen miles to the east of West Chester, and a line drawn from the east point or side, where the fresh water falls into the salt, at high water mark, north-north-west to the line of the Massachusetts, be the western bounds of the said colony of Connecticut, and all plantations lying westward of that creek and line so drawn, to be under his royal highness's government; and all plantations lying eastward of that creek and line, to be under the government of Connecticut. Given under our hands, at James's Fort, in New York, on the island of Manhattan, this first day of December, 1664—Richard Nicolls, George Carteret, S. Mavericke." "We, the governor and commissioners of the general assembly of Connecticut, do give our consent to the limits and bounds above-mentioned, as witness our hands—Gold, John Winthrop, jun., John Winthrop, Allen, sen., Richards."

At the time of this determination, about two-thirds of Long Island were possessed by people from New England, who had gradually encroached upon the Dutch. As to the settlement between New York and Connecticut on the main, it has always been considered by the former as founded upon ignorance and fraud. The town of Rye was settled under Connecticut, and the grant from that colony is bounded by this line of division. The station at Mamaroneck was about 30 miles from New York, from Albany 150. The general course of the river is about north twelve or fifteen degrees east: and hence it is evident, that a north-north-west line will soon intersect the river, and consequently leave the Dutch country, but a little before surrendered to Colonel Carteret, out of the province of New York. It has been generally esteemed that the Connecticut commissioners in this affair took advantage of the duke's agents, who were ignorant of the geography of the country.

About the close of the year, the estate of the Dutch West India company was seized and confiscated, hostilities being actually commenced in Europe as well as in America, though no declarations of war had yet been published by either of the contending parties. A great dispute between the inhabitants of Jamaica on Long Island, which was adjusted by Colonel Nicolls, on the 2d of January, 1665, gave rise to a salutary institution which has in part ob-

tained ever since. The controversy respected Indian deeds, and thenceforth it was ordained, that no purchase from the Indians, without the governor's licence executed in his presence, should be valid. The strength and numbers of the natives rendered it necessary to purchase their rights; and to prevent their frequent selling the same tract, it was expedient, that the bargain should be attended with some considerable solemnity.

Another instance of Col. Nicolls's prudence, was his gradual introduction of the English methods of government. It was not till the 12th of June, 1665, that he incorporated the inhabitants of New York, under the care of a mayor, five aldermen and a sheriff. Till this time, the city was ruled by a scout, burgomasters, and schepens.

In March preceding, there was a great convention before the governor, at Hempstead, of two deputies from every town on Long Island, empowered to bind their constituents. The design of their meeting was to adjust the limits of their townships for the preservation of the public peace.

The war being proclaimed at London on the 4th of this month, Nicolls received the account of it in June, with a letter from the Lord Chancellor, informing him that De Ruyter, the Dutch admiral, had orders to visit New York. His lordship was misinformed, or the admiral was diverted from the enterprise, for the English peaceably held possession of the country during the whole war, which was concluded on the 21st of July, 1667, by the treaty of Breda. Some are of opinion, that the exchange made with the Dutch for Surinam, which they had taken from us, was advantageous to the nation; but these judges do not consider, that it would have been impossible for the Dutch to have preserved this colony against the increasing strength of the people in New England, Maryland, and Virginia.

After an administration of three years Nicolls returned to England. The time during his short residence here, was almost wholly taken up in confirming the ancient Dutch grants. He erected no courts of justice, but took upon himself the sole decision of all controversies whatsoever. Complaints came before him by petition; upon which he gave a day to the parties, and after a summary hearing, pronounced judgment. His determinations were called edicts, and executed by the sheriffs he had appointed. It is much to his honour that, notwithstanding all this plenitude of power, he governed the province with integrity and moderation. A representation from the inhabitants of Long Island to the general court of Connecticut, made about the time of the Revolution, commends him as a man of an easy and benevolent disposition; and this testimonial is the more to be relied upon, because the design of the writers was, by a detail of their grievances, to induce the colony of Connecticut to take them under its immediate protection.

Francis Lovelace, a colonel, was appointed by the duke to succeed Nicolls in the government of the province, which he began to exercise in May, 1667. As he was a man of great moderation, the people lived very peaceably under him, till the surrender of the colony, which put an end to his power, and is the only event that signalized his administration.

The ambitious designs of Louis XIV. against the Dutch, gave rise to the war with the States-general in 1672. Charles II., a prince sunk in pleasures, profligate, and poor, was easily detached from his alliance with the Dutch, by the intrigues and pecuniary promises of the French king. The following

passage from Voltaire shews that his pretences for entering into the war were groundless and trifling.

"The king of England, on his side, reproached them with disrespect, in not directing their fleet to lower the flag before an English ship; and they were also accused in regard to a certain picture, wherein Cornelius de Witt, brother to the pensionary, was painted with the attributes of a conqueror. Ships were represented in the back ground of the piece, either taken or burnt. Cornelius de Witt, who had really had a great share in the maritime exploits against England, had permitted this trifling memorial of his glory; but the picture, which was in a manner unknown, was deposited in a chamber wherein scarce any body ever entered. The English ministers who presented the complaints of their king against Holland, in writing, therein mentioned certain abusive pictures. The states, who always translated the memorials of ambassadors into French, having rendered abusive, by the words *fautifs trompeurs*, they replied, they did not know what these roguish pictures (*ces tableaux trompeurs*) were. In reality, it never in the least entered into their thoughts, that it concerned this portrait of one of their citizens, nor did they ever conceive this could be a pretence for declaring war."

A few Dutch ships arrived the year after on the 30th of July, 1673, under Staten Island, at the distance of a few miles from the city of New York. John Manning, a captain of an independent company, had at that time the command of the fort, and by a messenger sent down to the squadron, treacherously made his peace with the enemy. On that very day the Dutch ships came up, moored under the fort, landed their men, and entered the garrison, without giving or receiving a shot. A council of war was afterwards held at the Stadt-House, at which were present—commodores, Cornelius Evertse, jun. and Jacob Benkes; and captains, Anthony Colve, Nicholas Boes, and Abraham Ferd. Van Zyll.

All the magistrates and constables from East Jersey, Long Island, Esopus, and Albany, were immediately summoned to New York; and the major part of them swore allegiance to the States-general, and the prince of Orange. Colonel Lovelace was ordered to depart the province, but afterwards obtained leave to return to England with Commodore Benkes. It has often been insisted on, that this conquest did not extend to the whole province of New Jersey; but upon what foundation cannot be discovered. From the Dutch records, it appears, that deputies were sent by the people inhabiting the country, even so far westward as Delaware river, who in the name of their principals made a declaration of their submission; in return for which, certain privileges were granted to them, and judicatories erected at Niewer, Amstel, Upland, and Hoer Kill. Colve's commission to be governor of this country is worth printing, because it shews the extent of the Dutch claims. The translation runs thus:—

"The honourable and awful council of war, for their high mightinesses the States-General of the United Netherlands, and his serene highness the Prince of Orange, over a squadron of ships, now at anchor in Hudson's river in New Netherlands, to all those who shall see or hear these, greeting. As it is necessary to appoint a fit and able person to carry the chief command over this conquest of New Netherlands, with all its appendencies and dependencies from Cape Hinlopen on the south side of the south or Delaware bay, and fifteen miles more south-

erly, with the said bay and South river included; so as they were formerly possessed by the directors of the city of Amsterdam, and after by the English government, in the name and right of the Duke of York; and further, from the said Cape of Hinlopen, along the Great Ocean, to the east end of Long Island and Shelter Island; from thence westward to the middle of the Sound, to a town called Greenwich, on the main, and to run landward in, north-erly; provided that such line shall not come within ten miles of North river, conformable to a provincial treaty made in 1650, and ratified by the States-general, February 22, 1656, and January 23, 1664, with all lands, islands, rivers, lakes, kills, creeks, fresh and salt waters, fortresses, cities, towns, and plantations therein comprehended. So it is, that, we being sufficiently assured of the capacity of Anthony Colve, captain of a company of foot, in the service of their high mightinesses the States-general of the United Netherlands, and his serene highness the Prince of Orange, &c. By virtue of our commission, granted us by their before-mentioned high mightinesses and his highness, have appointed and qualified, as we do by these presents appoint and qualify, the said Captain Anthony Colve, to govern and rule these lands, with the appendencies and dependencies thereof, as governor-general; to protect them from all invasions of enemies, as he shall judge most necessary; hereby charging all high and low officers, justices, and magistrates, and others in authority, soldiers, burghers, and all the inhabitants of this land, to acknowledge, honour, respect, and obey the said Anthony Colve, as governor-general; for such we judge necessary for the service of the country, waiting for the approbation of our principals. Thus done at Fort William Hendrick, the twelfth day of August, 1673.

“Signed by Jacob Benkes.

“Cornelius Evertse, jun.”

The Dutch governor enjoyed his office but a very short season; for on the 9th of February, 1674, the treaty of peace between England and the States-General was signed at Westminster; the sixth article of which restored this country to the English. The terms of it were generally, “That whatsoever countries, islands, towns, ports, castles, or forts have or shall be taken on both sides, since the time that the late unhappy war broke out, either in Europe or elsewhere, shall be restored to their former lord and proprietor, in the same condition they shall be in, when the peace itself shall be proclaimed; after which time there shall be no spoil nor plunder of the inhabitants, no demolition of fortifications, nor carrying away of guns, powder, or other military stores, which belonged to any castle or fort at the time when it was taken.”

The lenity which began the administration of Colonel Nicolls was continued under Lovelace. He appears to have been a man rather of a phlegmatic than an enterprising disposition, always pursuing the common road, and scarce ever acting without the aid of his council. Instead of taking upon himself the sole determination of judicial controversies, after the example of his predecessor, he called to his assistance a few justices of the peace. This, which was called the court of assizes, was the principal law judicatory in those times. It was a court both of law and equity, for the trial of causes of 20*l*. and upwards, and ordinarily sat but once a year. Subordinate to this, were the town courts and sessions; the former took cognizance of actions under 5*l*., and the latter of suits between that sum and

twenty pounds: seven constables and overseers were judges in the first, and in the last the justices of the peace, with a jury of seven men. The verdict of the majority was sufficient. The legislative power under the duke was vested entirely in the governor and council. A third estate might then be easily dispensed with, for the charge of the province was small, and in a great measure defrayed by his royal highness, the proprietor of the country. The manner of raising public money was established by Colonel Nicolls on the 1st of June, 1665. The high sheriff issued a warrant annually to the high constables of every district, and they sent theirs to the petty constables; who, with the overseers of each town, made a list of all male persons above sixteen years of age, with an estimate of their rent and personal estates, and then taxed them according to certain rates, prescribed by a law. After the assessment was returned to the high sheriff, and approved by the governor, the constables received warrants for levying the taxes by distress and sale.

Upon the conclusion of the peace in 1674, the Duke of York, to remove all controversy respecting his property, obtained a new patent from the king, dated the 29th of June, for the lands granted in 1664, and two days afterwards commissioned Major, afterwards Sir Edmond Andross, to be governor of his territories in America. After the resignation of this province, which was made to him by the Dutch possessors, on the 31st of October following he called a court-martial, to try Manning for his treacherous and cowardly surrender. The articles of accusation exhibited against him were in substance:—

I. That the said Manning, on the 28th of July, 1673, having notice of the approach of the enemy's fleet, did not endeavour to put the garrison in a posture of defence, but on the contrary slighted such as offered their assistance.

II. That while the fleet was at anchor under Staten Island, on the 30th of July, he treacherously sent on board to treat with the enemy, to the great discouragement of the garrison.

III. That he suffered the fleet to moor under the fort, forbidding a gun to be fired on pain of death.

IV. That he permitted the enemy to land without the least opposition.

V. That shortly after he had sent persons to treat with the Dutch commodores, he struck his flag, even before the enemy were in sight of the garrison, the fort being in a condition, and the men desirous to fight.

VI. And lastly, that he treacherously caused the fort gates to be opened, and cowardly and basely let in the enemy, yielding the garrison without articles.

Such conduct, which Manning on his trial confessed to be true, is less surprising than the lenity of the sentence pronounced against him; which was, that, though he deserved death, yet because he had since the surrender been in England, and seen the king and duke, it was adjudged that his sword should be broken over his head in public, before the city hall, and himself rendered incapable of wearing a sword, and of serving his majesty for the future, in any public trust in the government.

This light censure is, however, no proof that Sir Edmond was a man of a merciful disposition; the historians of New England, where he was afterwards governor, justly transmit him to posterity, under the odious character of a sycophant tool to the duke, and an arbitrary tyrant over the people committed to his care. He knew no law but the will of his master, and Kirk and Jefferies were not fitter instru-

ments than he to execute the despotic projects of James II.

In the year 1675, Nicholas Renslaer, a Dutch clergyman, arrived. He claimed the manor of Renslaerwick, and was recommended by the duke to Sir Edmond Andross for a living in one of the churches at New York, or Albany, probably to serve the popish cause. Niewenhyt, minister of the church at Albany, disputed his right to administer the sacraments, because he had received an episcopal ordination, and was not approved by the Classis of Amsterdam, to which the Dutch churches hold themselves subordinate. In this controversy the governor took the part of Renslaer, and accordingly summoned Niewenhyt before him, to answer for his conduct. This minister was treated with such singular contempt, and so frequently harassed by fruitless and expensive attendances before the council, that the dispute became interesting, and the greater part of the people resented the usage he met with. Hence we find, that the magistrates of Albany soon after imprisoned Renslaer, for several dubious words (as they are called in the record) delivered in a sermon. The governor, on the other hand, ordered him to be released, and summoned the magistrates to attend him at New York; warrants were then issued to compel them to give security in 5000*l.* each, to make out good cause for confining the minister. Leisler, who was one of them, refused to comply with the warrant, and was thrown into jail. Sir Edmond, fearful that a great party would rise up against him, was at last compelled to discontinue his ecclesiastical jurisdiction, and to refer the controversy to the determination of the consistory of the Dutch church at Albany. It is perhaps not improbable, that these popish measures sowed the seeds of that aversion to the duke's government, which afterwards produced those violent convulsions in the province under Leisler, at the time of the revolution, in favour of the Prince of Orange. Another reason is assigned for the favour he met with from the crown. It is said, that while Charles II. was an exile, he predicted the day of his restoration. The people of Albany had a high opinion of his prophetic spirit, and many strange tales prevailed there. The parson made nothing of his claim, the manor being afterwards granted, by Col. Dongan, to Killian Van Renslaer, a distant relation. This extensive tract, by the Dutch called a colony, is an oblong, extending twenty-four miles upon Hudson's river, and as many on each side. The patent of confirmation was issued by special direction from the king, and is the most liberal in the privileges it grants of any one in the province.

If Sir Edmond Andross's administration at New York appears to be less exceptionable than while he commanded at Boston, it was through want of more opportunities to shew himself in his true light. The main course of his public proceedings, during his continuance in the province, was spent in the ordinary acts of government, which then principally consisted in passing grants to the subject, and presiding in the court of assize, established by Colonel Lovelace. The public exigences were now in part supplied by a kind of benevolence; the badge of bad times; this appears in an entry on the records, of a letter of May 5, 1676, from Governor Andross, to several towns of Long Island, desiring to know, what sums they would contribute towards the war. Near the close of his administration, he thought proper to quarrel with Philip Carteret, who in 1680 exercised the government of East Jersey, under a

commission from Sir George Carteret, dated the 31st of July, 1675; Andross disputed his right, and seized and brought him prisoner to New York; for which it is said he lost his own government, but whoever considers that Sir Edmond was immediately preferred to be governor of Boston, will rather believe, that the duke superseded him for some other reasons.

Before proceeding to the succeeding administration, in which the Indian affairs began to have a powerful influence upon the public measures, it may not be improper to present the reader with a summary view of the history and character of the Five Nations, by the Dutch called Maquaas, by the French Iroquois, and by us, Five Nations, Six Nations, and lastly the Confederates. They are greatly diminished, and consist now only of about 1200 fighting men. These, of all the innumerable tribes of savages, which inhabit the northern part of America, are of most importance, both on account of their vicinity and warlike disposition. Before the last incorporation of the Tuscaroras, a people driven by the inhabitants of Carolina from the frontiers of Virginia, they consisted of five confederate cantons. The Tuscaroras were received upon a supposition, that they were originally of the same stock with the Five Nations, because there is some similitude between their languages. What in particular gave rise to this league, and when it took place, are questions which neither the natives, nor Europeans, pretend to answer. Each of these nations is divided into three families, or clans, of different ranks, bearing for their arms, and being distinguished by the names of, the tortoise, the bear, and the wolf. Their instruments of conveyances are signed by signatures, which they make with a pen, representing these animals.

No people in the world perhaps have higher notions than these Indians of military glory. All the surrounding nations have felt the effects of their prowess; and many not only became their tributaries, but were so subjugated to their power, that without their consent, they durst not commence either peace or war.

Though a regular police for the preservation of harmony within, and the defence of the state against invasions from without, is not to be expected from savages, yet perhaps they have paid more attention to it than is generally allowed. Their government is suited to their condition. A people whose riches consist not so much in abundance, as in a freedom from want; who are circumscribed by no boundaries; who live by hunting, and not by agriculture,—must always be free, and therefore subject to no other authority than such as consists with the liberty necessarily arising from their circumstances. All their affairs, whether respecting peace or war, are under the direction of their Sachems, or chief men. Great exploits and public virtue procure the esteem of a people, and qualify a man to advise in council, and execute the plan concerted for the advantage of his country; thus whoever appears to the Indians in this advantageous light, commences a Sachem without any other ceremony.

As there is no other way of arriving at this dignity, so it ceases unless an uniform zeal and activity for the common good is uninterruptedly continued. Some have thought it hereditary, but that is a mistake. The son is indeed respected for his father's services, but without personal merit he can never share in the government—which, were it otherwise, must sink into perfect disgrace. The children

such as are distinguished for their patriotism, moved by the consideration of their birth, and the perpetual incitements to virtue constantly inculcated into them, imitate their father's exploits, and thus attain to the same honours and influence; which accounts for the opinion that the title and power of Sachem is hereditary.

Each of these republics has its own particular chiefs, who hear and determine all complaints in council, and though they have no officers for the execution of justice, yet their decrees are always obeyed, from the general reproach that would follow a contempt of their advice. The condition of this people exempts them from factions, the common disease of popular governments. It is impossible to gain a party amongst them by indirect means; for no man has either honour, riches, or power to bestow.

All affairs which concern the general interest are determined in a great assembly of the chiefs of each canton, usually held at Onondago, the centre of their country. Upon emergencies they act separately, but nothing can bind the league but the voice of the general convention.

The French, upon the maxim of divide and govern, tried all possible means to disunite these republics, and sometimes even sowed great jealousies amongst them. In consequence of this plan, they seduced many families to withdraw to Canada, and there settled them in regular towns, under the command of a fort and the tuition of missionaries.

The manners of these savages are as simple as their government. Their houses are a few crotched stakes thrust into the ground and overlaid with bark. A fire is kindled in the middle, and an aperture left at the top for the conveyance of the smoke. Whenever a considerable number of those huts are collected, they have a castle, as it is called, consisting of a square without bastions, surrounded with palisadoes. They have no other fortification; and this is only designed as an asylum for their old men, their wives and children, whilst the rest are gone out to war. They live almost entirely without care. While the women, or squaws, cultivate a little spot of ground for corn, the men employ themselves in hunting. As to clothes, they use a blanket girt at the waist, and thrown loosely over their shoulders; some of their women indeed have, besides this, a sort of a petticoat, and a few of their men wear shirts; but the greater part of them are generally half-naked. In winter, their legs are covered with stockings of blanket, and their feet with socks of deer skin. Many of them are fond of ornaments, and their taste is very singular. Some have rings affixed, not only to their ears but their noses. Bracelets of silver and brass round their wrists, are very common. The women formerly plaited their hair, and tied it up behind in a bag, perhaps in imitation of the beaus in Canada. Though the Indians are capable of sustaining great hardships, yet they cannot endure much labour, being rather fleet than strong. Their men are taller than the Europeans, rather corpulent, always beardless, because they pluck out the hairs. The French writers, who say they have naturally no beards, are mistaken; and the reasons they assign for it are ridiculous. They are strait-limbed, of a tawny complexion, and black uncurled hair. In their food they have no manner of delicacy, for though venison is their ordinary diet, yet sometimes they eat dogs, bears, and even snakes. Their cookery is of two kinds, boiled or roasted; to perform the latter, the meat is penetrated by a short sharp stick set in the ground, inclining towards the fire,

and turned as occasion requires. They are hospitable to strangers, though few Europeans would relish their highest favours of this kind, for they are very dirty both in their garments and food. Every man has his own wife, whom he takes and leaves at pleasure; a plurality, however, at the same time, is by no means admitted among them. They have been generally commended for their chastity, but others say, on good authority, that they are very lascivious, and that the women, to avoid reproach, frequently destroy the fœtus in the womb. They are so perfectly free, that unless their children, who generally assist their mother, may be called servants, they have none. The men frequently associate themselves for conversation, by which means they not only preserve the remembrance of their wars and treaties, but diffuse among their youths incitements to a love of war, as well as instruction in all its subtilties.

Since they became acquainted with the Europeans, their warlike apparatus is a musket, hatchet, and a long knife. To "take up the hatchet," is with them a phrase signifying to declare war; as on the contrary "to bury it" denotes the establishment of a peace. Their boys still accustom themselves to bows and arrows, and are so dextrous in the use of them, that a lad of sixteen will strike an English shilling five times in ten, at twelve or fourteen yards distance. Their men are excellent marksmen, both with the gun and hatchet; their dexterity at the latter is very extraordinary, for they rarely miss the object though at a considerable distance. The hatchet in the flight perpetually turns round, and yet always strikes the mark with the edge.

Before they go out, they have a feast upon dog's flesh and a great war dance. At these, the warriors, who are frightfully painted with vermilion, rise up and sing their own exploits, or those of their ancestors, and thereby kindle a military enthusiasm in the whole company. The day after the dance, they march out a few miles in a row, observing a profound silence. The procession being ended, they strip the bark from a large oak, and paint the design of their expedition on the naked trunk. The figure of a canoe, with the number of men in it, determines the strength of their party; and by a deer, a fox, or some other emblem painted at the head of it, we discover against what nation they are gone out.

The five nations being devoted to war, every art is contrived to diffuse a military spirit through the whole body of their people. The ceremonies attending the return of a party, seem calculated in particular for that purpose. The day before they enter the village, two heralds advance, and at a small distance set up a yell, which by its modulation intimates either good or bad news. If the former, the village is alarmed, and an entertainment provided for the conquerors, who in the mean time approach in sight: one of them bears the scalps stretched over a bow, and elevated upon a long pole. The boldest man in the town comes out, and receives it, and instantly flies to the hut where the rest are collected. If he is overtaken, he is beaten unmercifully; but if he outruns the pursuer, he participates in the honour of the victors, who at their first entrance receive no compliments, nor speak a single word till the end of the feast. Their parents, wives, and children then are admitted, and treat them with the profoundest respect. After these salutations, one of the conquerors is appointed to relate the whole adventure, to which the rest attentively listen without

asking a question, and the whole concludes with a savage dance.

The Indians never fight in the field, or upon equal terms, but always sculk and attack by surprise, in small parties, meeting every night at a place of rendezvous. Scarce any enemy can escape them; for, by the disposition of the grass and leaves, they follow his track with great speed any where but over a rock. Their barbarity is shocking to human nature. Women and children they generally kill and scalp, because they would retard their progress, but the men they carry into captivity. If any woman has lost a relation, and inclines to receive the prisoner in his stead, he not only escapes a series of the most inhuman tortures, and death itself, but enjoys every immunity they can bestow, and is esteemed a member of the family into which he is adopted. To part with him would be the most ignominious conduct, and considered as selling the blood of the deceased; and, for this reason, it is not without the greatest difficulty that a captive is redeemed.

When the Indians incline to peace, a messenger is sent to the enemy with a pipe, the bowl of which is made of soft red marble; and a long reed, beautifully painted, and adorned with the gay plumage of birds, forms the stem. This is his infallible protection from any assault on the way. The envoy makes his proposals to the enemy, who, if they approve them, ratify the preliminaries to the peace, by smoking through the pipe, and, from that instant, a general cessation of arms takes place. The French call it a calumet. It is used, as far as can be learned, by all the Indian nations on the continent. The rights of it are esteemed sacred, and have been only invaded by the Flat Heads; in just indignation for which the confederates maintained a war with them for near thirty years.

As to the language of the five nations, the best account of it is contained in a letter from the Reverend Mr. Spencer, who resided amongst them in the year 1748, being then a missionary from the Scotch society for propagating christian knowledge. He writes thus:—

“Except the Tuscaroras, all the six nations speak a language radically the same. It is very masculine and sonorous, abounding with gutturals and strong aspirations, but without labials. Its solemn grave tone is owing to the generosity of its feet.

“The extraordinary length of Indian words, and the guttural aspirations necessary in pronouncing them, render the speech extremely rough and difficult. The verbs never change in their terminations, as in Latin, Greek, and Hebrew, but all their variations are prefixed. Besides the singular and plural, they have also the dual number. A strange transposition of syllables of different words is very common in the Indian tongue.

“The dialect of the Oneidas is softer than that of the other nations; and the reason is, because they have more vowels, and often supply the place of harsh letters with liquids; instead of R, they always use L: Rebecca would be pronounced Lequecca.”

The art of public speaking is in high esteem among the Indians, and much studied. They are extremely fond of method, and displeased with an irregular harangue, because it is difficult to be remembered. When they answer, they repeat the whole, reducing it into strict order. Their speeches are short, and the sense conveyed in strong metaphors. In conversation they are sprightly, but solemn and serious in their messages relating to pub-

lic affairs. Their speakers deliver themselves with surprising force, and great propriety of gesture. The fierceness of their countenances, the flowing blanket, elevated tone, naked arm, and erect stature, with a half circle of auditors seated on the ground and in the open air, cannot but impress upon the mind a lively idea of the ancient orators of Greece and Rome.

At the close of every important part of the speech, ratifying an old covenant or creating a new one, a belt is generally given, to perpetuate the remembrance of the transaction. These belts are about four inches wide, and thirty in length. They consist of strings of conque-shell beads fastened together. Those beads, which passed for money, were called by the Indians Wampum, and by the Dutch Sewant; six beads were formerly valued at a styver. There were always several poor families at Albany, who supported themselves by coining this cash for the traders.

With respect to religion, the Indians may be said to be under the thickest gloom of ignorance. If they have any, which is much to be questioned, those who affirm it, will find it difficult to tell us wherein it consists. They have neither priest nor temple, sacrifice nor altar. Some traces indeed appear of the original law written upon their hearts; but they have no system of doctrines, nor any rites and modes of public worship. They are sunk, unspeakably, beneath the polite pagans of antiquity. Some confused notions, indeed, of beings superior to themselves, they have; but of the Deity, and his natural and moral perfections, no proper or tolerable conceptions; and of his general and particular providence they know nothing. They profess no obligations to him, nor acknowledge their dependence upon him. Some of them, it is said, are of opinion that there are two distinct, powerful beings, one able to help, the other to do them harm. The latter they venerate most, and some allege, that they address him by a kind of prayer. Though there are no public monuments of idolatry to be seen in their country, yet the missionaries have discovered coarse imagery in wooden trinkets, in the hands of their jugglers, which the converts deliver up as detestable. The sight of them would remind an antiquary of the Lares and Penates of the ancients, but no certain judgment can be drawn of their use. The Indians sometimes assemble in large numbers, and retire far into the wilderness, where they eat and drink in a profuse manner. These conventions are called kenticoyes. Some esteem them to be debauched revels, or bacchanalia; but those who have privately followed them into these recesses give such accounts of their conduct, as naturally lead one to imagine that they pay a joint homage and supplication to some invisible being. If we suppose they have a religion, it is worse than none, and raises most melancholy ideas of their depraved condition.

As to the history of the Five Nations before their acquaintance with the Europeans, it is involved in the darkness of antiquity. It is said that their first residence was in the country about Montreal; and that the superior strength of the Adirondacks, whom the French call Algonquins, drove them into their present possessions, lying on the south side of the Mohawks river, and the great lake Ontario. Towards the close of those disputes, which continued for a great series of years, the confederates gained advantages over the Adirondacks, and struck a general terror into all the other Indians. The Hurons on the north side of the lake Erie, and the Cat In

dians on the south side, were totally conquered and dispersed. The French, who settled Canada in 1603, took umbrage at their success, and began a war with them which had well nigh ruined the new colony. In autumn, 1665, M. Courcelles, the governor, sent out a party against the Mohawks. Through ignorance of the country, and the want of snow shoes, they were almost perished, when they fell in with Schencetady. And even there the Indians would have sacrificed them to their barbarous rage, had not Corlear, a Dutchman, interposed to protect them. For this seasonable hospitality, the French governor invited him to Canada, but he was unfortunately drowned in his passage through the lake Champlain. It is in honour of this man, who was a favourite of the Indians, that the governors of New York, in all their treaties, were addressed by the name of Corlear. Twenty light companies of foot, and the whole militia of Canada, marched the next spring into the country of the Mohawks; but their success was very unequal to the charge and labour of such a tedious march of 700 miles, through an uncultivated desert; for the Indians, on their approach, retired into the woods, leaving behind them some old sachems, who preferred death to life, to glut the fury of their enemies. The emptiness of this parade on the one hand, and the Indian fearfulness of fire-arms on the other, brought about a peace in 1667, which continued for several years after. In this interval both the English and French cultivated a trade with the natives very profitable to both nations. The latter, however, were most politic and vigorous, and filled the Indian country with their missionaries. The Sieur Perot, the very year in which the peace was concluded, travelled above 1200 miles westward, making proselytes of the Indians every where to the French interest. Courcelles appears to have been a man of art and industry. He took every measure in his power for the defence of Canada. To prevent the eruptions of the Five Nations by the way of lake Champlain, he built several forts in 1665, between that and the mouth of the river Sorel. In 1672, just before his return to France, under pretence of treating with the Indians more commodiously, but in reality, as Charlevoix expresses it, "to bridle them," he obtained their leave to erect a fort at Caderacqui, or lake Ontario, which Count Frontenac, his successor, completed the following spring, and called after his own name. The command of it was afterwards given to Mr De la Salle, who, in 1678, rebuilt it with stone. This enterprising person, the same year, launched a bark of ten tons into the lake Ontario, and another of sixty tons, the year after, into lake Erie, about which time he enclosed with pallisadoes a little spot at Niagara.

Though the Duke of York had preferred Colonel Thomas Dongan to the government of this province on the 30th of September, 1682, he did not arrive here till the 27th of August in the following year. He was a man of integrity, moderation, and polite manners, and though a professed papist, may be classed among the best of the governors.

The people, who had been formerly ruled at the will of the duke's deputies, began their first participation in the legislative power under Colonel Dongan, for shortly after his arrival, he issued orders to the sheriffs to summon the freeholders for choosing representatives, to meet him in assembly on the 17th of October, 1683. Nothing could be more agreeable to the people, who, whether Dutch or English, were born the subjects of a free state; nor indeed was the

change of less advantage to the duke than to the inhabitants. For such a general disgust had prevailed, and in particular in Long Island, against the old form which Colonel Nicolls had introduced, as threatened the total subversion of the public tranquillity. Colonel Dongan saw the disaffection of the people at the east end of the island, for he landed there on his first arrival in the country; and to extinguish the discontent, then impatient to burst out, gave them his promise, that no laws or rates for the future should be imposed but by a general assembly. Doubtless, this alteration was agreeable to the duke's orders, who had been strongly importuned for it, as well as acceptable to the people, for they sent him soon after an address, expressing the highest sense of gratitude for so beneficial a change in the government. It would have been impossible for him much longer to have maintained the old model over free subjects, who had just before formed themselves into a colony for the enjoyment of their liberties, and had even already solicited the protection of the colony of Connecticut, from whence the greatest part of them came. Disputes relating to the limits of certain townships at the east end of Long Island, sowed the seeds of enmity against Dongan so deeply in the hearts of many who were concerned in them, that their representation to Connecticut, at the revolution, contains the bitterest invectives against him.

Dongan surpassed all his predecessors in a due attention to affairs with the Indians, by whom he was highly esteemed. It must be remembered to his honour, that though he was ordered by the duke to encourage the French priests who were come to reside among the natives, under pretence of advancing the popish cause but in reality to gain them over to a French interest; yet he forbid the five nations to entertain them. The Jesuits, however, had no small success. Their proselytes were called praying Indians, or Caghnugaes, and resided afterwards in Canada, at the fall of St. Lewis, opposite to Montreal. This village was begun in 1671, and consisted of such of the five nations as had formerly been drawn away by the intrigues of the French priests, in the times of Lovelace and Andross, who seem to have paid no attention to the Indian affairs. It was owing to the instigation also of these priests, that the five nations about this time committed hostilities on the back parts of Maryland and Virginia, which occasioned a grand convention at Albany, in the year 1684. Lord Howard of Effingham, the governor of Virginia, was present, and made a covenant with them for preventing further depredations, towards the accomplishment of which, Colonel Dongan was very instrumental.

While Lord Howard was at Albany, a messenger from De la Barre, then governor of Canada, arrived, complaining of the Senneca Indians, for interrupting the French in their trade with the more distant Indians, commonly included among us by the general name of the Far Nations. Colonel Dongan, to whom the message was sent, communicated it to the Sennecas, who admitted the charge, but justified their conduct, alleging, that the French supplied arms and ammunition to the Twightwies, with whom they were then at war. De la Barre, at the same time, meditating nothing less than the total destruction of the five nations, proceeded with an army of 1700 men to the lake Ontario. Mighty preparations were made to obtain the desired success: fresh troops were imported from France, and a letter procured from the duke of York to Colonel Dongan

commanding him to lay no obstacles in the way. The officers posted in the out forts, even as far as Messilimakinae, were ordered to rendezvous at Niagara, with all the western Indians they could engage. Dongan, regardless of the duke's orders, apprised the Indians of the French designs, and promised to assist them. After six weeks delay at fort Frontenac, during which time a great sickness occasioned by bad provisions, broke out in the French army, De la Barre found it necessary to conclude the campaign with a treaty, for which purpose he crossed the lake, and came to the place which, from the distress of his army, was called La Famine. Dongan sent an interpreter among the Indians, by all means to prevent them from attending the treaty. The Mohawks and Sennecas accordingly refused to meet De la Barre, but the Oneydoes, Onondagas, and Cayugas, influenced by the missionaries, were unwilling to hear the interpreter, except before the priests, one La Main, and three other Frenchmen, and afterwards waited upon the French governor. Two days after their arrival in the camp, Monsieur De la Barre addressing himself to Garrangula, an Onondaga chief, made the following speech, the Indians and French officers at the same time forming a circle round about him.

"The king, my master, being informed that the five nations have often infringed the peace, has ordered me to come hither with a guard, and to send Ohguesse to the Onondagas, to bring the chief Sachems to my camp. The intention of the great king is, that you and I may smoke the calumet of peace together: but on this condition that you promise me, in the name of the Sennecas, Cayugas, Onondagas, and Mohawks, to give entire satisfaction and reparation to his subjects, and for the future never to molest them.

"The Sennecas, Cayugas, Onondagas, Oneydoes, and Mohawks, have robbed and abused all the traders that were passing to the Illinois and Miamas, and other Indian nations, the children of my king. They have acted, on these occasions, contrary to the treaty of peace with my predecessor. I am ordered, therefore, to demand satisfaction, and to tell them that, in case of refusal, or their plundering us any more, I have express orders to declare war. This belt confirms my words. The warriors of the five nations have conducted the English into the lakes which belong to the king, my master, and brought the English among the nations that are his children, to destroy the trade of his subjects, and to withdraw these nations from him. They have carried the English thither, notwithstanding the prohibition of the late governor of New York, who foresaw the risk that both they and you would run. I am willing to forget those things, but if ever the like shall happen for the future, I have express orders to declare war against you. This belt confirms my words. Your warriors have made several barbarous incursions on the Illinois and Unameis; they have massacred men, women, and children, and have made many of these nations prisoners, who thought themselves safe in their villages in time of peace; these people, who are my king's children, must not be your slaves; you must give them their liberty, and send them back into their own country. If the five nations shall refuse to do this, I have express orders to declare war against them. This belt confirms my words.

"This is what I have to say to Garrangula, that he may carry to the Sennecas, Onondagas, Oneydoes, Cayugas, and Mohawks, the declaration which the

king, my master, has commanded me to make. He doth not wish them to force him to send a great army to Cadarackui fort, to begin a war which must be fatal to them. He would be sorry that this fort, that was the work of peace, should become the prison of your warriors. We must endeavour, on both sides, to prevent such misfortunes. The French, who are the brethren and friends of the five nations, will never trouble their repose, provided that the satisfaction which I demand, be given; and that the treaties of peace be hereafter observed. I shall be extremely grieved, if my words do not produce the effect which I expect from them; for then I shall be obliged to join with the governor of New York, who is commanded by his master to assist me, and burn the castles of the five nations, and destroy you. This belt confirms my words."

Garrangula heard these threats with contempt, because he had learnt the distressed state of the French army, and knew that they were incapable of executing the designs with which they set out; and therefore, after walking five or six times round the circle, he answered the French governor, who sat in an elbow chair, in the following strain:

"Yonnondio,—I honour you, and the warriors that are with me likewise honour you. Your interpreter has finished your speech; I now begin mine. My words make haste to reach your ears; hearken to them.

"Yonnondio, you must have believed, when you left Quebec, that the sun had burnt up all the forests, which render our country inaccessible to the French, or that the lakes had so far overflown the banks, that they had surrounded our castles, and that it was impossible for us to get out of them. Yes, Yonnondio, surely you must have dreamt so, and the curiosity of seeing so great a wonder has brought you so far. Now you are undeceived, since I and the warriors here present, are come to assure you, that the Sennecas, Cayugas, Onondagas, Oneydoes, and Mohawks, are yet alive. I thank you, in their name, for bringing back into their country the calumet which your predecessor received from their hands. It was happy for you, that you left underground that murdering hatchet that has been so often died in the blood of the French. Hear, Yonnondio, I do not sleep, I have my eyes open, and the sun which enlightens me discovers to me a great captain at the head of a company of soldiers, who speaks as if he were dreaming. He says, that he only came to the lake to smoke on the great calumet with the Onondagas. But Garrangula says, that he sees the contrary, that it was to knock them on the head, if sickness had not weakened the arms of the French.

"I see Yonnondio raving in a camp of sick men, whose lives the great spirit has saved, by inflicting this sickness on them. Hear, Yonnondio! our women had taken their clubs, our children and old men had carried their bows and arrows into the heart of your camp, if our warriors had not disarmed them and kept them back, when your messenger, Ohguesse, came to our castles. It is done, and I have said it. Hear, Yonnondio! we plundered none of the French, but those that carried guns, powder and ball to the Twightwies and Chictaghicks, because those arms might have cost us our lives. Herein we follow the example of the Jesuits, who stave all the kegs of rum brought to our castles, lest the drunken Indians should knock them on the head. Our warriors have not beaver enough to pay for all these arms that they have taken, and our old men

are not afraid of the war. This belt preserves my words.

"We carried the English into our lakes, to trade there with the Utawawas and Quatoghies, as the Adirondacks brought the French to our castles, to carry on a trade, which the English say is theirs. We are born free; we neither depend on Yonnon-dio nor Corlear.

"We may go where we please, and carry with us whom we please, and buy and sell what we please: if your allies be your slaves, use them as such, command them to receive no other but your people. This belt preserves my words.

"We knocked the Twightwies and Chictaghicks on the head, because they had cut down the trees of peace, which were the limits of our country. They have hunted beavers on our lands: they have acted contrary to the customs of all Indians, for they left none of the beavers alive, they killed both male and female. They brought the Satanas into the country, to take part with them, after they had concerted ill designs against us. We have done less than either the English or French, that have usurped the lands of so many Indian nations, and chased them from their own country. This belt preserves my words.

"Hear, Yonnon-dio, what I say is the voice of all the five nations—hear what they answer—open your ears to what they speak. The Sennecas, Cayugas, Onondagas, Oneydoes, and Mohawks say, that when they buried the hatchet at Cadarackui (in the presence of your predecessor) in the middle of the fort; they planted the tree of peace in the same place, to be there carefully preserved, that, in place of a retreat for soldiers, that port might be a rendezvous for merchants: that in place of arms and ammunition of war, beavers and merchandize should only enter there.

"Hear, Yonnon-dio, take care for the future, that so great a number of soldiers as appear there do not choak the tree of peace planted in so small a fort. It will be a great loss if, after it had so easily taken root, you should stop its growth, and prevent its covering your country and ours with its branches. I assure you, in the name of the five nations, that our warriors shall dance to the calumet of peace under its leaves, and shall remain quiet on their mats, and shall never dig up the hatchet, till their brother Yonnon-dio or Corlear shall, either jointly or separately, endeavour to attack the country which the great spirit has given to our ancestors. This belt preserves my words, and this other, the authority which the five nations have given me."

Then Garrangula, addressing himself to Monsieur La Main, said "Take courage Ohguesse, you have spirit, speak, explain my words, forget nothing, tell all that your brethren and friends say to Yonnon-dio your governor, by the mouth of Garrangula, who loves you, and desires you to accept of this present of beaver, and take part with me in my feast, to which I invite you. This present of beaver is sent to Yonnon-dio, on the part of the five nations."

Enraged at this bold reply De la Barre, as soon as the peace was concluded, retired to Montreal, and ingloriously finished an expensive campaign, as Dr. Colden observes, in a scold with an old Indian.

De la Barre was succeeded by the Marquis de Nonville, colonel of the dragoons, who arrived with a reinforcement of troops in 1685. The marquis was a man of courage, and an enterprising spirit, and not a little animated by the consideration, that he was sent over to repair the disgrace which his

predecessor had brought upon the French colony. The year after his arrival at Quebec, he wrote a letter to the minister in France, recommending the scheme of erecting a stone fort, sufficient to contain four or five hundred men, at Niagara, not only to exclude the English from the lakes, but to command the fur trade, and subdue the five nations. Dongan, who was jealous of his designs, took umbrage at the extraordinary supplies sent to fort Frontenac, and wrote to the French governor, signifying that, if he attacked the confederates, he would consider it as a breach of the peace subsisting between the two crowns; and to prevent his building a fort at Niagara, he protested against it, and claimed the country as dependent upon the province. De Nonville, in his answer, denied that he intended to invade the five nations, though the necessary preparations for that purpose were then carrying on, and yet Charlevoix commends him for his piety and uprightness. Colonel Dongan, who knew the importance of the Indian alliance, placed no confidence in the declarations of the marquis, but exerted himself in preparing the confederates for the war; and the French author just mentioned does him honour, while he complains of him as a perpetual obstacle in the way of the execution of their schemes.

De Nonville, to prevent the interruption of the French trade with the Twightwies, determined to divert the five nations, and carry the war into their country. To that end, in 1687, he collected 2,000 troops, and 600 Indians, at Montreal, and issued orders to all the officers in the more westerly country to meet him with additional succours at Niagara, on an expedition against the Sennecas. An English party, under one M'Gregory, at the same time was gone out to trade on the lakes, but the French, notwithstanding the peace then subsisting between the two crowns, intercepted them, seized their effects, and imprisoned their persons. Monsieur Fonti, commandant among the Chictaghies, who was coming to the general's rendezvous at Niagara, did the like to another English party, which he met with in lake Erie—both which attacks were open infractions of the treaty at Whitehall, executed in November, 1686; by which it was agreed, that the Indian trade in America should be free to the English and French. The five nations, in the mean time, were preparing to give the French army a suitable reception. Monsieur Companie, with two or three hundred Canadians in an advanced party, surprised two villages of the confederates, who, at the invitation, and on the faith of the French, seated themselves down about eight leagues from lake Fadarackui or Ontario. To prevent their escape with intelligence to their countrymen, they were carried to the fort, and all but thirteen died in torments at the stake, singing, with an heroic spirit, in their expiring moments, the perfidy of the French. The rest, according to the express orders of the French king, were sent to the galleys in Europe. The marquis having embarked his whole army in canoes, set out from the fort at Cadurackui on the 23d of June, one half of them passing along the north, and the other on the south side the lake; and both arrived the same day at Tyronpequait, and shortly after set out on their march towards the chief village of the Sennecas, at about seven leagues distance. The main body was composed of the regulars and militia, the front and rear of the Indians and traders. The scouts advanced the second day on their march as far as the corn of the village, and within pistol-shot of 500 Sennecas, who lay upon their bellies, undiscovered.

The French, who imagined the enemy were all fled, quickened their march, to overtake the women and old men. But no sooner had they reached the foot of a hill, about a mile from the villages, than the Sennecas raised the war shout, and in the same instant charged upon the whole army both in the front and rear. Universal confusion ensued. The battalions divided, fired upon each other, and fled into the wood. The Sennecas improved the disorder of the enemy, till they were repulsed by the French Indians. According to Charlevoix's account, which may be justly suspected, the enemy lost but six men, and had twenty wounded in the conflict. Of the Sennecas, he says, sixty were wounded, and forty-five slain. The marquis was so much dispirited, that he could not be persuaded to pursue the enemy that day; which gave the Sennecas an opportunity to burn their village, and get off. Two old men remained in the castle to receive the general, and regale the barbarity of his Indian allies. After destroying the corn in this and several other villages, the army retired to the banks of the lake, and erected a fort with four bastions on the south-east side of the straights at Niagara, in which they left one hundred men under the command of Le Chevalier de la Troye, with eight months provisions; but these being chiefly blocked up, all, except seven or eight of them, who were accidentally relieved, perished through famine. Soon after this expedition Colonel Dongan met the five nations at Albany. To what intent, appears from the speech he made to them on the 5th of August, which is quoted, in order to shew his vigilance and zeal for the province committed to his care, and a sample of the mode of conducting business.

"Brethren,—I am very glad to see you here in this house, and am heartily glad that you have sustained no greater loss by the French, though I believe it was their intention to destroy you all, if they could have surprised you in your castles.

"As soon as I heard their design to war with you, I gave you notice, and came up hither myself, that I might be ready to give all the assistance and advice that so short a time would allow me.

"I am now about sending a gentleman to England to the king, my master, to let him know that the French have invaded his territories on this side of the great lake, and warred upon the brethren, his subjects. I therefore would willingly know, whether the brethren have given the governor of Canada any provocation or not; and if they have, how, and in what manner; because I am obliged to give a true account of this matter. This business may cause a war between the king of England, and the French king, both in Europe and here, and therefore I must know the truth.

"I know the governor of Canada dare not enter into the king of England's territories in a hostile manner, without provocation, if he thought the brethren were the king of England's subjects; but you have, two or three years ago, made a covenant chain with the French, contrary to my command, (which I knew could not hold long), being void of itself among the christians; for as much as subjects (as you are) ought not to treat with any foreign nation, it not lying in your power. You have brought this trouble on yourselves, and, as I believe, this is the only reason of their falling on you at this time.

"Brethren, I took it very ill, that after you had put yourselves into the number of the great king of England's subjects, you should ever offer to make peace or war, without my consent. You know that

we can live without you, but you cannot live without us; you never found that I told you a lie, and I offered you the assistance you wanted, provided that you would be advised by me; for I know the French better than any of you do.

"Now since there is a war begun upon you by the governor of Canada; I hope without any provocation by you given; I desire and command you, that you hearken to no treaty but by my advice; which if you follow you shall have the benefit of the great chain of friendship between the great king of England and the king of France, which came out of England the other day, and which I have sent to Canada by Anthony le Junard: in the meantime I will give you such advice as will be for your good; and will supply you with such necessaries as you will have need of.

"First. My advice is, as to what prisoners of the French you shall take, that you draw not their blood, but bring them home, and keep them to exchange for your people, which they have prisoners already, or may take hereafter.

"Secondly. That if it be possible that you can order it so, I would have you take one or two of your wisest sachems, and one or two of your chief captains, of each nation, to be a council to manage all affairs of the war. They to give orders to the rest of the officers what they are to do, that your designs may be kept private; for after it comes among so many people, it is blazed abroad, and your designs are often frustrated; and those chief men should keep a correspondence with me by a trusty messenger.

"Thirdly. The great matter under consideration with the brethren is, how to strengthen themselves, and weaken the enemy. My opinion is, that the brethren should send messengers to the Utawawas, Twichtwies, and the further Indians, and to send back likewise some of the prisoners of these nations, if you have any left, to bury the hatchet, and to make a covenant chain, that they may put away all the French that are among them, and that you will open a path for them this way, (they being the king of England's subjects likewise, though the French have been admitted to trade with them; for all that the French have in Canada, they had it of the great king of England), that, by that means, they may come hither freely, where they may have every thing cheaper than among the French: that you and they may join together against the French, and make so firm a league, that whoever is an enemy to one, must be to both.

"Fourthly. Another thing of concern is, that you ought to do what you can to open a path for all the north Indians and Mahikanders that are among the Utawawas and further nations. I will endeavour to do the same to bring them home; for, they not daring to return home your way, the French keep them there on purpose to join with the other nations against you, for your destruction; for you know, that one of them is worse than six of the others; therefore, all means must be used to bring them home, and use them kindly as they pass through your country.

"Fifthly. My advice further is, that messengers go in behalf of all the five nations, to the christian Indians at Canada, to persuade them to come home to their native country. This will be another great means to weaken your enemy; but if they will not be advised, you know what to do with them.

"Sixthly. I think it very necessary for the brethren's security and assistance, and to the en-

damaging the French, to build a fort upon the lake, where I may keep stores and provisions in case of necessity; and therefore I would have the brethren let me know what place will be most convenient for it.

"Seventhly. I would not have the brethren keep their corn in their castles, as I hear the Onondagas do, but bury it a great way in the woods, where few people may know where it is, for fear of such an accident as happened to the Senneecas.

"Eighthly. I have given my advice in your general assembly, by Mr. Dirk Wessels and Akus, the interpreter, how you are to manage your parties, and how necessary it is to get prisoners, to exchange for your own men that are prisoners with the French, and I am glad to hear that the brethren are so united as Mr. Dirk Wessels tells me you are, and that there was no rotten members nor French spies among you.

"Ninthly. The brethren may remember my advice which I sent you this spring, not to go to Cadarackui; if you had, they would have served you, as they did your people that came from hunting thither, for I told you that I knew the French better than you did.

"Tenthly. There was no advice or proposition that I made to the brethren all the time that the priest lived at Onondaga, but what he wrote to Canada, as I found by one of his letters, which he gave to an Indian to carry to Canada, but which was brought hither; therefore, I desire the brethren not to receive him, or any French priest any more, having sent for English priests, with whom you may be supplied to your content.

"Eleventhly. I would have the brethren look out sharp, for fear of being surprised. I believe all the strength of the French will be at their frontier places, viz. at Cadarackui and Oniagara, where they have built a fort now, and at Trois Rivières, Montreal, and Chambly.

"Twelfthly. Let me put you in mind again, not to make any treaties without my means, which will be more advantageous for you, than your doing it by yourselves, for then you will be looked upon as the king of England's subjects, and let me know, from time to time, every thing that is done.

"Thus far I have spoken to you relating to the war."

Not long after this interview, a considerable party of Mohawks and Mahikanders, or river Indians, beset fort Chambly, burnt several houses, and returned with many captives to Albany. Forty Onondagas, about the same time, surprised a few soldiers near fort Frontenac, whom they confined instead of the Indians sent home to the galleys, notwithstanding the utmost address was used to regain them, by Lamberville, a French priest, who delivered them two belts, to engage their kindness to the prisoners, and prevent their joining the quarrel with the Senneecas. The belts being sent to Colonel Dongan, he wrote to De Nonville, to demand the reason of their being delivered. Pere le Vaillant was sent about the beginning of the year 1688, under colour of bringing an answer, but in reality as a spy. Col. Dongan told him, that no peace could be made with the five nations, unless the Indians sent to the galleys, and the Caghnuaga proselytes, were returned to their respective cantons, the forts at Niagara and Frontenac razed, and the Senneecas had satisfaction made them for the damage they had sustained. The Jesuit, in his return, was ordered not to visit the Mohawks.

Dongan, who was fully sensible of the importance

of the Indian interest to the English colonies, was for compelling the French to apply to him in all their affairs with the five nations; while they, on the other hand, were for treating with them independent of the English. For this reason, among others, he refused them the assistance they frequently required, till they acknowledged the dependence of the confederates on the English crown. King James, a bigotted, popish, priest-ridden prince, ordered his governor to give up this point, and to persuade the five nations to send messengers to Canada, to receive proposals of peace from the French. For this purpose, a cessation of arms and mutual redelivery of prisoners was agreed upon. Near 1200 of the confederates attended this negociation at Montreal, and in their speech to De Nonville, insisted with great resolution upon the terms proposed by Colonel Dongan to Father le Vaillant. The French governor declared his willingness to put an end to the war, if all his allies might be included in the treaty of peace, if the Mohawks and Senneecas would send deputies to signify their concurrence, and the French might supply fort Frontenac with provisions. The confederates, according to the French accounts, acceded to these conditions, and the treaty was ratified in the field. But a new rupture not long after ensued, from a cause entirely unsuspected. The Dinondadies had been inclined to trade with the English at Missilimakinac, and their alliance was therefore become suspected by the French. Adario, their chief, thought to regain the ancient confidence, which had been reposed in his countrymen, by a notable action against the five nations; and for that purpose put himself at the head of 100 men: nothing was more disagreeable to him, than the prospect of peace between the French and the confederates; for that event would not only render the amity of the Dinondadies useless, but give the French an opportunity of resenting their late favourable conduct towards the English. Impressed with these sentiments, out of affection to his country, he intercepted the ambassadors of the five nations, at one of the falls in Cadarackui river, killed some and took others prisoners, telling them that the French governor had informed him, that fifty warriors of the five nations were coming that way. As the Dinondadies and confederates were then at war, the ambassadors were astonished at the perfidy of the French governor, and could not help communicating the design of their journey. Adario, in prosecution of his crafty scheme, counterfeited the utmost distress, anger, and shame, on being made the ignominious tool of De Nonville's treachery, and addressing himself to Dekanesora, the principal ambassador, said to him, "Go, my brethren, I untie your bonds, and send you home again, though our nations be at war. The French governor has made me commit so black an action, that I shall never be easy after it, till the five nations shall have taken full revenge." This outrage and indignity upon the rights of ambassadors, the truth of which they did not in the least doubt, animated the confederates to the keenest thirst after revenge; and accordingly 1200 of their men, on the 26th of July, 1688, landed on the south side of the island of Montreal, while the French were in perfect security; burnt their houses, sacked their plantations, and put to the sword all the men, women, and children, without the skirts of the town. A thousand French were slain in this invasion, and twenty-six carried into captivity and burnt alive. Many more were made prisoners in another attack in October, and the lower

part of the island wholly destroyed. Only three of the confederates were lost, in all this scene of misery and desolation.

The foregoing account is from Dr. Colden, who differs from Charlevoix, who says, that the invasion was late in August, and the Indians 1500 strong; and the loss of the French only 200.

The news of this attack on Montreal no sooner reached the garrison at the lake Ontario, than they set fire to the two barks which they had built there, and abandoned the fort, leaving a match to 28 barrels of powder, designed to blow up the works. The soldiers went down the river in such precipitation, that one of the battoes and her crew were all lost in shooting a fall. The confederates in the mean time seized the fort, the powder, and the stores; and of all the French allies, who were very numerous, only the Nepicirinians and Kikabous adhered to them in their calamities. The Utawawas and seven other nations instantly made peace with the English; and but for the uncommon sagacity and address of the *Sieur Perot*, the western Indians would have murdered every Frenchman amongst them. Nor did the distresses of the Canadians end here. Numerous scouts from the five nations continually infested their borders. The frequent depredations that were made, prevented them from the cultivation of their fields, and a distressing famine raged through the whole country. Nothing but the ignorance of the Indians, in the art of attacking fortified places, saved Canada from being now utterly cut off. It was therefore unspeakably fortunate to the French, that the Indians had no assistance from the English, and as unfortunate to us, that our colonies were then incapable of affording succours to the confederates, through the malignant influence of those execrable measures, which were pursued under the infamous reign of king James the Second. Colonel Dongan, whatever his conduct might have been in civil affairs, did all that he could in those relating to the Indians, and fell at last into the king's displeasure, through his zeal for the true interest of the province.

While these things were transacting in Canada, a scene of the greatest importance was opening at New York. A general disaffection to the government prevailed among the people. Papists began to settle in the colony under the smiles of the governor. The collector of the revenues, and several principal officers, threw off the mask, and openly avowed their attachment to the doctrines of Rome. A Latin school was set up, and the teacher strongly suspected for a Jesuit. The people of Long Island, who were disappointed in their expectation of the favours promised by the governor on his arrival, were become his personal enemies; and in a word, the whole body of the people trembled for the protestant cause. Here the leaven of opposition first began to work. Their intelligence from England, of the designs there in favour of the prince of Orange, elevated the hopes of the disaffected. But no man dared to act, till after the rupture in Boston. Sir Edmond Andross, who was perfectly devoted to the arbitrary measures of king James, by his tyranny in New England had drawn upon himself the universal odium of a people animated with the love of liberty, and in the defence of it resolute and courageous; and therefore, when they could no longer endure his despotic rule, they seized and imprisoned him, and afterwards sent him to England. The government, in the mean time, was vested in the hands of a committee for the safety of the people, of

which Mr. Bradstreet was chosen president. Upon the news of this event, several captains of the New York militia convened themselves to concert measures in favour of the prince of Orange. Amongst these, Jacob Leisler was the most active; a man in tolerable esteem among the people, and of a moderate fortune, but destitute of every qualification necessary for the enterprise. Milborne, his son-in-law, an Englishman, directed all his councils, while Leisler as absolutely influenced the other officers.

The first thing they contrived, was to seize the garrison in New York; and the custom, at that time, of guarding it every night by the militia, gave Leisler a fine opportunity of executing the design. He entered it with forty-nine men, and determined to hold it till the whole militia should join him. Col. Dongan, who was about to leave the province, then lay embarked in the bay, having a little before resigned the government to Francis Nicholson, the lieutenant-governor. The council, civil officers, and magistrates of the city were against Leisler, and therefore many of his friends were at first fearful of openly espousing a cause disapproved by the gentlemen of figure. For this reason, Leisler's first declaration in favour of the prince of Orange was subscribed only by a few among several companies of the trained bands. While the people, for four days successively, were in the utmost perplexity to determine what part to choose, being solicited by Leisler on the one hand, and threatened by the lieutenant-governor on the other, the town was alarmed with a report, that three ships were coming up, with orders from the prince of Orange. This falsehood was very seasonably propagated to serve the interest of Leisler; for on that day, the 3d of June, 1689, his party was augmented by the addition of six captains and 400 men in New York, and a company of 70 men from East Chester, who all subscribed a second declaration, mutually covenanting to hold the fort for that prince. Colonel Dongan continued till this time in the harbour, waiting the issue of these commotions; and Nicholson's party being now unable to contend with their opponents, were totally dispersed, the lieutenant-governor himself absconding the very night after the last declaration was signed.

Leisler being now in complete possession of the fort, sent home an address to King William and Queen Mary, as soon as he received the news of their accession to the throne. It is a tedious, incorrect, ill-drawn narrative of the grievances which the people had endured, and the methods lately taken to secure themselves, ending with a recognition of the King and Queen over the whole English dominions.

This address was soon followed by a private letter from Leisler to King William, which, in very broken English, informs his majesty of the state of the garrison, the repairs he had made to it, and the temper of the people, and concludes with strong protestations of his sincerity, loyalty, and zeal. Jost Stoll, an ensign, on the delivery of this letter to the king, had the honour to kiss his majesty's hand, but Nicholson the lieutenant-governor, and one Ennis, an episcopal clergyman, arrived in England before him; and by falsely representing the late measures in New York, as proceeding rather from their aversion to the church of England, than zeal for the prince of Orange, Leisler and his party were deprived of the rewards and notice which their activity for the revolution justly deserved. For though the king made Stoll the bearer of his thanks to the people for their fidelity, he so little regarded Leisler's com-

plaints against Nicholson, that he was soon after preferred to the government of Virginia. Dongan returned to Ireland, and succeeded to the earldom of Limerick.

Leisler's sudden investiture with supreme power over the province, and the probable prospects of King William's approbation of his conduct, could not but excite the envy and jealousy of the late council and magistrates, who had refused to join in aiding the revolution; and hence the spring of all their aversion both to the man and his measures. Colonel Bayard, and Courtland the mayor of the city, were at the head of his opponents, and finding it impossible to raise a party against him in the city, they very early retired to Albany, and there endeavoured to foment the opposition. Leisler, on the other hand, fearful of their influence, and to extinguish the jealousy of the people, thought it prudent to admit several trusty persons to a participation of that power which the militia on the 1st of July had committed solely to himself. In conjunction with these, (who, after the Boston example, were called the committee of safety) he exercised the government, assuming to himself only the honour of being president in their councils. This model continued till the month of December, when a packet arrived with a letter from the Lords Carmarthen, Hallifax, and others, directed "To Francis Nicholson, Esq.; or in his absence, to such as for the time being take care for preserving the peace and administering the laws, in their majesty's province of New York, in America." This letter was dated the 29th of July, and was accompanied with another from Lord Nottingham, dated the next day, which empowered Nicholson to take upon him the chief command, and to appoint for his assistance as many of the principal freeholders and inhabitants as he should think fit, requiring him also "to do every thing appertaining to the office of lieutenant-governor, according to the laws and customs of New York until further orders."

Nicholson having absconded before this packet came to hand, Leisler considered the letter as directed to himself, and from this time issued all kinds of commissions in his own name, assuming the title as well as authority of lieutenant-governor. On the 11th of December, he summoned the committee of safety, and, agreeably to their advice, swore the following persons for his council. Peter de Lanoy, Samuel Staats, Hendrick Jansen, and Johannes Vermilie, for New York; Gerardus Beekman, for King's County; Samuel Edsel, for Queen's County; Thomas Williams, for West Chester; and William Lawrence, for Orange County.

Except the eastern inhabitants of Long Island, all the southern part of the colony cheerfully submitted to Leisler's command. The principal freeholders, however, by respectful letters, gave him hopes of their submission, and thereby prevented his betaking himself to arms, while they were privately soliciting the colony of Connecticut to take them under its jurisdiction. They had indeed no aversion to Leisler's authority in favour of any other party in the province, but were willing to be incorporated with a people, from whence they had originally colonized; and therefore as soon as Connecticut declined their request, they openly appeared to be advocates for Leisler. At this juncture the Long Island representation was drawn up.

The people of Albany, in the meantime, were determined to hold the garrison and city for king William, independent of Leisler, and on the 26th of October, which was before the packet arrived

from Lord Nottingham, formed themselves into a convention for that purpose. As Leisler's attempt to reduce this country to his command, was the original cause of the future divisions in the province, and in the end brought about his own ruin, it may not be improper to give the resolution of the convention at large, a copy of which was sent down to him.

"Peter Schuyler, mayor, Dirk Wessels, recorder, Jan Wendal, Jan Jansen Bleeker, Claes Ripse, David Schuyler, Albert Ryckman, aldermen. Killian V. Renslaer, justice, Captain Marte Gerritse, justice, Captain Gerrit Teunisse, Dirk Teunisse, justices, Lieutenant Robert Saunders, John Cuyler, Gerrit Ryerse, Evert Banker, Rynier Barentse.

"Resolved,—Since we are informed, by persons coming from New York, that Captain Jacob Leisler is designed to send up a company of armed men, upon pretence to assist us in this country, who intend to make themselves master of their majesties fort and this city, and carry divers persons and chief officers of this city prisoners to New York, and so disquiet and disturb their majesties liege people; that a letter be written to Alderman Levinus Van Schaic, now at New York, and Lieutenant Jochim Staets, to make narrow enquiry of the business, and to signify to the said Leisler, that we have received such information; and withal acquaint him, that notwithstanding we have the assistance of ninety-five men from our neighbours of New England, who are now gone for, and 100 men upon occasion, to command, from the county of Ulster, which we think will be sufficient this winter, yet we will willingly accept any such assistance as they shall be pleased to send for the defence of their majesties county of Albany; provided they be obedient to, and obey such orders and commands as they shall from time to time receive from the convention; and that by no means they will be admitted to have the command of their majesties fort or this city; which we intend, by God's assistance, to keep and preserve for the behoof of their majesties, William and Mary, king and queen of England, as we hitherto have done since their proclamation; and if you hear that they persevere with such intentions, so to disturb the inhabitants of this county, that you then, in the name and behalf of the convention and inhabitants of the city and county of Albany, protest against the said Leisler, and all such persons that shall make attempt for all losses, damages, blood-shed, or whatsoever mischiefs may ensue thereon; which you are to communicate with all speed, as you perceive their design."

Taking it for granted, that Leisler at New York, and the convention at Albany, were equally affected to the revolution, nothing could be more egregiously foolish, than the conduct of both parties, who, by their intestine divisions, threw the province into convulsions, and sowed the seeds of mutual hatred and animosity, which, for a long time after, greatly embarrassed the public affairs of the colony. When Albany declared for the Prince of Orange, there was nothing else that Leisler could properly require: and rather than sacrifice the public peace of the province to the trifling honour of resisting a man who had no evil designs, Albany ought in prudence to have delivered the garrison into his hands, till the king's definite orders should arrive. But while Leisler, on the one hand, was inebriated with his new-gotten power, so on the other, Bayard, Courtland, Schuyler, and others, could not brook a submission to the authority of a man, mean in his abilities, and inferior in his degree. Animated by

these principles, both parties prepared, the one to reduce, the other to retain, the garrison of Albany. Mr. Livingston, a principal agent for the convention, retired into Connecticut, to solicit the aid of that colony, for the protection of the frontiers against the French. Leisler, suspecting that they were to be used against him, endeavoured not only to prevent these supplies, but wrote letters, to have Livingston apprehended, as an enemy to the reigning powers, and to procure succours from Boston, falsely representing the convention as in the interest of the French and king James.

Jacob Milborne was commissioned for the reduction of Albany. Upon his arrival there, a great number of the inhabitants armed themselves, and repaired to the fort, then commanded by Mr. Schuyler, while many others followed the other members of the convention to a conference with him at the city hall. Milborne, to gain over the crowd, declaimed much against king James, popery, and arbitrary power; but his oratory was lost upon the hearers, who, after several meetings, still adhered to the convention. Milborne then advanced with a few men up to the fort, and Mr. Schuyler had the utmost difficulty to prevent both his own men, and the Mohawks, who were then in Albany, and perfectly devoted to his service, from firing upon Milborne's party, which consisted of an inconsiderable number. In these circumstances, he thought proper to retreat, and soon after departed from Albany. In the spring, he commanded another party upon the same errand, and the distress of the country on an Indian irruption, gave him all the desired success. No sooner was he possessed of the garrison, than most of the principal members of the convention absconded. Upon which, their effects were arbitrarily seized and confiscated, which so highly exasperated the sufferers, that their posterity for a long time vented the bitterest invectives against Leisler and his adherents.

In the midst of those intestine confusions at New York, the people of New England were engaged in a war with the Owenagungas, Ourages, and Penocooks. Between these and the Schakook Indians there was then a friendly communication, and the same was suspected of the Mohawks, among whom some of the Owenagungas had taken sanctuary. This gave rise to a conference between several commissioners from Boston, Plymouth, and Connecticut, and the five nations, at Albany, in September, 1689, the former endeavouring to engage the latter against those eastern Indians who were then at war with the New England colonies. Tahajadoris, a Mohawk sachem, in a long oration, answered the English message, and, however improbable it may seem to Europeans, repeated all that had been said the preceding day. The art they have in assisting their memories is this. The sachem who presides has a bundle of sticks prepared for the purpose, and at the close of every principal article of the message delivered to them, gives a stick to another sachem, charging him with the remembrance of it. By this means the orator, after a previous conference with the Indians, is prepared to repeat every part of the message, and give it its proper reply. This custom is invariably pursued in all their public treaties.

The conference did not answer the expectation of the people of New England, the five nations discovering a great disinclination to join in the hostilities against the eastern Indians. To atone for which, they gave the highest protestations of their willingness to distress the French, against whom the Eng-

lish had declared war, on 7th of May preceding. That part of the speech, ratifying their friendship with the English colonies, is singularly expressed. "We promise to preserve the chain inviolably, and wish that the sun may always shine in peace over all our heads that are comprehended in this chain. We give two belts. One for the sun and the other for its beams. We make fast the roots of the tree of peace and tranquillity, which is planted in this place. Its roots extend as far as the utmost of your colonies: if the French should come to shake this tree, we would feel it by the motion of its roots, which extend into our country. But we trust it will not be in the governor of Canada's power to shake this tree, which has been so firmly and long planted with us." The Indian conception of the league is couched under the idea of a chain extended from a ship to a tree, and every renewal of this league they call brightening the chain.

Nothing could have been more advantageous to the colonies, and especially to New York, than the success of the five nations against Canada. The miseries to which the French were reduced rendered them secure against their inroads, till the work of the revolution was in a great measure accomplished; and to their distressed condition we must principally ascribe the defeat of the French design of conquering the province. De Calliers, who went to France in 1668, first projected the scheme, and the troubles in England encouraged the French court to make the attempt. Caffiniere commanded the ships, which sailed for that purpose from Rochfort; subject, nevertheless, to the Count de Frontenac, who was general of the land forces, destined to march from Canada by the route of Sorel river and the lake Champlain. The fleet and troops arrived at Chebucta, the place of rendezvous, in September; from whence the count proceeded to Quebec, leaving orders with Caffiniere to sail for New York, and continue in the bay in sight of the city, but beyond the fire of the cannon, till the 1st of December, when, if he received no intelligence from him, he was ordered to return to France, after unlading the ammunition, stores, and provisions at Port-Royal, now Annapolis. The count was in high spirits, and fully determined upon the enterprise, till he arrived at Quebec; where the news of the success of the five nations against Montreal, the loss of his favourite fort at lake Ontario, and the advanced season of the year, defeated his aims, and broke up the expedition. De Nonville, who was recalled, carried the news of this disappointment to the court of France, leaving the chief command of the country in the hands of Count Frontenac. This gentleman was a man of courage, and well acquainted with the affairs of that country. He was then in the 68th year of his age, and yet so far from consulting his ease, that in a few days after he landed at Quebec, he re-embarked in a canoe for Montreal, where his presence was absolutely necessary, to animate the inhabitants and regain their Indian alliances. A war between the English and French crowns having broken out, the count betook himself to every art for concluding a peace between Canada and the five nations; and for this purpose, the utmost civilities were shewn to Taweraket and the other Indians, who had been sent to France by De Nonville, and were now returned. Three of those Indians, who doubtless were struck with the grandeur and glory of the French monarch, were properly sent on the important message of conciliating the friendship of the five nations. These, agreeably to their alliance with New York, sent two

sachems to Albany in December, with a notice that a council for that purpose was to be held at Onondaga. It is a just reflection upon the people of Albany, that they regarded the treaty so slightly, as only to send four Indians and the interpreter with instructions, in their name, to dissuade the confederates from a cessation of arms; while the French, on the other hand, had then a Jesuit among the Oneydoes. The council began on the 22d of January 1690, and consisted of eighty sachems. Sadekanaghtie, an Onondaga chief, opened the conference. The whole was managed with great art and formality, and concluded in shewing a disposition to make peace with the French, without perfecting it; guarding, at the same time, against the least umbrage to the English.

Among other measures to detach the five nations from the British interest, and raise the depressed spirit of the Canadians, the Count de Frontenac thought proper to send out several parties against the English colonies. D'Aillebout, De Mantel and Le Moyne commanded that against New York, consisting of about 200 French and some Caghnuaga Indians, who being proselytes from the Mohawks, were perfectly acquainted with that country. Their orders were, in general, to attack New York; but pursuing the advice of the Indians, they resolved, instead of Albany, to surprise Schenectady, a village seventeen miles north-west from it, and about the same distance from the Mohawks. The people of Schenectady, though they had been informed of the designs of the enemy, were in the greatest security; judging it impracticable for any men to march several hundred miles, in the depth of winter, through the snow, bearing their provisions on their backs. Besides, the village was in as much confusion as the rest of the province; the officers who were posted there being unable to preserve a regular watch, or any kind of military order. Such was the state of Schenectady, as represented by Colonel Schuyler, who was at that time mayor of the city of Albany, and at the head of the convention.

After two and twenty days march, the enemy fell in with Schenectady, on the 8th of February; and were reduced to such streights, that they had thoughts of surrendering themselves prisoners of war. But their scouts, who were a day or two in the village entirely unsuspected, returned with such encouraging accounts of the absolute security of the people, that the enemy determined on the attack. They entered, on Saturday night about eleven o'clock, at the gates, which were found unshut; and, that every house might be invested at the same time, divided into small parties of six or seven men. The inhabitants were in a profound sleep and unalarmed, till their doors were broken open. Never were people in a more wretched consternation. Before they were risen from their beds, the enemy entered their houses, and began the perpetration of the most inhuman barbarities. No tongue, says Col. Schuyler, can express the cruelties that were committed. The whole village was instantly in a blaze. Women with child ripped open, and their infants cast into the flames, or dashed against the posts of the doors. Sixty persons perished in the massacre, and twenty-seven were carried into captivity. The rest fled naked towards Albany, through a deep snow which fell that very night in a terrible storm; and twenty-five of these fugitives lost their limbs in the flight through the severity of the frost. The news of this dreadful tragedy reached Albany about break of day, and an universal dread seized the inhabitants

of that city, the enemy being reported to be 1,400 strong. A party of horse was immediately dispatched to Schenectady, and a few Mohawks then in town, fearful of being intercepted, were with difficulty sent to apprise their own castles.

The Mohawks were unacquainted with this bloody scene till two days after it happened, our messengers being scarce able to travel through the great depth of the snow. The enemy, in the mean time, pillaged the town of Schenectady till noon the next day, and then went off with their plunder, and about forty of their best horses. The rest, with all the cattle they could find, lay slaughtered in the streets.

The design of the French, in this attack, was to alarm the fears of the Indian allies, by shewing that the New York people were incapable of defending them. Every art also was used to conciliate their friendship, for they not only spared those Mohawks who were found in Schenectady, but several other particular persons, in compliment to the Indians, who requested that favour. Several women and children were also released at the desire of Captain Glen, to whom the French offered no violence; the officer declaring he had strict orders against it, on the score of his wife's civilities to certain French captives in the time of Colonel Dongan.

The Mohawks, considering the deceptive arts of the French, and that the Caghnuagas who were with them were once a part of their own body, behaved as well as could be reasonably expected. They joined a party of young men from Albany, fell upon the rear of the enemy, and either killed or captured twenty-five. Several sachems, in the mean time, came to Albany, and very affectingly addressed the inhabitants, who were just ready to abandon the country; urging their stay, and exciting an union of all the English colonies against Canada. Their sentiments concerning the French, appear from the following speech of condolence: "Brethren, we do not think, that what the French have done can be called a victory: it is only a farther proof of their cruel deceit: the governor of Canada sent to Onondaga, and talks to us of peace with our whole house; but war was in his heart, as you now see by woful experience. He did the same, formerly, at Cadaracqui, and in the Sennecas country. This is the third time he has acted so deceitfully. He has broken open our house at both ends; formerly in the Sennecas country, and now here. We hope, however, to be revenged of them."

Agreeably to this declaration, the Indians soon after treated the chevalier D'Eau and the rest of the French messengers, who came to conclude the peace proposed by Taweraket, with the utmost indignity; and afterwards delivered them up to the English. Besides this, their scouts harassed the borders of the enemy and fell upon a party of French and Indians, in the river, about 120 miles above Montreal, under the command of Louvigni, a captain who was going to Missilimakinac, to prevent the conclusion of the peace between the Utawawas and Quatoghies, with the five nations. The loss in this skirmish was nearly equal on both sides. One of the English prisoners was delivered to the Utawawas, who ate him. In revenge for this barbarity, the Indians attacked the island of Montreal at Trembling Point, and killed an officer and twelve men; while another party carried off about fifteen prisoners taken at Riviere Puante, whom they afterwards slew through fear of their pursuers, and others burnt the French plantations at St. Eurs. But what rendered this year most remarkable was, the

expedition of Sir William Phipps against Quebec. He sailed up the river with a fleet of thirty-two sail and came before the city in October. Had he improved his time and strength, the conquest would have been easy; but by spending three days in idle consultations, the French governor brought in his forces, and entertained such a mean opinion of the English knight, that he not only despised his summons to surrender, but sent a verbal answer, in which he called king William an usurper, and poured the utmost contempt upon his subjects. The messenger who carried the summons insisted upon a written answer, and that within an hour; but the Count De Frontenac absolutely refused it, adding, "I'll answer your master by the mouth of my cannon, that he may learn that a man of my condition is not to be summoned in this manner." Upon this, Sir William made two attempts to land below the town, but was repulsed by the enemy, with considerable loss of men, cannon, and baggage. Several of the ships also cannonaded the city, but without any success. The forts at the same time returned the fire, and obliged them to retire in disorder. The French writers, in their accounts of this expedition, universally censure the conduct of Sir William, though they confess the valour of his troops. La Hontan, who was then at Quebec, says, he could not have acted in a manner more agreeable to the French, if he had been in their interest. Among the causes of the ill success of the fleet, the author of the life of Sir William Phipps mentions the neglect of the conjoined troops of New York, Connecticut, and the Indians, to attack Montreal, according to the original plan of operations. He says that they marched to the lake, but there found themselves unprovided with battoes, and that the Indians were dissuaded from the attempt. By what authority these assertions may be supported, does not appear. Charlevoix says, the English colonial troops were disappointed in the intended diversion, by the small-pox, which seized the camp, killed 300 men, and terrified our Indian allies.

*From the revolution to the second expedition against Canada.*

While the Indians were faithfully exerting themselves against the common enemy, Colonel Henry Sloughter, who had a commission to be governor of this province, dated the 4th of January, 1689, arrived, and published it on the 19th of March, 1691. Never was a governor more necessary to the province, than at this critical conjuncture; as well for reconciling a divided people, as for defending them against the wiles of a cunning adversary. But either through the hurry of the king's affairs, or the powerful interest of a favourite, a man was sent over utterly destitute of every qualification for government—licentious in his morals, avaricious, and poor. The council present at his arrival were—Joseph Dudley, Frederick Philipse, Stephen Van Courtland, Gabriel Mienville, Chudley Brook, Thomas Willet, William Pinhorne.

If Leisler had delivered the garrison to Colonel Sloughter, as he ought to have done, upon his first landing, besides extinguishing, in a great degree, the animosities then subsisting, he would doubtless have attracted the favourable notice both of the governor and the crown. But being a weak man, he was so intoxicated with the love of power, that though he had been well informed of Sloughter's appointment to the government, he not only shut himself up in the fort with Bayard and Nichols, whom

he had, before that time, imprisoned, but refused to deliver them up, or to surrender the garrison. From this moment, he lost all credit with the governor, who joined the other party against him. On the second demand of the fort, Milborne and Delanoy came out, under pretence of conferring with his excellency, but in reality to discover his designs. Sloughter, who considered them as rebels, threw them both into gaol. Leisler, upon this event, thought proper to abandon the fort, which Colonel Sloughter immediately entered. Bayard and Nichols were now released from their confinement, and sworn of the privy council. Leisler having thus ruined his cause, was apprehended with many of his adherents, and a commission of oyer and terminer issued to Sir Thomas Robinson, Col. Smith, and others, for their trials.

In vain did they plead the merit of their zeal for king William, since they had so lately opposed his governor. Leisler, in particular, endeavoured to justify his conduct, insisting that Lord Nottingham's letter entitled him to act in the quality of lieutenant-governor. Whether it was through ignorance or sycophancy, does not appear; but the judges, instead of pronouncing their own sentiments upon this part of the prisoner's defence, referred it to the governor and council, praying their opinion, whether that letter, "or any other letters, or papers, in the packet from Whitehall, can be understood, or interpreted, to be and contain any power or direction to Captain Leisler, to take the government of this province upon himself, or that the administration thereupon be holden good in law." The answer was, as might have been expected, in the negative; and Leisler and his son were condemned to death for high treason. These violent measures drove many of the inhabitants, who were fearful of being apprehended, into the neighbouring colonies, which shortly after occasioned the passing an act of general indemnity.

From the surrender of the province to the year 1683, the inhabitants were ruled by the duke's governors and their councils, who, from time to time, made rules and orders, which were esteemed to be binding as laws.

Those acts, which were made in 1683, and after the duke's accession to the throne, when the people were admitted to a participation of the legislative power, are for the most part decayed or lost. Few minutes relating to them remain on the council books, and none in the journals of the house.

As this assembly, in 1691, was the first after the revolution, it may not be improper to take some particular notice of its transactions. All laws made antecedent to this period, are disregarded both by the legislature and the courts of law. In the collection of acts, published in 1752, the compilers were directed to begin at this assembly.

It began the 9th of April, according to the writs of summons issued on the 20th of March preceding. The journal of the house opens with a list of the members returned by the sheriffs. City and county of New York—James Graham, William Merret, Jac. Van Courtlandt, Johannes Kip. City and county of Albany—Derrick Wessels, Levinus Van Scayck. County of Richmond—Elias Dukesbury, John Dally. County of West Chester—John Pell. County of Suffolk—Henry Pierson, Matthew Howell. Ulster and Dutchess county—Henry Beekman, Thomas Garton. Queen's County—John Bound, Nathaniel Percall. King's County—Nicholas Stillwell, John Poland.

The members for queen's county, being Quakers, were afterwards dismissed for refusing the oaths directed by the governor's commission; but all the rest were qualified before two commissioners appointed for that purpose. James Graham was elected their speaker, and approved by the governor. The majority of the members of this assembly were against the measures which Leisler pursued in the latter part of his time, and hence we find the house, after considering a petition, signed by sundry persons against Leisler, unanimously resolved, that his dissolving the late convention, and imprisoning several persons, was tumultuous, illegal, and against their majesties right, and that the late depredations on Schenectady were to be attributed to his usurpation of all power.

They resolved against the late forcible seizures made of effects of the people, and against the levying of money on their majesties subjects. And as to Leisler's holding the fort against the governor, it was voted to be an act of rebellion.

The house having, by these resolves, prepared the way of their access to the governor, addressed him in these words:

"May it please your Excellency,—We, their majesties most dutiful and loyal subjects, convened, by their majesties most gracious favour, in general assembly, in this province, do, in all most humble manner, heartily congratulate your excellency, that as, in our hearts, we do abhor and detest all the rebellious, arbitrary, and illegal proceedings of the late usurpers of their majesties authority over this province, so we do, from the bottom of our hearts, with all integrity, acknowledge and declare, that there are none that can or ought to have right to rule and govern their majesties subjects here, but by their majesties authority, which is now placed in your excellency; and therefore we do solemnly declare that we will, with our lives and fortunes, support and maintain the administration of your excellency's government, under their majesties, against all their majesties enemies whatsoever: and this we humbly pray your excellency to accept, as the sincere acknowledgment of all their majesties good subjects, within this their province; praying for their majesties long and happy reign over us, and that your excellency may long live and rule, as according to their majesties most excellent constitution of governing their subjects by a general assembly."

Before this house proceeded to pass any acts, they unanimously resolved, "That all the laws consented to by the general assembly, under James, Duke of York, and the liberties and privileges therein contained, granted to the people, and declared to be their rights, not being observed, nor ratified and approved by his royal highness, nor the late king, are null and void, and of none effect; and also, the several ordinances, made by the late governors and councils, being contrary to the constitution of England, and the practice of the government of their majesties other plantations in America, are likewise null and void, and of no effect, nor force, within this province."

Among the principal laws enacted this session, we may mention that for establishing the revenue, which was drawn into precedent. The sums raised by it were made payable into the hands of the receiver-general, and issued by the governor's warrant. By this means the governor became, for a season, independent of the people, and hence we find frequent instances of the assemblies contending with him for the discharge of debts to private persons, contracted on the faith of government.

Antecedent to the English revolution, innumerable were the controversies relating to public townships and private rights; and hence an act was now passed, for the confirmation of ancient patents and grants, intended to put an end to those debates. A law was also passed for the establishment of courts of justice, though a perpetual act had been made to that purpose in 1683, and the old court of assize entirely dissolved in 1684. As this enacted in 1691 was a temporary law, it was disputed by some, whether the establishment of the courts for general jurisdiction, by an ordinance, was consistent with the preceding act, or the general rules of law. Upon the erection of the supreme court, a chief justice, and four assistant judges, with an attorney-general, were appointed. The chief justice, Joseph Dudley, had a salary of 130*l.* per annum; Johnson, the second judge, 100*l.*, and both were payable out of the revenue; but William Smith, Stephen Van Courtlandt, and William Pinhorne, the other judges, and Newton, the attorney-general, had nothing allowed for their services.

It has, more than once, been a subject of animated debate, whether the people in this colony had a right to be represented in assembly, or whether it was a privilege enjoyed through the grace of the crown. A memorable act passed this session, virtually declared in favour of the former opinion upon that and several other of the principal and distinguishing liberties of Englishmen; but it was afterwards repealed by the English parliament, in the year 1697, by an act, entitled, "An act declaring what are the rights and privileges of their majesties subjects inhabiting within their province of New York."

Colonel Sloughter proposed, immediately after the session, to set out to Albany; but as Leisler's party were enraged at his imprisonment and the late sentence against him, his enemies were afraid new troubles would spring up in the absence of the governor; for this reason, both the assembly and council advised that the prisoners should be immediately executed. Sloughter, who had no inclination to favour them in this request, chose rather to delay such a violent step, being fearful of cutting off two men, who had vigorously appeared for the king, and so signally contributed to the revolution. Nothing could be more disagreeable to their enemies, whose interest was deeply concerned in their destruction. And therefore, when no other measures could prevail with the governor, tradition informs us, that Colonel Sloughter was invited to an entertainment, and prevailed on, when intoxicated, to sign the death-warrant, on the authority of which, before he recovered his senses, the prisoners were executed. Leisler's son afterwards carried home a complaint to king William against the governor. His petition was referred, according to the common course of plantation affairs, to the lords commissioners of trade, who, after hearing the whole matter, reported on the 11th of March, 1692, "That they were humbly of opinion, that Jacob Leisler and Jacob Milborne, deceased, were condemned and had suffered according to law." Their lordships, however, interceded for their families, as fit objects of mercy, and this induced Queen Mary, who approved the report, on the 17th of March, to declare, "That upon the humble application of the relations of the said Jacob Leisler and Jacob Milborne, deceased, her majesty will order the estates of Jacob Leisler and Jacob Milborne to be restored to their families, as objects of her majesty's mercy." The bodies of these un-

happy sufferers were afterwards taken up, and interred, with great pomp, in the old Dutch church, in the city of New York. Their estates were restored to their families, and Leisler's children, in the public estimation, were rather dignified than disgraced, by the fall of their ancestor.

These distractions in the province so entirely engrossed the public attention, that the Indian allies, who had been left solely to contend with the common enemy, grew extremely disaffected. The Mohawks in particular highly resented this conduct, and, at the instance of the Caghnuagas, sent a messenger to Canada, to confer with Count Frontenac about a peace. To prevent this, Colonel Sloughter had an interview at Albany, in June, with the other four nations, who expressed their joy at seeing a governor again in that place. They told him, that their ancestors, as they had been informed, were greatly surprised at the arrival of the first ship in that country, and were curious to know what was in its huge belly. That they found christians in it, and one Jacques, with whom they made a chain of friendship, which they had preserved. All the Indians, except the Mohawks, assured the governor at this meeting of their resolution to prosecute the war. The Mohawks confessed their negotiations with the French, that they had received a belt from Canada, prayed the advice of the governor, and afterwards renewed their league with all our colonies.

Sloughter soon after returned to New York, and ended a short, weak, and turbulent administration, for he died suddenly on the 23d of July, 1691. Some were not without suspicions that he came unfairly to his end; but the certificate of the physician and surgeons who opened his body, by an order of council, confuted these conjectures, and his remains were interred in Stuyvesant's vault, next to those of the old Dutch governor.

At the time of Sloughter's decease, the government devolved, according to the late act for declaring the rights of the people of the province, on the council, in which Joseph Dudley had a right to preside; but they committed the chief command to Richard Ingolsby, a captain of an independent company, who was sworn into the office of president on the 26th of July, 1691. Dudley soon afterwards returned to this province from Boston, but did not think proper to dispute Ingolsby's authority, though the latter had no title, nor the greatest abilities for government, and was besides obnoxious to the party who had joined Leisler, having been an agent in the measures which accomplished his ruin. To the late troubles, which were then recent, and the agreement subsisting between the council and assembly we must ascribe it, that the former tacitly acknowledged Ingolsby's right to the president's chair; for they concurred with him in passing several laws in autumn and the spring following, the validity of which was never disputed.

This summer Major Schuyler, with a party of Mohawks, passed through the lake Champlain, and made a bold irruption upon the French settlement at the north end of it. De Callieres, the governor of Montreal, to oppose him, collected a small army of 800 men, and encamped at La Prairie. Schuyler had several conflicts with the enemy, and slew about 300 of them, which exceeded in number his whole party. The French, ashamed of their ill success, attributed it to the want of order, too many desiring to have the command. But the true cause was the ignorance of their officers in the Indian manner of fighting. They kept their men in a body, while the

English colonists posted themselves behind trees, hidden from the enemy. Major Schuyler's design, in this descent, was to animate the Indians and preserve their enmity with the French. They, accordingly, continued their hostilities against them, and, by frequent incursions, kept the country in constant alarm.

In the midst of these distresses, the French governor preserved his sprightliness and vigour, animating every body about him. After he had negotiated with the Utawawas, who came to trade at Montreal, he sent them home under the care of a captain and 110 men; and to secure their attachment to the French interest, gave them two Indian prisoners, and, besides, sent very considerable presents to the western Indians, in their alliance. The two captives were afterwards burnt. The five nations, in the mean time, grew more and more incensed, and continually harassed the French borders. M. Beaucour, a young French gentleman, in the following winter marched a body of about 300 men to attack them at the isthmus, at Niagara. Incredible were the fatigues they underwent in this long march over the snow, bearing their provisions on their backs. Eighty men of the five nations opposed the French party, and bravely maintained their ground till most of them were cut off. In return for which, the confederates in small parties obstructed the passage of the French through lake Ontario, and the river issuing out of it, and cut off their communication with the western Indians. An Indian called Black Kettle commanded in these incursions of the five nations, and his successes, which continued the whole summer, so exasperated the count that he ordered an Indian prisoner to be burnt alive. The bravery of this savage was as extraordinary, as the torments inflicted on him were cruel. He sang his military achievements without interruption, even while his barbarous executioners practised all possible cruelties. They broiled his feet, thrust his fingers into red-hot pipes, cut his joints, and twisted the sinews with bars of iron. After this his scalp was ripped off, and hot sand poured on the wound. We cannot but shrink with horror and disgust from the conduct of the French, who were boasting themselves the most, if not the only, civilized nation in the world, and who, with all the advantages of education, and professing christianity, were surpassing the Indians, whom they reviled as savages, in base and remorseless atrocities.

In June, 1692, Captain Ingolsby met the five nations at Albany, and encouraged them to persevere in the war. The Indians declared their enmity to the French in the strongest terms, and as heartily professed their friendship to us. "Brother Corlear," said the sachem, "we are all subjects of one great king and queen, we have one head, one heart, one interest, and are all engaged in the same war." The Indians at the same time did not forget, at this interview, to condemn the inactivity of the English, telling them, that the destruction of Canada would not make one summer's work against their united strength, if vigorously exerted.

Colonel Benjamin Fletcher arrived with a commission to be governor on the 29th of August, 1692, which was published the next day, before the following members, in council:—Frederick Philipse, Nicholas Bayard, Chudley Brooke, Thomas Willet, Stephen Van Courtlandt, Gabriel Mienville, William Nicoll, and Thomas Johnson.

William Pinhorne, one of that board, being a non-resident was refused the oaths; and Joseph

Dudley, for the same reason, removed both from his seat in council and his office of chief justice; Caleb Heathcote and John Young succeeded them in council; and William Smith was seated in Dudley's place on the bench.

Colonel Fletcher brought over with him a present to the colony of arms, ammunition, and warlike stores; in gratitude for which, he exhorted the council and assembly, who were sitting at his arrival, to send home an address of thanks to the king. It consists, principally, of a representation of the great expense the province was continually at to defend the frontiers, and praying his majesty's direction, that the neighbouring colonies might be compelled to join their aid for the support of Albany. The following passage in it shews the sense of the legislature, upon a matter which was afterwards very much debated. "When these countries were possessed by the Dutch West-India company, they always had pretences (and had the most part of it within their actual jurisdiction) to all that tract of land (with the islands adjacent) extending from the west side of Connecticut river to the lands lying on the west side of Delaware bay, as a suitable portion of land for one colony or government; all which, including the lands on the west of Delaware bay or river, were in the duke of York's grant, from his majesty King Charles II., whose governors also possessed those lands on the west side of Delaware bay or river. By several grants as well from the crown, as from the duke, the said province has been so diminished, that it is now decreased to a very few towns and villages; the number of men fit to bear arms in the whole government not amounting to 3,000, who are all reduced to great poverty."

Fletcher was by profession a soldier, a man of strong passions, and inconsiderable talents, very active, and equally avaricious. Nothing could be more fortunate to him, than his early acquaintance with Major Schuyler, at Albany, at the treaty for confirmation of the Indian alliance, the autumn after his arrival. No man then in the province understood the state of affairs with the five nations better than Major Schuyler. He had so great an influence over them, that whatever Quider, as they called him (instead of Peter, which they could not pronounce), recommended or disapproved, had the force of a law. This power over them was supported, as it had been obtained, by repeated offices of kindness, and his singular bravery and activity in the defence of his country. These qualifications rendered him singularly serviceable and necessary, both to the province and the governor. For this reason, Fletcher took him into his confidence, and on the 25th of October raised him to the council board. Under the tutelage of Major Schuyler, the governor became daily more and more acquainted with the Indian affairs; his constant application to which procured and preserved him a reputation and influence in the colony. Without this knowledge, and which was all that he had to distinguish himself, his incessant solicitations for money, his passionate temper and bigoted principles, must necessarily have rendered him obnoxious to the people, and kindled a hot fire of contention in the province.

The old French governor, who found that all his measures for accomplishing a peace with the five nations proved abortive, was now meditating a blow on the Mohawks. He accordingly collected an army of 600 or 700 French and Indians, and supplied them with every thing necessary for a winter campaign. They set out from Montreal on the 15th of

January, 1693; and after a march attended with incredible hardships, they passed by Schenectady on the 6th of February, and, that night, captured five men, and some women and children, at the first castle of the Mohawks. The second castle was taken with equal ease, the Indian inhabitants being in perfect security, and for the most part at Schenectady. At the third, the enemy found about forty Indians in a war dance, designing to go out upon some enterprise the next day. Upon their entering the castle a conflict ensued, in which the French lost about thirty men. Three hundred of the Indian allies were made captives in this descent; and, but for the intercession of the savages in the French interest, would all have been put to the sword.

The Indians were enraged, and with good reason, at the people of Schenectady, who gave them no assistance against the enemy, though they had notice of their marching by that village. But this was atoned for by the succours from Albany. Colonel Schuyler voluntarily headed a party of 200 men, and went out against the enemy. On the 15th of February he was joined by near 300 Indians, ill armed, and many of them boys. A pretended deserter, who came to dissuade the Indians from the pursuit, informed him the next day, that the French had built a fort, and waited to fight him; upon which he sent to Ingolsby, the commandant at Albany, as well for a reinforcement, as for a supply of provisions; for the greatest part of his men came out with only a few biscuits in their pockets, and at the time they fell in with the enemy, on the 17th of the month, had been several days without any kind of food. Upon approaching the French army, sundry skirmishes ensued; the enemy endeavouring to prevent Indians in alliance with the English from felling trees for their protection. Capt. Syms, with 80 regulars of the independent companies, and a supply of provisions, arrived on the 19th, but the enemy had marched off the day before, in a great snow storm. They, however, pursued them, and would have attacked their rear, if the Mohawks had not been averse to it. When the French reached the north branch of Hudson's river, luckily for them, a cake of ice served them to cross over it, the river being open both above and below. The frost was now extremely severe, and the Mohawks fearful of an engagement; upon which Schuyler, who had retaken about fifty Indian captives, desisted from the pursuit on the 20th of February; four of his men and as many Indians being killed, and twelve wounded. The Indians, at this time, were so distressed for provisions, that they fed upon the dead bodies of the French; and the enemy in their turn were reduced, before they got home, to eat up their shoes. The French in this enterprise lost 80 men, and had above 30 wounded.

Fletcher's extraordinary dispatch up to Albany, upon the first news of this descent, gained the esteem both of the public and the Indian allies.

The express reached New York on the 12th of February, at ten o'clock in the night, and in less than two days, the governor embarked with 300 volunteers. The river, which was heretofore very uncommon at that season, was open. Fletcher landed at Albany, and arrived at Schenectady the 17th of the month, which is about 160 miles from New York; but he was still too late to be of any other use than to strengthen the ancient alliance. The Indians, in commendation of his activity on the occasion, gave him the name of Cayenguirago, or The great Swift Arrow.

Fletcher returned to New York, and in March met the assembly, who were so well pleased with his late vigilance, that besides giving him the thanks of the house, they raised 6000*l.* for a year's pay of 300 volunteers and their officers, for the defence of the frontiers.

As the greatest part of this province consisted of Dutch inhabitants, all the governors, as well in the duke's time as after the revolution of 1688, thought it good policy to encourage English preachers and schoolmasters in the colony. No man could be more bent upon such a project than Fletcher, a bigot to the episcopal form of church government. He, accordingly, recommended this matter to the assembly, on his first arrival, as well as at their present meeting. The house, from their attachment to the Dutch language, and the model of the church of Holland, secured by one of the articles of surrender, were entirely disinclined to the scheme, which occasioned a warm rebuke from the governor, in his speech at the close of the session, in these words: "Gentlemen, the first thing that I did recommend to you, at our last meeting, was to provide for a ministry, and nothing is done in it. There are none of you, but what are big with the privileges of Englishmen and Magna Charta, which is your right; and the same law doth provide for the religion of the church of England; against sabbath-breaking and all other profanity. But as you have made it last, and postponed it this session, I hope you will begin with it the next meeting, and do somewhat toward it effectually."

The news of the arrival of the recruits and ammunition at Canada, the late loss of the Mohawks, and the unfulfilled promises of assistance made from time to time by the English, together with the incessant solicitations of Milet, the jesuit, all conspired to induce the Oneydoes to sue for a peace with the French. To prevent so important an event, Fletcher met the five nations at Albany, in July 1693, with a considerable present of knives, hatchets, clothing, and ammunition, which had been sent over by the crown for that purpose. The Indians consented to a renewal of the ancient league, and expressed their gratitude for the king's donation with singular force. "Brother Cayenguarago, we roll and wallow in joy, by reason of the great favour the great king and queen have done us, in sending us arms and ammunition at a time when we are in the greatest need of them; and because there is such unity among the brethren." Col. Fletcher pressed their delivering up to him Milet, the old priest, which they promised, but never performed. On the contrary, he had influence enough to persuade all but the Mohawks to treat about the peace at Onondaga, though the governor exerted himself to prevent it.

Soon after this interview, Fletcher returned to New York; and, in September, met a new assembly, of which James Graham was chosen speaker. The governor laboured at this session to procure the establishment of a ministry throughout the colony, a revenue to his majesty for life, the repairing the fort in New York, and the erection of a chapel. That part of his speech, relating to the ministry, was in these words: "I recommended to the former assembly the settling of an able ministry, that the worship of God may be observed among us; for I find that great and first duty very much neglected. Let us not forget that there is a God that made us, who will protect us if we serve him. This has been always the first thing I have recommended, yet the last in your consideration. I hope you are all satisfied of the great necessity and duty that lies upon

you to do this, as you expect his blessing upon your labours." The zeal with which this affair was recommended, induced the house, on the 12th of September, to appoint a committee of eight members, to agree upon a scheme for settling a ministry in each respective precinct throughout the province. This committee made a report the next day, but it was recommitted till the afternoon, and then deferred to the next morning. Several debates arising about the report in the house, it was again "recommitted for further consideration." On the 15th of September it was approved, the establishment being then limited to several parishes in four counties, and a bill ordered to be brought in accordingly; which the speaker (who, on the 18th of September, was appointed to draw all their bills) produced on the 19th. It was read twice on the same day, and then referred to a committee of the whole house. The third reading was on the 21st of September, when the bill passed, and was sent up to the governor and council, who immediately returned it with an amendment, to vest his excellency with an episcopal power of inducting every incumbent, adding to that part of the bill near the end, which gave the right of presentation to the people, these words, "and presented to the governor to be approved and collated." The house declined their consent to the addition, and immediately returned the bill, praying, "that it may pass without the amendment, having, in the drawing of the bill, had a due regard to the pious intent of settling a ministry for the benefit of the people." Fletcher was so exasperated with their refusal, that he no sooner received the answer of the house, than he convened them before him, and in an angry speech broke up the session. That part of it, relating to this bill, is given, because it is characteristic of the man and the times.

"Gentlemen, there is also a bill for settling a ministry in this city and some other countries of the government. In that very thing you have shewn a great deal of stiffness. You take upon you, as if you were dictators: I sent down to you an amendment of three or four words in that bill, which, though very immaterial, yet was positively denied. I must tell you it seems very unmannerly. There never was an amendment yet desired by the council board but what was rejected. It is the sign of a stubborn ill temper.

"But, gentlemen, I must take leave to tell you, if you seem to understand by these words, that none can serve without your collation or establishment, you are far mistaken. For I have the power of collating or suspending any minister, in my government, by their majesties letters patent; and whilst I stay in the government, I will take care that neither heresy, sedition, schism, or rebellion, be preached among you, nor vice and profanity encouraged. It is my endeavour to lead a virtuous and pious life amongst you, and to give a good example: I wish you all to do the same. You ought to consider, that you have but a third share in the legislative power of the government; and ought not to take all upon you, nor be so peremptory. You ought to let the council have a share. They are in the nature of the house of lords, or upper house; but you seem to take the whole power in your hands, and set up for every thing. You have set a long time to little purpose, and I have been a great charge to the country. Ten skillings a day is a large allowance, and you punctually exact it. You have been always forward enough to pull down the fees of other ministers in the government. Why did you

not think it expedient to correct your own, to a more moderate allowance?

"Gentlemen, I shall say no more at present, but that you do withdraw to your private affairs in the country. I do prorogue you to the 10th of January next, and you are hereby prorogued to the 10th day of January next ensuing."

The violence of this man's temper is very evident in all his speeches and messages to the assembly; and it can only be attributed to the ignorance of the times, that the members of that house, instead of asserting their equality, peaceably put up with his rudeness. Certainly they deserved better usage at his hands. For the revenue, established the last year, was, at this session, continued five years longer than was originally intended. This was rendering the governor for a time independent of the people. For, at that day, the assembly had no treasure, but the amount of all taxes went of course into the hands of the receiver-general, who was appointed by the crown. Out of this fund, monies were only issuable by the governor's warrant; so that every officer in the government, from Mr. Blaithwait, who drew annually five per cent. out of the revenue, as auditor-general, down to the meanest servant of the public, became dependent, solely, on the governor. And hence we find the house, at the close of every session, humbly addressing his excellency for the trifling wages of their own clerk. Fletcher was, notwithstanding, so much displeased with them, that soon after the prorogation he dissolved the assembly.

The members of the new assembly met according to the writ of summons, in March, 1694, and chose Colonel Peirson for their speaker, Mr. Graham being left out at the election for the city. The shortness of this session, which continued only to the latter end of the month, was owing to the disagreeable business the house began upon, of examining the state of the public accounts, and in particular the muster-rolls of the volunteers in the pay of the province. They, however, resumed it again in September, and formally entered their dissatisfaction with the receiver-general's accounts. The governor, at the same time, fostered the discontent, by a demand of additional pay for the king's soldiers, then just arrived, and new supplies for detachments in defence of the frontiers. He at last prorogued them, after obtaining an act for supporting 100 men upon the borders. The same disputes revived again in the spring, 1695; and proceeded to such lengths, that the assembly asked the governor's leave to print their minutes, that they might appeal to the public. It was at this session, on the 12th of April, 1695, that, upon a petition of five churchwardens and vestrymen of the city of New York, the house declared its opinion, "That the vestrymen and churchwardens have power to call a dissenting protestant minister, and that he is to be paid and maintained as the act directs." The intent of this petition was to refute an opinion which prevailed, that the late ministry act was made for the sole benefit of episcopal clergymen.

The quiet, undisturbed state of the frontiers, while the French were endeavouring to make a peace with the five nations, and the complaints of the volunteers, who had not received their pay, added much to the unwillingness of the assembly to answer Fletcher's perpetual demands of money. But when the Indians refused to comply with the terms of peace demanded by the French governor, which were to suffer him to rebuild the fort at Cadaraqui, and to include the Indian allies, the war broke out

afresh, and the assembly were obliged to augment both their detachments and supplies. The Count Frontenac now levelled his wrath principally against the Mohawks, who were more attached than any other of the five nations to the interest of the province; but as his intentions had taken air, he prudently changed his measures, and sent a party of 300 men to the Isthmus at Niagara, to surprise those of the five nations that might be hunting there. Among a few that were met with, some were killed, and others taken prisoners, and afterwards burnt at Montreal. The allied Indians imitated the count's example, and burnt ten Dewagunga captives.

Colonel Fletcher and his assembly having come to an open rupture in the spring, he called another in June, of which James Graham was chosen speaker. The Count Frontenac was then repairing the old fort at Cadaraqui; and the intelligence of this, and the king's assignment of the quotas of the several colonies for an united force against the French, were the principal matters which the governor laid before the assembly. The list of the quotas was this: Pennsylvania 800, Massachusetts 350, Maryland 160, Virginia 240, Rhode Island and Providence 48, Connecticut 120, and New York 200.

As a number of forces were now arrived, the assembly were in hopes the province would be relieved from raising any more men for the defence of the frontiers; and to obtain this favour of the governor, ordered 1,000 to be levied, one-half to be presented to him, and the rest he had leave to distribute among the English officers and soldiers. A bill for this purpose was drawn, but though his excellency thanked them for their favourable intention, he thought it not for his honour to consent to it. After passing several laws, the session broke up in perfect harmony, the governor in his great grace recommending it to the house, to appoint a committee to examine the public accounts against the next sessions.

In September, Fletcher went up to Albany, with very considerable presents to the Indians, whom he blamed for suffering the French to rebuild the fort at Cadaraqui, or Frontenac, which commands the entrance from Canada into the great lake Ontario.

While these works were carrying on, the Dionandadies, who were then poorly supplied by the French, made overtures of a peace with the five nations, which the latter readily embraced, because it was owing to their fears of these Indians, who lived near the lake Misilimachinac, that they never dared to march with their whole strength against Canada. The French commandant was fully sensible of the importance of preventing this alliance. The civilities of the Dionandadies to the prisoners, by whom the treaty, to prevent a discovery, was negotiated, gave the officer the first suspicion of it. One of them had the unhappiness to fall into the hands of the French, who put him to the most exquisite torments, that all future intercourse with the Dionandadies might be cut off. Dr. Colden, in just resentment for this inhuman barbarity, published the whole process from La Potherie's History of North America, as follows:—

"The prisoner being first made fast to a stake, so as to have room to move round it, a Frenchman began the horrid tragedy, by broiling the flesh of the prisoner's legs from his toes to his knees, with the red-hot barrel of a gun. His example was followed by an Utawawa, who being desirous to outdo the French in their refined cruelty, split a furrow from the prisoner's shoulder to his garter, and filling it with gunpowder, set fire to it. This gave him

exquisite pain, and raised excessive laughter in his tormentors. When they found his throat so much parched, that he was no longer able to gratify their ears with his howling, they gave him water, to enable him to continue their pleasure longer. But at last his strength failing, an Utawawa flayed off his scalp, and threw burning hot coals on his skull. They then untied him, and bid him run for his life. He began to run, tumbling, like a drunken man. They shut up the way to the east, and made him run westward, the country (as they think) of departed miserable souls. He had still force left to throw stones, till they put an end to his misery by knocking him on the head. After this every one cut a slice from his body, to conclude the tragedy with a feast."

From the time Colonel Fletcher received his instructions, respecting the quotas of these colonies for the defence of the frontiers, he repeatedly, but in vain, urged their compliance with the king's direction; he then carried his complaints against them home to his majesty, but all his applications were defeated by the agents of those colonies who resided in England. As soon therefore as he had laid this matter before the assembly, in autumn 1695, the house appointed William Nicol to go home in the quality of an agent for this province, for which they allowed him 1,000*l.*: but his solicitations proved unsuccessful. Fletcher maintained a good correspondence with the assembly, through the rest of his administration; and nothing appears upon their journals worth the reader's attention.

The French never had a governor in Canada so vigilant and active as the Count de Frontenac. He had no sooner repaired the old fort, called by his name, than he formed a design of invading the country of the five nations, with a great army. For this purpose, in 1696, he convened at Montreal all the regulars, as well as militia, under his command; the Owenagungas, Quatoghies of Loretto, Adirondacks, Sokakies, Nipiciriniens, the converted praying Indians of the five nations, and a few Utawawas. Instead of waggons and horses, (which are useless in such a country as he had to march through) the army was conveyed through rivers and lakes, in light barks, which were portable, whenever the rapidity of the stream and the crossing an isthmus rendered it necessary. The count left La Chine, at the south end of the island of Montreal, on the 7th of July. Two battalions of regulars, under the command of Le Chevalier de Callieres, headed by a number of Indians, led the van, with two small pieces of cannon, the mortars, grenadoes, and ammunition. After them followed the provisions; then the main body, with the count's household, a considerable number of volunteers and the engineer, and four battalions of the militia commanded by Monsieur de Ramezai, governor of Trois Rivières. Two battalions of regulars and a few Indians, under the Chevalier de Vaudrueil, brought up the rear. Before the army went a parcel of scouts, to descry the tracks and ambuscades of the enemy.

After 12 days march they arrived at Cadaracqui, about 180 miles from Montreal, and then crossed the lake to Oswego. Fifty men marched on each side of the Onondaga river, which is narrow and rapid. When they entered the little lake, the army divided into two parts, coasting along the edges, that the enemy might be uncertain as to the place of their landing; and where they did land they erected a fort. The Onondagas had sent away their wives and children, and were determined to defend

their castle, till they were informed by a deserter of the superior strength of the French, and the nature of bombs, which were intended to be used against them—and then, after setting fire to their village, they retired into the woods. As soon as the count heard of this, he marched to their huts in order of battle; being himself carried in an elbow chair, behind the artillery. With this mighty apparatus he entered it, and the destruction of a little Indian corn was the great acquisition. A brave sachem, then about 100 years old, was the only person who tarried in the castle to salute the old general. The French Indians put him to torment, which he endured with astonishing presence of mind. To one who stabbed him with a knife, he said, "you had better make me die by fire, that these French dogs may learn how to suffer like men: you Indians, their allies, you dogs of dogs, think of me when you are in like condition." "Never perhaps," says Charlevoix, "was a man treated with more cruelty, nor did any ever bear it with superior magnanimity and resolution." This sachem was the only man, of all the Onondagas, that was killed; and had not thirty-five Oneydoes, who waited to receive Vaudrueil at their castles, been afterwards basely carried into captivity, the count would have returned without the least mark of triumph. As soon as he began his retreat, the Onondagas followed, and annoyed his army by cutting off several batteaus.

This expensive enterprise, and the continual incursions of the five nations on the country near Montreal, again spread a famine through all Canada. The count, however, kept up his spirits to the last; and sent out scalping parties, who infested Albany, as the allied Indians did Montreal, till the treaty of peace signed at Ryswick, in 1697.

Richard, Earl of Bellamont, was appointed to succeed Colonel Fletcher in the year 1695, but did not receive his commission till the 18th of June, 1697; and as he delayed his voyage till after the peace of Ryswick, which was signed the 10th of September following, he was blown off the coast to Barbadoes, and did not arrive before the 2d of April, 1698.

During the late war the seas were extremely infested with English pirates, some of whom sailed out of New York; and it was strongly suspected that they had received too much countenance there, even from the government, during Fletcher's administration. His lordship's promotion to the chief command of the Massachusetts bay and New Hampshire, as well as this province, was owing partly to his rank, but principally to the affair of the pirates; and the multiplicity of business to which the charge of three colonies would necessarily expose him, induced the earl to bring over with him John Nansan, his kinsman, in the quality of lieutenant-governor. When Lord Bellamont was appointed to the government of these provinces, the king did him the honour to say, "that he thought him a man of resolution and integrity, and with these qualities more likely than any other he could think of, to put a stop to the growth of piracy."

Before the earl set out for America, he became acquainted with Robert Livingston, Esq. who was then in England, soliciting his own affairs before the council and the treasury. The earl took occasion, in one of his conferences with Mr. Livingston to mention the scandal the province was under on account of the pirates. The latter, who confessed it was not without reason, brought the earl acquainted with one Kid, whom he recommended as a man of integrity and courage, that knew the

pirates and their rendezvous, and would undertake to apprehend them, if the king would employ him in a good sailing frigate of thirty guns and one hundred and fifty men. The earl laid the proposal before the king, who consulted the admiralty upon that subject; but this project dropped, through the uncertainty of the adventure, and the French war, which gave full employment to all the ships in the navy. Mr. Livingston then proposed a private adventure against the pirates, offering to be concerned with Kid, a fifth part in the ship and charges, and to be bound for Kid's execution of the commission. The king then approved of the design, and reserved a tenth share, to shew that he was concerned in the enterprise. Lord Chancellor Somers, the duke of Shrewsbury, the earls of Romney and Oxford, Sir Edmund Harrison and others, joined in the scheme, agreeing to the expense of 6000*l*. But the management of the whole affair was left to Lord Bellamont, who gave orders to Kid to pursue his commission, which was in common form. Kid sailed from Plymouth, for New York, in April 1696; and afterwards turned pirate, burnt his ship, and came to Boston, where the earl apprehended him. His lordship wrote to the secretary of state, desiring that Kid might be sent for. The Rochester man of war was dispatched upon this service, but being driven back, a general suspicion prevailed in England, that all was collusion between the ministry and the adventurers, who, it was thought, were unwilling Kid should be brought home, lest he might discover that the chancellor, the duke, and others, were confederates in the piracy. The matter even proceeded to such lengths, that a motion was made in the house of commons, that all who were concerned in the adventure might be turned out of their employments; but it was rejected by a great majority.

The tory party, who excited these clamours, though they lost their motion in the house, afterward impeached several whig lords; and, among other articles, charged them with being concerned in Kid's piracy. But these prosecutions served only to brighten the innocency of those against whom they were brought; for the impeached lords were honourably acquitted by their peers.

Lord Bellamont's commission was published in council on the day of his arrival; Colonel Fletcher, who still remained governor under the proprietors of Pennsylvania, and Lieut.-Governor Nanfan being present. The members of the council were Frederick Philipse, Stephen Van Cortlandt, Nicholas Bayard, Gabriel Mienvielle, William Smith, William Nicoll, Thomas Willet, William Pinhorne, John Lawrence.

After the earl had dispatched Capt. John Schuyler, and Dellius, the Dutch minister of Albany, to Canada, with the account of the peace, and to solicit a mutual exchange of prisoners; he laid before the council the letters from Secretary Vernon and the East India company, relating to the pirates, informing that board that he had an affidavit, that Fletcher had permitted them to land their spoils in this province, and that Mr. Nicoll bargained for their protections, and received for his services 800 Spanish dollars. Nicoll confessed the receipt of the money for protections, but said it was in virtue of a late act of assembly, allowing privateers on their giving security; but he denied the receipt of any money from known pirates. One Weaver was admitted at this time into the council chamber, and acted in the quality of king's counsel, and in answer to Mr. Nicoll, denied that there was any such act of assembly as he mentioned. After considering the whole

matter, the council advised his excellency to send Fletcher home, but to try Nicoll in New York, because his estate would not bear the expense of a trial in England. Their advice was never carried into execution, which was probably owing to a want of evidence against the parties accused. It is nevertheless certain, that the pirates were frequently in the sound, and supplied with provisions by the inhabitants of Long Island, who for many years afterwards, were so infatuated with a notion that the pirates buried great quantities of money along the coast, that there is scarce a point of land, or an island, without the marks of their cupidity. Some credulous people ruined themselves by these researches, and propagated a thousand idle fables, afterwards passing current among the vulgar.

As Fletcher, through the whole of his administration, had been entirely influenced by the enemies of Leisler; nothing could be more agreeable to the numerous adherents of that unhappy man, than the earl's disaffection to the late governor. It was for this reason, they immediately devoted themselves to his lordship, as the head of their party.

The majority of the members of the council were Fletcher's friends, and there needed nothing more to render them obnoxious to his lordship. Leisler's advocates at the same time mortally hated them, not only because they had imbrued their hands in the blood of the principal men of their party, but also because they had engrossed the sole confidence of the late governor, and brought down his resentment upon them. Hence, at the commencement of the earl's administration, the members of the council had every thing to fear; while the party they had depressed, began once again to erect its head under the smiles of a governor who was fond of their aid, as they were solicitous to conciliate his favour. Had the earl countenanced the enemies, as well as the friends of Leisler, which he might have done, his administration would doubtless have been easier to himself and advantageous to the province. But his inflexible aversion to Fletcher prevented his acting with that moderation, which was necessary to enable him to govern both parties. The fire of his temper appeared very early, on his suspending Mr. Nicoll from the board of council, and obliging him to enter into recognizance in 2,000*l*. to answer for his conduct relating to the protections. But his speech to the new assembly, convened on the 18th of May, gave the fullest evidence of his abhorrence of the late administration. Philip French was chosen speaker, and waited upon his excellency with the house, when his lordship spoke to them in the following manner:—

“I cannot but observe to you, what a legacy my predecessor has left me, and what difficulties to struggle with—a divided people, an empty purse, a few miserable, naked, half-starved soldiers, not half the number the king allowed pay for, the fortifications, and even the governor's house, very much out of repair—and in a word the whole government out of frame. It hath been represented to the government in England, that this province has been a noted receptacle of pirates, and the trade of it under no restriction, but the acts of trade violated by the neglect and connivance of those whose duty it was to have prevented it.”

After this introduction, he puts them in mind that the revenue was near expiring: “It would be hard,” he says, “if I that come among you with an honest mind, and a resolution to be just to your interest, should meet with greater difficulties, in the discharge

of his majesty's service, than those that have gone before me. I will take care there shall be no misapplication of the public money. I will pocket none of it myself, nor shall there be any embezzlement by others; but exact accounts shall be given you, when, and as often, as you shall require."

It was customary with Fletcher to be present in the field to influence elections; and as the assembly consisted at this time of but nineteen members, they were too easily influenced to serve the private ends of a faction. For that reason, his lordship was warm in a scheme of increasing their number, at present to thirty, and so in proportion as the colony became more populous; and hence we find the following clause in his speech:—"You cannot but know, what abuses have been formerly in elections of members to serve in the general assembly, which tends to the subversion of your liberties. I do therefore recommend the making of a law to provide against it."

The house, though unanimous in a hearty address of thanks to the governor for his speech, could scarce agree upon any thing else. It was not till the beginning of June, that they had finished the controversies relating to the late turbulent elections; and even then six members seceded from the house, which obliged his excellency to dissolve the assembly on the 14th of June, 1698. About the same time, the governor dismissed two of the council—Pinhorne for disrespectful words of the king, and Brook the receiver-general, who was also turned out of that office, as well as removed from his place on the bench.

In July, the disputes with the French, concerning the exchange of prisoners, obliged his excellency to go up to Albany. When the earl sent the account of the conclusion of the peace to the governor of Canada, all the French prisoners were restored, and as to those among the Indians, he promised to order them to be safely escorted to Montreal. His lordship then added, "I doubt not, sir, that you on your part will also issue an order to relieve the subjects of the king, captured during the war, whether Christians or Indians."

The count, fearful of being drawn into an implicit acknowledgment that the five nations were subject to the English crown, demanded the French prisoners among the Indians to be brought to Montreal; threatening, at the same time, to continue the war against the confederates, if they did not comply with his request. After the earl's interview with them, he wrote a second letter to the count, informing him, that they had importunately begged to continue under the protection of the English crown, professing an inviolable subjection and fidelity to his majesty; and that the five nations were always considered as subjects, which, says his lordship, "can be manifested to all the world by authentic and solid proofs." His lordship added, that he would not suffer them to be insulted, and threatened to execute the laws of England upon the missionaries, if they continued any longer in the five cantons. A resolute spirit runs through the whole letter, which concludes in these words:—"If it is necessary I will arm every man in the provinces, under my government, to oppose you; and redress the injury that you may perpetrate against our Indians." The count, in his answer, proposed to refer the dispute to the commissaries to be appointed according to the treaty of Ryswick. The count misunderstood the treaty. No provision was made by it for commissaries to settle the limits between the English and French possessions, but only to examine and determine the con-

troverted rights and pretensions to Hudson's bay. The Earl of Bellamont continued the claim, insisting that the French prisoners should be delivered up at Albany.

The French count dying while this matter was controverted, Monsieur de Callieres, his successor sent ambassadors the next year to Onondaga, there to regulate the exchange of prisoners, which was accomplished without the earl's consent, and thus the important point in dispute remained unsettled. The Jesuit Bruyas, who was upon this embassy, offered to live at Onondaga; but the Indians refused his belt, saying that Corlear, or the governor of New York, had already offered them ministers for their instruction.

Great alterations were made in council at his excellency's return from Albany. Bayard, Meinvielle, Willet, Townly, and Lawrence, were all suspended on the 28th of September; and Colonel Abraham Depeyster, Robert Livingston, and Samuel Staats, called to that board. The next day, Frederick Philipse resigned his seat, and Robert Walters was sworn in his stead.

The new assembly, of which James Graham was chosen speaker, met in the spring. His excellency spoke to them on the 21st of March, 1699.

As the late assembly was principally composed of Anti-Leislerians, so this consisted almost entirely of the opposite party. The elections were attended with great outrage and tumult, and many applications made relating to the returns; but as Abraham Gouverneur, who had been secretary to Leisler, got returned for Orange county, and was very active in the house, all the petitions were rejected without ceremony.

Among the principal acts passed in this session, there was one for indemnifying those who were excepted out of the general pardon in 1691; another against pirates; one for the settlement of Milborne's estate; and another to raise 1,500*l.* as a present to his lordship, and 500*l.* for the lieutenant-governor, his kinsman, besides which, the revenue was continued for six years longer. A necessary law was also made for the regulation of elections, containing the substance of the English statutes of 8 Hen. VI. c. 7, and the 7 and 8 Will. III.

This assembly took also into consideration sundry extravagant grants of land, which Colonel Fletcher had made to several of his favourites. Among these, two grants to Dellius, the Dutch minister, and one to Nicholas Bayard, were the most considerable. Dellius was one of the commissioners for Indian affairs, and had fraudulently obtained the Indian deeds, according to which the patents had been granted. One of the grants included all the lands within twelve miles on the east side of Hudson's river, and extended twenty miles in length, from the north bounds of Saraghtoga. The second patent, which was granted to him in company with Pinhorne, Baneker, and others, contained all the lands within two miles on the Mohawks river, and along its banks to the extent of fifty miles. Bayard's grant was also for lands in that country, and very extravagant. Lord Bellamont, who justly thought these great patents, with the trifling annual reservation of a few skins, would impede the settlement of the country, as well as alienate the affections of our Indian allies, wisely procured recommendatory instructions from the lords justices, for vacating those patents, which was now regularly accomplished by a law, and Dellius thereby suspended from his ministerial function.

The earl having thus carried all his points at

New York, set out for Boston in June, and after he had settled his salary there, and apprehended the pirate Kidd, returned again in the autumn.

The revenue being settled for six years, his lordship had no occasion to meet the assembly till the summer of the year 1700, and then indeed little else was done than to pass a few laws.—One for hanging every popish priest that came voluntarily into the province, which was occasioned by the great number of French Jesuits, who were continually practising upon the friendly Indians. By another, provision was made for erecting a fort in the country of the Onondagas, but was repealed a few months after the king's providing for that purpose.

The earl was a man of ability and polite manners; and being a mortal enemy to the French, as well as a lover of liberty, he would doubtless have been of considerable service to the colony; but he died there on the 5th of March, in 1701, when he was but just become acquainted with the country.

The earl of Bellamont's death was the source of new troubles; for Nanfan, the lieutenant-governor, being then absent in Barbadoes, a dispute arose among the counsellors concerning the exercise of the powers of government. Abraham de Peyster, Samuel Staats, Robert Walters, and Thomas Weaver, who sided with the party that adhered to Leisler, insisted that the government was devolved upon the council, who had a right to act by a majority of voices; but Colonel Smith contended that all the powers of the late governor were devolved upon him, as president, he being the eldest member of that board. Colonel Schuyler and Robert Livingston, who did not arrive in town till the 21st of March, joined Mr. Smith, and refused to appear at the council-board, till nearly the middle of April. The assembly, which was convened on the second of that month, were in equal perplexity, for they adjourned from day to day, waiting the issue of this rupture. Both parties continuing inflexible, those members who opposed Colonel Smith sent down to the house a representation of the controversy, assigning a number of reasons for the sitting of the assembly, which the house took into their consideration, and on the 16th of April resolved, that the execution of the earl's commission and instructions, in the absence of the lieutenant-governor, was the right of the council by majority of voices, and not of any single member of that board: and this was afterwards the opinion of the lords of trade. The disputes, nevertheless, continuing in the council, strenuously supported by Mr. Livingston, the house, on the 19th of April, thought proper to adjourn themselves to the first Tuesday in June.

In this interval, on the 18th of May, John Nanfan, the lieutenant-governor, arrived, and settled the controversy, by taking upon himself the supreme command.

Mr. Nanfan brought the welcome intelligence, that the king had given 2,000*l.* sterling for the defence of Albany and Schenectady, as well as 500*l.* more for erecting a fort in the country of Onondagas. And, not long after, an ordinance was issued, agreeably to the special direction of the lords of trade, for erecting a court of chancery, to sit the first Thursday in every month. By this ordinance the powers of the chancellor were vested in the governor and council, or any two of that board: commissions were also granted, appointing masters, clerks, and a register: so that this court was completely organised on the 2d of September, 1701.

Attwood, who was then chief justice of the supreme

court, was now sworn of the council. Abraham de Peyster and Robert Walters were his assistants on the bench; and the former was also made deputy auditor-general, under Mr. Blaithwait. Sampson Shelton Broughton was the attorney-general, and came into that office when Attwood took his seat on the bench, before the decease of Lord Bellamont. Both these had their commissions from England. The lieutenant-governor, and the major part of the board of council, together with the several other officers above named, being strongly in the interest of the Leislerian party, it was not a little surprising, that Mr. Nanfan dissolved the late assembly on the 1st of June.

Great were the struggles at the ensuing elections, which, however, generally prevailed in favour of those who joined Leisler at the revolution: and hence, when the new assembly met on the 19th of August, 1701, Abraham Gouverneur was elected for their speaker. Dutchess was thought heretofore incapable of bearing the charge of a representation: but the people of that county, now animated by the heat of the times, sent Jacob Rutsen and Adrian Garretsen to represent them in assembly.

Mr. Nanfan, in his speech to the house, informs them of the memorable grant made to the crown, on the 19th of July, by the five nations, of a vast tract of land, to prevent the necessity of their submitting to the French in case of a war; that his majesty had given out of his exchequer 2,500*l.* sterling for forts, and 800*l.* to be laid out in presents to the Indians; and that he had also settled a salary of 300*l.* on a chief justice, and 150*l.* on the attorney-general, who were both now arrived here.

The fire of contention, which had lately appeared in the tumultuous elections, blazed out afresh in the house. Nicoll, the late counsellor, got himself elected for Suffolk, and was in hopes of being seated in the chair: but Abraham Gouverneur was chosen speaker. Several members contended, that he, being an alien, was unqualified for that station. To this it was answered, that he was in the province in the year 1683, at the time of passing an act to naturalise all the free inhabitants, professing the christian religion; and that for this reason, the same objection against him had been over-ruled at the last assembly. In return for this attack, Gouverneur disputed Nicoll's right to sit as a member of that house; and succeeded in a resolve, that he and Mr. Wessels, who had been returned for Albany, were both unqualified, according to the late act, they being neither of them residents in the respective counties for which they were chosen. This occasioned an imprudent secession of seven members, who had joined the interest of Mr. Nicoll; which gave their adversaries an opportunity to expel them, and introduce others in their stead.

Among the first opposers of Captain Leisler, none was more considerable than Mr. Livingston. The measures of the convention at Albany were very much directed by his advice; and he was peculiarly obnoxious to his adversaries, because he was a man of sense and resolution, two qualifications rarely to be found united in one person at that period. Mr. Livingston's intimacy with the late earl had, till this time, been his defence against the rage of the party which he had formerly opposed; but as that lord was now dead, and Mr. Livingston's conduct in council, in favour of Colonel Smith, had given fresh provocation to his enemies, they were fully bent upon his destruction. It was in execution of this scheme, that as soon as the disputed elections

were over, the house proceeded to examine the state of the public accounts, which they partly began at the late assembly.

The pretence was, that he refused to account for the public monies he had formerly received out of the excise; upon which, a committee of both houses advised the passing a bill to confiscate his estate, unless he agreed to account by a certain day. But instead of this, an act was afterwards passed to oblige him to account for a sum amounting to near 18,000*l*. While this matter was transacting, a new complaint was forged, and he was summoned before another committee of both houses, relating to his procuring the five nations to signify their desire that he should be sent home to solicit their affairs. The criminality of this charge could only be seen by his enemies. Besides, there was no evidence to support it, and therefore the committee required him to purge himself by his own oath. Mr. Livingston, who was better acquainted with English law and liberty than to countenance a practice so odious, rejected the insolent demand with disdain; upon which the house, by the advice of the committee, addressed the lieutenant-governor, to pray his majesty to remove him from his office of secretary of Indian affairs, and that the governor, in the meantime, would suspend him from the exercise of his commission. Mr. Livingston's reason for not accounting was truly unanswerable; his books and vouchers were taken into the hands of the government, and detained from him.

It was at this favourable conjuncture that Jacob Leisler's petition to the king, and his majesty's letter to the late earl of Bellamont, were laid before the assembly. Leisler, displeased with the report of the lords of trade, that his father and his brother, Milborne, had suffered according to law, laid his case before the parliament, and obtained an act to reverse the attainder. After which, he applied to the king, complaining that his father had disbursed about 4,000*l*., in purchasing arms and forwarding the revolution; in consequence of which he procured the following letter to Lord Bellamont, dated at Whitehall the 6th of February, 1699--1700.

"My Lord,—The king being moved upon the petition of Mr. Jacob Leisler, and having a gracious sense of his father's services and sufferings, and the ill circumstances the petitioner is thereby reduced to, his majesty is pleased to direct, that the same be transmitted to your lordship, and that you recommend his case to the general assembly of New York, being the only place where he can be relieved, and the prayer of his petition complied with.

"I am, my Lord, your Lordship's

"Most obedient and humble servant,

"JERSEY."

As soon as this letter and the petition were brought into the house, the sum of 1,000*l*. was ordered to be levied for the benefit of Mr. Leisler, as well as several sums for other persons, by a bill for paying the debts of the government; which, nevertheless, did not pass into a law till the next session. Every thing that was done at this meeting of the assembly, which continued till the 18th of October, was under the influence of a party spirit; and nothing can be a fuller evidence of it than an incorrect, impertinent, address to his majesty, which was drawn up by the house at the close of the session, and signed by fourteen of the members. It contains a tedious narrative of their proceedings relating to the disputed elections, and concludes with a little incense, to regale some of the then principal agents in the public affairs, in these words:

"This necessary account of ourselves and our unhappy divisions, which we hoped the moderation of our lieutenant-governor, the wisdom and prudence of William Attwood, Esq. our chief justice, and Thomas Weaver, Esq. your majesty's collector and receiver-general, might have healed, we lay before your majesty with all humility, and deep sense of your majesty's goodness to us, lately expressed in sending over so excellent a person to be our chief justice."

The news of the king's having appointed Lord Cornbury to succeed the Earl of Bellamont, so strongly animated the hopes of the Anti-Leislerian party, that about the commencement of the year 1702, Nicholas Bayard promoted several addresses to the king, the parliament, and Lord Cornbury, which were subscribed at a tavern kept by one Hutchins, an alderman of the city of New York. In that to his majesty they assured him, "That the late differences were not grounded on a regard to his interest, but the corrupt designs of those who laid hold on an opportunity to enrich themselves by the spoils of their neighbours." The petition to the parliament says, that Leisler and his adherents gained the fort, at the revolution, without any opposition; that he oppressed and imprisoned the people without cause, plundered them of their goods, and compelled them to flee their country, though they were well affected to the prince of Orange. That the Earl of Bellamont appointed indigent sheriffs, who returned such members to the assembly as were unduly elected, and in his lordship's esteem. That he suspended many from the board of council, who were faithful servants of the crown, introducing his own tools in their stead. Nay they denied the authority of the late assembly, and added, that the house had bribed both the lieutenant-governor and the chief justice; the one to pass their bills, the other to defend the legality of their proceedings. A third address was prepared to be presented to Lord Cornbury, to congratulate his arrival, as well to prepossess him in their favour, as to prejudice him against the opposite party.

Nothing could have a more natural tendency to excite the wrath of the lieutenant-governor, and the revenge of the council and assembly, than the reflections contained in those several addresses. Nanfan had no sooner received intelligence of them than he summoned Hutchins to deliver them up to him, and upon his refusal committed him to jail, on the 19th of January; the next day Nicholas Bayard, Rip Van Dam, Philip French, and Thomas Wenham, hot with party zeal, sent an imprudent address to the lieutenant-governor, boldly justifying the legality of the address, and demanding his discharge out of custody. We have before observed, that upon Slougher's arrival in 1691, an act was passed, to recognise the right of King William and Queen Mary to the sovereignty of this province. At the end of that law, a clause was added in these words: "That whatsoever person or persons shall, by any manner of ways, or upon any pretence whatsoever, endeavour, by force of arms or otherwise, to disturb the peace, good and quiet of their majesties' government, as it is now established, shall be deemed and esteemed as rebels and traitors unto their majesties, and incur the pains, penalties, and forfeitures, as the laws of England have for such offences made and provided." Under pretext of this law, which Bayard himself had been personally concerned in enacting, Mr. Nanfan issued a warrant for committing him to jail as a traitor on the 21st of January, 1702; and lest the mob should interpose, a company

of soldiers for a week after constantly guarded the prison.

Through the uncertainty of the time of Lord Cornbury's arrival, Mr. Nanfan chose to bring the prisoner to his trial as soon as possible; and for that purpose issued a commission of oyer and terminer, on the 12th of February, to William Attwood the chief justice, and Abraham de Peyster and Robert Walters, who were the puisne judges of the supreme court; and not long after Bayard was arraigned, indicted, tried, and convicted of high treason. Several reasons were afterwards offered in arrest of judgment; but as the prisoner was unfortunately in the hands of an enraged party, Attwood overruled what was offered, and condemned him to death on the 16th of March.

Bayard applied to Mr. Nanfan for a reprieve, till his majesty's pleasure might be known; and obtained it, not without great difficulty, nor till after a seeming confession of guilt was extorted. Hutchins, who was also convicted, was bailed upon the payment of forty pieces of eight to the sheriff; but Bayard, who refused to procure him the gift of a farm of about 1,500*l.* value, was not released from his confinement till after the arrival of Lord Cornbury, who not only gave his consent to an act for reversing the late attainders, but procured the queen's confirmation of it, upon their giving security according to the advice of Sir Edward Northey, not to bring any suits against those who were concerned in their prosecution; which the attorney-general thought proper, as the act ordained all the proceedings to be obliterated.

After these trials, Nanfan erected a court of exchequer, and again convened the assembly, who thanked him for his late measures, and passed an act to outlaw Philip French, and Thomas Wenham, who absconded from Bayard's commitment; another to augment the number of representatives, and several others—which were, all but one, afterwards repealed by Queen Anne. During this session, Lord Cornbury being daily expected, the lieutenant-governor suspended Mr. Livingston from his seat in council, and thus continued to abet Leisler's party to the end of his administration.

Lord Cornbury's arrival opened a new scene. His father, the earl of Clarendon, adhered to the cause of the late abdicated king, and always refused the oaths both to King William and Queen Anne. But the son recommended himself at the revolution, by appearing very early for the prince of Orange, being one of the first officers that deserted King James's army. King William, in gratitude for his services, gave him a commission for this government, which upon the death of the king was renewed by Queen Anne, who at the same time appointed him to the chief command of New Jersey, the government of which the proprietors had lately surrendered into her hands. As Lord Cornbury came to this province in very indigent circumstances, hunted out of England by a host of hungry creditors, he was bent upon getting as much money as he could squeeze out of the purses of an impoverished people. His talents were, perhaps, not superior to the most inconsiderable of his predecessors; but in his zeal for the church he was surpassed by none. With these bright qualifications he began his administration on the 3d of May, 1702, assisted by a council consisting of the following members:—

William Attwood, William Smith, Peter Schuyler, Abraham de Peyster, Samuel Staatt, Robert Walters, Thomas Weaver, Sampson Shelton Broughton,

Wolfgang William Romar, William Lawrence, Gerardus Beekman, Rip Van Dam.

His lordship without the least disguise espousing the anti-Leislerian faction, Attwood, the chief justice, and Weaver, who acted in quality of solicitor-general, thought proper to retire from his frowns to Virginia, whence they sailed to England; the former concealing himself under the name of Jones, while the latter called himself Jackson. Col. Heathcote and Doctor Bridges succeeded in their places at the council board.

The following summer was remarkable for an uncommon mortality, which prevailed in the city of New York and makes a grand epoch among the inhabitants, distinguished by the "time of the great sickness." The fever killed almost every patient seized with it, and was brought here in a vessel, from St. Thomas in the West Indies, an island remarkable for contagious diseases. On this occasion Lord Cornbury had his residence and court at Jamaica, a pleasant village on Long Island, distant about twelve miles from the city.

The inhabitants of Jamaica consisted at that time partly of original Dutch planters, but mostly of New England emigrants, encouraged to settle there after the surrender by the Duke of York's conditions for plantations, one of which was in these words:—"That every township should be obliged to pay their own ministers, according to such agreements as they should make with them; the minister being elected by the major part of the householders and inhabitants of the town." These people had erected an edifice for the worship of God, and enjoyed a handsome donation of a parsonage-house and glebe, for the use of their minister. After the ministry act was passed by Col. Fletcher, in 1693, a few Episcopalians crept into the town, and viewed the Presbyterian church with a jealous eye. The town vote, in virtue of which the building had been erected, contained no clause to prevent its being hereafter engrossed by any other sect. The episcopal party, who knew this, formed a design of seizing the edifice for themselves, which they shortly after carried into execution, by entering the church between the morning and evening service, while the Presbyterian minister and his congregation were in perfect security, unsuspecting of the zeal of their adversaries and a fraudulent ejection on a day consecrated to sacred rest.

Great outrage ensued among the people, for the contention was animating and important. The original proprietors of the house tore up the seats, and afterwards got the key and the possession of the church, which were shortly after again taken from them by force and violence. In these controversies the governor abetted the episcopal zealots, and harassed the others by numberless prosecutions, heavy fines, and long imprisonments; through fear of which many, who had been active in the dispute, fled out of the province. Lord Cornbury's situation should have prevented him from taking part in so ignominious a quarrel; but his lordship's sense of honour and justice was as weak and indelicate as his bigotry was violent and uncontrollable; and hence we find him guilty of an act implicating a number of vices, which no man could have perpetrated without violence to the very slightest remains of generosity and justice. When his excellency retired to Jamaica, one Hubbard, the Presbyterian minister, lived in the best house in the town. His lordship begged the loan of it for the use of his own family, and the clergyman put himself to no small

inconvenience to favour the governor's request; but in return for the generous benefaction, his lordship perfidiously delivered the parsonage-house into the hands of the episcopal party, and encouraged one Cardwell, the sheriff, a mean fellow who afterwards put an end to his own life, to seize upon the glebe, which he surveyed into lots and farmed for the benefit of the episcopal church. These tyrannical measures justly inflamed the indignation of the injured sufferers, and that again the more embittered his lordship against them. They resented, and he prosecuted; nor did he confine his pious rage to the people of Jamaica. He detested all who were of the same denomination; nay, averse to every sect except his own, he insisted that neither the ministers nor schoolmasters of the Dutch, the most numerous persuasion in the province, had a right to preach or instruct without his licence; and some of them tamely submitted to his unauthoritative rule.

While his excellency was exerting his bigotry, during the summer season, at Jamaica, the elections were carrying on with great heat, for an assembly which met him at that village, in the fall. It consisted principally of the party which had been borne down by the Earl of Bellamont and his kinsman; and hence we find Philip French, who had lately been outlawed, was returned a representative for New York, and William Nicoll elected into the speaker's chair. Several extracts from his lordship's speech are laid before the reader, as a specimen of his temper and designs. "It was an extreme surprise to me (says his lordship) to find this province, at my landing at New York, in such a convulsion as must unavoidably have occasioned its ruin, if it had been suffered to go on a little longer. The many complaints that were brought to me against the persons I found here in power, sufficiently proved against them, and the miserable accounts I had of the condition of our frontiers, made me think it convenient to delay my meeting you in general assembly, till I could inform myself in some measure of the condition of this province, that I might be able to offer to your consideration some few of those things which will be necessary to be done forthwith for the defence of the country."

He then recommends their fortifying the port of New York, and the frontiers; adding, that he found the soldiers naked and unarmed: after which, he proposes a militia bill, the erection of public schools, and an examination of the provincial debts and accounts; and not only promises to make a faithful application of the monies to be raised, but that he would render them an account. The whole speech is sweetened with this gracious conclusion: "Now, gentlemen. I have no more to trouble you with, but to assure you, in the name of the great queen of England, my mistress, that you may safely depend upon all the protection that good and faithful subjects can desire or expect from a sovereign, whose greatest delight is the welfare of her people, under whose auspicious reign we are sure to enjoy what no nation in the world dares claim but the subjects of England; I mean, the free enjoyment of the best religion in the world, the full possession of all lawful liberty, and the undisturbed enjoyment of our freeholds and properties. These are some of the many benefits which I take the inhabitants of this province to be well entitled to by the laws of England; and I am glad of this opportunity to assure you, that as long as I have the honour to serve the queen in the government of this province, those laws shall be put in execution, according to the intent with which

they were made; that is, for the preservation and protection of the people, and not for their oppression. I heartily rejoice to see, that the free choice of the people has fallen upon gentlemen, whose constant fidelity to the crown, and unwearied application to the good of their country, is so universally known."

The house echoed back an address of high compliment to his lordship, declaring, "That, being deeply sensible of the misery and calamity the country lay under at his arrival, they were not sufficiently able to express the satisfaction they had, both in their relief and their deliverer."

Well pleased with a governor who headed their party, the assembly granted him all his requests; 1,800*l.* was raised, for the support of 180 men, to defend their frontiers—besides 2,000*l.* more, as a present towards defraying the expenses of his voyage. The queen, by her letter of the 20th of April, in the next year, forbade any such donations for the future. It is observable, that though the county of Dutchess had no representatives at this assembly, yet such was then the known indigence of that now populous and flourishing county, that but 18*l.* were apportioned for their quota of these levies.

Besides the acts above-mentioned, the house brought up a militia bill, and continued the revenue to the 1st of May, 1709; and a law passed to establish a grammar-school, according to his lordship's recommendation. Besides the great harmony that subsisted between the governor and his assembly, there was nothing remarkable, except two resolutions against the court of chancery, moved by Mr. Nanfan, occasioned by a petition of several disappointed suitors, who were displeased with a decree. The resolutions were in these words: "That the setting up a court of equity in this colony, without consent of general assembly, is an innovation without any former precedent, inconvenient, and contrary to the English law." And again: "That the court of chancery, as lately erected, and managed here, was and is unwarrantable, a great oppression to the subject, of pernicious example and consequence; that all proceedings, orders, and decrees in the same, are, and of right ought to be, declared null and void; and that a bill be brought in according to these two resolutions," which was done; but though his lordship was by no means disinclined to fix contempt on Nanfan's administration, yet as this bill would diminish his own power, himself being the chancellor, the matter was never moved farther than to the order for the ingrossment of the bill upon the second reading.

Though a war was proclaimed by England on the 4th of May, 1702, against France and Spain; yet, as the five nations had entered into a treaty of neutrality with the French in Canada, this province, instead of being harassed on its borders by the enemy, carried on a trade very advantageous to all those who were concerned in it. The governor, however, continued his solicitations for money with unremitted importunity; and by alarming the assembly which met in April, 1703, with his expectation of an attack by sea, 1,500*l.* were raised, under pretence of erecting two batteries at the Narrows; which, instead of being employed for that use, his lordship, notwithstanding the province had expended 22,000*l.* during the late peace, ventured to appropriate to his private advantage. But while he was robbing the public, he consented to several laws for the emolument of the clergy.

Whether it was owing to the extraordinary sagacity of the house, or their presumption that his lord

ship was as little to be trusted as any of his predecessors, that after voting the above sum for the batteries, they added, that it should be "for no other use whatsoever," is left for the reader to determine. It is certain they now began to see the danger of throwing the public money into the hands of a receiver-general appointed by the crown, from whence the governor, by his warrants, might draw it at his pleasure. To this cause we must assign it, that in an address to his lordship, on the 19th of June, 1703, they desire and insist, that some proper and sufficient person might be commissioned treasurer, for the receiving and paying such monies now intended to be raised for the public use, as a means to obstruct misapplications for the future." Another address was sent home to the queen, complaining of the ill state of the revenue, through the frauds which had formerly been committed, the better to facilitate the important design of having a treasurer dependent on the assembly. The success of these measures will appear in the sequel.

Though the frontiers enjoyed the profoundest tranquillity all the next winter, and 1,300*l.* had been expended in supporting 100 fuzileers about Albany, besides the four independent companies in the pay of the crown, yet his excellency demanded provisions for 150 men, at the next meeting of the assembly, in April, 1704. The house having reason to suspect that the several sums of eighteen and thirteen hundred pounds, lately raised for the public service, had been prodigally expended or embezzled, prudently declined any further aids, till they were satisfied that no misapplication had been made. For this purpose they appointed a committee, who reported that there was a balance of near 1,000*l.* due to the colony. His lordship, who had hitherto been treated with great complaisance, took offence at this parsimonious scrutiny, and ordered the assembly to attend him; when, after the example of Fletcher, whom, excepting his superior activity, his lordship mostly resembled, he made an angry speech, in which he charges them with innovations never attempted by their predecessors, and hopes they would not force him to exert "certain powers" vested in him by the queen. But what he more particularly took notice of, was their insisting in several late bills, upon the title of "general assembly," and a saving of the "rights of the house," in a resolution agreeing to an amendment for preventing delay; with respect to which, his lordship used these words: "I know of no right that you have as an assembly, out such as the queen is pleased to allow you." As to the vote, by which they found a balance due to the colony of 913*l.* 15*s.*, "it is true," (says his lordship), "the queen is pleased to command me, in her instructions, to permit the assembly, from time to time, to view and examine the accounts of money, or value of money, disposed by virtue of the laws made by them; but you can in no wise meddle with that money; but if you find any misapplication of any of that money, you ought to acquaint me with it, that I may take care to see those mistakes rectified, which I shall certainly do."

The house bore these rebukes with the utmost passiveness, contenting themselves with little else than a general complaint of the deficiency of the revenue, which became the subject of their particular consideration in the autumn. The governor, on the one hand, then proposed an additional duty of ten per cent. on certain goods not immediately imported from Europe, to which the assembly, on the other, was utterly averse, and as soon as they re-

solved against it, the very printer, clerk, and door-keeper, were denied the payment of their salaries. Several other demands being made for the public debts, the house resolved to address his lordship for an exact account of the revenue; which, together with their refusal to admit the council's amendment of a money bill, gave him such high provocation, that he was induced to dissolve an assembly, whose prodigal liberality had justly exposed them to the resentment of the people. The new assembly, which met on the 14th of June, 1705, neglected the affair of the revenue, and the additional duty, though his lordship strongly recommended them both. Among the principal acts passed at this meeting, is that for the benefit of the clergy, who were entitled to the salaries formerly established by Colonel Fletcher; which, though less than his lordship recommended, was, doubtless, a grateful offering to his unceasing zeal for the church, manifested in a part of his speech at the opening of the session, in these words: "The difficulties which some very worthy ministers of the church of England have met with, in getting the maintenance settled upon them by an act of the general assembly of this province, passed in the year 1693, moves me to propose to you the passing an act, explanatory of the forementioned act, that those worthy good men, who have ventured to come so far, for the service of God in his church, and the good and edification of the people, to the salvation of their souls, may not for the future be vexed, as some of them have been; but may enjoy in quiet that maintenance which was by a law provided for them. I farther recommended to you, the passing of an act to provide for the maintenance of some ministers, in some of the towns at the east end of Long Island, where I do not find any provision has been yet made for propagating religion."

The harbour being wholly unfortified, a French privateer actually entered it in 1705, and put the inhabitants into great consternation. The assembly, at their session in June, the next year, were not disinclined, through the importunity of the people, to put the city in a better posture of defence for the future; but being fully convinced, by his lordship's embezzlement of 1,500*l.*, formerly raised for two batteries at the Narrows, and near 1,000*l.* levied for the protection of the frontiers, that he was no more to be trusted with public monies, offered a bill for raising 3,000*l.* for fortifications, appointing that sum to be deposited in the hands of a private person of their own nomination; but his excellency did not pass it till their next meeting in the autumn, when he informed them that he had received the queen's command, "to permit the general assembly to name their own treasurer, when they raised extraordinary supplies for particular uses, and which are no part of the standing and constant revenue; the treasurer being accountable to the three branches of the legislature, and the governor always acquainted with the occasion of issuing such warrants."

His lordship's renewing the proposal of raising fortifications at the Narrows, which he had himself hitherto scandalously prevented, is a proof of his excessive effrontery and contempt of the people; and the neglect of the house to take the least notice, either of that matter or the revenue, occasioned another dissolution.

Before we proceed to the transactions of the new assembly, which did not meet till the year 1708, it will not be improper to lay before the reader the account of a memorable proof of that persecuting spirit, which influenced Lord Cornbury's whole administration

The inhabitants of the city of New York consisted at this time of Dutch Calvinists, upon the plan of the church of Holland—French refugees, on the Geneva model—a few English Episcopalians—and a still smaller number of English and Irish Presbyterians, who having neither a minister nor a church, used to assemble themselves every Sunday at a private house, for the worship of God. Such were the circumstances when Francis M'Kemie and John Hampton, two Presbyterian ministers, arrived in January, 1707. As soon as Lord Cornbury, who hated the whole persuasion, heard that the Dutch had consented to M'Kemie's preaching in their church, he arbitrarily forbade it; so that the public worship on the next sabbath was performed with open doors at a private house. Mr. Hampton preached the same day at the Presbyterian church in New Town, distant a few miles from the city. At that village both these ministers were two or three days after apprehended by Cardwel the sheriff, pursuant to his lordship's warrant for preaching without his licence. From hence they were led in triumph a circuit of several miles through Jamaica to New York. They appeared before his lordship with an undaunted courage, and had a conference with him, in which it is difficult to determine whether his lordship excelled in the character of a savage bigot, or an ill-mannerly tyrant. The ministers were no lawyers, or they would not have founded their justification on the supposed extent of the English act of toleration. They knew not that the ecclesiastical statutes had no relation to this colony, and that its religious state consisted in a perfect parity between protestants of all denominations. They erroneously supposed that all the penal laws extended to this province, and relied for their defence on the toleration, offering testimonials for their having complied with the act of parliament in Virginia and Maryland, and promised to certify the house, in which M'Kemie had preached, to the next sessions. His lordship's discourse with them was the more ridiculous, because he had Bickley, the attorney-general, to assist him. Against the extension of the statute, they insisted that the penal laws were limited to England, and so also the toleration act, because the sole intent of it was to take away the penalties formerly established. But grant the position, and the consequence they drew from it, it argues that his lordship and Mr. Attorney were either very weak, or influenced by evil designs. If the penal laws did not extend to the plantations, then the prisoners were innocent, for where there is no law there can be no transgression; but according to these incomparable sages, if the penal laws and the toleration were restricted to the realm of England, as they contended, then the poor clergymen for preaching without his licence, were guilty of a heinous crime against his private unpublished instructions; and for this cause he issued an informal precept to the sheriff of New York, for their commitment to jail till further orders. They continued in confinement, through the absence of Mompesson, the chief justice, who was in New Jersey, six weeks and four days; but were then brought before him by a writ of habeas corpus. Mompesson being a man of learning in his profession, and his lordship now apprised of the illegality of his first warrant, issued another on the very day of the *teste* of the writ, in which he virtually contradicts what he had before insisted on at his conference with the prisoners. For according to this, they were imprisoned for preaching without being qualified as the toleration act required, though

they had offered themselves to the sessions during their imprisonment. They were then bailed to the next supreme court, which began a few days after. Great pains were taken to secure a grand jury for the purpose, and among those who found the indictment, to their shame be it recorded, were several Dutch and French protestants.

Mr. M'Kemie returned to New York from Virginia, in June, and was now come to his trial on the indictment found at the last court. As to Mr. Hampton, he was discharged, no evidence being offered to the grand jury against him.

Bickley, the attorney-general, managed the prosecution in the name of the queen; Reignere, Nicoll, and Jamison appeared for the defendant. The trial was held on the 6th of June, and being a cause of great expectation, a numerous audience attended. Roger Mompesson sat on the bench as chief justice, with Robert Milward and Thomas Wenham for his assistance. The indictment was in substance that Francis M'Kemie, pretending himself to be a protestant dissenting minister, contemning and endeavouring to subvert the queen's ecclesiastical supremacy, unlawfully preached without the governor's licence first obtained, in derogation of the royal authority and prerogative; that he used other rites and ceremonies than those contained in the common prayer book; and lastly, that being unqualified by law to preach, he nevertheless did preach at an illegal conventicle; and both these last charges were laid to be contrary to the form of the English statutes. For it seems that Mr. Attorney was now of opinion, that the penal laws did extend to the American plantations, though his sentiments were the very reverse at the first debate before his excellency, but Bickley was rather remarkable for a voluble tongue, than a penetrating head or much learning. To support this prosecution, he endeavoured to prove the queen's ecclesiastical supremacy in the colonies, and that it was delegated to her noble cousin the governor; and hence he was of opinion, that his lordship's instructions relating to church matters had the force of law. He, in the next place, contended for the extension of the statutes of uniformity, and upon the whole was pleased to say, that he had no doubt the jury would find a verdict for the queen. Reignere, for the defendant, insisted that preaching was no crime by the common law, that the statutes of uniformity and the act of toleration did not extend here, and that the governor's instructions were not laws. Nicoll spoke to the same purpose, and so did David Jamison; but M'Kemie concluded the whole defence in a speech, which set his capacity in a very advantageous light. The chief justice, in his charge, advised a special verdict, but the jury found no difficulty to acquit the defendant, who, through the shameful partiality of the court, was not discharged from his recognizance till they had illegally extorted all the fees of his prosecution, which together with his expenses, amounted to eighty-three pounds seven shillings and sixpence.

Lord Cornbury was now daily losing the favour of the people. The friends of Leisler held him in the utmost abhorrence from the beginning: and being all spies upon his conduct, it was impossible for his lordship to commit the smallest crime unnoticed. His persecution of the Presbyterians very early increased the number of his enemies. The Dutch too were fearful of his religious rage against them, as he disputed their right to call and settle ministers, or even schoolmasters, without his special licence. His excessive avarice, his embezzlement

of the public money, and his sordid refusal to pay his private debts, bore so heavily upon his reputation, that it was impossible for his adherents, either to support him or themselves against the general opposition. Such being the temper of the people, his lordship did not succeed according to his wishes in the new assembly, which met on the 19th of August, 1708. The members were all against him, and William Nicoll was again chosen speaker.

Among the several things recommended to their consideration, the affair of the revenue, which was to expire in May following, and the propriety of making presents to the Indians were the chief. The house were not insensible of the importance of the Indian interest, and of the infinite arts of the French to seduce them from our alliance; but suspicious that his lordship, who heretofore had given himself little concern about that matter, was seeking a fresh opportunity to defraud the public, they desired him to give them a list of the articles of which the presents were to consist, together with an estimate of the charge, before they would provide for that donation.

With respect to the revenue his lordship was not so successful, for the assembly resolutely refused to continue it; though they consented to an act to discharge him from a contract of 250*l.* and upwards, which he had made with one Hanson for the public service. Thomas Byerly was at that time collector and receiver-general, and by pretending that the treasury was exhausted, the debts of the government were unpaid. This gave rise to many petitions to the assembly to make provision for their discharge. Colonel Schuyler, who had expended large sums on the public credit, was among the principal sufferers, and joined with several others in an application to the house, that Byerly might be compelled to account. The disputes relating to this matter took up a considerable part of the session, and were litigated with great heat. Upon the whole, an act was passed for refunding 700*l.* which had been misapplied.

The resolutions of the committee of grievances, approved by the house, shew the general objections of the people to his lordship's administration. These were made at the beginning of the session, and yet we find this haughty nobleman subdued by the opposition against him, and so dispirited through indigence, and the incessant solicitations of his creditors, that he not only omitted to justify himself, but to shew even an impotent resentment. For after all the censures of the house, he tamely thanked them for passing the bill to discharge him from a small debt, which they could not in justice have refused. The resolutions were in these words:

"Resolved, That it is the opinion of this committee, that the appointing coroners in this colony, without their being chosen by the people, is a grievance, and contrary to law.

"Resolved, That it is, and always has been the unquestionable right of every freeman in this colony, that he hath a perfect and entire property in his goods and estate.

"Resolved, That the imposing and levying of any monies upon her majesty's subjects of this colony, under any pretence or colour whatsoever, without consent in general assembly, is a grievance, and a violation of the people's property.

"Resolved, That for any officer whatsoever to extort from the people extravagant and unlimited fees, or any money whatsoever, not positively established and regulated by consent in general assembly, is unreasonable and unlawful, a great griev-

ance, and tending to the utter destruction of all property in this plantation.

"Resolved, That the erecting a court of equity without consent in general assembly is contrary to law, without precedent, and of dangerous consequence to the liberty and property of the subjects.

"Resolved, That the raising of money for the government, or other necessary charge, by any tax, impost, or burthen on goods imported, or exported; or any clog, or hindrance on traffic or commerce, is found by experience to be the expulsion of many, and the impoverishing of the rest of the planters, freeholders, and inhabitants of this colony; of most pernicious consequence, which if continued will unavoidably prove the ruin of the colony.

"Resolved, That the excessive sums of money screwed from masters of vessels trading here, under the notion of port-charges, visiting the said vessels by supernumerary officers, and taking extraordinary fees, is the great discouragement of trade, and strangers coming amongst us, beyond the precedent of any other port, and without colour of law.

"Resolved, That the compelling any man upon trial by a jury, or otherwise, to pay any fees for his prosecution, or any thing whatsoever, unless the fees of the officers whom he employs for his necessary defence, is a great grievance, and contrary to justice."

Lord Cornbury was no less obnoxious to the people of New Jersey, than to those of New York. The assembly of that province, impatient of his tyranny, drew up a complaint against him, which they sent home to the queen.

Her majesty graciously listened to the cries of her injured subjects, divested him of his power, and appointed Lord Lovelace in his stead; declaring that she would not countenance her nearest relations in oppressing her people.

As soon as this nobleman was superseded, his creditors threw him into the custody of the sheriff of New York; and he remained there till the death of his father, when, succeeding to the earldom of Clarendon, he returned to England.

The colonies never had a governor so universally detested, nor any one who so richly deserved public abhorrence. In spite of his noble descent, his behaviour was trifling, mean, and extravagant.

It was not uncommon for him to dress himself in a woman's habit, and then to patrol the fort in which he resided. Such freaks of low humour exposed him to the universal contempt of the people; but their indignation was kindled by his despotic rule, savage bigotry, insatiable avarice, and injustice, not only to the public, but even his private creditors. For he left some of the lowest tradesmen in his employment unsatisfied in their just demands.

John Lord Lovelace, baron of Hurley, was appointed to this government in the spring, 1708, but did not arrive here till the 18th of December following. Lord Cornbury's oppressive, mean administration had long made the people very desirous for a change; and therefore his successor was received with universal joy. Having dissolved the general assembly soon after his accession to the government, he convened a new one on the 5th of April, 1709, which consisted of members of the same interest with the last, who re-elected William Nicoll, the former speaker, into the chair. His lordship told them, at the beginning of the session, "that he had brought with him large supplies of soldiers and stores of war, as well as presents for the Indians," than which nothing could be more agreeable to the people. He

lamented the greatness of the provincial debts, and the decay of public credit; but still recommended their raising a revenue for the same term with that established by the act in the 11th year of the late reign. He also pressed the discharge of the debts of the government, and their examination of the public accounts, "that it may be known (said he) what this debt is, and that it may appear hereafter to all the world that it was not contracted in my time." This oblique reflection upon his predecessor, who was now ignominiously imprisoned by his creditors, was displeasing to nobody.

Though the assembly, in their answer, heartily congratulated his lordship's arrival, and thanked the queen for her care of the province, yet they sufficiently intimated their disinclination to raise the revenue, which the governor had requested. "Our earnest wishes (to use the words of the address) are, that suitable measures may be taken to encourage the few inhabitants to stay in it, and others to come. The just freedom enjoyed by our neighbours by the tender indulgence of the government, has extremely drained and exhausted us both of people and stock; whilst a different treatment, the wrong methods too long taken, and severities practised here, have averted and deterred the useful part of mankind from settling and coming hitherto." Towards the close, they assure him, "that as the beginning of his government gave them a delightful prospect of tranquillity, so they were come with minds prepared to consult the good of the country, and his satisfaction."

The principal matter which engaged the attention of the assembly, was the affair of the revenue. Lord Cornbury's conduct had rendered them utterly averse to a permanent support for the future, and yet they were unwilling to quarrel with the new governor. They, however, at last agreed, on the 5th of May, to raise 2,500*l.* to defray the charges of the government to the 1st of May ensuing, 1,600*l.* of which was voted to his excellency, and the remaining sums towards a supply of firewood and candles to the several forts in New York, Albany, and Schenectady; and for payment of small salaries to the printer, clerk of the council, and Indian interpreter.

This new project of providing, annually, for the support of government, was contrived to prevent the mischief, to which the long revenues had formerly exposed the colonists. But as it rendered the governor, and all the other servants of the crown dependent upon the assembly, a rupture between the several branches of the legislature would doubtless have ensued; but on the 9th of May, the very day in which the vote passed the house, his lordship died of a disorder contracted in crossing the ferry at his first arrival in the city of New York. His lady remained long after his death, soliciting for the sum voted to her husband; but though the queen interposed by a letter, in her behalf, nothing was allowed till several years afterwards.

*From the Canada expedition, in 1709, to the arrival of Governor Burnet.*

On the death of the governor, the chief command devolved upon Richard Ingoldsby, the lieutenant-governor, the same who had exercised the government several years before, upon the decease of Colonel Sloughter. His short administration is remarkable, not for his extraordinary talents, for he was a dull man, but for a second fruitless attempt against Canada. Colonel Vetch, who had been several years before at Quebec, and sounded the river of St. Law-

rence, was the first projector of this enterprise. The ministry approved of it, and Vetch arrived in Boston, and prevailed upon the New England colonies to join in the scheme. After that, he came to New York, and concerted the plan of operations with Francis Nicholson, formerly lieutenant-governor, who, at the request of Ingoldsby, the council, the assembly, Gurdon Saltonstall, the governor of Connecticut, and Charles Cockin, lieutenant-governor of Pennsylvania, accepted the chief command of the provincial forces intended to penetrate into Canada by way of lake Champlain. Impoverished as the colonists were, the assembly joined heartily in the enterprise. It was at this juncture the first act for issuing bills of credit was passed; an expedient without which they could not have contributed to the expedition, the treasury being then totally exhausted. Universal joy now brightened every man's countenance, because all expected the complete reduction of Canada before the ensuing fall. Big with the pleasing prospect of an event, which would put an end to all the ravages of an encroaching, merciless enemy, extend the British empire, and augment trade, the colonists exerted themselves to the utmost for the success of the expedition. As soon as the design was made known to the house, twenty ship and house carpenters were impressed into the service for building batteaus. Commissioners also were appointed to purchase provisions and other necessaries, and empowered to break open houses for that purpose; and to impress men, vessels, horses, and waggons, for transporting the stores. Four hundred and eighty-seven men, besides the independent companies, were raised, and detached to Albany, by the 27th of June; from whence they advanced, with the main body, to the Wood Creek. Three forts were built there, besides many block-houses and stores for the provisions, which were transported with great dispatch. The province of New York (all things considered) had the merit of having contributed more than any of her neighbours towards this expedition. Pennsylvania gave no kind of aid, and New Jersey was only at the expense of 3,000*l.* One hundred batteaus, as many birch canoes, and two of the forts, were built entirely, and the other fort, for the most part, at the charge of this government. All the provisions and stores for the army were transported at their expense; and besides their quota of volunteers, and the independent companies, they procured and maintained 600 Indians, and victualled 1,000 of their wives and children at Albany during the campaign.

Having thus put themselves to the expense of above 20,000*l.* towards this enterprise, the delay of the arrival of the fleet spread a general discontent through the country; and, early in the fall, the assembly addressed the lieutenant-governor, to recall their forces from the camp. Vetch and Nicholson soon after broke up the campaign, and retired to New Port, in Rhode Island, where there was a congress of governors. Ingoldsby, who was invited to it, did not appear, in compliance with the inclination of the assembly, who, incensed at the public disappointment, harboured great jealousies of all the first promoters of the design. As soon, therefore, as Lord Sunderland's letters, which arrived here on the 21st of October, were laid before the house, they resolved to send an address to the queen, to lay before her a true account of the manner in which the province exerted itself in the late undertaking.

Had this expedition been vigorously carried on

It doubtless would have succeeded. The public affairs at home were conducted by a wise ministry. The allied army triumphed in repeated successes in Flanders; and the court of France was in no condition to give assistance to so distant a colony as Canada. The Indians of the five nations were engaged through the indefatigable solicitation of Colonel Schuyler, to join heartily in the attempt; and the eastern colonies had nothing to fear from the Ouwenagunas, because those Indians had a little before concluded a peace with the confederates. In America every thing was ripe for the attack. At home Lord Sunderland, the secretary of state, had proceeded so far, as to dispatch orders to the queen's ships at Boston, to hold themselves in readiness, and the British troops were upon the point of their embarkation. At this juncture, the news arrived of the defeat of the Portuguese, which reducing the allies to great straits, the forces intended for the American adventure were then ordered to their assistance, and the thoughts of the ministry entirely diverted from the Canada expedition.

As there was not a man in the province who had more extended views of the importance of driving the French out of Canada than Colonel Schuyler, so neither did any person more heartily engage in the late expedition. To preserve the friendship of the five nations, without which it would be impossible to prevent our frontiers from becoming a field of blood, he studied all the arts of insinuating himself into their favour. He gave them all possible encouragement and assistance, and very much impaired his own fortune by his liberality to their chiefs. They never came to Albany, but they resorted to his house, and even dined at his table; and by this means he obtained an ascendancy over them, which was attended with very good consequences to the province; for he could always, in a great degree, obviate or eradicate the prejudices and jealousies by which the French Jesuits were incessantly labouring to debauch their fidelity.

Impressed with a strong sense of the necessity of some vigorous measures against the French, Colonel Schuyler was extremely discontented at the late disappointment; and resolved to make a voyage to England, at his private expense, the better to inculcate on the ministry the absolute necessity of reducing Canada to the crown of Great Britain. For that purpose he proposed to carry home with him five Indian chiefs. The house no sooner heard of his design, than they came to a resolution, which, in justice to his distinguished merit, ought not to be suppressed. It was this:

"Resolved, nemine contradicente, that the humble address of the lieut.-governor, council, and general assembly of this colony to the queen, representing the present state of this plantation, be committed to his charge and care, to be presented by himself to her sacred majesty; he being a person, who not only in the last war, when he commanded the forces of this colony in chief at Canada, but also in the present, has performed faithful services to this and the neighbouring colonies; and behaved himself in the offices with which he has been intrusted, with good reputation, and the general satisfaction of the people in these parts."

The arrival of the five sachems in England made a great stir through the whole kingdom. The mob followed them wherever they went, and small cuts of them were sold among the people. The court was at that time in mourning for the death of the prince of Denmark: the sachems were therefore

dressed in black under-clothes, after the English manner; but instead of a blanket, they had each a scarlet ingrain cloth mantle, edged with gold, thrown over all their other garments. This dress was directed by the dressers of the play-house, and given by the queen, who was advised to make a shew of them. A more than ordinary solemnity attended the audience they had of her majesty. Sir Charles Cotterel conducted them, in two coaches, to St. James's; and the lord chamberlain introduced them into the royal presence. Their speech, on the 19th of April, 1710, was in these words:—

"Great Queen,—We have undertaken a long voyage, which none of our predecessors could be prevailed upon to undertake, to see our great queen, and relate to her those things which we thought absolutely necessary for the good of her, and us her allies, on the other side of the water.

"We doubt not but our great queen has been acquainted with our long and tedious war, in conjunction with her children, against her enemies, the French; and that we have been as a strong wall for their security, even to the loss of our best men. We were mightily rejoiced, when we heard our great queen had resolved to send an army to reduce Canada, and immediately, in token of friendship, we hung up the kettle, and took up the hatchet, and, with one consent, assisted Colonel Nicholson in making preparations on this side the lake; but, at length, we were told our great queen, by some important affairs, was prevented in her design, at present, which made us sorrowful, lest the French, who had hitherto dreaded us, should now think us unable to make war against them. The reduction of Canada is of great weight to our free hunting; so that if our great queen should not be mindful of us, we must, with our families, forsake our country, and seek other habitations, or stand neuter, either of which will be much against our inclinations.

"In token of the sincerity of these nations, we do, in their names, present our great queen with these belts of wampum, and in hopes of our great queen's favour, leave it to her most gracious consideration."

While Colonel Schuyler was at the British court, Captain Ingoldsby was displaced, and Gerardus Beekman exercised the powers of government, from the 10th of April, 1710, till the arrival of Brigadier Hunter, on the 14th of June following. The council then present were, Mr. Beekman, Mr. Van Dam, Colonel Benslaer, Mr. Mompesson, Mr. Barbarié, Mr. Philipse.

Hunter was a native of Scotland, and, when a boy, put apprentice to an apothecary. He left his master, and went into the army; and, being a man of wit and personal beauty, recommended himself to Lady Hay, whom he afterwards married. In the year 1707 he was appointed lieut.-governor of Virginia, but being taken by the French in his voyage to that colony, he was carried into France, and, upon his return to England, appointed to succeed to the government of the province of New York and New Jersey.

Governor Hunter carried over with him near three thousand palatines, who the year before fled to England from the rage of persecution in Germany. Many of these people settled in the city of New York, where they built a Lutheran church. Others settled on a tract of several thousand acres, in the manor of Livingston. Their village there, called the camp, was one of the pleasantest situations on Hudson's river: opposite, on the west bank, were

many other families of them. Queen Anne's liberality to these people was not more beneficial to them than serviceable to the colony. They behaved themselves peaceably, and lived with great industry.

The late attempt to attack Canada proving abortive, exposed the colony to consequences equally calamitous, dreaded, and foreseen. While the preparations were making to invade it, the French exerted themselves in cajoling their Indian allies to assist in the repulse; and as soon as the scheme dropped, numerous parties were sent out to harass the English frontiers. These irruptions were principally made on the northern parts of New England, where the most savage cruelties were daily committed. New York had indeed hitherto escaped, being covered by the Indians of the five nations; but the danger induced Governor Hunter, soon after his arrival, to make a voyage to Albany, where he met the confederate chiefs, and renewed the old covenant. While there, he was strongly solicited by the New England governments, to engage the Indians in a war with those who were daily ravaging their borders; but he prudently declined a measure, which might have exposed his own province to a general devastation. A treaty of neutrality subsisted at that time between the confederates and the Canada French and their Indians; which, depending upon the faith of lawless savages, was at best but precarious, and yet the only security we had for the peace of the borders. A rupture between them would have involved the colony in a scene of misery, at a time of all others most unseasonable. However the people of New England might censure the governor, it was a proof of his wisdom to refuse their request. For besides a want of men and arms our forts were fallen down, and the treasury exhausted.

The new assembly met at New York on the 1st of September. Mr. Nicoll, the speaker, Mr. Livingston, Mr. De Lancey, and Colonel Morris, were the members most distinguished for their activity in the house. Mr. De Lancey was a protestant refugee, a native of Caen in Normandy; and by marrying a daughter of Mr. Courtlandt, connected with a family then, perhaps, the most opulent and extensive of any in the province. He was an eminent merchant, and by a successful trade had amassed a very considerable fortune. But of all these, Colonel Morris had the greatest influence on public affairs. He was a man of letters, and, though a little whimsical in his temper, was grave in his manners and of penetrating parts. Being excessively fond of the society of men of sense and reading, he was never wearied at a sitting, till the spirits of the whole company were dissipated. From his infancy he had lived in a manner best adapted to teach him the nature of man, and to fortify his mind for the vicissitudes of life. He very early lost both his father and mother, and fell under the patronage of his uncle, formerly an officer of very considerable rank in Cromwell's army, who, after the restoration, disguised himself under the profession of quakerism, and settled on a fine farm within a few miles of the city, called after his own name, Morrisania. Being a boy of strong passions, the general indications of a fruitful genius, he gave frequent offence to his uncle, and on one of these occasions, through fear of his resentment, strolled away into Virginia, and thence to Jamaica in the West Indies, where, to support himself, he set up for a scrivener. After several years spent in this vagabond life, he returned again to his uncle, who received the young prodigal

with joy; and, to reduce him to regularity, brought about his marriage with a daughter of Mr. Graham, a lady, with whom he lived above fifty years, in the possession of every enjoyment which good sense and polite manners in a woman could afford. The greatest part of his life, before the arrival of Mr. Hunter, was spent in New Jersey, where he signalised himself in the service both of the proprietors and the assembly. He was one of the council in that province, and a judge of the supreme court there in 1692. Upon the surrender of the government to Queen Anne, in 1702, he was named to be governor of the colony; but the appointment was changed in favour of Lord Cornbury, the queen's cousin. The assembly employed him to draw up their complaint against Lord Cornbury, and he was made the bearer of it to the queen. Though he was indolent in the management of his private affairs, yet, through the love of power, he was always busy in matters of a political nature, and no man in the colony equalled him in the knowledge of the law and the arts of intrigue. From this character the reader will easily perceive, that Governor Hunter shewed his prudence in taking Mr. Morris into his confidence, his talents and advantages rendering him either a useful friend or formidable foe. Such were the acting members of this assembly. When Brigadier Hunter spoke to them, he recommended the settling a revenue, the defence of the frontiers, and the restoration of the public credit, which Lord Cornbury had almost entirely destroyed. To stifle the remaining sparks of ancient feuds, he concluded with these words: "If any go about to disturb your peace, by reviving buried parties or piques, or creating new ones, they shall meet with no countenance or encouragement from me; and I am sure they deserve as little from you." The address of the house was perfectly agreeable to the governor. They promised to provide for the support of government, and to restore the public credit, as well as to protect the frontiers. In answer to the close of his speech, they declared their hope, "that such as excited party contentions might meet with as little credit, and as much disgrace, as they deserve." This unanimity, however, was soon interrupted. Colonel Morris, for some warm words dropped in a debate, was expelled the house; and soon after a dispute arose between the council and assembly, concerning some amendments made by the former, to a bill, "For the treasurer's paying sundry sums of money." The design of it, in mentioning the particular sums, and rendering them issuable by their own officer, was to restrain the governor from repeating the misapplications which had been so frequent in a late administration. The council, for that reason, opposed it, and adhered to their amendments; which occasioned a prorogation on the 25th of November, after the passing of several other necessary laws.

Mr. Hunter cautiously avoided entering publicly into the dispute between the two houses, till he knew the sentiments of the ministry, and then opened the spring sessions with a speech too singular not to be inserted.

"Gentlemen—I hope you are now come with a disposition to answer the ends of your meeting, that is, to provide a suitable support for her majesty's government here, in the manner she has been pleased to direct; to find out means to restore the public credit, and to provide better for your own security.

"They abuse you who tell you that you are hardly

dealt by in the augmentation of salaries. Her majesty's instructions, which I communicated to you at our last meeting, might have convinced you, that it was her tenderness towards her subjects in the plantations, who suffered under an established custom of making considerable presents to their governors by acts of assembly, that induced her to allot to each of them such a salary as she judged sufficient for their support, in their respective stations, with a strict prohibition of all such presents for the future; which instruction has met with a cheerful and grateful compliance in all the other colonies.

"If you have been in any thing distinguished, it is by an extraordinary measure of her royal bounty and care. I hope you will make suitable returns, lest some insinuations, much repeated of late years, should gain credit at last, that however your resentment has fallen upon the governor, it is the government you dislike.

"It is necessary at this time that you be told also, that giving money for the support of government, and disposing of it at your pleasure, is the same with giving none at all. Her majesty is the sole judge of the merits of her servants. This right has never yet been disputed at home, and should I consent to give it up abroad, I should render myself unworthy not only of the trust reposed in me, but of the society of my fellow subjects, by incurring her highest displeasure. If I have tired you by a long speech, I shall make amends, by putting you to the trouble of a very short answer.

"Will you support her majesty's government in the manner she has been pleased to direct, or are you resolved that burden shall lie still upon the governor, who cannot accuse himself of any thing that may have deserved this treatment at your hands?

"Will you take care of the debts of the government? or, to increase my sufferings, must I continue under the torture of the daily cries of such as have just demands upon you, and are in misery, without the power of giving them any hopes of relief?

"Will you take more effectual care of your own safety, in that of your frontiers; or are you resolved for the future to rely upon the security of an open winter, and the caprice of your savage neighbours? I shall be very sorry if this plainness offends you. I judge it necessary towards the establishing and cultivating a good understanding betwixt us. I hope it will be so construed, and wish heartily it may have that effect."

Perplexed with this remarkable speech, the assembly, after a few days, concluded that as his excellency had prorogued them in February, while he was at Burlington, in the province of New Jersey, they could not sit and act as a house; upon which, they were the same day dissolved.

The five Indian sachems, carried to England by Colonel Schuyler, having seen all the curiosities in London, and been much entertained by many persons of distinction, returned to Boston with Commodore Martin and Colonel Nicholson; the latter of whom commanded the forces designed against Port Royal and the coast of Nova Scotia. In this enterprise the New England colonies, agreeable to their wonted courage and loyalty, lent their assistance; and the reduction of the garrison, which was then called Annapolis Royal, was happily completed on the 2d of October, 1710. Animated by this and some other successes in Newfoundland, Nicholson again urged the prosecution of the scheme for the reduction of Canada; which having been strongly recommended by the Indian chiefs, as the only

effectual means to secure the northern colonies, was now again resumed.

Towards the execution of this project, 5,000 troops from England and Flanders were sent over under the command of Brigadier Hill, the brother of Mrs. Masham, the queen's new confidant, on the disgrace of the duchess of Marlborough. The fleet of transports, under the convoy of Sir Hovenden Walker, arrived after a month's passage at Boston, on the 4th of June, 1711. The provisions with which they expected to be supplied there being not provided, the troops landed. Nicholson, who was to command the land forces, came immediately to New York, where Mr. Hunter convened the assembly on the 2d of July. The re-election of the same members who had served in the last, was a sufficient proof of the general aversion to the establishment of a revenue. Robert Livingston, junior, who married the only daughter of Col. Schuyler, came in for Albany; and together with Mr. Morris, who was again chosen for the borough of West Chester, joined the governor's interest. Brigadier Hunter informed the assembly of the intended expedition, and the arrival of the fleet and forces; that the quota of this province, settled by the council of war at New London, was 600 private sentineils and their officers; besides which, he recommended their making provision for building batteaus, transporting the troops and provisions, subsisting the Indians, and for the contingent charges; nor did he forget to mention the support of government and the public debts.

The house was so well pleased with the design upon Canada, that they voted an address of thanks to the queen, and sent a committee to Nicholson, to congratulate his arrival, and make an honourable acknowledgment of his "sedulous application to her majesty for reducing Canada." In a few days time an act was passed for raising forces, and the assembly by a resolution, according to the governor's advice, restricted the price of provisions to certain particular sums. Bills of credit, for forwarding the expedition, were now also struck to the amount of 10,000*l.*, to be sunk in five years, by a tax on estates real and personal. After these supplies were granted, the governor prorogued the assembly, though nothing was done relating to the ordinary support of government.

While these preparations were making at New York, the fleet, consisting of twelve men of war, forty transports, and six store ships, with forty horses, a fine train of artillery and all manner of warlike stores, sailed for Canada from Boston on the 30th of July; and about a month afterwards Nicholson appeared at Albany, at the head of an army of 4,000 men, raised in New York, New Jersey, and Connecticut: the several regiments being commanded by Colonel Ingoldsby, Colonel Whiting, and Colonel Schuyler, the latter of whom procured 600 of the five nations to join the army.

The French in Canada were not unapprised of these designs. Vaudreuil, the governor-general, sent his orders from Montreal, to the Sieur De Beaucourt, to hasten the works he was about at Quebec, and commanded that all the regulars and militia should be held in readiness to march on the first warning. Four or five hundred Indians, of the more distant nations, arrived at the same time at Montreal, with Messieurs St. Pierre and Tonti, who, together with the Caughnauaga proselytes, took up the hatchet in favour of the French. Vaudreuil, after dispatching several Indians and two missionaries among the five nations, to detach them from

the interest of New York, went to Quebec, which Beaucourt the engineer had sufficiently fortified to sustain a long siege. All the principal posts below the city, on both sides of the river, were prepared to receive the British troops in case of their landing. On the 14th of August, Sir Hovenden Walker arrived with the fleet in the mouth of St. Lawrence river, and fearing to lose the company of the transports, the wind blowing fresh at north-west, he put into Gaspy bay, and continued 'here till the 20th of the same month. Two days after he sailed from thence, the fleet was in the utmost danger, for they had no soundings, were without sight of land, the wind high at east-south-east, and the sky darkened by a thick fog. In these circumstances the fleet brought to by the advice of the pilots, who were of opinion that if the ships lay with their heads to the southward, they might be driven by the stream into the midst of the channel; but instead of that, in two hours after they found themselves on the north shore among rocks and islands, and upon the point of being lost. The men of war escaped, but eight transports, containing 800 souls, officers, soldiers, and seamen, were cast away. Two or three days being spent in recovering what they could from the shore, it was determined, at a consultation of sea officers, to return to some bay or harbour, till a further resolution could be taken. On the 14th of September they arrived at Spanish river bay, where a council of war, consisting of land and sea officers, considering that they had but ten weeks provision, and judging that they could not depend upon a supply from New England, unanimously concluded to return home without making any further attempts; and they accordingly arrived at Portsmouth on the 9th of October, when the *Edgar*, a 70 gun ship, was blown up, having on board above 400 men, besides many persons who came to visit their friends.

As soon as the Marquis de Vaudreuil, by the accounts of the fishermen and two other ships, had reason to suspect that our fleet was returned, he went to Chambly, and formed a camp of 3,000 men to oppose Nicholson's army, intended to penetrate Canada at that end. But he was soon informed that our troops were returned, upon the news of the disaster which had befallen the fleet, and that the people of Albany were in the utmost consternation.

Apprehensive that the enemy would fall upon the borders, as they afterwards really did, in small parties, upon the miscarriage of the enterprise, Governor Hunter pressed the assembly, in autumn, to continue a number of men in pay the ensuing winter, and to repair the out-forts. After the house had passed several votes to this purpose his excellency, during the session, went up to Albany to withdraw the forces of the colony, and give orders for the necessary repairs.

The public debts, by this unfortunate expedition, were become greatly enhanced, and the assembly at last entered upon measures for the support of the government, and sent up to the council several bills for that purpose. The latter attempted to make amendments, which the other would not admit, and a warm controversy arose between these two branches of the legislature. The council assigned instances that amendments had formerly been allowed; and, besides this argument, drawn from precedent, insisted that they were a part of the legislature, constituted as the assembly were "by the mere grace of the crown;" adding, that the lords of trade had determined the matter in their favour. The house,

nevertheless, adhered to their resolutions, and answered in these words:

"It is true, the share the council have (if any) in the legislation, does not flow from any title they have from the nature of that board, which is only to advise; or from their being another distinct state, or rank of people in the constitution, which they are not, being all commons; but only from the mere pleasure of the prince signified in the commission. On the contrary, the inherent right the assembly have to dispose of the money of the freemen of this colony does not proceed from any commission, letters patent, or other grant from the crown; but from the free choice and election of the people, who ought not to be divested of their property (nor justly can) without their consent. Any former condescensions, of other assemblies, will not prescribe to the council a privilege to make any of those amendments, and therefore they have it not. If the lords commissioners for trade and plantations did conceive no reason why the council should not have right to amend money bills, this is far from concluding there are none. The assembly understand them very well, and are sufficiently convinced of the necessity they are in, not to admit of any encroachment so much to their prejudice."

Both houses adhered obstinately to their respective opinions: in consequence of which, the public debts remained unpaid, though his excellency could not omit passing a bill for paying to himself 3,750 ounces of plate.

Upon the return of the fleet, Dudley, Saltonstall, and Cranston, the governors of the eastern colonies, formed a design of engaging the five nations in a rupture with the French, and wrote on that head to Mr. Hunter; who, suspicious that his assembly would not approve of any project that might increase the public debts, laid their letter before the house; and, according to his expectations, they declared against the scheme.

About this time Colonel Hunter, by the advice of his council, began to exercise the office of chancellor, having, on the 4th of October, appointed Messrs Van Dam and Philipse, masters, Mr. Whileman, register, Mr. Harrison, examiner, and Messrs. Sharpas and Broughton, clerks. A proclamation was then issued, to signify the sitting of the court on Thursday in every week. This gave rise to these two resolutions of the house.

"Resolved, that the erecting a court of chancery, without consent in general assembly, is contrary to law, without precedent, and of dangerous consequence to the liberty and property of the subjects.

"That the establishing fees, without consent in general assembly, is contrary to law." The council made these votes the subject of part of a long representation, which they shortly after transmitted to the lords of trade, who, in a letter to the governor in answer to it, approved of his erecting a court of equity, and blamed the assembly, adding, "That her majesty has an undoubted right of appointing such, and so many courts of judicature in the plantations, as she shall think necessary for the distribution of justice."

At the next meeting, in May, 1712, Colonel Hunter strongly recommended the public debts to the consideration of the assembly, informing them, that the lords of trade had signified their opinion, with respect to the amending money bills, in favour of the council. The house neglected the matters laid before them, and the governor broke up the sessions, by a short prorogation of three days. After

which they soon passed an act for paying his excellency 8,025 ounces of plate. Public affairs never wore a more melancholy aspect than at this juncture.

Among the five nations, many emissaries from the French were daily seducing them from the British interest, and the late ill success gave such a powerful influence to their solicitations, that the Indians, even at Catt's Kill, sent a belt of wampum to those in Dutchess county to prepare for a war. The Senneecas and Shawanias were also greatly disaffected, and it was generally apprehended, that they would fall upon the inhabitants along Hudson's river. An invasion was strongly suspected by sea on the city of New York, where they had been alarmed, in April, by an insurrection of the negroes; who, in execution of a plot to set fire to the town, had burnt down a house in the night, and killed several people who came to extinguish the fire, for which nineteen of them were afterwards executed. But distressed as the colony then was, the assembly were inflexibly averse to the establishment of a revenue, which had formerly been wickedly misapplied and exhausted. At the ensuing session, in the fall, Col. Hunter proposed a scheme to the assembly, which was, in substance, that the receiver-general should give security, residing in the colony, for the due execution of his office; and every quarter account, to the governor and council, for the sums he might receive. That the creditors of the government should, every three months, deliver in their demands to the governor and council; when, if that quarter's revenue equalled the amount of such debts, the governor, by the advice of council, should draw for it: but if the revenue for that quarter should fall short of the governor's demands, then the warrants were to be drawn for so much only as remained, and the creditors should afterwards receive new drafts for their balances in the next quarter. That no warrant should be issued, until the quarterly account of the revenue was given in; but that then they should be paid in course, and an action of debt be given against the receiver-general in case of refusal. That he should account also to the assembly when required, and permit all persons to have recourse to his books. The house turned a deaf ear to this plausible project, and, displeased with a letter from the lords of trade favouring the council's claim to amend money bills, they agreed upon an address to the queen, protesting their willingness to support her government, complaining of misapplications in the treasury, intimating their suspicions that they were misrepresented, and praying an instruction to the governor to give his consent to a law, for supporting an agent to represent them at the court of Great Britain. Provoked by this conduct, and to put an end to the disputes subsisting between the two houses, his excellency dissolved the assembly.

Before the meeting of the next assembly the peace of Utrecht was concluded, on the 31st of March, 1713,—a peace, in the judgment of many, dishonourable to Great Britain, and injurious to her allies. We shall only merely refer to it with relation to Indian affairs. Lord Bellamont, after the peace at Ryswick, contended with the governor of Canada, that the five nations ought to be considered as subjects of the British crown, and the point was disputed even after the death of Count Frontenac. It does not appear that any decision of that matter was made between the two crowns, till the treaty of Utrecht, the 15th article of which is in these words:

"The subjects of France inhabiting Canada, and others, shall hereafter give no hindrance or molest-

ation to the five nations, or cantons of Indians, subject to the dominion of Great Britain, nor to the other nations of America who are friends to the same. In like manner, the subjects of Great Britain shall behave themselves peaceably towards the Americans who are subjects or friends to France; and on both sides they shall enjoy full liberty of going and coming on account of trade. Also the natives of these countries shall, with the same liberty, resort, as they please, to the British and French colonies, for promoting trade on one side and the other, without any molestation or hindrance, either on the part of the British subjects, or of the French. But it is to be exactly and distinctly settled by commissaries, who are, and who ought to be accounted, the subjects of Britain or of France."

In consequence of this treaty, the British crown became entitled, at least for any claim that could justly be interposed by the French, to the sovereignty over the country of the five nations.

Brigadier Hunter was disappointed in his expectations upon the late dissolution; for though the elections were very hot, and several new members came in, yet the majority were in the interest of the late assembly, and on the 27th of May, 1713, chose Mr. Nicoll into the chair. The governor spoke to them with great plainness, informing them that it would be in vain to endeavour to lodge the money allotted for the support of government in any other than the hands of the queen's officers. "Nevertheless (says he) if you are so resolved, you may put the country to the expense of a treasurer, for the custody of money raised for extraordinary uses." He added, that he was resolved to pass no law, till provision was made for the government. The members were therefore reduced to the dilemma of passing a bill for that purpose, or breaking up immediately. They chose the former, and the governor gave his assent to that, and an excise bill on strong liquors, producing to the treasury about 1,000*l.* per annum. After a short recess, several other laws were enacted in the autumn. But the debts of the government still remained unnoticed, till the summer of the year 1714. A long session was then almost entirely devoted to that single affair. Incredible were the numbers of the public creditors. New demands were every day made; amounting to near 28,000*l.* To pay this prodigious sum, recourse was had to the circulation of bills of credit to that value. These were lodged in the hands of the province treasurer, and issued by him only, according to the directions of the act.

The news of the queen's death arriving in the ensuing autumn, a dissolution ensued; and a new house met in May, 1715, which continued only to the 21st of July. For the governor being now determined to subdue those whom he could not allure, again dissolved the assembly. He succeeded in his design; for though Mr. Nicoll was re-elected into the chair on the 9th of June, 1716, yet we plainly perceive, by the harmony introduced between the several branches of the legislature, that the majority of the house were now in the interest of the governor.

An incontestible evidence of their good understanding appeared at the session in autumn, 1717 when the governor informed them of a memoria which had been sent home, reflecting upon his administration. The house immediately voted an address to him, which was conceived in terms of the utmost respect, testifying their abhorrence of the memorial, as a false and malicious libel. It was

supposed to be written by Mulford, a representative for Suffolk county, who always opposed the measures that were taken to preserve the friendship of the five nations, and foolishly projected a scheme to cut them off. It was printed in England, and delivered to the members at the door of the house of commons, but never had the author's intended effect.

It was at this meeting the council, on the 31st of October, sent a message by Mr. Alexander, then deputy secretary to the house, desiring them "to appoint proper persons, for running the division line between this colony and the province of New Jersey, his excellency being assured the legislature of the province of New Jersey will bear half the expense thereof." The assembly had a bill before them at that time, which afterwards passed into a law, for the payment of the remaining debts of the government, amounting to many thousand pounds; in which, after a recital of the general reasons for ascertaining the limits between New York and New Jersey on the one side, and Connecticut on the other, a clause was added to defray the expense of those services. Seven hundred and fifty ounces of plate were enacted "to be issued by warrant, under the hand and seal of the governor of this province for the time being, by and with the advice and consent of his majesty's council, in such parts and portions as shall be requisite for that service, when the survey, ascertaining, and running the said line, limit, and boundary, shall be begun and carried on by the mutual consent and agreement of his excellency and council of this province, and the proprietors of the soil of the said province of New Jersey." According to this law, the line "agreed on by the surveyors and commissioners of each colony was to be conclusive." Another sum was also provided by the same clause, for running the line between New York and Connecticut; and in the year 1719, an act was passed for the settlement of that limit.

Whether it was because Mr. Nicoll was disgusted with the governor's prevailing interest in the house, or owing to his infirm state of health, that he desired, by a letter to the general assembly, on the 18th of May, 1718, to be discharged from the speaker's place, is uncertain. His request was readily granted, and Robert Livingston, Esq., chosen in his stead. The concord between the governor and this assembly was now wound up to its highest pitch, as is evidenced by his last speech to the house on the 24th of June, 1719, and their address in answer to it.

"Gentlemen, I have now sent for you, that you may be witness to my assent to the acts passed by the general assembly in this session. I hope that what remains unfinished may be perfected by to-morrow, when I intend to put a close to this session.

"I take this opportunity also to acquaint you, that my late uncertain state of health, the care of my little family, and my private affairs, on the other side, have at last determined me to make use of that license of absence, which has been some time ago so graciously granted me; but with a firm resolution to return to you again, if it is his majesty's pleasure that I should do so, but if that proves otherwise, I assure you that whilst I live I shall be watchful and industrious to promote the interest and welfare of this country, of which I think I am under the strongest obligations for the future to account myself a countryman.

"I look with pleasure on the present quiet and flourishing state of the people here, whilst I reflect on that in which I found them at my arrival. As

the very name of party or faction seems to be forgotten, may it for ever lie buried in oblivion, and no strife ever happen amongst you, but that laudable emulation, who shall approve himself the most zealous servant and most dutiful subject of the best of princes, and most useful member of a well established and flourishing community, of which you, gentlemen, have given a happy example, which I hope will be followed by future assemblies. I mention it to your honour, and without ingratitude and breach of duty I could do no less."

Colonel Morris and the new speaker were the authors of the answer to this speech, though it was signed by all the members.

"Sir, when we reflect upon your past conduct, your just, mild, and tender administration, it heightens the concern we have for your departure, and makes our grief such as words cannot truly express. You have governed well and wisely, like a prudent magistrate—like an affectionate parent; and wherever you go, and whatever station the divine providence shall please to assign you, our sincere desires and prayers for the happiness of you and yours, shall always attend you.

"We have seen many governors, and may see more; and as none of those who had the honour to serve in your station, were ever so justly fixed in the affections of the governed, so those to come will acquire no mean reputation, when it can be said of them, their conduct has been like yours.

"We thankfully accept the honour you do us, in calling yourself our countryman; give us leave then to desire, that you will not forget this as your country, and if you can, make haste to return to it.

"But if the service of our sovereign will not admit of what we do earnestly desire, and his commands deny us that happiness; permit us to address you as our friend, and give us your assistance, when we are oppressed with an administration the reverse of yours."

Colonel Hunter departing the province, the chief command devolved, the 31st of July, 1719, on Peter Schuyler, Esq., then the eldest member of the board of council. As he had no interview with the assembly during his short administration, in which he behaved with great moderation and integrity; there is very little observable in his time, except a treaty at Albany with the Indians, for confirming the ancient league; and the transactions respecting the partition line between New York and New Jersey; concerning the latter of which the following is a summary.

The two provinces were originally included in the grant of King Charles to the Duke of York. New Jersey was afterwards conveyed by the duke to Lord Berkley and Sir George Carteret. This again, by a deed of partition, was divided into East and West Jersey, the former being released to Sir George Carteret, and the latter to the assigns of Lord Berkley. The line of division extended from Little Egg Harbour to the North Partition Point on Delaware river, and thus both those tracts became concerned in the limits of the province of New York. The original rights of Lord Berkley and Sir George Carteret were vested in two different sets, consisting each of a great number of persons, known by the general name of the proprietors of East and West Jersey, who, though they surrendered the powers of government to Queen Anne, in the year 1702, still retained their property in the soil. These were the persons interested against the claim of New York. It is agreed on all sides, that the deed to

New Jersey was to be first satisfied out of that great tract granted to the duke, and that the remainder was the right of New York. The proprietors insisted upon extending their northern limits to a line drawn from the latitude of  $41^{\circ} 40'$  on Delaware, to the latitude of  $41^{\circ}$  on Hudson's river; and alleged that before the year 1671, the latitude of  $41^{\circ}$  was reputed to be fourteen miles to the northward of Tappan Creek, part of those lands having been settled under New Jersey till 1684. They farther contended, that in 1684 or 1685, Dongan and Lawrie (the former governor of New York, and the latter of New Jersey) with their respective councils agreed, that the latitude on Hudson's river was at the mouth of Tappan Creek, and that a line from thence to the latitude of  $41^{\circ} 46'$  on Delaware should be the boundary line. In 1686, Robinson, Wells, and Keith, surveyors of the three several provinces, took two observations, and found the latitude of  $41^{\circ}$  to be  $1'$  and  $25''$  to the northward of the Yonker's mills, which is four miles and forty-five chains to the southward of the mouth of Tappan Creek. But against these observations the proprietors offered sundry objections. It was not pretended by any of the litigants, that a line according to the station settled by Dongan and Lawrie was actually run; so that the limits of these contending provinces must long have existed in the uncertain conjectures of the inhabitants of both; and yet the inconveniences of this unsettled state, through the infancy of the country, were very inconsiderable. In the year 1701, an act passed in New York relating to elections, which annexed Wagachemeck, and great and little Minisink, certain settlements near Delaware, to Ulster county. The intent of this law was to quiet disputes before subsisting between the inhabitants of those places, whose votes were required both in Orange and Ulster. The natural conclusion from hence is, that the legislature of New York then deemed those plantations not included within the New Jersey grant.

Such was the state of this affair till the year 1717, when provision was made by New York for running the line. The same being done in New Jersey the succeeding year, commissions for that purpose under the great seals of the respective colonies, were issued in May, 1719. The commissioners, by indenture dated the 26th of July, fixed the North Station Point on the northernmost branch of Delaware, called the Fish Kill; and from thence a random line was run to Hudson's river, terminating about five miles to the northward of the mouth of Tappan Creek. In August, the surveyors of East Jersey met for fixing the station on Hudson's river. All the commissioners not attending through sickness, nothing further was done. What had already been transacted, however, gave a general alarm to many persons interested in several patents under New York, who before imagined their rights extended to the southward of the random line. The New York surveyor afterwards declined proceeding in the work, complaining of faults in the instrument which had been used in fixing the North Station on Delaware. The proprietors, on the other hand, thought they answered his objections, and the matter rested without much contention till the year 1740. Frequent quarrels multiplying after that period, relating to the rights of soil and jurisdiction southward of the line in 1719, a probationary act was passed in New Jersey, in February, 1748, for running the line ex-parte, if the province of New York refused to join in the work. The New York assembly soon after

directed their agent to oppose the king's confirmation of that act, and it was accordingly dropped, agreeably to the advice of the lords of trade, whose report of the 18th of July, 1753, on a matter of so much importance, it is thought right here to insert.

"To the king's most excellent majesty.

"May it please your majesty,—We have lately had under our consideration, an act passed in your majesty's province of New Jersey in 1747-8, entitled An act for running and ascertaining the line of partition and division betwixt this province of New Jersey, and the province of New York.

"And having been attended by Mr. Paris, solicitor in behalf of the proprietors of the eastern division of New Jersey, with Mr. Hume Campbell and Mr. Henley his counsel in support of the said act; and by Mr. Charles, agent for the province of New York, with Mr. Forrester and Mr. Pratt his counsel against the said act, and heard what each party had to offer thereupon; we beg leave humbly to represent to your majesty, that the considerations which arise upon this act are of two sorts, viz., such as relate to the principles upon which it is founded, and such as relate to the transactions and circumstances which accompany it.

"As to the first, it is an act of the province of New Jersey interested in the determination of the limits, and in the consequential advantages to arise from it.

"The province of New Jersey, in its distinct and separate capacity, can neither make nor establish boundaries: it can as little prescribe regulations for deciding differences between itself and other parties concerned in interest.

"The established limits of its jurisdiction and territory are such as the grants under which it claims have assigned. If those grants are doubtful, and differences arise upon the constructions, or upon the matters of them, we humbly apprehend that there are but two methods of deciding them; either by the concurrence of all parties concerned in interest, or by the regular and legal forms of judicial proceedings; and it appears to us, that the method of proceeding must be derived from the immediate authority of the crown itself, signified by a commission from your majesty under the great seal; the commission of subordinate officers and of derivative powers being neither competent nor adequate to such purposes; to judge otherwise would be, as we humbly conceive, to set up ex-parte determinations and incompetent jurisdictions in the place of justice and legal authority.

"If the act of New Jersey cannot conclude other parties, it cannot be effectual to the ends proposed; and that it would not be effectual to form an absolute decision in this case, the legislature of that province seems sensible, whilst it endeavours to leave to your majesty's determination the decision of one point relative to this matter, and of considerable importance to it; which power your majesty cannot derive from them, without their having the power to establish the thing itself, without the assistance of your majesty.

"As we are of opinion, that the present act, without the concurrence of other parties concerned in interest, is unwarrantable and ineffectual; we shall in the next place consider what transactions and proceedings have passed, towards obtaining such concurrence.

"The parties interested, are your majesty and the two provinces of New York and New Jersey. Your majesty is interested with respect to your sovereign ty,

seigneurie, and property; and the said provinces with respect to their government and jurisdiction.

“ With regard to the transactions on the part of New York, we beg leave to observe, that whatever agreements have been made formerly between the two provinces for settling their boundaries; whatever acts of assembly have passed, and whatever commissions have been issued by the respective governors and governments; the proceedings under them have never been perfected, the work remains unfinished, and the disputes between the two provinces subsist with as much contradiction as ever; but there is a circumstance that appears to us to have still more weight, namely, that those transactions were never properly warranted on the part of the crown: the crown never participated in them, and therefore cannot be bound with respect to its interests by proceedings so authorised.

“ The interest which your majesty has in the determination of this boundary, may be considered in three lights: either as interests of sovereignty, respecting mere government; of seigneurie, which respect escheats, and quit-rents; or of property, as relative to the soil itself; which last interest takes place in such cases, where either your majesty has never made any grants of the soil, or where such grants have, by escheats, reverted to your majesty.

“ With regard to the first of these interests, viz. that of sovereignty, it has been alleged to us in support of the act, that it is not materially affected by the question, as both provinces are under your majesty's immediate direction and government; but they stand in a very different light with respect to your majesty's interest in the quit-rents and escheats; in both which articles the situation of the two provinces appears to us to make a very material alteration; for although the province of New Jersey is not under regulations of propriety or charter with respect to its government, yet it is a proprietary province with respect to the grant and tenure of its territory; and consequently, as New York is not in that predicament, the determination of the boundary in prejudice to that province, will affect your majesty's interest with respect to the tenure of such lands as are concerned in this question; it being evident, that whatever districts are supposed to be included in the limits of New Jersey, will immediately pass to the proprietors of that province, and be held of them, by which means your majesty would be deprived of your escheats, and the quit-rents would pass into other hands.

“ To obviate this objection, it has been alleged, that the crown has already made absolute grants of the whole territory that can possibly come in question under the denomination of this boundary, and reserved only trifling and inconsiderable quit-rents on those grants. But this argument does not seem to us to be conclusive, since it admits an interest in your majesty, the greatness or smallness of which is merely accidental; and therefore does not affect the essence of the question: and we beg leave to observe, that in the case of exorbitant grants with inconsiderable quit-rents; and where consequently it may reasonably be supposed, that the crown has been deceived in such grants by its officers; your majesty's contingent right of property in virtue of your seigneurie, seems rather to be enlarged than diminished.

“ This being the case, it appears to us, that Governor Hunter ought not to have issued his commission for running the line above-mentioned, without having previously received the royal direction and

instruction for that purpose; and that a commission issued without such authority can be considered, with respect to the interests of the crown, in no other light than as a mere nullity: and even with respect to New York, we observe, that the said commission is questionable, as it does not follow the directions of the above-mentioned act, passed in 1717, which declares, that the commission to be issued, shall be granted under the joint authority of the governor and council of that province.

“ But it has been further urged, that the crown has since confirmed these transactions, either by previous declarations or by subsequent acquiescence, and consequently participated in them, so far as to conclude itself: we shall therefore, in the next place, beg leave to consider the circumstances urged for this purpose.

“ It has been alleged, that the crown, by giving consent to the aforesaid act, passed in New York in 1717, for paying and discharging several debts due from that colony, &c., concluded and bound itself, with respect to the subsequent proceedings had under the commission issued by Governor Hunter; but the view and purport of that act appears to us so entire, and so distinctly formed for the purpose of raising money and establishing funds; so various and so distinct from any consideration of the disputes subsisting in the two provinces, with respect to the boundaries; that we cannot conceive a single clause in so long and so intricate an act, can be a sufficient foundation to warrant the proceedings of Governor Hunter subsequent to it, without a special authority from the crown for that purpose; and there is the more reason to be of this opinion, as the crown, by giving its assent to that act, can be construed to have assented only to the levying money for a future purpose; which purpose could not be effected by any commission but from itself; and therefore can never be supposed to have, thereby, approved a commission from another authority, which was at that time already issued, and carrying into execution, previous to such assent.

“ We further beg leave humbly to represent to your majesty, that the line of partition and division between your majesty's province of New York and colony of Connecticut, having been run and ascertained, pursuant to the directions of an act passed at New York for that purpose, in the year 1719, and confirmed by his late majesty in 1723; the transactions between the said province and colony, upon that occasion, have been alleged to be similar to, and urged as, a precedent, and even as an approbation, of the matter now in question: but we are humbly of opinion, that the two cases are materially, and essentially, different. The act passed in New York, in 1719, for running and ascertaining the lines of partition and division between that colony and the colony of Connecticut, recites, that in the year 1683, the governor and council of New York, and the governor and commissioners of Connecticut, did, in council, conclude an agreement concerning the boundaries of the two provinces; that, in consequence of this agreement, commissioners and surveyors were appointed on the part of each government, who did actually agree, determine, and ascertain, the lines of partition; marked out a certain part of them, and fixed the point from whence the remaining part should be run: that the several things agreed on and done by the said commissioners, were ratified by the respective governors entered on record in each colony, in March, 1700 approved and confirmed by order of King William

the Third, in his privy council; and by his said majesty's letter to his governor of New York. From this recital it appears to us, that those transactions were not only carried on with the participation, but confirmed by the express act and authority of the crown; and that confirmation made the foundation of the act passed, by New York, for settling the boundaries between the two provinces; of all which authority and foundation the act, we now lay before your majesty, appears to us to be entirely destitute.

"Upon the whole, as it appears to us, that the act in question cannot be effectual to the ends proposed; that your majesty's interest may be materially affected by it, and that the proceedings on which it is founded were not warranted in the first instance by the proper authority, but carried on without the participation of the crown: we cannot think it advisable to lay this act before your majesty, as fit to receive your royal approbation.

"Which is most humbly submitted,  
 "Dunk Halifax,  
 "J. Grenville,  
 "James Oswald,  
 "Andrew Stone."

Whitchall,  
 July 18, 1753.

*From the year 1720 to the commencement of the administration of Colonel Cosby.*

William Burnet, Esq. took upon him the government of this province, on the 17th of September, 1720. The council named in his instructions were, Colonel Schuyler, Colonel Depeyster, Captain Walter, Colonel Beekman, Mr. Van Dam, Colonel Heathcote, Mr. Barbarié, Mr. Philipse, Mr. Byerly, Mr. Clarke, Dr. Johnston, Mr. Harrison.

Mr. Burnet, as has been already observed, in the account of his government of Massachusetts, was the son of the famous Bishop Burnet. His fortune was very inconsiderable, for he suffered much in the South Sea scheme. While in England, he had the office of comptroller of the customs at London, which he resigned to Brigadier Hunter, as the latter, in his favour, did the government of this and the colony of New Jersey. Mr. Burnet's acquaintance with that gentleman gave him an opportunity to obtain good intelligence both of persons and matters in the colony. The brigadier recommended all his old friends to the favour of his successor, and he made few changes amongst them. Colonel Schuyler and Mr. Philipse were, indeed, removed from the council board by his representations, for their opposing, in council, the continuance of the assembly, after his arrival. Mr. Morris, the chief justice, was his principal confidant. Dr. Colden and Mr. Alexander, two Scotch gentlemen, had the next place in his esteem. They were both men of learning, good morals, and solid parts. The former was well acquainted with the affairs of the province, and particularly those which concerned the French in Canada and the Indian allies. The latter was bred to the law, and though no speaker, at the head of his profession for sagacity and penetration; and in application to business no man could surpass him. Nor was he unacquainted with the affairs of the public, having served in the secretary's office, the best school in the province for instruction in matters of government; because the secretary enjoyed a plurality of offices, conversant with all the business of the colony. Both those gentlemen were, by Mr. Burnet, soon raised to the council-board, as were also Mr. Morris, jun., Mr. Van Horn, whose daughter he married, and Mr. Kennedy, who suc-

ceeded Byerly, both at the council-board and in the office of receiver-general.

Of all the governors, none had such extensive and just views of our Indian affairs, and the dangerous neighbourhood of the French, as Governor Burnet, in which Mr. Livingston was his principal assistant. His attention to these matters appeared at the very commencement of his administration; for in his first speech to the assembly, the autumn after his arrival, he laboured to implant the same sentiments in the breasts of the members; endeavouring to alarm their fears, by the daily advances of the French, their possessing the main passes, seducing the Indian allies, and increasing their new settlements in Louisiana.

Chief justice Morris, whose influence was very great in the house, drew the address in answer to the governor's speech, which contained the following passage, manifesting the confidence they reposed in him: "We believe that the son of that worthy prelate, so eminently instrumental under our glorious monarch, William the Third, in delivering us from arbitrary power, and its concomitants, popery, superstition, and slavery; has been educated in, and possesses, those principles that so justly recommended his father to the council and confidence of protestant princes; and succeeds our former governor, not only in power, but inclination to do us good."

From an assembly, impressed with such favourable sentiments, his excellency had the highest reason to expect a submissive compliance with every thing recommended to their notice. The public business proceeded without suspicion or jealousy, and nothing intervened to disturb the tranquillity of the political state. Among the most remarkable acts passed this session, we may reckon that, for a five years' support; another for laying a duty of two per cent. prime cost on the importation of European goods, which was soon after repealed by the king; and a third, for prohibiting the sale of Indian goods to the French. The last of these was a favourite act of the governor's, and though a law very advantageous to the province, became the source of an unreasonable opposition against him, which continued through his whole administration. From the conclusion of the peace of Utrecht, a great trade was carried on between Albany and Canada, for goods saleable among the Indians. The chiefs of the confederates wisely foresaw its ill consequences, and complained of it to the commissioners of Indian affairs, who wrote to Mr. Hunter, acquainting him of their dissatisfaction. The letter was laid before the house, but no effectual step taken to prevent the mischief, till the passing of this act, which subjected the traders to a forfeiture of the effects sold, and the penalty of 100*l*. Mr. Burnet's scheme was to draw the Indian trade into the colony's power; to obstruct the communication of the French with the Indian allies, which gave them frequent opportunities of seducing them from their fidelity; and to regain the Caghnugas, who became interested in their disaffection, by being the carriers between Albany and Montreal. Among those who were more immediately prejudiced by this new regulation, the importers of those goods from Europe were the chief; and hence the spring of their opposition to the governor. Frequent reference being made to "commissioners of Indian affairs," it is necessary to describe the nature of their office. As the governors resided at New York, it became necessary that some persons should be commissioned, at Albany, to re-

ceive intelligence from the Indians, and treat with them upon emergencies, which gave rise to the office of "commissioners of Indian affairs," who in general transacted all such matters as might be done by the governor. They received no salaries, but considerable sums were deposited in their hands for occasional presents. There are regular minutes of their transactions from the year 1675. These were in separate quires, till 1751, when they were bound up in four large volumes, in folio. And in them all the Indian treaties are entered. The books were kept by a secretary, commissioned in England. The commandant at Oswego was generally a commissioner. The office would probably have been more advantageous if the commissioners had not been traders, than which nothing is more ignoble in the judgment of the Indians.

All possible arts were used, both here and in England, to preserve the good temper of the assembly. Brigadier Hunter gave the ministry such favourable accounts of the members, that Colonel Schuyler, during his presidentship, had orders from Mr. Secretary Craggs, neither to dissolve them himself, nor permit them to be dissolved; and at the spring session, in the year 1721, Mr. Burnet informed them, that his continuance of them was highly approved at home. Horace Walpole, the auditor-general, who had appointed Mr. Clarke for his deputy, thought this a favourable conjuncture for procuring five per cent. out of the treasury. But the house were averse to his application, and on the 2d of June, Abraham Depeyster, jun., was appointed treasurer by the speaker's warrant, with the consent of the governor, in the room of his father, who was infirm; upon which he entered into a recognizance of 5,000*l.* to the king, before a judge of the supreme court, for the faithful execution of his trust, which was lodged in the secretary's office. The house, at the same time, in an address, declared their willingness that the treasurer should account; but utterly refused to admit of any draughts upon the treasury for the auditor-general, who was constrained to depend entirely upon the revenue, out of which he received about 200*l.* per annum.

Mr. Burnet being well acquainted with the geography of the country, wisely concluded, that it was to the last degree necessary to get the command of the great lake Ontario, as well for the benefit of the trade, and the security of the friendship of the five nations, as to frustrate the French designs, of confining the English colonies to narrow limits along the sea coast, by a chain of forts on the great passes from Canada to Louisiana. Towards the subversion of this scheme, he began the erection of a trading house at Oswego, in the country of the Senneecas, in 1722; and recommended a provision for the residence of trusty persons among them, and the Onondagas, which last possessed the centre of the five cantons. This year was remarkable for a congress of several governors and commissioners, on the renewal of the ancient friendship with the Indians at Albany. Mr. Burnet prevailed upon them to send a message to threaten the Eastern Indians with a war, unless they concluded a peace with the English, who were very much harassed by their frequent irruptions. On the 20th of May, in the year following, the confederates were augmented by their reception of above eighty Nicariagas, besides women and children, as they had been formerly, by the addition of the Tuscaroras. The country of the Nicariagas was on the north side of Missilimakinack, but the Tuscaroras possessed a tract of land near

the sources of James's river, in Virginia, from whence the encroachments of the English induced them to remove, and settle near the south-east end of the Oneyda lake.

The strict union subsisting between the several branches of the legislature, gave a handle to Mr. Burnet's enemies to excite a clamour against him. Jealousies were industriously sown in the breasts of the people. The continuance of an assembly, after the accession of a new governor, was represented as an anti-constitutional project; and though the affairs of the public were conducted with wisdom and spirit, many were so much imposed upon, that a rupture between the governor and the assembly was thought to be absolutely necessary for the weal and safety of the community. But this was not the only stratagem of those who were dissatisfied at the prohibition of the French trade. The London merchants were induced to petition the king for an order to his governor, prohibiting the revival of the act made against it, or the passing any new law of that tendency. The petition was referred to the board of trade, and backed before their lordships, with suggestions of the most notorious falsehoods. The lords of trade prudently advised, that no such directions should be sent to Mr. Burnet till he had an opportunity of answering the objections against the act. They were accordingly sent over to him, and he laid them before his council. Dr. Colden and Mr. Alexander exerted themselves in a memorable report in answer to them, which drew upon them the resentment of several merchants who had first excited the London petition, and laid the foundation for a variance between their families, which manifested itself on many occasions. As this report illustrates the state of the colony at this period, it is introduced.

"May it please your excellency.

"In obedience to your excellency's commands, in council, the 29th of October, referring to us a petition of several merchants in London, presented to the king's most excellent majesty, against renewing an act passed in this province, entitled, 'An act for encouragement of the Indian trade, and rendering it more effectual to the inhabitants of this province, and for prohibiting the selling of Indian goods to the French.' As likewise the several allegations of the said merchants before the right honourable the lords of trade and plantations, we beg leave to make the following remarks.

"In order to make our observations the more distinct and clear, we shall gather together the several assertions of the said merchants, both in their petition, and delivered verbally before the lords of trade, as to the situation of this province, with respect to the French and Indian nations; and observe on them, in the first place, their being the foundation on which all their other allegations are grounded. Afterwards we shall lay before your excellency what we think necessary to observe on the other parts of the said petition, in the order they are in the petition, or in the report of the lords of trade.

"In their geographical accounts they say, 'Besides the nations of Indians that are in the English interest, there are very many nations of Indians, who are at present in the interest of the French, who lie between New York and the nations of Indians in the English interest. The French and their Indians would not permit the English Indians to pass over by their forts. The said act restrains them (the five nations) from a free commerce with the inhabitants of New York.'

“ ‘The five Indian nations are settled upon the banks of the river St. Lawrence, directly opposite to Quebec, two or three hundred leagues distant from the nearest British settlements in New York.

“ ‘They (the five nations of Indians) were two or three hundred leagues distant from Albany; and that they could not come to trade with the English, but by going down the river St. Lawrence, and from thence through a lake which brought them within eighteen leagues of Albany.’

“These things the merchants have thought it safe for them, and consistent with their duty to his sacred majesty, to say in his majesty’s presence, and to repeat them afterwards before the right honourable the lords of trade, though nothing can be more directly contrary to the truth. For there are no nations of Indians between New York and the nations of Indians in the English interest, who are now six in number, by the addition of the Tuscaroras. The Mohawks (called Annies by the French), one of the five nations, live on the south side of a branch of Hudson’s river, (not on the north side as they are placed in the French maps) and but forty miles directly west from Albany, and within the English settlements; some of the English farms, upon the same river, being thirty miles further west. The Oneydas (the next of the five nations) lie likewise west from Albany, near the head of the Mohawks river, about 100 miles from Albany. The Onondagas lie about 130 miles west from Albany; and the Tuscaroras live partly with the Onondagas. The Cayugas are about 160 miles from Albany; and the Senneecas (the furthest of all these nations) are not above 240 miles from Albany, as may appear from Mr. D’Isle’s map of Louisiana, who lays down the five nations under the name of Iroquois; and goods are daily carried from this province, to the Senneecas, as well as to those nations that lie nearer, by water all the way, except three miles (or in the dry season five miles), where the traders carry over land between the Mohawks river and the Wood Creek, which runs into the Oneydas lake, without going near either St. Lawrence river, or any of the lakes upon which the French pass, which are entirely out of their way.

“The nearest French forts or settlements to Albany, are Chambly and Montreal, both of them lying about north and by east from Albany, and are near 200 miles distant from it. Quebec lies about 380 miles north-east from Albany. So far is it from being true, that the five nations are situated upon the banks of the river St. Lawrence, opposite to Quebec, that Albany lies almost directly between Quebec and the five nations. And to say that these Indians cannot come to trade at Albany, but by going down the river St. Lawrence, and then into a lake eighteen leagues from Albany (we suppose they mean lake Champlain) passing by the French forts, is to the same purpose as if they should say, that one cannot go from London to Bristol, but by way of Edinburgh.

“Before we go on to observe other particulars, we beg leave further to remark, that it is so far from being true, that the Indians in the French interest lie between New York and our five nations of Indians; that some of our nations of Indians lie between the French and the Indians, from whence the French bring the far greatest quantity of their furs; for the Senneecas (whom the French call Sonontouons) are situated between lake Erie and Cadaracqui lake, (called by the French Ontario) near the great fall of Niagara, by which all the Indians that live round

lake Erie, round the lake of the Hurons, round the lake of the Illinois, or Michigan, and round the great upper lake, generally pass in their way to Canada. All the Indians situated upon the branches of the Mississippi, must likewise pass by the same place, if they go to Canada. And all of them likewise, in their way to Canada, pass by our trading-place upon the Cadaracqui lake, at the mouth of the Onondaga river. The nearest and safest way of carrying goods upon the Cadaracqui lake, towards Canada, being along the south side of that lake, (near where our Indians are settled, and our trade of late is fixed) and not by the north side and Cadaracqui, or Frontenac fort, where the French are settled.

“Now that we have represented to your excellency, that not one word of the geography of these merchants is true, upon which all their reasoning is founded; it might seem needless to trouble your excellency with any further remarks, were it not to show with what earnestness they are promoting the French interest, to the prejudice of all his majesty’s colonies in North America, and that they are not ashamed of asserting any thing for that end, even in the royal presence.

“First they say, ‘that by the act passed in this province, entitled, An act for the encouragement of the Indian trade, &c., all trade whatsoever is prohibited in the strictest manner, and under the severest penalties, between the inhabitants of New York government, and the French in Canada.’

“This is not true; for only carrying goods to the French, which are proper for the Indian trade, is prohibited. The trade, as to other things, is left in the same state it was before that act was made, as it will appear to any person that shall read it; and there are, yearly, large quantities of other goods, openly carried to Canada, without any hindrance from the government of New York. Whatever may be said of the severity and penalties in that act, they are found insufficient to deter some from carrying goods clandestinely to the French; and the legislature of this province are convinced, that no penalties can be too severe to prevent a trade, which puts the safety of all his majesty’s subjects of North America in the greatest danger.

“Their next assertion is, ‘All the Indian goods have by this act been raised 25% to 30% per cent.’ This is the only allegation in the whole petition that there is any ground for. Nevertheless, though the common channel of trade cannot be altered without some detriment to it in the beginning; we are assured from the custom-house books, that there has been every year, since the passing of this act more furs exported from New York, than in the year immediately before the passing of this act. It is not probable that the greatest difference between the exportation of any year before this act, and any year since, could so much alter the price of beaver, as it is found to be this last year. Beaver is carried to Britain from other parts besides New York, and it is certain that the price of beaver is not so much altered here by the quantity in our market, as by the demand for it in Britain. But as we cannot be so well informed here, what occasions beaver to be in greater demand in Britain, we must leave that to be enquired after in England. However, we are fully satisfied that it will be found to be for very different reasons from what the merchants allege.

“The merchants go on and say, ‘Whereas, on the other hand, this branch of the New York trade,

'by the discouragements brought upon it by this act, is almost wholly engrossed by the French, who have already by this act been encouraged to send proper European goods to Canada, to carry on this trade, so that should this act be continued, the New York trade, which is very considerable, must be wholly lost to us, and centre in the French. Though New York should not furnish them, the French would find another way to be supplied therewith, either from some other of his majesty's plantations, or it might be directly from Europe. Many of the goods, which the Indians want, being as easy to be had directly from France or Holland, as from Great Britain.'

"This is easily answered, by informing your excellency, that the principal of the goods proper for the Indian market, are only of the manufactures of Great Britain, or of the British plantations, viz., strouds, or stroud-waters, and other woollens, and rum. The French must be obliged to buy all their woollens (the strouds especially) in England, and thence carry them to France, in order to their transportation to Canada.

"The voyage to Quebec, through the bay of St. Lawrence, is well known to be the most dangerous of any in the world, and only practicable in the summer months. The French have no commodities in Canada, by reason of the cold and barrenness of the soil, proper for the West India markets; and therefore have no rum but by vessels from France, that touch at their islands in the West Indies. New York has, by reason of its situation, both as to the sea and the Indians, every way the advantage of Canada. The New York vessels make always two voyages in a year from England, one in summer, and another in winter, and several voyages in a year to the West Indies. It is manifest, therefore, that it is not in the power of the French to import any goods near so cheap to Canada, as they are imported to New York.

"But to put this out of all controversy, we need only observe to your excellency, that strouds (without which no considerable trade can be carried on with the Indians) are sold at Albany for 10*l.* a piece; they were sold at Montreal, before this act took place, at 13*l.* 2*s.* 6*d.*, and now they are sold there for 25*l.* and upwards; which is an evident proof, that the French have not in these four years time (during the continuance of this act), found out any other way to supply themselves with strouds; and likewise that they cannot trade without them, seeing they buy them at so extravagant a price.

"It likewise appears, that none of the neighbouring colonies have been able to supply the French with these goods, and those that know the geography of the country, know it is impracticable to do it at any tolerable rate, because they must carry their goods ten times further by land than we need to do.

"We are likewise assured, that the merchants of Montreal lately told Mr. Vaudreuil, their governor, that if the trade from Albany be not by some means or other encouraged, they must abandon that settlement. We have reason therefore to suspect, that these merchants (at least some of them) have been practised upon by the French agents in London; for no doubt, the French will leave no method untried to defeat the present designs of this government, seeing they are more afraid of the consequences of this trade between New York and the Indians, than of all the warlike expeditions that ever were attempted against Canada.

"But to return to the petitioners. 'They con-

ceive nothing can tend more to the withdrawing the affections of the five nations of Indians from the English interest, than the continuance of the said act, which in its effects restrains them from a free commerce with the inhabitants of New York, and may too probably estrange them from the English interest; whereas, by a freedom of commerce, and an encouraged intercourse of trade with the French and their Indians, the English interest might, in time, be greatly improved and strengthened.'

"It seems to us a strange argument to say, that an act, the whole purport of which is to encourage our own people to go among the Indians, and to draw the far Indians through our Indian country to Albany (and which has truly produced these effects) would, on the contrary, restrain them from a free commerce with the inhabitants of New York, and may too probably estrange them from the English interest; and therefore that it would be much wiser in us to make use of the French, to promote the English interest; and for which end, we ought to encourage a free intercourse between them and our Indians. The reverse of this is exactly true, in the opinion of our five nations; who, in all their public treaties with this government, have represented against this trade, as the building the French forts with English strouds; that the encouraging a freedom of commerce with our Indians, and the Indians round them, who must pass through their country to Albany, would certainly increase both the English interest and theirs, among all the nations to the westward of them; and that the carrying the Indian market to Montreal in Canada, draws all the far Indians thither.

"The last thing we have to take notice, is what the merchants asserted before the lords of trade, viz. 'That there has not been half the quantity of European goods exported since the passing of this act, that used to be.' We are well assured, that this is no better grounded than the above facts they assert with the same positiveness. For it is well known, almost to every person in New York, that there has not been a less, but rather a greater, quantity of European goods imported into this place, since the passing of this act, than was at any time before it, in the same space of time. As this appears by the manifests in the custom house here, the same may likewise be easily proved by the custom house books in London.

"As all the arguments of the merchants run upon the ill effects this act has had upon the trade, and the minds of the Indians, every one of which we have shewn to be asserted without the least foundation to support them; there nothing now remains, but to shew the good effects this act has produced, which are so notorious in this province, that we know not one person that now opens his mouth against the act.

"Before this act passed, none of the people of this province travelled into the Indian countries to trade. We have now above forty young men, who have been several times as far as the lakes trading, and thereby become well acquainted not only with the trade of the Indians, but likewise with their manners and languages; and those have returned with such large quantities of furs, that great numbers are resolved to follow their example; so that we have good reason to hope, that in a little time the English will draw the whole Indian trade of the inland countries to Albany, and into the country of the five nations. This government has built a pub

lic trading house upon Cataracqui lake, at Irondequat, in the Senneecas land, and another is to be built, next spring, at the mouth of the Onondagas river. All the far Indians pass by these places, in their way to Canada; and they are not above half so far from the English settlements as they are from the French.

"So far it is from being true what the merchants say, 'That the French forts interrupt all communication between the Indians and the English,' that if these places be well supported, as they easily can be from our settlements, in case of a rupture with the French it will be in the power of this province to intercept the greatest part of the trade between Canada and the Indians round the lakes and the branches of the Mississippi. Since this act passed, many nations have come to Albany to trade, in peace and friendship, whose names had not so much as been heard of among us. In the beginning of May, 1723, a nation of Indians came to Albany, singing and dancing, with their calumets before them, as they always do when they come to any place where they have not been before. We do not find that the commissioners of Indian affairs, were able to inform themselves what nation this was.

"Towards the end of the same month, eighty men, besides the women and children, came to Albany in the same manner. These had one of our five nations with them for an interpreter, by whom they informed the commissioners, that they were of a great nation, called Nehkereeages, consisting of six castles and tribes; and that they lived near a place, called by the French, Missimakinah, between the upper lake and the lake of the Hurons. These Indians not only desired a free commerce, but likewise to enter into a strict league of friendship with us and our six nations, that they might be accounted the seventh nation in the league; and being received accordingly, they left their calumet, as a pledge of their fidelity. In June another nation arrived, but from what part of the continent we have not learned.

"In July the Twightwies arrived, and brought an Indian interpreter of our nations with them, who said, that they were called by the French, Miamies, and that they lived upon one of the branches of the river Mississippi. At the same time some of the Tahsagrondie Indians, who live between lake Erie and the lake Hurons, near a French settlement, did come and renew their league with the English, nor durst the French hinder them. In July this year, another nation came, whose situation and name we know not; and in August and September several parties of the same Indians that had been here last year: but the greatest numbers of these far Indians have been met this year in the Indian country by our traders, every one of them endeavouring to get before another, in order to reap the profits of so advantageous a trade, which has all this summer long kept about forty traders constantly employed, in going between our trading places, in our Indian country, and Albany.

"All these nations of Indians, who came to Albany, said, that the French had told them many strange stories of the English, and did what they could to hinder their coming to Albany, but that they had resolved to break through by force. The difference on this score between the Tahsagrondie Indians and the French (who have a fort and settlement there, called by them Le Droit) rose to that height this summer, that Mr. Tonti, who commanded there, thought it proper to retire, and return to Canada with many of his men.

"We are, for these reasons, well assured, that this year there will be more beaver exported for Great Britain than ever was from this province in one year; and that if the custom-house books at London be looked into, it will be found, that there will be a far greater quantity of goods for the Indians (strouds especially) sent over next spring, than ever there was at any one time to this province. For the merchants here tell us, that they have at this time ordered more of these goods than ever was done at any one time before.

"These matters of fact prove, beyond contradiction, that this act has been of the greatest service to New York, in making us acquainted with many nations of Indians, formerly entirely unknown, and strangers to us; withdrawing them from their dependance upon the French, and uniting them to us and our Indians, by means of trade and mutual offices of friendship.

"Of what great consequence this may be to the British interest in general, as to trade, is apparent to any body. It is no less apparent likewise, that it is of the greatest consequence to the safety of all the British colonies in North America. We feel, too sensibly, the ill effects of the French interest in the present war betwixt New England, and only one nation of Indians supported by the French. Of what dismal consequences then might it be, if the French should be able to influence, in the same manner, so many and such numerous nations, as lie to the westward of this province, Pennsylvania and Maryland? On the other hand, if all these nations (who assert their own freedom, and declare themselves friends to those that supply them best with what they want) be brought to have a dependance upon the English (as we have good reason to hope in a short time they will) the French of Canada, in case of a war, must be at the mercy of the English.

"To these advantages must be added, that many of our young men having been induced by this act to travel among the Indians, they learn their manners, their languages, and the situation of all their countries, and become inured to all manner of fatigues and hardships; and a great many more being resolved to follow their example, these young men, in case of war with the Indians, will be of ten times the service, that the same number of the common militia can be of. The effects of this act have likewise so much quieted the minds of the people, with respect to the security of the frontiers, that our settlements are now extended above thirty miles further west towards the Indian countries, than they were before it passed.

"The only thing that now remains to answer, is an objection which we suppose may be made. What can induce the merchants of London to petition against an act, which will be really so much for their interest in the end? The reason is, in all probability, because they only consider their present gain; and that they are not at all concerned for the safety of this country, in encouraging the most necessary undertaking, if they apprehended their profit for two or three years may be lessened by it. This inclination of the merchants has been so notorious, that few nations, at war with their neighbours, have been able to restrain them from supplying their enemies with ammunition and arms. The Count D'Estreade, in his letters in 1638, says, that when the Dutch were besieging Antwerp, one Beiland, who had loaded four fly-boats with arms and powder for Antwerp, being taken up by the prince of Orange's order, and examined at Amsterdam, said boldly,

that the burghers of Amsterdam had a right to trade every where: that he could name a hundred that were factors for the merchants at Antwerp, and that he was one. 'That trade cannot be interrupted, and that for his part he was very free to own, that if to get any thing by trade it was necessary to pass through hell, he would venture to burn his sails.' When this principle, so common to merchants, is considered, and that some in this place have got estates by trading many years to Canada, it is not to be wondered, that they have acted as factors for Canada in this affair, and that they have transmitted such accounts to their correspondents in London, as are consistent with the trust reposed in them by the merchants of Canada.

"In the last place, we are humbly of opinion, that it may be proper to print the petition of the merchants of London, and their allegations before the lords of trade, together with the answers your committee has made hitherto, in vindication of the legislature of this province, of which we have the honour to be a part, if your excellency shall approve of our answers; that what we have said may be exposed to the examination of every one in this place, where the truth of these matters of fact is best known, and that the correspondents of these merchants may have the most public notice to reply, if they shall think it proper, or to disown, in a public manner, that they are the authors of such groundless informations. All which is unanimously and humbly submitted by "Your excellency's

"Most obedient humble servants,

"R. Walter, Rip Van Dam, John Barbarie, Fr. Harrison, Cadwallader Colden, James Alexander, Abraham Van Horne."

Governor Burnet transmitted this report to the board of trade, and it had the intended effect.—About the latter end of the year 1724, an unfortunate dispute commenced in the French church, of which, because it had no small influence on the public affairs of the government, we shall give a short account.

The persecutions in France which ensued upon the revocation of the edict of Nantz, drove the protestant subjects of Louis XIV. into the territories of other princes. Many of them fled even into this province: the most opulent settled in the city of New York—others went into the country and planted New Rochelle—and a few seated themselves at the New Paltz in Ulster county. Those who resided in New York soon erected a church, upon the principles and model of that in Geneva; and by their growth and foreign accessions formed a congregation, for numbers and riches, superior to all but the Dutch. They had two ministers. Rou, who was a man of learning, but arrogant, luxurious, and passionate. Moulinaars, his colleague, was distinguished for his mild spirit, dull parts, and regular life. Rou despised his fellow-labourer, and for a long time commanded the whole congregation, by the superiority of his talents in the pulpit. The other, impatient of repeated affronts and open contempt, raised a party in his favour, and this year succeeded in the election of a set of elders disposed to humble the delinquent. Rou, being suspicious of the design, refused to acknowledge them duly elected. Incensed at this conduct, they entered an act in their minutes, dismissing him from the pastoral charge of the church, and procured a ratification of the act under the hands of the majority of the people. Governor Burnet had, long before this time, admitted Rou into his familiarity on the score of his learning, and that consideration encouraged a petition to

him from Rou's adherents, complaining against the elders. The matter was then referred to a committee of the council, who advised that the congregation should be abolished, to bring their differences to an amicable conclusion. Some overtures, to that end, were attempted, and the elders offered to submit the controversy to the Dutch ministers. But Rou, who knew that the French church without a synod was unorganized, and could not restrain him, chose rather to bring his bill in chancery before the governor.

Mr. Alexander was his counsel, and Mr. Smith, a young lawyer, of the first reputation as a speaker, appeared for the elders. He pleaded to the jurisdiction of the court, insisting, that the matter was entirely ecclesiastical; and, in the prosecution of his argument, entered largely into an examination of the government of the protestant churches in France. According to which, he shewed that the consistory were the proper judges of the point in dispute, in the first instance; and that from thence an appeal lay to a colloque, next to a provincial, and last of all to a national synod. Mr. Burnet nevertheless over-ruled the plea, and the defendants, being fearful of a decree that might expose their own estates to the payment of Rou's salary, thought it adviseable to drop their debates, reinstate the minister, and leave the church.

All those who opposed Rou were displeased with the governor; among these Mr. De Lancey was the most considerable for his wealth and popularity. He was very rigid in his religious profession, one of the first builders, and by far the most generous benefactor, of the French church, and therefore left it with the utmost reluctance. Mr. Burnet, before this time, had considered him as his enemy, because he had opposed the prohibition of the French trade; and this led him into a step, which, as it was a personal indignity, Mr. De Lancey could never recollect without resentment. This gentleman was returned for the city of New York, in the room of a deceased member, at the meeting of the assembly in September, 1725. When he offered himself for the oaths, Mr. Burnet asked him how he became a subject of the crown? he answered, that he was denized in England, and his excellency dismissed him, taking time to consider the matter. Mr. De Lancey then laid before the house an act of a notary public, certifying that he was named in a patent of denization, granted in the reign of James the Second; a patent of the same kind, under the great seal of the province, in 1686; and two certificates, one of his having taken the oath of allegiance, according to an act passed in the colonies in 1683, and another of his serving in several former assemblies. The governor, in the meantime, consulted the chief justice, and transmitted his opinion to the house, who resolved in favour of Mr. De Lancey. Several other new representatives came in, at this session, upon the decease of the old members; and Adolph Philipse, who had been, as we have seen some time before, dismissed from the council-board, was elected into the speaker's chair, in the absence of Mr. Livingston. The majority, however, continued in the interest of the governor; and consented to the revival of the several acts, which had been passed for prohibiting the French trade; which, in spite of all the restraints laid upon it, was clandestinely carried on by the people of Albany. Oswego, nevertheless, thrived: fifty-seven canoes went there this summer and returned with 738 packs of beaver and deer-skins.

Nothing could more naturally excite the jealousy

of the French, than the erection of a new trading-house at the mouth of the Onondaga river. Fearful of losing a profitable trade, which they had almost entirely engrossed, and the command of the lake Ontario, they launched two vessels in it in 1726, and transported materials for building a large store-house, and repairing the fort at Niagara. The scheme was not only to secure to themselves the entrance into the west end of the lake, as they already had the east, by the fraudulent erection of fort Frontenac many years before; but also to carry their trade more westerly, and thus render Oswego useless, by shortening the travels of the western Indians near 200 miles. Baron de Longueil, who had the chief command in Canada, on the death of the Marquis de Vaudreuil in October, 1725, was so intent upon this project, that he went, in person, to the Onondaga canton, for leave to raise the store-house at Niagara: and as those Indians were most of all exposed to the intrigues of the Jesuits, who constantly resided amongst them; he prevailed upon them by fraud, and false representations, to consent to it, for their protection against the English. But as soon as this matter was made known to the other nations, they declared the permission granted by the Onondagas to be absolutely void; and sent deputies to Niagara, with a message, signifying that the country in which they were at work belonged solely to the Senneecas, and required them immediately to desist. The French, notwithstanding, were regardless of the embassy, and pushed on their enterprise with all possible dispatch, while Joncaire exerted all his address among the Indians, to prevent the demolition of the works. Canada was very much indebted to the intrigues of this man. He had been adopted by the Senneecas, and was well esteemed by the Onondagas. He spoke the Indian language, as Charlevoix informs us, with a native eloquence, and had lived amongst them, after their manner, from the beginning of Queen Anne's reign. All these advantages he improved for the interest of his country; he facilitated the missionaries in their progress through the cantons, and more than any man contributed to render their dependence upon the English weak and precarious. Convinced of this, Colonel Schuyler urged the Indians, at his treaty with them, in 1719, to drive Joncaire out of their country, but his endeavours were fruitless.

The Jesuit, Charlevoix, does honour to Mr. Burnet, in declaring that he left no stone unturned, to defeat the French designs at Niagara. Nor is it much to be wondered at. For besides supplanting his favourite trade at Oswego, it tended to the defection of the five nations; and, in case of a rupture, exposed the frontiers of our southern colonies to the ravages of the French and their allies. Mr. Burnet, upon whom these considerations made the deepest impression, laid the matter before the house, remonstrated against the proceedings to Longueil in Canada, wrote to the ministry in England, who complained of them to the French court, and met the confederates at Albany, endeavouring to convince them of the danger they themselves would be in, from an aspiring, ambitious, neighbour. He spoke first about the affair privately to the Sachems, and afterwards, in the public conference, informed them of all the encroachments which the French had made upon their fathers, and the ill usage they had met with, according to La Potherie's account, published with the privilege of the French king, at Paris, in 1722. He then reminded them of the kind treatment they had received from the English,

who constantly fed and clothed them, and never attempted any act of hostility to their prejudice. This speech was extremely well drawn, the thoughts being conceived in strong figures, particularly expressive and agreeable to the Indians. The governor required an explicit declaration of their sentiments concerning the French transactions at Niagara, and their answer was truly categorical. "We speak now in the name of all the six nations, and come to you howling. This is the reason why we howl, that the governor of Canada encroaches on our land, and builds thereon." After which they entreated him to write to the king for succour. Mr. Burnet embraced this favourable opportunity to procure from them a deed, surrendering their country to his majesty, to be protected for their use, and confirming their grant in 1701, concerning which there was only an entry in the books of the secretary for Indian affairs. Besides the territories at the west end of lake Erie, and on the north side of that, and the lake Ontario, which were ceded in 1701; the Indians now granted, for the same purpose, all their habitations from Oswego to Cayahoga river, which disembogues into lake Erie, and the country extending sixty miles from the southern most banks of those lakes. Though the first surrender, through negligence, was not made by the execution of a formal deed under seal; yet as it was transacted with all the solemnity of a treaty, and as the second surrender confirms the first, no intermediate possession by the French could prejudice the British title derived by the cession 1701.

It happened very unfortunately, that his excellency's hands were then more weakened than ever, by the growing disaffection in the house. The intrigues of his adversaries, and the frequent deaths of the members, had introduced such a change in the assembly, that it was with difficulty he procured a three years support. The clamours of the people ran so high without doors for a new election, that he was obliged to dissolve the house, and soon after another dissolution ensued on the death of the king. The French, in the meantime, completed their works at Niagara, and Mr. Burnet, who was unable to do any thing else, erected a fort, in 1727, for the protection of the post and trade at Oswego. This necessary undertaking was pregnant with the most important consequences, not only to this but to all the colonies; and though the governor's seasonable activity deserved the highest testimonials of gratitude, he was obliged to build the fort at his private expense; and a balance of 56*l*. principal, though frequently demanded, remained long after due to his estate.

Beauharnois, the governor of Canada, who superseded Longueil, was so incensed at the building of the fort, that he sent a written summons, in July, to the officer posted there, to abandon it; and though his predecessor had done the same a little before at Niagara, in the county of the Senneecas, the acknowledged subjects of the British crown, yet, with a singular effrontery, he dispatched De la Chausaigne, a man of parts, and governor of Trois Rivières, to New York, with the strongest complaints to Mr. Burnet upon that head. His excellency sent him a polite, but resolute answer, on the 8th of August, in which he refuted the arguments urged by the French governor-general; and remonstrated against the proceedings of the last year at Niagara.

The new assembly met in September, 1727, and consisted of members all ill affected to the governor. The long continuance of the last, the clamours which

were excited by several late important decrees in chancery, the affair of the French church, and especially the prohibiting the Canada trade, were the causes to which the loss of his interest is to be ascribed. Mr. Philipse, the speaker, was piqued at a decree in chancery against himself, which very much affected his estate; and the members, who were very much influenced by him, came, on the 25th of November, into the following resolutions. Colonel Hicks, from the committee of grievances, reported,—“That as well by the complaints of several people, as by the general cry of his majesty’s subjects inhabiting this colony, they find that the court of chancery, as lately assumed to be set up here, renders the liberties and properties of the said subjects extremely precarious; and that by the violent measures taken in and allowed by it, some have been ruined—others obliged to abandon the colony—and many restrained in it, either by imprisonment or by excessive bail exacted from them not to depart, even when no manner of suits are depending against them: and therefore are of opinion, that the extraordinary proceedings of that court, and the exorbitant fees and charges, countenanced to be exacted by the officers and practitioners thereof, are the greatest grievance and oppression this colony hath ever felt: and that for removing the fatal consequences thereof, they had come to several resolutions, which being read, were approved by the house, and are as follow:

“Resolved, that the erecting or exercising in this colony, a court of equity or chancery (however it may be termed) without consent in general assembly, is unwarrantable, and contrary to the laws of England, and a manifest oppression and grievance to the subjects, and of pernicious consequence to their liberties and properties.

“Resolved, that this house will at their next meeting prepare, and pass, an act to declare and adjudge all orders, ordinances, devices, and proceedings of the court, so assumed to be erected and exercised as abovementioned, to be illegal, null, and void, as by law and right they ought to be.

“Resolved, that this house, at the same time, will take into consideration, whether it be necessary to establish a court of equity or chancery in this colony; in whom the jurisdiction thereof ought to be vested, and how far the powers of it shall be prescribed and limited.”

Mr. Burnet no sooner heard of these votes, than he called the members before him and dissolved the assembly. They occasioned, however, an ordinance in the spring following, as well to remedy sundry abuses in the practice in chancery, as to reduce the fees of that court, which, on account of the popular clamours, were so much diminished, that ever after it was abandoned by all gentlemen of eminence in the profession.

We are now come to the close of Mr. Burnet’s administration, when he was appointed to the chief command of Massachusetts. Though there had never been a governor to whom the colony was so much indebted as to him; yet the influence of a faction, in the judgment of some, rendered his removal necessary for the public tranquillity. Insensible of his merit, many considered it as a most fortunate event; and till the ambitious designs of the French king, with respect to America, awakened attention to the general welfare, Mr. Burnet’s administration was as little esteemed as that of the meanest of his predecessors.

He was very fond of New York, and left it with

reluctance. His marriage connected him with a numerous family, and, besides an universal acquaintance, there were some gentlemen with whom he contracted a strict intimacy and friendship.

The excessive love of money, a disease common to all his predecessors, and to some who succeeded him, was a vice from which he was entirely free. He sold no offices, nor attempted to raise a fortune by indirect means, for he lived generously, and carried scarce any thing away with him but his books. These and the conversation of men of letters, were to him inexhaustible sources of delight. His astronomical observations have been useful; but by his comment on the Apocalypse, he exposed himself to some harsh criticisms.

John Montgomerie, Esq., received the great seal of this province from Mr. Burnet, on the 15th of April, 1728, having a commission to supersede him here and in New Jersey. The council board consisted of Mr. Walters, Mr. Van Dam, Mr. Barbarie, Mr. Clarke, Mr. Harrison, Dr. Colden, Mr. Alexander, Mr. Morris, jun., Mr. Van Horne, Mr. Provost, Mr. Livingston, Mr. Kennedy.

The governor was a Scotch gentleman, and bred a soldier; but in the latter part of his life he had little concern with arms, having served as groom of the bed-chamber to George II. when prince of Wales. This station, and a seat in parliament, paved the way to his preferment in America. In his talents for government he was much inferior to his predecessor, for he had neither strength nor acuteness of parts, and was but little acquainted with any kind of literature.

All parties being weary of contention a calm ensued, and the governor’s good humour helped to extinguish the discontent: having no particular scheme to pursue, and confining himself to the exercise of the common acts of government, the public affairs flowed on in a very calm manner.

The two causes of dissension with the late administration were carefully avoided by the present governor, for he dissolved the assembly called by his predecessor, before they had ever been convened; and as to the chancery he himself countenanced the opposition to it, by declining to sit, till enjoined to exercise the office of chancellor by special orders from England.

He then obeyed the command, but not without discovering his reluctance; and modestly confessing to the practisers, that he thought himself unqualified for the station. Indeed the court of chancery was evidently his aversion, and he never gave a single decree in it, nor more than three orders; and these, both as to matter and form, were first settled by the counsel concerned.

Mr. Philipse was chosen speaker of the assembly which met on the 23d of July, and continued sitting in perfect harmony till autumn. After his excellency had procured a five years support, and several other laws of less considerable moment, he went up to Albany, and on the 1st of October, held a treaty with the the six nations for a renewal of the ancient covenant. He gave them great presents, and engaged them in the defence of Oswego. Nothing could be more seasonable than this interview; for the French, who viewed that important garrison and the increasing trade there with the most restless jealousy, prepared, early in the spring following, to demolish the works. Governor Burnet gave the first intelligence of this design, in a letter to Colonel Montgomerie, dated at Boston the 31st of March, 1729. The garrison was thereupon immediately re-

inforced by a detachment from the independent companies; which together with the declared resolution of the Indians to protect the fort, induced the French to desist from the intended invasion.

Thus far the Indian affairs appeared to be under a tolerable direction; but these fair prospects were soon obscured by the king's repealing, on the 11th of December, 1729, all the acts which Mr. Burnet, with so much labour and opposition, procured for the prohibition of an execrable trade between Albany and Montreal. To whose intrigues this event is to be ascribed, cannot be certainly determined. But that it was pregnant with the worst consequences, was soon sufficiently evinced. Nothing could more naturally tend to undermine the trade at Oswego, to advance the French commerce at Niagara, to alienate the Indians from their fidelity to Great Britain, and particularly to rivet the defection of the Caghnuagas. For these residing on the south side of St. Lawrence, nearly opposite to Montreal, were employed by the French as their carriers, and thus became interested against the colonists by motives of the most prevailing nature. One would imagine that, after all the attention bestowed on this affair in the late administration, the objections against this trading intercourse with Canada must have been obvious to the meanest capacity; and yet from the time Mr. Burnet removed to Boston, it was rather encouraged than restrained.

The year 1731 was distinguished only by the complete settlement of the disputed boundary between this province and the colony of Connecticut. An event, considering the colonizing spirit and extensive claims of the people of New England, of no small importance, and concerning which it is proper to give a succinct account.

The partition line agreed upon, in 1664, being considered as fraudulent, or erroneous, a second agreement, suspended only for the king's and the duke's approbation, was concluded on the 23d of November, 1683, between Colonel Dongan and his counsel, and Robert Trent, Esq. then governor of Connecticut, and several other commissioners appointed by that colony. The line of partition, then agreed to be established, was to begin at the mouth of Byram brook, "Where it falleth into the sound, at a point called Lyon's Point, to go as the said river runneth, to the place where the common road, or wading-place, over the said river is; and from the said road or wading-place, to go north-north-west into the country, as far as will be eight English miles from the aforesaid Lyon's Point; and that a line of twelve miles being measured from the said Lyon's Point, according to the line or general course of the sound eastward: where the said twelve miles endeth, another line shall be run from the sound, eight miles into the country north-north-west, and also, that a fourth line be run (that is to say) from the northernmost end of the eight miles line, being the third-mentioned line, which fourth line with the first-mentioned line, shall be the bounds where they shall fall to run; and that from the easternmost end of the fourth-mentioned line (which is to be twelve miles in length) a line parallel to Hudson's river, in every place twenty miles distant from Hudson's river, shall be the bounds there, between the said territories or province of New York, and the said colony of Connecticut, so far as Connecticut colony doth extend northwards; that is, to the south line of the Massachusetts's colony: only it is provided, that in case the line from Byram brook's mouth, north-north-west 8 miles, and the line that is

then to run twelve miles to the end of the third fore-mentioned line of eight miles, do diminish or take away land, within twenty miles of Hudson's river, that then so much as is in land diminished of twenty miles of Hudson's river thereby, shall be added out of Connecticut bounds unto the line afore-mentioned, parallel to Hudson's river and twenty miles distant from it; the addition to be made the whole length of the said parallel line, and in such breadth, as will make up, quantity for quantity, what shall be diminished as aforesaid."

Pursuant to this agreement some of the lines were actually run out, and a report made of the survey, which, on the 24th of February, 1684, was confirmed by the governor of each colony at Milford in Connecticut. Here the matter rested, till a dispute arose concerning the right of jurisdiction over the towns of Rye and Bedford, which occasioned a solicitation at home; and on the 28th of March, 1700, King William was pleased to confirm the agreement of 1683.

Nineteen years afterwards, a probationary act was passed, empowering the governor to appoint commissioners, as well to run the line parallel to Hudson's river, as to re-survey the other lines and distinguish the boundary. The Connecticut agent opposed the king's confirmation of this act, but it was approved on the 23d of January, 1723. Two years after, the commissioners and surveyors of both colonies met at Greenwich, and entered first into an agreement, relating to the method of performing the work.

The survey was immediately after executed in part, the report being dated on the 12th of May, 1725; but the complete settlement was not made till the 14th of May, 1731, when indentures, certifying the execution of the agreement in 1725, were mutually signed by the commissioners and surveyors of both colonies. Upon the establishment of this partition, a tract of land lying on the Connecticut side, consisting of above 60,000 acres, from its figure called the Oblong, was ceded to New York, as an equivalent for lands near the Sound surrendered to Connecticut.

The very day after the surrender made by that colony, a patent passed in London to Sir Joseph Eyles and others, intended to convey the whole Oblong. A grant posterior to the other was also regularly made here to Hauley and company, of the greatest part of the same tract, which the British patentees brought a bill in chancery to repeal. But the defendants filed an answer, containing so many objections against the English patent, that the suit remained unprosecuted, and the American proprietors have ever since held the possession. Mr. Harrison, of the council, solicited this controversy for Sir Joseph Eyles and his partners, which contributed in a great degree to the troubles so remarkable in a succeeding administration.

Governor Montgomerie died on the 1st of July, 1731, and being a man of a kind and humane disposition, his death was not a little lamented. The chief command then devolved upon Rip Van Dam, Esq., he being the oldest counsellor, and an eminent merchant of a fair estate, though distinguished more for the integrity of his heart, than his capacity to hold the reins of government. He took the oaths before Mr. Alexander, Mr. Van Horne, Mr. Kennedy, Mr. De Lancey, and Mr. Courtlandt.

This administration is unfortunately signalled by the memorable encroachment at Crown Point. The French, in Canada, were always jealous of the in-

creasing strength of the English colonies; and this jealousy led them to concert a regular system of conduct for their defence. To confine the English to scant limits along the sea-coast was the grand object they had long in view; and seizing the important passes from Canada to Louisiana, seducing the Indian allies, engrossing the trade, and fortifying the routes into their country, were all proper expedients towards the execution of their plan. By erecting this new fort, they secured the absolute command of lake Champlain, through which the colonists must pass, if ever a descent were to be made upon Canada, either to conquer the country, or harass its out-settlements. The garrison was, at first, situated on the east side of the lake, near the south end; but was afterwards built upon a commodious point on the opposite side. Of all their infractions of the treaty of Utrecht, none was more palpable than this. The country belonged to the six nations, and the very spot upon which this fort was erected was included within a patent, to Delliuss the Dutch minister of Albany, granted under the great seal of this province in 1696. Through this lake the French parties made their incursions upon Schenectady, the Mohawks' castles, and Deerfield; and the erection of this fort was apparently adapted to facilitate the inroads of the enemy upon the frontiers of the colonies of New York, Massachusetts, and New Hampshire. For it served not only as an asylum to fly to, after the perpetration of their inhumanities, but for a magazine of provisions and ammunition; and though it was not much above 120 miles from the very city of Albany, yet by the conveyance through Sorel river and the lake, it could be reinforced from Montreal in three or four days.

The Massachusetts government foresaw the dangerous consequences of the French fort at Crown Point, and Governor Belcher gave the first information of it, in a letter from Boston to Mr. Van Dam. He informed him of the vote of the general court, to bear their proportion of the charge of an embassy to Canada, to forbid the works, and pressed him to engage the opposition of the six nations. Van Dam laid the letter before his council, on the 4th of February, 1732; who, with singular calmness, advised him to write to the commissioners of Indian affairs, at Albany, ordering them to enquire whether the land belonged to the confederates or the river Indians. Whether the governor ever wrote to the commissioners, we have not been able to discover; nor whether any complaint of the encroachment was sent home, according to the second advice of council on the 11th of February; who, besides the first step, were now pleased to recommend his transmitting Governor Belcher's letter and the Boston vote to the several south-western colonies.

A very good scheme, in some measure, to repair this supineness, was afterwards projected, by settling the lands near lake George with protestant Highlanders from Scotland. Captain Laughlin Campbel, encouraged by a proclamation to that purpose, came over in 1737, and ample promises were made to him. He went upon the land, viewed, and approved it; and was entreated to settle there, even by the Indians, who were taken with his Highland dress. Mr. Clarke, the lieutenant-governor, promised him, in a printed advertisement, the grant of 30,000 acres of land, free from all but the charges of the survey and the king's quit-rent. Confiding on the faith of the government, Captain Campbel went home to Isla, sold his estate, and, shortly after, transported, at his own expense, eighty-three pro-

testant families, consisting of 423 adults, besides a great number of children. Private faith and public honour loudly demanded the fair execution of a project, so expensive to the undertaker and beneficial to the colony. But it unfortunately dropped, through the sordid views of some persons in power, who aimed at a share in the intended grant; to which Campbel, who was a man of spirit, would not consent.

Captain Campbel afterwards made an attempt to redress himself, by an application to the colonial assembly, and then to the board of trade in England. The first proved abortive, and such were the difficulties attending the last, that he left his colonists to themselves; and, with the poor remains of his broken fortune, purchased a small farm in this province. No man could have been better qualified for such an undertaking. He had a high sense of honour, excellent judgment, and was of a military disposition. Upon the news of the rebellion in Scotland, he went home; fought under the duke, returned to his family, and soon after died; leaving a widow and several children, who long felt the consequences of his disappointments.

Mr. Van Dam finished his administration on the 1st of August, 1732; when William Colsby, Esq. arrived, with a commission to govern this and the province of New Jersey.

Having been the advocate, in parliament, of the American colonies, he was at first popular, but soon lost the affection and confidence of the people. By his instigation, one Zenger, the printer of a newspaper, was prosecuted for publishing an article, declared to be derogatory to the dignity of his majesty's government. He was zealously defended by able counsel, and an independent jury gave a verdict of acquittal. The people applauded their conduct, and the magistrates of the city of New York presented to Andrew Hamilton, one of his defenders, the freedom of the city, in a gold box, and their thanks for "his learned and generous defence of the rights of mankind, and the liberty of the press."

Governor Colsby died in 1736, and was succeeded by George Clark, at that time senior counsellor, but soon after appointed lieutenant-governor. Again was revived the contest which had ended, twenty years before, in the victory gained by Governor Hunter over the house of representatives. The colony being in debt, the house voted to raise the sum of 6,000*l.*; but, in order to prevent its misapplication, declared, that it should be applied to the payment of certain specified debts. Offended by this vote, Clark resorted to the expedient which had usually been adopted to punish or intimidate; he immediately dissolved the assembly.

At the next election great exertions were made by the opposing parties. The popular party was triumphant. At their second session the house voted an address to the lieutenant-governor, which is worthy of particular notice. In bold and explicit language they state some of the vital principles of free government, refer to recent misapplications of money, and proceed:

"We therefore beg leave to be plain with your honour, and hope you will not take it amiss when we tell you, that you are not to expect that we will either raise sums unfit to be raised, or put what we shall raise into the power of a governor to misapply, if we can prevent it; nor shall we make up any other deficiencies than what we conceive fit and just to be paid; nor continue what support or revenue we shall raise, for any longer time than one year; nor

do we think it convenient to do even that, until such laws are passed as we conceive necessary for the safety of the inhabitants of this colony, who have reposed a trust in us for that only purpose, and which we are sure you will think it reasonable we should act agreeably to; and by the grace of God we shall endeavour not to deceive them."

With a body of men, so resolute in asserting their rights, the lieutenant-governor wisely forbore to contend. He thanked them for their address, and promised his cordial co-operation in all measures calculated to promote the prosperity of the colony. He gave his assent to a law, providing for the more frequent election of representatives; which law, however, two years afterwards, was abrogated by the king.

But between a house of representatives and a chief magistrate, deriving their authority from different sources, harmony could not long subsist. Mr. Clark, in his speech at the opening of the next session, declared that unless the revenue was granted for as long a time as it had been granted by former assemblies, his duty to his majesty forbade him from assenting to any act for continuing the excise, or for paying the colonial bills of credit. The house unanimously resolved, that it would not pass any bill for the grant of money, unless assurance should be given that the excise should be continued, and the bills of credit redeemed.

The lieutenant-governor immediately ordered the members to attend him. He told them that "their proceedings were presumptuous, daring, and unprecedented; that he could not look upon them without astonishment, nor with honour suffer the house to sit any longer;" and he accordingly dissolved it. Little more than a year had elapsed, since the members were chosen; but in that time they had, by their firm and spirited conduct in support of the rights of the people, merited the gratitude of their constituents.

About this time, a supposed "negro plot" occasioned great commotion and alarm in the city of New York. The frequent occurrence of fires, most of which were evidently caused by design, first excited the jealousy and suspicion of the citizens. Terrified by danger which lurked unseen in the midst of them, they listened with eager credulity to the declaration of some abandoned females, that the negroes had combined to burn the city, and make one of their number governor. Many were arrested and committed to prison. Other witnesses, not more respectable than the first, came forward; other negroes were accused, and even several white men were designated as concerned in the plot.

When the time of trial arrived, so strong was the prejudice against the miserable negroes, that every lawyer in the city volunteered against them. Ignorant and unassisted, nearly all who were tried were condemned. Fourteen were sentenced to be burned, eighteen to be hung, seventy-one to be transported, and all these sentences were executed. Of the whites two were convicted and suffered death.

All apprehension of danger having subsided, many began to doubt whether any plot had in fact been

concerted. None of the witnesses were persons of credit; their stories were extravagant and often contradictory; and the project was such as none but fools or madmen would form. The two white men were respectable; one had received a liberal education, but he was a catholic, and the prejudice against catholics was too violent to permit the free exercise of reason. Some of the accused were doubtless guilty of setting fire to the city; but the proof of the alleged plot was not sufficiently clear to justify the numerous and cruel punishments that were inflicted.

In April, 1740, the assembly again met. It had now risen to importance in the colony. The adherence of the representatives to their determination not to grant the revenue for more than one year, made annual meetings of the assembly necessary. This attachment to liberty was mistaken for the desire of independence. Lieutenant-governor Clark, in a speech delivered in 1741, alludes to "a jealousy which for some years had obtained in England, that the plantations were not without thoughts of throwing off their dependence on the crown."

In 1743, George Clinton was sent over as governor of the colony. Like most of his predecessors he was welcomed with joy; and one of his earliest measures confirmed the favourable accounts which had preceded him, of his talents and liberality. To show his willingness to repose confidence in the people, he assented to a bill limiting the duration of the present and all succeeding assemblies. The house manifested its gratitude by adopting the measures he recommended for the defence of the province against the French, who were then at war with England.

In 1745, the savages in alliance with France made frequent invasions of the English territories. The inhabitants were compelled to desert Hosick; Saratoga was destroyed; the western settlements of New England were often attacked and plundered. Encouraged by success, the enemy became more daring, and small parties ventured within the suburbs of Albany, and there laid in wait for prisoners. It is even said that one Indian, called Tomonwilemon, often entered the city and succeeded in taking captives.

Distressed by these incursions, the assembly, in 1746, determined to unite with the other colonies and the mother country in an expedition against Canada. They appropriated money to purchase provisions for the army, and offered liberal bounties to recruits. But the fleet from England did not arrive at the appointed time; the other colonies were dilatory in their preparations, and before they were completed, the season for military operations had passed away. A sufficient account of which has been already given in the histories of the other colonies.

Early in the next year a treaty was concluded, and the inhabitants were for a short period relieved from the burdens and distresses of war. And nothing of very great importance took place from this period, to the commencement of the revolutionary war, of which a general history will be given.
